- 2 Leaves with spreading hairs on the rhachides, petiolules and midribs beneath; leaflets 5–9 pairs, oblong to elliptic or lanceolate, unequal-sided and acute to subcordate at base, acuminate, 5–13 cm. long, 2–5 cm. broad; inflorescence glabrous or nearly so; receptacle and pedicel together 1.5–2 cm. long, glabrous; sepals 1.2–2 cm. long, glabrous outside except at the apex [2. *pynaertii*](#)

Leaves entirely glabrous: [3](#)

- 3 Inflorescence, pedicels, outside of receptacle and exposed parts of sepals glabrous or nearly so; ovary glabrous: [4](#)
Inflorescence, pedicels, outside of receptacle and exposed parts of sepals densely pubescent; ovary densely pubescent, at least on the margins, sooner or later glabrescent; sepals 1.2–1.7 cm. long, 6–11 mm. broad; pedicel and receptacle together 1–1.5 cm. long, receptacle distinctly turbinate; filaments 2–3 cm. long; leaflets 6–9 pairs, oblong, unequal-sided at base, acuminate, in crown foliage 6–11 cm. long, 2.5–3.5 cm. broad, considerably larger in saplings, etc. [5. *ogea*](#)

- 4 Sepals 1.6–2.2 cm. long, 11–17 mm. broad; pedicel and receptacle together 1.5–2 cm. long, receptacle conical; filaments 3–4.3 cm. long; leaflets 7–9 pairs, oblong or oblong-elliptic, unequal-sided at base, rather abruptly acuminate, in crown foliage 6–9 cm. long, 2.5–3.5 cm. broad, in saplings, etc., up to 19 cm. long and 6 cm. broad [3. *thurifera*](#)

Sepals 1–1.2 cm. long, about 8 mm. broad; pedicel and receptacle together about 1.2 cm. long, receptacle distinctly turbinate; filaments 2–2.7 cm. long; leaflets about 8 pairs, oblong, unequal-sided at base, rather abruptly acuminate, 6–12 cm. long, 2.5–4 cm. broad [4. *oblonga*](#)

1. *Daniellia oliveri* (*Rolfe*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 341 (1928); Kew Bull. 1928: 382; Léonard in Publ. I.N.É.A.C., Sér. Sci. 45: 118; Aubrév. Fl. For. Soud.-Guin. 235, t. 46, 3–6; Léonard in Fl. Congo Belge 3: 348, t. 26. *APD acc*

Paradaniellia oliveri *Rolfe* in Kew Bull. 1912: 96 (q.v. for synonymy).

Daniellia thurifera of F.T.A. 2: 300, partly, not of *Benn.*; Chev. Bot. 231.

Daniellia thurifera var. *chevalieri* *J. Léonard* in Bull. Jard. Bot. Brux. 19: 407 (1949), partly (leaves only).

A large savannah tree, to 100 ft. high, with copious rather flat panicles of white, scented flowers and smooth pale flat 1-seeded fruits of horny consistence, tardily dehiscent.

Sen.: Heudelot 364! Koulaye-Kouraye (Feb.) Chev. 2968! 2969 (partly)! Bignona, Casamance Serv. For. 44. *Gam.*: Genieri (Feb.) Fox 27! *Fr. Sud.*: Kita region (Jan.–Feb.) Chev. 96; Dubois 7. *Port. Tripetalanthus emarginatus (*Hutch. & Dalz.*) *A. Chev.* in Rev. Bot. Appliq. 26: 597, t. 19 A (1946).

Forest tree, to 100 ft. high; flowers white; **by river banks**.

S. L.: Morro R. (fr. Jan.) Unwin & Smythe 42! Njala (fl. July–Sept., fr. Jan.) Deighton 1950! 2836! Bumpe (fl. July, fr. Nov.) Deighton 4835! 4927! **Lib.:** St. John R., Tappita (Aug.) Baldwin 9139! **IV. C.:** Sassandra & Cavally Basins Aubrév. 860! 2798!

A sterile specimen (Keay s.n.) of a tall tree from Banga in the British Cameroons probably represents another species of this genus; flowering and fruiting material is required.

29. HYMENOSTEGIA

(*Benth.*) *Harms* in E. & P. Pflanzenfam. Nachtr. 1: 193 (1897); Léonard in Bull. Jard. Bot. Brux. 21: 433 (1951).

- 1 Leaflets 1–2 pairs, rhachis winged; the lower pair of leaflets (if present) smaller and more or less ovate-rhombic, about 3 cm. long, the upper pair obliquely obovate, narrowed at both ends, obtusely acuminate, 7–10 cm. long, 2–5 cm. broad, glabrous; racemes about as long as the leaves; pedicels up to 1 cm. long; bracteoles broadly ovate, 6–12 mm. long; petals 5, 3 larger, 2 much smaller; stamens 10; fruits obliquely obovate, 7–9 cm. long, 3–3.5 cm. broad [l. afzelii](#)

- Leaflets 3–10 pairs (rarely 2), rhachis not winged:2
- 2 Petals 5, 3 larger, 2 very much smaller; stamens 10; bracteoles ovate, about 1·7 cm. long and 1·1 cm. broad; pedicels up to 1·5 cm. long; leaflets 3–4 pairs (rarely 2), oblong-elliptic, obtuse and slightly emarginate at apex, 2·5–9 cm. long, 1–4 cm. broad, finely pubescent beneath; fruits subtrapezoid, 8–10 cm. long, 4–5 cm. broad2. *aubrevillei*
- Petals 3, 1 or 2 of which are large and 2 or 1 very small, or absent:3
- 3 Stamens 10; flowers with only 1 larger petal; bracteoles oblong-elliptic about 1 cm. long; pedicels 2–2·5 cm. long; leaflets 3–4 pairs, obliquely oblong-ob lanceolate, triangular-acuminate, 4–8 cm. long, 2–3·5 cm. broad, glabrous; fruits not known3. *gracilipes*
- Stamens 16–26; flowers with 2 larger petals and 1 smaller petal or absent; bracteoles lanceolate or linear-oblong:4
- 4 Leaflets 3–4 pairs, obliquely oblong, obtusely acuminate, 8–15 cm. long, 3·5–5 cm. broad; pedicels 1–2 cm. long, glabrous; bracteoles linear-oblong, acute, about 2 cm. long; petals either absent or very minute 4. *talbotii*
- Leaflets 8–10 pairs, oblong, obtusely acuminate, 4–8 cm. long, 1·5–2·5 cm. broad; racemes very densely flowered; pedicels about 2 cm. long, velutinous; bracteoles linear-ob lanceolate, about 1 cm. long, pilose outside; petals 3, 2 larger and 1 minute5. *bakeriana*
1. **Hymenostegia afzelii** (*Oliv.*) *Harms* in E. & P. Pflanzenfam. Nachtr. 1; 193 (1897); Chev. Bot. 235; Aubrév. Fl. For. C. Iv. 1: 248, t. 94 A; For. Trees & Timbers Brit. Emp. 2: 24, fig 4; Léonard in Bull. Jard. Bot. Brux. 21: 438. *APD acc*
- Cynometra afzelii* *Oliv.* F.T.A. 2: 318 (1871).
- A forest tree, to 60 ft. high; bracteoles white, lilac or pinkish; petals yellow.
- Fr. G.:** Farana Chev. 13432! **S. L.:** Afzelius. **Lib.:** Monrovia Whyte! **IV. C.:** Indenié (Dec.) Chev. 22646! Tabou Aubrév. 1682! And other localities fide Aubrév. l.c. **G. - Also in **French Cameroons**.
2. **Hymenostegia aubrevillei** *Pellegr.* in Bull. Soc. Bot. Fr. 80: 464 (1933); Aubrév. l.c. 250, t. 94 B; Léonard l.c. 440. *APD acc*
- Brachystegia eurycoma* of F.W.T.A., ed. 1, 1: 348, partly (Chev. 16283).
- Forest tree of medium size with short bole and dense rounded crown; by river banks; bracteoles mauve, sepals white, petals reddish.
- IV. C.:** Abidjan (Nov.–May) Aubrév. 83! Zaranou Chev. 16283! **G. C.:** Krokosana (Feb.) Cansdale FH 3985!
3. **Hymenostegia gracilipes** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 332 (1928); Kew Bull. 1928: 381; Léonard l.c. 442. *APD acc*
- APD:* *Synonym of Tetraberlinia tubmaniana J. Léonard*
- Riverside forest tree, to 45 ft. high; flowers white.
- G. C.:** Sa, Bonsa R. (July, Aug.) Vigne FH 154! 978! 4765! Obin Vigne FH 1280!
- [A sterile specimen (Fobes LF 1) from Bomi Hills, Montserrado, Liberia, also appears to be this species.]
4. **Hymenostegia talbotii** *Bak. f.* in J. Bot. 67: 196 (1929); Léonard l.c. 442. *APD acc*
- A forest tree (?).
- S. Nig.:** Eket Dist. Talbot 3141!
5. **Hymenostegia bakeriana** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 332 (1928); Kew Bull. 1928: 381; Léonard l.c. 442. *APD acc*
- Cynometra longituba* of Bak. f. in Cat. Talb. 127, not of Harms.
- A tree with rather densely pubescent branchlets; flowers red (?) or drying reddish.

S. Nig.: Oban Talbot 1567!

30. GUIBOURTIA

Benn. in J. Linn. Soc. 1: 149 (1857); Léonard in Bull. Jard. Bot. Brux. 19: 391–406 (1949); op. cit. 20: 269–284 (1950).

- 1 Bracteoles persistent forming a calyx-like cup at the base of the ellipsoidal flower bud; fruits indehiscent, flat, thin; seeds not arillate; leaflets glabrous:2
Bracteoles caducous:3
- 2 Leaflets with 3–5 prominent longitudinal nerves from the base, the strong nerves not arranged pinnately; lamina falcate, cuneate or unequal at base, obtusely acuminate, 3–12 cm. long, 1.5–5 cm. broad; petiole 3–5 mm. long; stipules foliaceous, 5–7 mm. long, subpersistent; fruits obliquely elliptic, 3.8–4.2 cm. long, 2.7–3 cm. broad, with a nerve parallel to the margin on one side [1. copallifera](#)
Leaflets with pinnately arranged strong lateral nerves; lamina ovate-falcate, strongly asymmetrical, one side cuneate, the other rounded at base, acute or acuminate at apex, 6.5–20 cm. long, 3–8 cm. broad; petiole 1.5–3 cm. long; stipules early caducous; fruits suborbicular or elliptic, 2.2–3.8 cm. long, 1.8–2.9 cm. broad, with a rather indistinct nerve running all round parallel to the margin [2. demeusei](#)
- 3 Buds globose; fruits, where known, indehiscent, flat, thin; seeds, where known, not arillate; young leaflets pubescent on nerves beneath:4
Buds, where known, ellipsoidal; fruits dehiscent, thick, without marginal or longitudinal nerves; seeds arillate; leaflets glabrous:5
- 4 Leaflets with 2 strong longitudinal ascending nerves on one or both sides of the midrib; upper leaves usually 2-foliolate with falcate leaflets up to 11.5 cm. long and 3–9 cm. broad, long- or caudate-acuminate at apex; lower leaves 1-foliolate with an ovate to ovate-rhombic leaflet, rounded at base, long-acuminate at apex, 7–13 cm. long, 4–7 cm. broad; petioles 3–4 mm. long; fruits not known [3. dinklagei](#)
Leaflets with 5–9 pinnately arranged strong lateral nerves; leaves all 2-foliolate with falcate leaflets, one side cuneate, the other obtuse at base, acuminate at apex, 5–10 cm. long, 1.5–5 cm. broad; petiole 4–10 mm. long; fruits obliquely rhombic-elliptic, 4–6 cm. long, 2.5–3.5 cm. broad, with a prominent curved nerve towards the upper margin dividing the narrow winged portion from the reticulate body of the fruit [4. ehie](#)
- 5 Bark of branchlets exfoliating in thin reddish-brown pieces; rhachis of inflorescence up to 1.5 mm. diam.; fruits black when dry, 2–2.5 cm. long, 1.7–1.8 cm. broad, with a stipe 2–7 mm. long; leaflets elliptic-falcate, abruptly acuminate at apex 6–11.5 cm. long, 2.5–5.5 cm. broad; petiole 1.5–2.5 cm. long [5. pellegriniana](#)
Bark of branchlets not exfoliating in thin pieces; rhachis of inflorescence more than 2 mm. diam.; fruits reddish-brown when dry:6
- 6 Leaflets coriaceous, acumen about 5 mm. long; fruits with very short pedicel and 3–5 mm. long stipe; body of fruit 3–3.5 cm. long, 2–2.5 cm. broad; leaflets falcate, 7–15 cm. long, 3–6 cm. broad; petiole 1.5–2.5 cm. long [6. tessmannii](#)
Leaflets membranous, abruptly acuminate, acumen 5–20 mm. long; fruits with pedicel about 2 mm. long and stipe 9–11 mm. long; body of fruit 2.6–2.8 cm. long, 1.7–1.8 cm. broad; leaflets falcate-elliptic, 5–13 cm. long, 2–5 cm. broad; petiole 1.2–2.7 cm. long [7. leonensis](#)

1. *Guibourtia copallifera* Bern. in J. Linn. Soc. 1: 150 (1857); Léonard in Publ. I.N.É.A.C., Sér. Sci. 45: 72. *APD acc*

Copaifera guibourtiana Benth. (1865) — F.T.A. 2: 314; F.W.T.A., ed. 1, 1: 338 (excl. syn. *C. ehie* A. Chev.); Aubrév. Fl. For. C. Iv. 1: 262, t. 103 B; Kennedy For. Fl. S. Nig. 96.

38. BERLINIA

Soland. ex Hook. f. — F.T.A. 2: 292; Keay in Kew Bull. 1954: 267. *APD acc*

- 1 Petals more or less subequal in length, all about 6–8 cm. long, limb of posterior petal broader than the others; inflorescence a stout terminal simple raceme; bracts at least 1·6 cm. long, conspicuous in the unopened part of the inflorescence; calyx-tube glabrous or sparingly puberulous outside; fruits glabrous:2
- Petals very unequal in length, the posterior one much longer and broader than the others; inflorescence a cluster of racemes or sparingly branched panicles; bracts up to 0·5 cm. long; fruits tomentellous or minutely puberulous, rarely glabrous:3
- 2 Bracts 5–7 cm. long, 1·8–2·5 cm. broad, enclosing the flower-buds until opening, the unopened part of the inflorescence thus head-like and wrapped in the imbricating bracts; bracteoles elliptic-ob lanceolate, 5–8 cm. long, 1–2 cm. broad, sparingly puberulous to glabrous within; pedicels 1–3 cm. long; leaflets 4–5 pairs, subopposite, obovate-elliptic rounded or obtuse at base, acuminate, 10–36 cm. long, 4–13·5 cm. broad, with 10–15 pairs of lateral nerves; rhachis up to 30 cm. long, petiolules 6–10 mm. long; fruits with stipe 2–2·5 cm. long, oblong, 27–36 cm. long, 9–10 cm. broad, upper suture 1 cm. broad, marked by a double groove .. [1. bracteosa](#)
- Bracts up to 2·7 cm. long and 1·4 cm. broad, enclosing only the very young buds, the older buds thus conspicuous; bracteoles obovate-ob lanceolate, 4–5 cm. long, 1·5–2 cm. broad, densely puberulous to tomentellous within; pedicels 2–4·8 cm. long; leaflets 4–5 pairs (rarely 1–3), subopposite, obovate-elliptic to oblong-elliptic, rounded or obtuse at base, acuminate, 9–25 cm. long, 3·2–9 cm. broad, with 10–13 pairs of lateral nerves; rhachis up to 30 cm. long, petiolules up to 1 cm. long; fruits with stipe 2–3 cm. long, oblong, 28–36 cm. long, 9–11 cm. broad, upper suture grooved [2. occidentalis](#)
- 3 Bracteoles densely silky-villous inside, tomentellous outside, about 3 cm. long; calyx-tube glabrous or pubescent; posterior petal about 4–6 cm. long; leaflets 3–6 pairs, elliptic-obovate or oblong-elliptic, subfalcate, acuminate at apex, 8–16 cm. long, 3–6 cm. broad, puberulous or nearly glabrous beneath; fruits 20–30 cm. long, 5–7 cm. broad, tomentellous [3. grandiflora](#)
- Bracteoles shortly pubescent, puberulous, or nearly glabrous inside, usually more densely hairy outside:4
- 4 Calyx-tube and lobes glabrous or sparingly puberulous outside, or rather densely puberulous down one side only:5
- Calyx-tube and lobes (at least in part) densely tomentose outside; bracteoles puberulous or tomentellous within; inflorescences densely tomentellous:8
- 5 Bracteoles 1·8–2·2 (–2·7) cm. long, 0·8–1·1 cm. broad; calyx-tube 7–8 mm. long; posterior petal 4·5–5 cm. long, 2·5–3 cm. broad; inflorescence a cluster of racemes, up to 10 cm. long, pedicels 1–1·5 cm. long; inflorescence and outside of bracteoles finely puberulous, the surface usually being clearly visible between the hairs; leaflets 2–3 pairs, thinly coriaceous, obliquely oblong or obovate-oblong or oblanceolate-oblong, (6–) 12–25 cm. long, (3·5–) 4·5–9·5 cm. broad, the upper pair larger than the lower pair or pairs; fruits not known [4. auriculata](#)
- Bracteoles 3–4·2 cm. long, 1–2·1 cm. broad; calyx-tube 1–1·7 cm. long; posterior petal 3·5–6 cm. broad; pedicels 1·2–3·5 cm. long:6
- 6 Outside of bracteoles densely minutely tomentellous; leaflets papery or very thinly coriaceous:7
- Outside of bracteoles very finely puberulous; leaflets thickly coriaceous, (1–) 2–3 pairs, oblong, 10–25 cm. long, 5–13 cm. broad; bracteoles 3·5–3·8 cm. long and 1·7–2·1 cm. broad; posterior petal 6·5–7 cm. long and 4·5–6 cm. broad; fruits 33–47 cm. long, 11–12 cm. broad, minutely pustulate, nearly glabrous [7. coriacea](#)
- 7 Leaflets (2–) 3–5 pairs, the surfaces discolorous when dry, ultimate venation usually obscure, obliquely oblong to oblong-ovate, acuminate and usually emarginate at apex, 5·5–12 (–17) cm. long, 3–6·5 (–9) cm. broad; bracteoles 3–3·7 cm. long, 1–1·5 cm. broad; calyx-tube usually more or less puberulous; posterior petal 4·5–5 cm. long, 3·5–4·5 cm. broad; fruits up to 45 cm. long and 9 cm. broad, minutely scurfy-puberulous [5. confusa](#)
- Leaflets 2 (–3) pairs, the surfaces concolorous when dry, ultimate venation prominulous on both surfaces, oblong-elliptic or oblong-obovate, shortly and obtusely acuminate, 10–16 cm. long, 6–8 cm. broad; bracteoles

3.7–4.2 cm. long, 8–11 mm. broad; calyx-tube usually with a densely puberulous line down the back; posterior petal 4–4.5 cm. long, about 5 cm. broad; fruits about 32 cm. long, and 8–9 cm. broad, densely yellow-brown tomentellous [6. *congolensis*](#)

- 8 Bracteoles 2.3–2.8 cm. long, 1–1.5 cm. broad; pedicels 1.4–2.8 cm. long; posterior petal (3.4–) 4–4.5 (–5) cm. long, 2.5 cm. broad, deeply 2-lobed; inflorescence to about 16 cm. long; leaflets (2–) 3–5 pairs, oblong-elliptic, to obovate-elliptic or ovate-elliptic, often long-acuminate at apex, 7–25 cm. long, 3–10 cm. broad [8. *tomentella*](#)

Bracteoles 4.5–6 cm. long, 1.4–2.8 cm. broad; pedicels 4–6 cm. long; posterior petal 6–7 cm. long, 5.5–8 cm. broad; inflorescence up to 30 cm. long; midrib and lateral nerves puberulous beneath: [9](#)

- 9 Bracteoles obovate, 4.5–4.8 cm. long, 2–2.8 cm. broad; leaflets 4–6 pairs, narrowly oblong-elliptic to obovate-elliptic, long-acuminate at apex, 5.5–18 cm. long, 2.8–8 cm. broad; young fruits brown-puberulous, not known at maturity [9. *craibiana*](#)

Bracteoles oblanceolate, about 6 cm. long and 1.4 cm. broad; leaflets 3–4 pairs, elliptic-lanceolate, very long-tapered-acuminate at apex, up to 16 cm. long and 6 cm. broad; fruits not known [10. *hollandii*](#)

1. ***Berlinia bracteosa* Benth.** — F.T.A. 2: 294; Bak. f. Leg. Trop. Afr. 3: 686; Pellegr. Lég. Gab. 62. **APD acc**

40. JULBERNARDIA

Pellegr. in *Boissiera* 7: 298 (1943).

- 1 Leaflets usually 3 pairs (rarely 2 or 4), with the lowest pair inserted close to the base of the 4–11 cm. long rhachis, petiolules twisted; leaflets elliptic to obovate-elliptic, acute at each end, 4–20 cm. long, 2–8.5 cm. broad, the lowest pair always the smallest, glabrous, with numerous translucent gland-dots; inflorescence and outside of flowers densely golden-brown tomentose; flowers with pedicels 3–5 mm. long; sepals 5, free, subequal; petals 5, of which 4 are minute and the other is obovate, about 17 mm. long and 6 mm. broad; fruit a flat woody pod, obtuse at apex, 12–20 cm. long, 4.5–5.5 cm. broad, glabrous; seeds 1–5 *seretii*

Julbernardia seretii (*De Wild.*) *Troupin* in *Bull. Jard. Bot. Brox.* 20: 312, fig. 32 (1950); Hauman in *FI Congo Beige* 3: 400, fig. 32. *APD acc*

Berlinia seretii *De Wild.* (1907); Bak. f. *Leg. Trop. Afr.* 3: 690.

Julbernardia ogoouensis *Pellegr.* (1943) — *Lég. Gab.* 69.

Forest tree, to 130 ft. high, with buttresses; flowers strongly scented; petals white or light pink.

S. Nig.: Oban Talbot 1586! **Br. Cam.:** Victoria to Kumba road (Mar.) Onochie FHI 32084! S. Bakundu F.R. (Apr.) Ejiofor FHI 29310!

Also in **French Cameroons**, **Gabon**, **Cabinda** and **Belgian Congo**.

41. PARABERLINIA

Pellegr. in Bull. Soc. Bot. Fr. 90: 79 (1943).

- 1 Leaflets 1 pair, narrowly oblong-falcate, unequal at base, gradually acute at apex, 10–17 cm. long, 3–4 cm. broad, glabrous, petiole about 8 mm long, petiolules very short; inflorescence and outside of flowers densely golden-brown tomentose; flowers mostly sessile or with pedicels up to 5 mm. long; sepals 5, free, subequal; petals 5, minute; fruit a flat woody pod, 13–15 cm. long, 4–4.7 cm. broad, glabrous, seeds 2–3 [bifoliolata](#)

Paraberlinia bifoliolata *Pellegr.* in Bull. Soc. Bot. Fr. 90: 79 (1943); Lég. Gab. 68.

APD: *Synonym of Julbernardia pellegriniana Troupin*

Julbernardia pellegriniana *Troupin* in Bull. Jard. Bot. Brux. 20: 311 (1950).

Forest tree, to about 150 ft. high, with buttresses and straight bole.

Br. Cam.: Banga, Kumba Div. (fl. buds Mar., fr. Aug.) Brenan 9312! Ejiofor FHI 15255! Olorunfemi FHI 30706!

Also in **Gabon**.

42. ANTHONOTHA

P. Beauv. Fl. Oware 1: 70 (1806). *APD acc*

- 1 Leaflets glabrous beneath (or if puberulous then inflorescence very long); inflorescences mostly very long, narrow and pendulous:2
 Leaflets very shortly tomentellous or tomentose, or pubescent beneath; inflorescence usually up to 35 cm. long:8
- 2 Leaf-rhachis winged, 4–28 cm. long; leaflets 2–4 pairs, the lowest pair very close to the stem, elliptic-oblongate, gradually narrowed to the base, acuminate at apex, 8–32 cm. long, 3.5–11 cm. broad; inflorescence borne on the trunk and older branches, pendulous, axis 30–90 cm. long, lateral branches very short; bracteoles 9–10 mm. long; petals 5, subequal, 11–12 mm. long; fruit oblong, about 23 cm. long and 7.5 cm. broad, brown-tomentellous, with 6–8 seeds1. [leptorrhachis](#)
 Leaf-rhachis not winged:3
- 3 Petals 4–6, subequal:4
 Petals 5, of which 3 are 0.7–2 cm. long and subequal, and the other 2 minute:7
- 4 Inflorescence generally under 20 cm. long; bracteoles 7–8 mm. long; leaflets 2–3 pairs, elliptic to lanceolate-elliptic, generally cuneate at base, gradually caudate-acuminate at apex, 7–18.5 cm. long, 3–7 cm. broad, with 5–6 pairs of arcuate, ascending, lateral nerves, rather prominent beneath; rhachis 4–10 cm. long; fruits not known2. [isopetala](#)
 Inflorescence 20–120 cm. long:5
- 5 Stipules persistent, oblanceolate, obtuse, leathery, 5–7 mm. long; leaflets 2 pairs, ovate to obovate, rounded to cuneate at base, 7–12.5 cm. long, 4–6 cm. broad, with about 5 pairs of arcuate, ascending, lateral nerves, prominent beneath; rhachis 3.5–5.5 cm. long; axis of inflorescence about 30 cm. long, lateral branches up to 4.5 cm. long; bracteoles about 1 cm. long; petals 5; fruits not known3. [elongata](#)
 Stipules very early caducous or small and inconspicuous:6
- 6 Lateral nerves or leaflets 9–16, prominent beneath and conspicuously looped near the margin; leaflets 2–3 pairs, elliptic to obovate-lanceolate, obtuse at base, shortly acuminate at apex, 9–27 cm. long, 4–9 cm. broad, puberulous to glabrescent; rhachis 6.5–16 cm. long; axis of inflorescence 25–90 cm. long; lateral branches up to 1.5 cm. long; bracteoles 7–11 mm. long; petals 5, 8–9 mm. long; fruits obliquely oblong, about 10 cm. long and 3 cm. broad, densely tomentellous, with numerous transverse ridges; seeds 3–44. [nigerica](#)
 Lateral nerves of leaflets 7–9, not conspicuously looped; leaflets 3 (rarely 4) pairs, mostly obovate or elliptic rounded or obtuse at base, shortly acuminate or rounded at apex, upper leaflets 15–20 cm. long, 6–8 cm. broad, lower leaflets 6.5–10 cm. long, 3.5–5 cm. broad; rhachis 9–20 cm. long; inflorescences on shoots with reduced leaves arising from older twigs, axis 25–60 cm. long, lateral branches up to 7 cm. long, rather distant; bracteoles 1–1.4 cm. long; petals 4–5, 1–1.5 cm. long; fruits not known5. [obanensis](#)
- 7 Bracteoles about 1 cm. long; developed petals up to 2 cm. long; inflorescence axis to 120 cm. long, with lateral branches up to 4 cm. long; leaflets 2–3 pairs, obovate-oblongate to oblong-oblongate, cuneate at base,

- acuminate at apex, upper pair up to 22 cm. long and 9.5 cm. broad, lower pair up to 7 cm. long and 3.5 cm. broad; fruit not known [6. *ernae*](#)
- Bracteoles 5–8 mm. long; developed petals 7–8 mm. long; inflorescence axis 22–45 cm. long, with very short lateral branches; leaflets 2–3 pairs, ovate or oblong-elliptic, rounded to cuneate at base, acuminate at apex, 4.5–12 cm. long, 2.5–5 cm. broad, lateral nerves 4–6 pairs; mature fruit not known [7. *explicans*](#)
- 8 Petals 4, all developed and subequal, up to 8 mm. long, or only 1–3 developed and the others minute; leaflets reddish-brown pubescent beneath especially near midrib and nerves, sometimes eventually almost glabrous; leaflets 2–4 pairs, ovate to elliptic, rounded to obtuse at base, gradually caudate-acuminate, 7–18 cm. long, 3–5 cm. broad, with 5–8 pairs of lateral nerves, ascending, arcuate, looped and rather prominent beneath; rhachis 3–12 cm. long; flowers numerous in terminal panicles 5–15 cm. long; bracteoles 7–10 mm. long; fruits oblong, thick, 10–12 cm. long, 4–5.5 cm. broad; seeds 1–2, large [8. *vignei*](#)
- Petals 5, only the posterior one developed, the other 4 minute; leaflets very shortly tomentellous, or tomentose beneath: [9](#)
- 9 Undersurface of leaflets ferrugineous-tomentose, with lateral nerves prominent; branchlets densely ferrugineous-tomentose: [10](#)
- Undersurface of leaflets very shortly tomentellous and silvery; lateral nerves only slightly prominent beneath; leaflets usually 3 pairs, elliptic, oblong or obovate, up to 30 cm. long and 12 cm. broad; branchlets grey, puberulous or glabrescent; inflorescences on young or 1–2 year old shoots: [11](#)
- 10 Bracteoles 5–8 mm. long; posterior petal 7–8 mm. long; inflorescence axillary, terminal or on old wood, axis 8–35 cm. long, with numerous lateral racemes or panicles 2–12 cm. long; leaflets 2–5 pairs, elliptic, obovate-elliptic or oblong, rounded or obtuse at base, shortly acuminate at apex or more often appearing rounded by the destruction of the tip, 6–38 cm. long, 4–13.5 cm. broad, densely ferrugineous-tomentose beneath, with 12–24 pairs of lateral nerves prominent beneath; rhachis 5–35 cm. long; fruits oblong, thick, 3.5–12 cm. long, 4.5–6 cm. broad, 1.5–3 cm. thick, tomentellous, with numerous prominent anastomosing ridges, tardily dehiscent, valves not curling; seeds 1–3, large [9. *fragrans*](#)
- Bracteoles 11–12 mm. long; posterior petal up to 1.5 mm. long; inflorescences on the wood of several seasons' growth, axis 9–30 cm. long, with rather isolated lateral racemes up to 6 cm. long; leaflets 4–7 pairs, more or less elongate-oblong, rounded or obtuse at base, caudate-acuminate, 15–28 cm. long, 5–7 cm. broad, densely silky-tomentose beneath, with 9–16 pairs of lateral nerves, rhachis 25–30 cm. long; fruits not known [10. *lamprophylla*](#)
- 11 Upper suture of fruit about 5 mm. broad, not broader than the lower; fruits more or less flattened, 15–23 cm. long, 4–6.5 cm. broad, usually rather dark brown tomentellous, 2–7-seeded, tardily dehiscent; inflorescences 2–28 cm. long, rather laxly flowered; bracteoles 6–11 mm. long; leaflets acuminate to long-acuminate [11. *macrophylla*](#)
- Upper suture of fruit at least 1.2 cm. broad, distinctly broader than the lower; fruits stout, 7–15 cm. long, 3.5–8 cm. broad, pale brown-tomentellous, 1–4-seeded, apparently indehiscent, on short stout stipes; inflorescences up to 4 cm. long, very densely flowered; bracteoles 5–6 mm. long; leaflets very short acuminate or more often appearing rounded by the destruction of the tip [12. *crassifolia*](#)

1. *Anthonotha leptorrhachis* (Harms) J. Léonard in Bull. Jard. Bot. Brux. 25: 202 (1955).

APD: *Synonym of Isomacrolobium leptorrhachis* (Harms) Aubrév. & Pellegr.

Macrolobium leptorrhachis Harms in Engl. Bot. Jahrb. 33: 157 (1902); Pellegr. Lég. Gab. 46.

Forest tree, to 50 ft. high, cauliflorous.

Br. Cam.: S. Bakundu F. R. (young fr. Aug.) Olorunfemi FHI 30737!

Also in French Cameroons.

2. *Anthonotha isopetala* (Hanns) J. Léonard l.c. 202 (1955).

APD: *Synonym of Isomacrolobium isopetalum* (Harms) Aubrév. & Pellegr.

Macrolobium isopetalum Harms in Engl. Bot. Jahrb. 40: 25 (1907); Pellegr. l.c. 44.

Small forest tree; flowers white.

Br. Cam.: Mamfe (Feb.) Lobe Babute 6/37!

Also in French Cameroons and Gabon.

3. *Anthonotha elongata* (Hutch) J. Léonard l.c. 202 (1955).

APD: Synonym of Isomacrolobium obanense (Baker f.) Aubrév. & Pellegr.

Macrolobium elongatum Hutch. in Kew Bull. 1916: 229.

A small branching tree with long narrow finely brownish-puberulous pendulous inflorescences of white flowers.

S. L.: Pujehun (Feb.) Lane-Poole 161!

4. *Anthonotha nigerica* (Bak. f.) J. Léonard l.c. 202 (1955).

APD: Synonym of Isomacrolobium nigericum (Baker f.) Aubrév. & Pellegr.

Macrolobium leptorrhachis var. *nigericum* Bak. f. in Cat. Talb. 29 (1913); Leg. Trop. Afr. 3: 671.

M. nigericum (Bak. f.) J. Léonard in Fl. Congo Belge 3: 416 (1952).

Small forest tree.

S. Nig.: Oban Talbot 582!

Also in Belgian Congo.

5. *Anthonotha obanensis* (Bak. f.) J. Léonard in Bull. Jard. Bot. Brux. 25: 203 (1955).

APD: Synonym of Isomacrolobium obanense (Baker f.) Aubrév. & Pellegr.

Macrolobium obanense Bak. f. in Cat. Talb. 28 (1913); Leg. Trop. Afr. 3: 670.

Forest tree, to 32 ft. high, with long, pendulous dark brown inflorescences; petals white.

S. Nig.: Idanre Hills (Oct.) Brenan 8669! Ubulubu (Jan.) Thomas 2260! Utanga, Obudu Div. (Dec.) Keay & Savory FHI 25143! Oban Talbot 1428! 1468! Degema Talbot 3714!

6. *Anthonotha ernae* (Dinkl.) J. Léonard l.c. 202 (1955).

APD: Synonym of Isomacrolobium obanense (Baker f.) Aubrév. & Pellegr.

Macrolobium ernae Dinkl. in Fedde Rep. 42: 157 (1937).

Shrub or small tree, near the coast.

Lib.: Zinkor, Monrovia (Feb.) Dinklage 2805.

7. *Anthonotha explicans* (Baill.) J. Léonard l.c. 202 (1955).

APD: Synonym of Isomacrolobium explicans (Baill.) Breteler

Vouapa explicans Baill. in Adansonia 6: 181 (Oct. 1865).

Macrolobium heudelotii Planch. ex Benth. in Trans. Linn. Soc. 25: 308 (Nov. 1865); F.T.A. 2: 298; Chev. Bot. 228; F.W.T.A., ed. 1, 1: 347, partly (excl. Sc. Elliot 4800 and frt. descr.); Aubrév. Fl. For. Soud.-Guin. 239, t. 49, 1–2.

M. explicans (Baill.) Keay in Kew Bull. 1953: 490 (1954).

Scandent shrub or small tree to 25 ft. high.

Fr. G.: Fouta Djallon Heudelot 738! Kindia fide Chev. l.c. **S. L.:** Afzelius! Blama, Juring (Dec.) Deighton 309! **Lib.:** Dukwia R. (Oct.) Cooper 100!

8. *Anthonotha vignei* (Hoyle) J. Léonard l.c. 203 (1955).

APD: Synonym of Isomacrolobium vignei (Hoyle) Aubrév. & Pellegr.

Macrolobium vignei Hoyle in Kew Bull. 1933: 171.

M. sp. aff. obanense of Aubrév. Fl. For. C. Iv. 1: 236, t. 89.

Forest tree, with spreading crown, to 80 ft. high; petals white; fruits velvety, dark brown.

S. L.: Gola Forest (Apr.) Small 624! 628! 635! **Lib.:** Grand Bassa Dinklage 1972! Lakrata (Apr.) Bequaert 187! Sarbo (fr. July) Baldwin 6384! Brewersville (fr. Dec.) Baldwin 10948! Suen (fr. Nov.) Baldwin 10450! **IV. C.:** Banco, Toulépleu &

M. dawei Hutch. & Burt Davy in F.W.T.A., ed. 1, 1: 347 (1928); Kew Bull. 1928: 398.

Forest tree, to 120 ft. high; petals blue.

Fr. G.: Ditinn Cochet 51. Kindia Pobéguin 1265; 1289. S. L.: Dawe 28! Bunkababe (May) Lane-Poole 121! Kenema (June) Aylmer 88! Tabe (young fr. Sept.) Deighton 3059! Njala (fl. & fr. May) Small 27! 28!

Also in French Cameroons, Ubangi-Shari, French Congo and Belgian Congo, Kenya and Tanganyika.

44. **PELLEGRINIODENDRON**

J. Léonard in Bull. Jard. Bot. Brux. 25: 203 (1955).

- 1 Tree; branchlets glabrous; stipules triangular, about 3 mm. long; leaves glabrous with a single pair of leaflets; petiole about 5 mm. long, with a pair of stipellae at the top, subtending the very short petiolules; leaflets obliquely oblong-ob lanceolate, unequal at the base (proximal side rounded, the distal side cuneate), rounded towards the apex, apex itself twisted, usually shortly acuminate and with a horny mucro, 6–23.5 cm. long, 1.5–7.5 cm. broad; both surfaces of leaves strongly reticulate, with two glands within the margin on each side; panicles terminal, composed of densely flowered racemes 2–3 cm. long; axis of racemes marked by the scars of the fallen pedicels and the short thick bracts; pedicels 6–8 mm. long; bracteoles 7–8 mm. long; sepals 5, lanceolate, subequal, about 3 mm. long; petals 5, the posterior one with a 3–4 mm. long claw and a 2-lobed limb, each lobe suborbicular and about 4 mm. broad, the other 4 petals similar to the sepals; fertile stamens 3, with an intrastaminal ring bearing staminodes; fruits obliquely oblong, flat, 9–10 cm. long, 3.5–4.5 cm. broad, valves glabrous, with no ridges, curling on dehiscence; seeds 1–3 [diphyllum](#)

Pellegriniodendron diphyllum (Harms) J. Léonard l.c. (1955).

APD: *Synonym of Gilbertiodendron diphyllum* (Harms) Estrella & Devesa

Macrobium diphyllum Harms in Engl. Bot. Jahrb. 30: 84 (1901); Aubrév. Fl. For. C. Iv. 1: 232, t. 86; Pellegr. Lég. Gab. 48.

M. reticulatum Hutch. in Chipp, Gold Coast Trees 20 (1913), name only.

Understorey forest tree, to 80 ft. high; pedicels and bracteoles pink, large petal white, stamens red.

IV. C.: Banco & Agboville (fl. Nov., fr. Dec.) Aubrév. 368; 508; 509. G. C.: Tanosu (Dec.) Chipp 35! Ankassa, W. Applonia Chipp 327! Tano Rapids (fr. Sept.) Chipp 376! Axim (fr. Feb.) Irvine 2182!

Also in French Cameroons and Gabon.

45. GILBERTIODENDRON

J. Léonard in Bull. Jard. Bot. Brux. 22: 188 (1952).

- 1 Bracteoles 3–5 cm. long, or more; sepals 4 or 5; stamens 3 or 9; posterior petal 9–15 cm. long, 5.5–15 cm. broad: [2](#)
 Bracteoles up to 2 cm. long; sepals 5; stamens 3; posterior petal up to 3 cm. long and broad: [4](#)
- 2 Stamens 9; bracteoles 4.5–5 cm. long, or more, 2.5–3 cm. broad; sepals 4; posterior petal 9–15 cm. long and broad, pink; pedicels 4–5.5 cm. long; stipules ovate-lanceolate, connate for 1/2 their length, 5–9 cm. long, with reniform appendages 4–10 cm. diam.; leaflets 2–4 pairs, the upper leaflets up to 55 cm. long and 16 cm. broad, the lowest leaflets as little as 8 cm. long and 3 cm. broad; fruits oblong, up to 60 cm. long and 13 cm. broad, dark brown-tomentellous, with 3 strong longitudinal ridges [1. splendidum](#)
 Stamens 3; bracteoles 3–4.5 cm. long; posterior petal white or yellow; stipules without appendages: [3](#)
- 3 Leaflets 2 pairs; sepals 4; bracteoles 3.5–4.5 cm. long, 2–2.7 cm. broad, puberulous outside; posterior petal about 10 cm. long (including the 2.5 cm. long claw) and 12.5 cm. broad, yellow; pedicels 3–3.5 cm. long; stipules ovate-lanceolate, connate, 2–4 cm. long, 1.3–2 cm. broad; upper leaflets 22–45 cm. long, 8–16 cm. broad, lower leaflets 9–21 cm. long, 5–9 cm. broad; fruits with 2 longitudinal ridges (not known at maturity) [2. grandiflorum](#)
 Leaflets 4–7 pairs; sepals 5; bracteoles 3–3.5 cm. long, 2–2.3 cm. broad, densely tomentellous outside; posterior petal 10–12 cm. long (including the 3–6 cm. long claw) and 5.5–7 cm. broad, 2-lobed, white; pedicels 1.5–4 cm. long; stipules ovate-lanceolate, 3–3.5 cm. long, 0.8–1.2 cm. broad; leaflets 8–25 cm. long, 4–9 cm. broad; fruits oblong-obovate, up to 12 cm. long and 5 cm. broad (? at maturity) glabrescent, with 2 longitudinal ridges [3. ivorense](#)
- 4 Bracteoles 1–2 cm. long: [5](#)
 Bracteoles 0.5–0.6 cm. long: [11](#)
- 5 Pedicels 2–4 cm. long; posterior petal wine-red, 1.7–2.8 cm. long (including the 0.7–1 cm. long claw), 2.5–2.8 cm. broad; stipules ovate-lanceolate, 2–8 cm. long, 1.6–4 cm. broad, with 2 reniform appendages, one 0.6–2.5 cm. long, 1–4.3 cm. broad, the other smaller; leaflets 3 pairs (more rarely 2, or 4–5), densely papillose beneath and usually puberulous by the midrib, 9–30 (–50) cm. long, 3.5–18 cm. broad; rhachis 2–15 cm. long; fruit oblong to oblong-obovate, 15–30 cm. long, 6–9 cm. broad, densely brown-tomentellous, with 1 longitudinal ridge [4. dewevrei](#)
 Pedicels up to 2 cm. long; colour (where known) of standard petals white or cream: [6](#)
- 6 Stipules and/or stipular appendages more or less persistent: [7](#)
 Stipules and appendages very early caducous, or absent: [10](#)
- 7 Leaflets 2–4 pairs; fruits with 1–2 longitudinal ridges: [8](#)
 Leaflets 4–7 pairs, up to 25 cm. long and 7 cm. broad, glabrous beneath, rhachis 10–25 cm. long, soon glabrous; stipules up to 5 cm. long and 1 cm. broad, with reniform appendages, 1.7–2.2 cm. diam., more or less persistent; pedicels 1.5–2 cm. long; tomentellous; bracts subpersistent; bracteoles 1–1.3 cm. long; posterior petal about 2 cm. long (including the 1 cm. long claw), deeply 2-lobed, with the lobes about 1 cm. broad; fruit oblong, up to 30 cm. long and 9 cm. broad, tomentellous to glabrescent, with 2–3 strong longitudinal ridges [8. bilineatum](#)
- 8 Stipules up to 1 cm. long, with reniform appendages up to 3 cm. diam.; leaflets 2–3 (rarely 4) pairs, puberulous by midrib beneath; posterior petal about 2–8 cm. long (including the 1 cm. long claw), deeply 2-lobed, with the lobes 1.3–1.4 cm. broad; fruit glabrescent: [9](#)
 Stipules 1–5 cm. long, without reniform appendages; leaflets 3–4 pairs, up to 22 cm. long and 7.5 cm. broad with numerous looped lateral nerves very prominent beneath, midrib glabrous beneath, rhachis stout, 8–12 cm. long, glabrous; pedicels 1–1.5 cm. long, hirsute; bracteoles about 1 cm. long; posterior petal 1.6 cm. long (including the 0.6 cm. long claw), deeply 2-lobed, with the lobes about 1 cm. broad; fruit glabrescent [7. demonstrans](#)
- 9 Fruit with 1 longitudinal submedian ridge, up to 20 cm. long and 5 cm. broad; rhachis of leaves hirsute, 1.5–8 cm. long; leaflets 9–22 cm. long, 3.5–9 cm. broad; pedicels 1.2–2 cm. long, hirsute; bracteoles 1.2–1.6 cm. long [5. limba](#)
 Fruit with 2 longitudinal ridges (one submedian, the other submarginal), 10–12 cm. long, about 5 cm. broad; rhachis of leaves glabrous, 1.5–18 cm. long; leaflets 6.5–30 cm. long, 2–10.5 cm. broad; pedicels 1–1.5 cm. long, shortly tomentose; bracteoles 1–1.4 cm. long [6. mayombense](#)
- 10 Leaflets 3–5 pairs; midrib glabrous beneath; leaflets up to 18 cm. long and 5.5 cm. broad, glossy, rhachis 7–20 cm. long, glabrous; bracts very early caducous; pedicels about 1.5 cm. long; bracteoles about 1 cm. long; fruit oblong, up to 25 cm. long and 6 cm. broad, glabrescent, with 1 longitudinal ridge and occasionally a second less distinct ridge near the upper margin [9. preussii](#)
 Leaflets 7 pairs; midrib hirsute beneath; leaflets up to 15 cm. long and 4.5 cm. broad with numerous looped

lateral nerves prominent beneath; rhachis 26 cm. long, hirsute; pedicels and bracteoles each about 1.3 cm. long; fruit not known [10. obliquum](#)

- 11** Leaflets 2 pairs; stipules caducous (not seen); leaflets obovate to oblanceolate, up to 18 cm. long and 7 cm. broad, sometimes much smaller, but upper pair always larger than the lower, glabrous, rhachis 1–4 cm. long; pedicels 1.2–1.4 cm. long; posterior petal about 1.6 cm. long (including the 0.5 cm. long claw), 2-lobed, the lobes about 0.6 cm. broad; ovary glabrous except for the villous margins; fruit glabrescent, with 1 longitudinal ridge (not known at maturity) [11. aylmeri](#)

Leaflets 5–9 pairs, usually 7; stipules broadly ovate, about 1 cm. long, with reniform appendages; leaflets oblong to ovate-oblong, 2–7.5 cm. long, 1.3–3.5 cm. broad, with a single gland on the distal margin just above the petiole; pedicels 1.2–1.8 cm. long; posterior petal about 0.6 cm. long (including the 0.3 cm. long claw), 2-lobed, the lobes about 0.5 cm. diam.; ovary hirsute; fruit not known [12. brachystegioides](#)

1. Gilbertiodendron splendidum (A. Chev. ex Hutch. & Dalz.) J. Léonard in Bull. Jard. Bot. Brux. 24: 59 (1954). *APD acc*

Berlinia splendida A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 343 (1928); Kew Bull. 1928: 398; Chev. Bot. 230, name only.

Macrolobium splendidum (A. Chev. ex Hutch. & Dalz.) Pellegr. in Bull. Soc. Bot. Fr. 77: 667 (1931); Aubrév. Fl. For. C. Iv. 1: 236, t. 88.

Forest tree, to 80 ft. high; petals pink; in swamp forest.

S. L.: Kenema (fr. Oct.) King 284! Bagbe, Gola Forest (fl. June, fr. May) Small 706! 721! **Iv. C.:** Tébo (July) Chev. 19387! Massa-Mé Aubrév. 136! **G. C.:** Namachere, E. of Tarkwa (May) Chipp 234! Ajakwa Chipp 206! Cape Coast Dist. (May–June) Vigne FH 936! Bonsasu, Dompim Vigne FH 1970!

2. Gilbertiodendron grandiflorum (De Wild.) J. Léonard l.c. 22: 190 (1952); Fl. Congo Belge 3: 433. *APD acc*

Macrolobium grandiflorum De Wild. (1914), partly.

Forest tree, to 50 ft. high; petals lemon-yellow; in swamp forest by rivers.

Br. Cam.: Tedji, Bamenda (May) Johnstone 321!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

3. Gilbertiodendron ivorense (A. Chev.) J. Léonard l.c. 24: 58 (1954). *APD acc*

Berlinia ivorensis A. Chev. in Bull. Soc. Bot. Fr. 58, Mém. 8: 165 (1912).

Macrolobium ivorense (A. Chev.) Pellegr. in Bull. Soc. Bot. Fr. 69: 745 (1923); Aubrév. l.c. 1: 234.

M. chevalieri Harms (1922) — F.W.T.A., ed. 1, 1: 347.

Forest tree, to 65 ft. high, with clear bole and no buttresses; petals white.

Lib.: Mt. Barclay (June) Bunting 168! Dukwia R. (May) Cooper 427! R. Cess, Grand Bassa (fr. Mar.) Baldwin 11271! Jabroke, Webo (July) Baldwin 6426! Gletown, Tchien (July) Baldwin 6752! **Iv. C.:** Grabo (July) Chev. 19645! Tabou Aubrév. 1298.

[The specimens from Sierra Leone (Sc. Elliot 4221 and Thomas 498) cited as this species in F.W.T.A., ed. 1, 1: 347 are very doubtful. They are sterile except for detached fruits on Thomas 498 which probably do not belong to this species.)

4. Gilbertiodendron dewevrei (De Wild.) J. Léonard l.c. 22: 190 (1952); Fl. Congo Belge 3: 429, photo 15. *APD acc*

Macrolobium dewevrei De Wild. (1904) — Kennedy For. Fl. S. Nig. 102.

Forest tree, to 125 ft. high, with clear bole and no buttresses, bark yellowish-brown, scaly; petals wine-red; gregarious, often in swamp forest.

S. Nig.: Sapoba (Jan.) Kennedy 2121! 2548! Richards 3917! Degema Talbot 3737!

Also in **French Cameroons**, **Ubangi-Shari**, **Gabon**, French and **Belgian Congo** and **Angola**.

5. Gilbertiodendron limba (Sc. Elliot) J. Léonard l.c. 24: 59 (1954). *APD acc*

Macrolobium limba Sc. Elliot in J. Linn. Soc. 30: 77 (1894); F.W.T.A., ed. 1, 1: 347; Aubrév. l.c. 1: 234.

Forest tree, to 40 ft. high, with spreading crown and drooping branches; flowers white; in wet places.

Fr. G.: fide Aubrév. l.c. **S. L.:** Kurusu, Limba (Apr.) Sc. Elliot 5539! Kafogo, Limba (Apr.) Sc. Elliot 5606! Giehun (Apr.) Aylmer 222! Kafoko (fr. Sept.) Thomas 2111! **IV. APD: Synonym of Aphanocalyx microphyllus subsp. compactus (Hutch. ex Lane-Poole) Wieringa

Large [forest](#) tree.

[S. L.](#): Falaba (Apr.) Aylmer 30! Giehun (Apr.) Aylmer 226!

1. **Monopetalanthus sp. A.** “Toubaouate” of Aubrév. Fl. For. C. Iv. 1: 242, t. 95 A.

Large [forest](#) tree; stipules caducous; leaflets 15–30 pairs, emarginate at apex, midrib central; flowers not known.

[Iv. C.](#): Olodio to Grabo Avubrév. 1321!

Imperfectly known species.

2. **Monopetalanthus sp. B.**

[Forest](#) tree to 70 ft. high; stipules persistent, leafy; leaflets 28–32 pairs, rounded or slightly emarginate at apex, midrib central; flowers and fruits unknown.

[S. Nig.](#): Obutong, Calabar Onochie FHI 7798! Orem, Calabar Ejifor FHI 21893!

Imperfectly known species.

3. **Monopetalanthus sp. C.**

[Forest](#) tree or shrub; stipules caducous; leaflets 19–30 pairs, rounded or obtuse at apex, midrib diagonal from the corner of the base; flowers not known.

[Br. Cam.](#): FHI 12029!

Imperfectly known species.

48. BRACHYSTEGIA

Benth. — F.T.A. 2: 305.

- 1 Leaflets progressively larger from base to apex of the whole leaf, the terminal pair usually distinctly the largest, obliquely elliptic to obovate, glabrous or rarely puberulous; if leaflets obliquely lanceolate, then rarely more than 6 pairs, often less than 5 pairs:2
- Leaflets progressively larger from the base to the middle of the whole leaf, thence usually slowly decreasing to the smaller terminal pair; leaflets mostly obliquely lanceolate, narrowed to the obtuse or acuminate apex, very rarely oblanceolate or obovate, usually with stiff, spreading hairs on the midrib beneath; fruit as in *B. laurentii* but smaller:4
- 2 Basal pair of leaflets relatively very minute and appearing vestigial, 0.7–1 cm. long, shortly petiolulate, inserted at or very shortly above the apex of the pulvinus, usually early caducous but leaving a pair of minute scars; remaining leaflets 3–4 (–6) pairs, the terminal pair (6–) 7–10 (–15) cm. long, (2–) 3–5 (–6) cm. broad, obliquely lanceolate to obovate, more or less falcate and often acuminate, the middle pairs usually smaller or at least narrower; fruit (15–) 20–25 (–30) cm. long, (5–) 6–8 (–11) cm. broad, smooth, dark purplish or reddish brown, woody, upper suture broadly winged [1. laurentii](#)
- Basal pair of leaflets not relatively minute and not appearing vestigial, sessile like the others, normally persistent; if petiole very short and basal pair of leaflets very small (*B. nigerica*), then terminal pair rarely more than 5 cm. long, leaflets usually 7 or more pairs, and fruit rarely exceeding 14 cm. long and 5 cm. broad, coriaceous:3
- 3 Leaflets (4–) 5 (6) pairs, those of the terminal pair 5–10 (–15) cm. long, (2.5–) 3–5 (–7) cm broad, elliptic to oblanceolate; common petiole (10–) 13–20 (–30) mm. long; fruit woody, transversely nervose, rather pale brown, normally 16–22 cm. long, 5–6 cm. broad, the upper suture with a conspicuous spreading wing 5–6 mm. broad on each side [2. eurycoma](#)
- Leaflets (5–) 6–8 (–9) pairs, those of the terminal pair (2–) 3–5 (–7) cm. long, (1–) 1.5–2 (–3.5) cm. broad, broadly elliptic to obovate; common petiole 4–7 mm. long; fruit thickly coriaceous, smooth, dark purplish

brown, normally 12–14 cm. long, 4–5 cm. broad, the wing of the upper suture not conspicuous, 2–3 mm. broad on each side [3. nigerica](#)

- 4 Leaflets (6–) 8–10 (–12) pairs, mostly obliquely cuneate at base; usually 2, at most 3, nerves departing fanwise beside the midrib on the broader side of the base of the leaflet; style leaving the ovary at a right angle; staminal tube scarcely 0.5 mm. long, outside the disk-like rim of the receptacle-cup [4. leonensis](#)

Leaflets (5–) 6–7 (–8) pairs, mostly obliquely rounded or subcordate at base; usually 3, more rarely 4, nerves departing fanwise beside the midrib on the broader side of the base of the leaflet; style leaving the ovary at an angle of about 45°; staminal tube more or less irregular, 2–3.5 mm. long, gradually narrowed within to the obscure rim of the receptacle-cup. [5. kennedyi](#)

1. **Brachystegia laurentii** (*De Wild.*) *Louis ex Hoyle* in Fl. Congo Belge 3: 461 (1952). *APD acc APD acc*

Macrobium laurentii *De Wild.* Miss. Laur. 99, t. 37 (1905).

Brachystegia zenkeri *Harms* in Engl. Bot. Jahrb. 45: 298 (1910); Burt Davy & Hutch. in Kew Bull. 1923: 167; Bak. f. Leg. Trop. Afr. 3: 732.

A large, heavy-crowned, **forest** tree, to 150 ft. high, locally common near water, with cylindrical bole attaining 80 ft. high and 9 ft. girth; bark hard, tough, fibrous, at first smooth, silvery-grey, later brownish-grey, rough and flaking.

Br. Cam.: S. Bakundu F. R., Kumba (fr. Feb.) Ngalame FHI 24805!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

[The Cameroons (*B. zenkeri*) and Gabon forms of the species differ from some Belgian Congo forms in having fewer, more pointed leaflets and more slender, glabrous rachis, while the little-known flowers are smaller and the perianth more reduced, but the differences hardly warrant specific rank.]

2. **Brachystegia eurycoma** *Harms* in Engl. Bot. Jahrb. 49: 424 (1913); Burt Davy & Hutch, l.c.; F.W.T.A., ed. 1, 1: 348, partly; Bak. f. l.c. 731, partly; Kennedy For. Fl. S. Nig. 103. *APD acc*

A large-crowned **forest** tree, to 120 ft. high, **common on stream-banks**, with buttressed bole to 25 ft. in girth and grey-green bark rough with woody flakes, red when cut, exuding red and yellow gum.

Hymenostegia minutifolia A. Chev. in Bull. Soc. Bot. Fr. 58, Mem. 8: 165 (1912).

A montane forest tree, 80–100 ft. high, with bole of 50–60 ft. and small bifoliolate leaves.

IV. C.: Toula to Nekaougnie, Middle Cavally (July) Chev. 19579!

4. **Cryptosepalum diphyllum** *Duvign. sp. nov.* c89f5 *APD acc*

A forest tree to 50 ft. high, with reddish-grey, smooth bark, glabrous branchlets, bifoliolate leaves, and short, slightly pubescent, axillary racemes.

S. Nig.: Ekang R., Oderige, Obubra (Apr.) A. P. D. Jones 1467!

5. **Cryptosepalum pellegrinianum** (*J. Léonard*) *J. Léonard* In Bull. Jard. Bot. Brux. 22: 210 (1952). *APD acc*

Pynaertiodendron pellegrinianum *J. Léonard* (1951).

A small tree with glabrous branchlets, unifoliolate leaves, and glabrous axillary racemes.

S. Nig.: Ukpon F.R., Ogoga Prov. Catterall 1!

Also In Gabon and Belgian Congo.

50. DIDELOTIA

Baill. — F.T.A. 2: 307.

1 Leaves 2 or more foliolate;.....2

Leaves 1-foliolate; petiole 5–7 mm. long, with a pair of small stipellae at the apex, usually early caducous; lamina ovate or elliptic-ovate, equal and rounded at base, gradually acuminate or acute at apex, 7–15.5 cm. long, 4–8 cm. broad; panicles narrow, 13–50 cm. long; pedicels 7–9 mm. long; bracteoles about 5 mm. long; fruits oblong with a single median longitudinal ridge, and sometimes a short basal one .. 4. *sp. nr. unifoliolata*

2 Leaflets 3–7 pairs:3

Leaflets 1 pair; flowers pedicellate, pedicels nearly 1 cm. long, shortly pubescent; leaflets together forming almost a circle, very oblique, acuminate, 7–13 cm. long, 3–6 cm. broad, glabrous; petiole 0.5–1 cm. long; racemes forming a long slender leafless panicle up to 20 or more cm. long; bracteoles obovate-elliptic3. *africana*

3 Leaflets 5– pairs, small, up to 3 cm. long and 1.3 cm. broad, oblong, very oblique at the base on one side, emarginate, glabrescent except on the midrib; racemes short, in the axils of the upper, often much smaller leaves, forming an elongated leafy panicle; stipules intrapetiolar, united into one; pedicels up to 1–3 cm. long, tomentose; bracteoles 2, broadly ovate, tomentose outside, 4–5 mm. long1. *engleri*

Leaflets 3–4 pairs, larger, 5–8 cm. long, obliquely oblong, emarginate, shining, glabrous; racemes paniculate, elongated; pedicels 5–8 mm. long; bracteoles 2, suborbicular, shortly pilose outside2. *afzelii*

1. **Didelotia engleri** *Dinkl. & Harms* In Engl. Bot. Jahrb. 30: 80 (1901); Bak.f. Leg. Trop. Afr. 3: 736. *APD acc*

A shrub or small tree; inflorescence narrow, drooping, up to 10 in. long; flowers scented, small, crimson.

Lib.: Grand Bassa, in moist woods near the sea (Aug.) Dinklage 2033!

2. **Didelotia afzelii** *Taub.* in E. & P. Pflanzenfam. 3, 3: 387 (1894); Harms in Engl. Bot. Jahrb. 26: 266; Bak. f. l.c. *APD acc*

Forest tree, to 20 ft. high; inflorescence pendulous; stamens and inside of bracts red.

S. L.: Afzelius! Dawe 29! Cons. of For. 38! Njala (fl. Oct., fr. Feb.) Deighton 2247! 2462! Mafindo Falls, Moa R. (fl. & fr. Feb.) Deighton 4003!

Widespread in the tropics.

Caesalpinia pulcherrima (Linn.) Sw.

Poinciana pulcherrima Linn.

A commonly cultivated shrub, a native of Asia but commonly known as “Pride of Barbados”

Caesalpinia decapetala (Roth) Alston *APD acc*

Caesalpinia sepiaria Roxb.

53. DELONIX

Raf. Fl. Tellur. 2: 92 (1837).

- 1 A tree; leaves bipinnate, up to 45 cm. long; pinnae 11–18 pairs; leaflets opposite, numerous, oblong, rounded and asymmetrical at base, rounded to mucronate at apex, about 1 cm. long and 2.5–4 mm. broad; flowers in lax terminal or subterminal racemes, glabrous; receptacle short, sepals oblong, 2–2.5 cm. long; petals 5, subequal in length, clawed, 3–5 cm. long, up to 5 cm. broad; stamens 10, free, up to 3 cm. long; fruit elongate-oblong, 30–60 cm. long, about 5 cm. broad, valves woody, glabrous, tardily dehiscent; seeds numerous, up to 2.5 cm. long and 6 mm. diam. [regia](#)

Delonix regia (Boj. ex Hook.) Raf. l.c. (1837). *APD acc*

Poinciana regia Boj. ex Hook. in Bot. Mag. t. 2884 (1829); F.T.A. 2: 266.

Commonly planted ornamental, known in West Africa as “Flame of the Forest” or “Flamboyant”, now subspontaneous in many localities; posterior petal variegated red and white, other petals red with orange claw.

A native of Madagascar, widely planted in the tropics.

54. BUSSEA

Harms in Engl. Bot. Jahrb. 33: 159 (1902).

- 1 Large tree; leaves bipinnate; leaflets alternate, oblong-elliptic, very long-acuminate, 6–10 cm. long, 3–4 cm. broad, laxly reticulate, glossy above, glabrous; flowers racemose; racemes about 20 cm. long; pedicels up to 1 cm. long, tomentose; sepals triangular-ovate, subacute, about 8 mm. long, rusty-brown-tomentellous when dry; petals crinkly, obovate, about 2 cm. long; filaments and style densely villous; fruit narrowly oblanceolate, woody with strongly recurved valves, about 15 cm. long and 3–5 cm. broad, densely brown-ferruginous when young [occidentalis](#)

Bussea occidentalis Hutch. in F.W.T.A., ed. 1, 1: 350 (1928); Kew Bull. 1928: 400; Aubrév. Fl. For. C. Iv. 1; 268, t. 105. *APD acc*

Widespread in tropical Africa.

57. ERYTHROPHLEUM

Afzel. ex R.Br. — F.T.A. 2: 320.

- 1 Leaflets acuminate; fruits usually rounded at each end, oblong, stipe more or less lateral, valves woody-leathery; seeds 5–10: 2
- Leaflets rounded or emarginate at apex, more or less obliquely oblong, unequal-sided at base, 3– cm. long, 1.3–2 cm. broad, softly pubescent when young; pinnae 2–4; leaflets alternate, 8–16 cm. each pinna; flowers in

densely pubescent panicles of spike-like racemes; fruits oblong to oblong-elliptic, attenuate-cuneate at base, alternate to rounded at apex, stipe more or less central, valves subcoriaceous, 7–19 cm. long, 2·2–4·5 cm. broad; seeds 2–5 [3. africanum](#)

- 2 Pedicels 1–2 mm. long; racemes 1–1·5 cm. diam., yellowish-brown tomentellous, in lax panicles; pinnae 2–3 (rarely 1 or 4) pairs; leaflets alternate, 10–13 on each pinna, ovate-elliptic, 5–9 cm. long, 3–5 cm. broad, usually pubescent on petiolule, midrib beneath and rhachis, usually drying pale green or greenish-brown; fruits tip to 15 cm. long and 5 cm. broad [1. guineense](#)

Pedicels up to 1 mm. long; racemes less than 1 cm. diam., reddish-brown tomentellous, in rather stiff panicles; leaves similar to above, but usually quite glabrous and drying blackish; fruits up to 10 cm. long and 3–5 cm. broad [2. ivorense](#)

1. **Erythrophleum guineense** *G. Don* — V.T.A. 2: 320; Aubrév. Fl. For. C. Iv. 1: 270; Fl. For. Soud.-Guin. 241; Wilczek in Fl. Congo Belge 3: 243, t. 18.

APD: Synonym of Erythrophleum suaveolens (Guill. & Perr.) Brenan

Large tree, with spreading crown, to 100 ft. high; flowers small, very fragrant, crowded in spike-like racemes; pods opening without scattering the seeds; [in the drier parts of the forest regions and in fringing forest.](#)

Stachyothyruif tessmannii *Harms* (1910).

Forest tree, to 200 ft. high, with cylindrical bole and well-developed plank-buttresses; flowers cherry-red; fruits black.

S. Nig.: Eba (fr. July) Kennedy 1720! Oban Gray 2/6! Also Ijebu Ode, Sapoba and Cameroons fide Kennedy l.c.

Also in **French Cameroons**, **Gabon**, **Spanish Guinea** and **Belgian Congo**.

MIMOSACEAE

Trees or shrubs, very rarely herbs. Leaves mostly bipinnate, rarely simply pinnate, often with large glands on the rachis. Flowers hermaphrodite, small, spicate, racemose or capitate, actinomorphic, usually 5-merous. Calyx tubular, valvate or very rarely imbricate, 5-lobed or toothed. Petals valvate, free or connate into a short tube. Stamens equal in number to the sepals or more numerous, free or monadelphous; anthers small, 2-celled, opening lengthwise, often with a deciduous gland at the apex. Ovary superior, of 1 carpel. Fruit mostly dehiscent. Seeds with scanty or no endosperm.

Mainly tropics and subtropics.

Often in dry regions and then frequently spiny; easily recognized by the usually bipinnate leaves and small flowers with valvate petals.

- | | | |
|---|---|-----------------------------------|
| 1 | Calyx-lobes imbricate: | 2 |
| | Calyx-lobes valvate or open from a very early stage: | 3 |
| 2 | Flowers bisexual in elongated paniculate spikes; stamens 5; staminodes several; fruit elongated, with the valves recurved when mature. | 1. Pentaclethra |
| | Flowers in dense short more or less club-shaped heads, the upper ones bisexual, the lower staminate or neuter; stamens 10; no staminodes; fruits 2-valved | 2. Parkia |
| 3 | Filaments free or united only with the disk at the base; flowers spicate or capitate: | 4 |
| | Filaments united into a short or long tube: | 20 |
| 4 | Stamens definite, as many as or up to twice as many as the petals: | 5 |
| | Stamens more than twice as many as the petals; flowers in spikes or heads; branchlets usually with spines or prickles. | 20. Acacia |
| 5 | Flowers in spikes or racemes: | 6 |
| | Flowers capitate: | 17 |
| 6 | All the flowers bisexual or at any rate sexual; branches without spines or prickles (but see No. 9): | 7 |
| | Upper flowers of the spikes bisexual, the lower neuter; fruits indehiscent twisted and crowded; leaves with glands; branches armed with spines terminating short lateral branchlets. | 14. Dichrostachys |
| 7 | Fruits dehiscent; | 8 |
| | Fruits indehiscent: | 14 |
| 8 | Valves of fruit remaining intact, not breaking into 1-seeded segments: | 9 |
| | Valves of fruit breaking into 1-seeded segments and leaving the continuous persistent sutures; branchlets prickly in <i>E. sclerata</i> only. | 9. Entada |
| 9 | Leaflets alternate; seeds flattened, winged: | 10 |
| | Leaflets opposite: | 11 |

- 10 Indumentum stellate; fruits very long, narrow, dehiscent along one margin only; flowers pedicellate, calyx and corolla puberulous outside; stamens with smooth filaments inserted on the side of a thin but conspicuous disk [5. *Cylicodiscus*](#)
- Indumentum not stellate; fruits very broadly oblong, dehiscent along both margins; flowers sessile, glabrous outside; stamens with densely papillose filaments inserted on the outside of a low thick disk. [8. *Fillaeopsis*](#)
- 11 Fruits dehiscent along both margins; valves woody, spirally twisted or recurving on dehiscence, usually conspicuously attenuate below; seeds not winged: **12**
- Fruits dehiscent along one margin only; valves thin; seeds flattened, winged: **13**
- 12 Flowers sessile; petals united below into a tube at least 1/3 as long as corolla; leaves with 1 pair of pinnae, rhachis glandular at their insertion; trees [3. *Calpocalyx*](#)
- Flowers pedicellate; petals free or nearly so; most leaves with 2 pairs of pinnae, rhachis not glandular; lianes or shrubs. [4. *Pseudoprosopis*](#)
- 13 Leaves without glands on rhachides; funicle of seeds attached in the middle; ovary and petals glabrous outside. [6. *Piptadeniastrum*](#)
- Leaves with glands on rhachides; funicle of seeds attached at one end; ovary and petals pubescent or puberulous outside. [7. *Newtonia*](#)
- 14 Fruits thin oblong, samaroid; leaves without glands on rhachides; leaflets opposite. [10. *Aubrevillea*](#)
- Fruits more or less turgid: **15**
- 15 Leaves with glands on rhachides; leaflets opposite; fruits subterete [11. *Prosopis*](#)
- Leaves without glands on rhachides; leaflets alternate: **16**
- 16 Fruits tetragonal, not winged. [12. *Amblygonocarpus*](#)
- Fruits with a fleshy wing-like ridge along the back of each valve [13. *Tetrapleura*](#)
- 17 Trees, shrubs or rarely herbs, not aquatic: **18**
- Aquatic herbs with some of the leaves submerged; leaves sensitive; pinnae 2–3 pairs; flowers capitate, on elongated peduncles, the upper ones bisexual, the lower neuter; anthers with a deciduous apical gland; fruit flat, glabrous [19. *Neptunia*](#)
- 18 Anthers tipped by a deciduous apical gland; valves of fruit woody and strongly elastic; large tree; pinnae 1 pair. [15. *Xylia*](#)
- Anthers without an apical gland; fruit not woody: **19**
- 19 Tree with smooth branchlets; pinnae about 5 pairs; fruits linear, flat, not prickly. [16. *Leucaena*](#)
- Slender trailer with quadrangular stems covered with numerous recurved prickles; pinnae 2–3 pairs; fruits linear, 4-ridged, prickly. [17. *Schrankia*](#)
- Shrubs or herbs; stems terete; pinnae several pairs; fruits flat, prickly or setose. [18. *Mimosa*](#)
- 20 Flowers in spikes; branches armed with stipular spines. [20. *Acacia*](#)
- Flowers capitate; branches without spines or prickles: **21**
- 21 Valves of fruit not separating elastically; stipules mostly inconspicuous, or caducous: **22**
- Valves of fruit separating elastically from the top downwards; stipules persistent, nervose. [24. *Calliandra*](#)
- 22 Fruit not jointed, oblong, with thin flat valves. [21. *Albizia*](#)
- Fruit with thick valves, not breaking up into 1-seeded segments. [22. *Samanea*](#)
- Fruit jointed and breaking up into 1-seeded segments, often curved or circinate [23. *Cathormion*](#)

***Pithecellobium dulce* (Roxb.) Benth.**

A native of tropical America, it has been introduced in W. Africa:

***Adenanthera pavonina* Linn.**

A native of tropical Asia, it has been introduced in W. Africa

***Enterolobium cyclocarpum* (Jacq.) Griseb.**

A native of tropical America, it has been introduced in W. Africa.

1. PENTACLETHRA

Benth. — F.T.A. 2: 322; *Benth.* in *Trans. Linn. Soc.* 30: 360 (1875).

- 1 A tree up to 25 m. high; young parts rusty-tomentellous; leaves bipinnate; pinnae opposite, in about 10 pairs;

rhachis angular, scurfy-puberulous; leaflets about 12 pairs, opposite, obliquely oblong, truncate and unequal-sided at base, emarginate and shortly mucronate at apex, about 2–5 cm. long and 1 cm. broad, glabrous or nearly so; spikes paniculate, elongated; calyx very short; petals about 2 mm. long; stamens 5, with alternating staminodes; fruit elongated, 8–10 cm. broad, valves thick and woody, at length recurved; seeds flattish, varying from oblanceolate to subrhomboid, striate, up to 6–7 cm. long.[macrophylla](#)

Pentaclethra macrophylla Benth. — F.T.A. 2: 322; Benth. l.c. 360; Bak. f. Leg. Trop. Afr. 3: 780; Aubrey. Fl. For. C. Iv. 1: 192, t. 71. *APD acc*

Forest tree, with spreading crown; flowers yellowish-creamy; pods strongly elastic; *often cultivated*.

Sen.: Bignona, Casamance Chev. 3117! **Port. G.:** Bissau Esp. Santo 1810! **Fr. G.:** Rio Nunez Heudelot 825! Conakry Dalz. 8064! **S. L.:** Makong (Apr.) Macdonald 27! Kenema (Mar.) Lane-Poole 211! Extends southwards to Gabon, *Angola* and *Belgian Congo*, also in Principe and S. Tome.

2. PARKIA

R.Br. — F.T.A. 2: 323.

- 1 Corolla lobes very short (about 1/6 total length of corolla); leaf-rhachis greyish-puberulous; leaflets alternate or subopposite, or opposite towards the apices of the pinnae; fruits 19–30 cm. long, 1.5–2.3 cm. broad, not or only slightly indented between the seeds; trees of the savannah regions:.....[2](#)
Corolla lobes long (1/2–4/5 total length of corolla); leaf-rhachis rusty-puberulous or tomentellous; forest trees: **3**
- 2 Leaflets 35–65 on each side of the rhachis of each pinna, the median ones about 10 (–12) mm. long and 2 (–3) mm. broad; pinnae 8–16 on each side of the leaf-rhachis [1. biglobosa](#)
Leaflets 14–30 on each side of the rhachis of each pinna, the median ones (11–) 12–18 (–20) mm. long, (2.5–) 3–5 (–6.5) mm. broad; pinnae 6–11 on each side of the leaf-rhachis. [2. clappertoniana](#)
- 3 Leaflets 20–55 on each side of the rhachis of each pinna, opposite, the median ones 4.5–10.5 (–12.5) mm. long, 1–2 (–3) mm. broad; pinnae 10–26 pairs; fruits 25–40 cm. long, 1.8–3 cm. broad, markedly indented between the seeds. [3. bicolor](#)
Leaflets 12–28 on each side of the rhachis of each pinna, opposite to alternate, the median ones 12–38 mm. long, 4–14 mm. broad; pinnae 5–11 pairs; fruits variable [4. filicoidea](#)

1. Parkia biglobosa (Jacq.) Benth. — F.T.A. 2: 324, partly; Bak. f. Leg. Trop. Afr. 3: 782; Aubrév. Fl. For. C. Iv. 1: 192, and Fl. For. Soud.-Guin. 249. *APD acc*

Mimosa biglobosa Jacq. (1763).

Tree 30–50 ft. high, with wide-spreading crown; flowers red or orange; seeds and pulp edible; *in savannah country*.

Sen.: Tivaouane (May) Be Wailly 4588! Fouladou Etesse! **Gam.:** Perrottet 261! Rosevear' 75! Kombo Dawe 14! Genieri Fox 60! **Fr. Sud.:** Siguiri (Jan.) Chev. 292! **Fr. G.:** Kouroussa (Jan.) Olorunfemi FHI 30774!

Also in **French Cameroons**, **Gabon**, **Cabinda** and **Belgian Congo**.

4. **Parkia filicoidea** *Welw. ex Oliv. F.T.A.* 2: 324 (1871), partly (excl. Barter s.n.); Bak. t. l.c. 781, partly; Aubrév. Fl. For. 0. Iv. 1: 196, t. 72, and Fl. For. Soud.-Guin. 249; Gilbert & Boutique in Fl. Congo Belge 3: 141. *APD acc*

Tree to 100 ft. high, in the drier parts of the forest zone and in gallery forest.

Iv. C.: Bamoro, N. of Bouaké, from Koun to Bondoukou Aubrév. 716; 2251.

Widespread in eastern and central tropical Africa.

3. CALPOCALYX

Harms in E. & P. Pflanzenfam. Nachtr. 1: 191 (1897); Engl. Bot. Jahrb. 26: 257 (1899).

- 1 Bracts nearly as long as the flowers, conspicuous in bud, with a broad blade tapered above into a point:.....2
Bracts much shorter than the flowers, not conspicuous in bud, spatulate, not tapered into a point; inflorescence of pedunculate spikes forming a panicle:3
- 2 Spikes about 2–5 cm. long, pedunculate, forming a panicle; calyx 1.5–2 mm. long; calyx and petals tomentellous outside; bracts persistent; leaflets 5–6 pairs, oblong-elliptic, unequal-sided and rounded at base, abruptly acuminate, 6–12 cm. long, 3–7 cm. broad; petiole 1.3–3 cm. long; petiolules about 5 mm. long1. *dinklagei*
Spikes 9–11 cm. long, peduncle 3–4 cm. long, solitary or paired in the upper axils, rhachis and peduncle stout (the latter up to 3 mm. diam.); calyx 3 mm. long; calyx and petals densely pubescent outside; bracts early caducous; leaflets 5–6 pairs, oblong or obovate-oblong, cuneate or obtuse at base; caudate-acuminate, 10–19 cm. long, 3.5–6.5 cm. broad; petiole 1.5–2 cm. long; petiolules 6–8 mm. long; fruit obliquely oblanceolate, 23–28 cm. long, 7–9 cm. broad, glabrous, with 3–5 suboblong seeds.2. *aubrevillei*
- 3 Inflorescences terminal on leafy shoots only; calyx densely to sparingly puberulous; leaflets 4–7 pairs, oblong or oblong-elliptic, rounded at base, long-acuminate, 6–15 cm. long, 2–6 cm. broad; petiole 1.5–4.5 (rarely to 7) cm. long; petiolules 3–7 mm. long; fruit sickle-shaped, tapered to the base, 15–17 cm. long, 3–4.5 cm. broad, glabrous, with 5–10 seeds.3. *brevibracteatus*
Inflorescences terminal on leafy shoots and also on the bole, congested; calyx sparingly puberulous; leaflets 4–5 pairs, oblong, unequal at base, shortly acuminate, 5–12 cm. long, 2.5–5 cm. broad; petiole 5–7 cm. long; petiolules 4–5 mm. long; fruit not known.4. *winkleri*
Inflorescences all on the bole, lax; calyx glabrous; leaflets 7–8 pairs, oblong-elliptic, obtuse to rounded at base, caudate-acuminate, 10–12 cm. long, 4–6 cm. broad; petiole 12.5–14 cm. long; petiolules 3–5 mm. long; fruit not known.5. *cauliflorus*

1. **Calpocalyx dinklagei** *Harms* in E. & P. Pflanzenfam. Nachtr. 1: 191 (1897); Engl. Bot. Jahrb. 26: 257, t. 5, F-G (1899); Bak. f. Leg. Trop. Afr. 3: 799. *APD acc*

A forest tree 30–50 ft. high; flowers white or yellowish.

S. Nig.: Oban Talbot 1641! **Br. Cam.:** S. Bakundu F.R., (Mar., Apr.) Brenan 9298! Olorunfemi FHI 30528!

Also in **French Cameroons**, **Spanish Guinea** and **Gabon**.

2. **Calpocalyx aubrevillei** *Pellegr.* in Bull. Soc. Bot. Fr. 80: 467 (1933); Aubrey. Fl. For. C. Iv. 1: 190, t. 70. *APD acc*

A **forest** tree, to 90 ft. high; flowers yellowish, fragrant.

S. L.: Gola Forest (fl. Apr., fr. Oct.) Sawyerr in Hb. King 222! Small 670! **Lib.:** Dukwia R. (Apr.) Cooper 402! **Iv. C.:** Zagni Aubrév. 1222. Toulépleu to Guiglo Aubrév. 1196. Dakpadou Aubrév. 858!

4. **Calpocalyx winkleri** (*Harms*) *Harms* in Notizbl. Bot. Gart. Berl. 10: 971 (1930). *APD acc*

Piptadenia winkleri *Harms* in Engl. Bot. Jahrb. 40: 17 (1907).

A **forest** tree, to 66 ft. high; flowers among the foliage and also on the stem right down to the ground; branchlets hollow, inhabited by ants.

Br. Cam.: Likomba (Nov.) Mildbr. 10721! Tiko (fl. & fr. Jan.) Dunlap 174!

Also In **French Cameroons**.

5. **Calpocalyx cauliflorus** *Hoyle* in Kew Bull. 1933: 172. *APD acc*

Understorey **forest** tree, to 65 ft. high; cauliflorous, flowers apparently never terminal among the foliage; calyx and petals red, stamens yellow; branchlets hollow, inhabited by ants.

S. Nig.: Ikom Rosevear 39/30a! 40/30a! Cross River North F.R., Ikom (Dec.) Keay FHI 28161!

Further collecting to show range in leaf-shape, together with observations on the cauliflorous habit, are needed to determine how far species Nos. 3, 4 and 5 are in fact distinct.

4. PSEUDOPROSOPIS

Harms in Engl. Bot. Jahrb. 33: 152 (1902).

- 1 Leaflets closely tomentellous beneath; pinnae (1–) 2 pairs; leaflets 3–5 pairs, oblong-lanceolate to obovate-oblongeolate, acute or acuminate, rounded at base, mucronate, 3–7 cm. long, 1.5–3 cm. broad; panicles elongated, tomentellous; bracts subulate, persistent; pedicels 1–1.5 mm. long; calyx and petals tomentose outside; fruit sickle-shaped, tapered to the base, glabrous, at least 10 cm. long (mature fruit not known)[*sericeus*](#)

Pseudoprosopis sericeus (*Hutch. & Dalz.*) *Brenan* in Kew Bull. 1955: 184. *APD acc*

Calpocalyx sericeus *Hutch. & Dalz.*, F.W.T.A., ed. 1, 1: 353 (1928); Kew Bull. 1928: 400; Bak. f. l.c. 800.

A strong woody climber with hexagonal branches and yellowish-grey foliage; flowers yellow, fragrant.

Fr. G.: Nzérékoré to Macenta (Oct.) Baldwin 9740! **S. L.:** Giewahun (fl. & young fr. Dec.) Deighton 3841! **Lib.:** Gbanga (Sept.) Linder 478! Peahtah (Oct.) Linder 478a! Zigida, Vonjama (Oct.) Baldwin 9995!

5. CYLICODISCUS

Harms in E. & P. Pflanzenfam. Nachtr. 1: 192 (1897); Engl. Bot. Jahrb. 26: 256 (1899).

- 1 A large tree; leaves bipinnate; pinnae opposite, 1 pair; leaflets alternate, stalked, ovate, rather long-acuminate, 5–10 cm. long, 3–5 cm. broad, shining above, glabrous and finely reticulate; primary rachis 2–2.5 cm. long, secondary up to 12 cm. long; racemes spike-like, usually paired or several, slender, up to 15 cm. long; axis shortly pubescent; pedicels about 1 mm. long, persistent; calyx nearly 1 mm. long; petals glabrous, 2 mm. long; stamens 10, free; anthers with a small deciduous apical gland [gabunensis](#)

Cylicodiscus gabunensis *Harms* in E. & P. Pflanzentam. Kachtr. 1: 192 (1897); Engl. Bot. Jahrb. 26: 256 (1899); Bak. f. Leg. Trop. Afr. 3: 796; Kennedy For. Fl. S. Nig. 110; Aubrév. Fl. For. C. Iv. 1: 178, t. 62. *APD acc*

Cyrtoxiphus staudtii *Harms* (1897).

Piptadenia sp. of Thompson Rep. For. Gold Coast (1910).

A very large tree of **rain forest**, reaching 200 ft. in height and 37 ft. girth, with straight bole up to 80 ft. and short buttresses; armed with brown thorns in the sapling stage; flower-spikes yellowish or greenish-white; pods up to 3 ft. long, 13/4 in. broad; seeds flat, thinly winged, sometimes over 3 in. long.

IV. C.: Adzopé region fide Aubrév. l.c. **G. C.:** Imbraim (Mar.) Thompson 27! Dunkwa (young fr. June) Vigne 891! Kumasi (Nov., Dec.) Darko 743! Andoh FH 6600! **S. Nig.:** Oni Sankey 22! Erin Foster 181! Sapoba Kennedy 1673! **Br. Cam.:** Johann-Albrechtshöhe Staudt 531; 766!

Also in **French Cameroons** and **Gabon**.

6. PIPTADENIASTRUM

Brenan in Kew Bull. 1955: 179.

- 1 Leaflets very small and numerous, contiguous, about 3–8.5 mm. long and 0.8–1.25 mm. broad, linear-subfalcate, auriculate at base; pinnae 10–19 pairs; panicles of spikes brown-tomentose; fruits broadly linear, elongated, 17–36 cm. long and 2–3.2 cm. broad, obliquely nervose, glabrous; seeds 6–8, flat, winged, attached in the middle, about (3–) 5.3–9.5 cm. long and 1.8–2.5 cm. broad [africanum](#)

Piptadeniastrum africanum (*Hook. f.*) *Brenan* l.c. (1955). *APD acc*

Piptadenia africana *Hook. f.* (1849) — F.T.A. 2: 328; Bak. f. Leg. Trop. Afr. 3: 794; Aubrév. Fl. For. C. Iv. 1: 182, t. 65; For. Trees & Timbers Brit. Emp. 2: 71; Gilbert & Boutique in Fl. Congo Belge 3: 226, t. 16.

Large tree of **rain forest**, reaching 160 ft. high, with straight bole, large plank-like buttresses, spreading parasol-like branches, and fine fern-like foliage; flowers in paniced yellowish-white spikes.

Sen.: Sinédone, Casamance Chev. 3360. **Fr. G.:** Kouria Chev. 18174. **S. L.:** Kenema (Aug.) Aylmer 249! Njala (July) Deighton 768! **Lib.:** Gbanga (Sept.) Under 750! Dukwia R. (May) Cooper 467! Piptadenia duparquetiana (Baill.) Pellegr. in Bull. Soc. Bot. Fr. 94: 101 (1947).

Newtonia insignis Baill. (1888) — F.W.T.A., ed. 1, 1: 353.

Piptadenia insignis (Baill.) Bak. f. Leg. Trop. Afr. 3: 792 (1930); Aubrév. Fl. For. C. Iv. 1: 184, t. 66.

A forest tree, up to 80 ft. high, with smooth bark and well-developed root flanges.

S. L.: Kambui F.R. (Apr.) Lane-Poole 215! **Iv. C.:** fide Aubrév. l.c. **G. C.:** Ajakwa, Chama (Apr.) Chipp 205! Maliomo, Esusu (May) Chipp 214! **S. Nig.:** Eket Dist. Gray SC/2! Akah FHI 5769! Oban Talbot!

Also in **French Cameroons** and **Gabon**.

2. *Newtonia elliottii* (Harms) Keay l.c. (1954). *APD acc*

Piptadenia elliottii Harms in Engl. Bot. Jahrb. 26: 260 (1899); F.W.T.A., ed. 1, 1: 354.

Tree, on river banks, to 40 ft. high; flowers white, sweet-scented.

S. L.: Maria, Scarcies (Dec.) Sc. Elliot 4792! Madina Limba (young fr. Apr.) Sc. Elliot 5660! Njala (Dec.) Deighton 1854! Batkanu (Jan.) Deighton 2850! Mano (fl. & young fr. Feb.) Dawe 481!

3. *Newtonia aubrevillei* (Pellegr.) Keay l.c. (1954). *APD acc*

Piptadenia aubrevillei Pellegr. in Bull. Soc. Bot. Fr. 80: 466 (1933); Aubrév. Fl. For. C. Iv. 1: 184, t. 67.

Forest tree, to 90 ft. high; flowers creamy.

S. L.: Unwin & Smythe 34! Kambui, Hangha (Sept.) Aylmer 244! Njala (fl. Feb. fr. Oct.) Deighton 1409! 1813! Dambaye, Kenema (fr. July) King 259! **Lib.:** Dukwia R. Cooper 119! Suacoco, Gbanga (fr. Jan.) Daniel 114! **Iv. C.:** Djibi Aubrév. 861! Yapo Aubrév. 600!

4. *Newtonia zenkeri* Harms in Engl. Bot. Jahrb. 40 17 (1907); Bak. f. l.c. 796.

APD: *Synonym of Newtonia griffoniana* (Baill.) Baker f.

Piptadenia zenkeri (Harms) Pellegr. l.c. 80: 466 (1933); Leg. Gab. 21 (1948).

Tall tree of forest, to 120 ft. high.

Br. Cam.: Victoria (fr. Mar.) Maitland 575!

Also in **French Cameroons** and **Gabon**.

5. *Newtonia sp. A*.

Tree common in Makun and more common in Eba Island; has high buttresses, with compact crown almost dome-shaped.”

S. Nig.: (fr. Jan.) Thornewill 262!

6. *Newtonia* sp. B.

A tall tree.

S. Nig.:? Eket Dist. Gray 1/21!

7. *Newtonia* sp. C.

A tall tree resembling *Piptadenia*, up to 100 ft. high, with large spreading branches.

Br. Cam.: Njinikom, Bamenda, 5,000 ft. (young fr. June) Maitland 1559!

8. FILLAEOPSIS

Harms in Engl. Bot. Jahrb. 26: 258 (1899).

- 1 A tree; leaves bipinnate; pinnae opposite, 1–2 pairs; leaflets mostly alternate, 4–8 to each pinna, ovate-elliptic, rounded at base, shortly obtusely acuminate, 4–7 cm. long, 2–3.5 cm. broad, glabrous; spikes rather densely paniculate at the end of the shoots; flowers very numerous, crowded; calyx small, 5-toothed, teeth ovate, obtuse, glabrous; petals 5, free, ovate, acute, valvate, glabrous; stamens 10; anthers glandular at the apex; disk large, surrounding the ovary; fruit very large, oblong, up to 40 cm. long and 15 cm. broad, shining, rather faintly nervose; seeds transverse, oblong, about 7 cm. long and 3 cm. broad, winged, attached by the middle to a slender funicle [discophora](#)

Fillaeopsis discophora *Harms* l.c. 259, t. 6 (1899); Bak. f. Leg. Trop. Afr. 3: 797; Kennedy For. Fl. S. Nig. 108; Gilbert & Boutique in Fl. Congo Beige 3: 216. *APD acc*

A forest tree, to 130 ft. high, “strongly branched and with offensive odour”.

S. Nig.: Sapoba Kennedy 1566! Boji Hill, Ikom (fr. June) Unwin 24! **Br. Cam.:** Kumba Ejiofor FHI 14058!

Also in **French Cameroons**, **Gabon**, **Belgian Congo** and **Angola**.

9. ENTADA

Adans. — F.T.A. 2: 325; Benth. in Trans. Linn. Soc. 30: 363 (1875).

- 1 Branchlets not prickly:2
 Branchlets and leaf-rhachis rather densely armed with short recurved prickles; pinnae 6–10 pairs; leaflets 10–12 pairs, oblong, rounded at apex, 10–15 mm. long, 4–7 mm. broad; spikes 4–6 cm. long, solitary or up to 3 together; fruits about 25–30 cm. long and 7 cm. broad. [7. scelerata](#)
- 2 Leaflets 2–4 pairs on each pinna, exceeding 2.5 cm. long and 1 cm. broad; pinnae 2–3 pairs, the end pair usually tendriform; inflorescence up to 30 cm. long, solitary, axillary or supraxillary; fruits very large, up to 120 cm. long, 8–10 cm. broad; seeds 4–6 cm. diam.:3
 Leaflets 8–50 pairs on each pinna, up to 4.2 cm. long and 1.5 cm. broad; end pair of pinnae not tendriform, or only rarely so; fruits chartaceous, up to 45 cm. long; seeds up to 18 mm. long:4
- 3 Flowers subsessile, or with a robust pedicel not more than 0–5 mm. long; peduncle borne close to the leaf axil; fruits straight, very woody; leaflets 3.5–9 cm. long, 2–4 cm. broad. [1. pursaetha](#)
 Flowers on distinct slender pedicels 1–1.5 mm. long; peduncle borne on the stem about 5 mm. above the leaf axil; fruits bent into a single or double spiral, often with the sides also twisted, coriaceous or subwoody; leaflets 2.5–5 cm. long, 1–2.2 cm. broad. [2. gigas](#)
- 4 Midrib in the middle or near the middle of the leaflets:5
 Midrib near one margin of the leaflets:6
- 5 Nervation of leaflets obscure on both surfaces; leaflets 8–13 pairs, oblong, rounded to emarginate at apex, 8–20 mm. long, 3–7 mm. broad, evenly and minutely puberulous beneath; pinnae 4–6 pairs, end pair sometimes tendriform; spikes borne towards the apex of the shoots, sometimes paniculate; fruits 15–45 cm. long, 6–11 cm. broad; seeds about 18 mm. long and 9 mm. broad. [3. mannii](#)
 Nervation of leaflets distinct on both surfaces; leaflets 8–24 pairs, linear or oblong-linear, 9–45 mm. long, 3–15

mm. broad, glabrous or sometimes puberulous; pinnae (1–) 3–9 pairs; spikes axillary among the leaves; fruits up to 38 cm. long and 5–7.3 cm. broad; seeds about 12 mm. long and 9–10 mm. broad. [4. africana](#)

- 6 A tree of savannah; flowers cream; fruit straight, 15–39 cm. long, (3.8–) 5–7.5 (–9) cm. broad; pinnae (1–) 2–20 (–22) pairs; leaflets (15–) 22–55 pairs, linear, mucronate, (3–) 4–12 (–14) mm. long, 1–3 (–3.5) mm. broad. [5. abyssinica](#)

A slender liane; flowers purple to red; fruit sickle-shaped, 11–23 cm. long, 2.9–3.8 cm. broad; pinnae (1–) 2 (–3) pairs; leaflets 9–18 pairs, linear-oblong, with midrib towards one side at base, 8–16 mm. long, 1.5–4.2 mm. broad [6. wahlbergii](#)

1. **Entada pursaetha** DC. Prod. 2: 425 (1825); Brenan in Kew Bull. 1955: 164 (q.v. tor synonymy).

APD: Synonym of Entada rheedei Spreng.

Entada gigas of F.W.T.A., ed. 1, 1: 355, partly; of Gilbert & Boutique in Fl. Congo Belge 3: 220; not of (Linn.) Fawcett & Bendle.

A lofty woody climber with very stout stem and enormous straight woody segmented pods.

Port. G.: Formosa (Apr.) Esp. Santo 1962! **Fr. G.:** Landouma country (Apr.) Heudelot 850! **S. L.:** Kafogo (Apr.) Sc. Elliot 5520! Makali (fr. Feb.) Deighton 4054! **G. C.:** Mampong (fl. & fr. Widespread in tropical Africa and Asia, and in N. Australia.

2. **Entada gigas** (Linn.) Fawcett & Rendle Fl. Jamaica 4, 2: 124, fig. 38, excl. fruit (1920); Brenan l.c. 164 (q.v. for synonymy). *APD acc*

APD: Synonym of Entada rheedei Spreng.

Mimosa gigas Linn. (1759).

Entada planoseminata (De Wild.) Gilbert & Boutique 1 c 221 (1953).

Entada umbonata (De Wild.) Gilbert & Boutique l.c. 222 (1953).

Entada scandens of F.T.A. 2: 325, partly (Mann spec.).

A liane, similar to the preceding, but with coriaceous or subwoody pods curved into a single or double spiral.

Lib.: Logantown, New Cess R. (Mar.) Baldwin 11182! **F. Po:** on the beach (Jan.) Mann 230! 1438!

Widespread in central tropical Africa and in the West Indies, central and south tropical America.

3. **Entada mannii** (Oliv.) Tisserant in Bull. Soc. Bot. Fr. 99: 257 (1953); Berhaut in Bull. Soc. Bot. Fr. 99: 275. *APD acc*

Piptadenia? mannii Oliv. F.T.A. 2: 329 (1871); F.W.T.A., ed 1, 1: 354.

Entadopsis mannii (Oliv.) Gilbert & Boutique l.c. 205 (1953).

Entada africana of F.T.A. 2: 326, partly; of F.W.T.A., ed. 1, 1: 355, partly; not of Guill. & Perr.

A shrub, usually scandent but sometimes arborescent; in streamside forest and on rocky hills in forest regions.

Sen.: Berhaut 763. **Port. G.:** Bijagós (fr. Nov.) Esp. Santo 2328! **Fr. G.:** Paroisse. **S. L.:** Bumbuna (young fr. Oct.) Thomas 3723! Giema Ferry, Dama (fr. Nov.) Widespread in tropical Africa, and in parts of S. Africa.

15. XYLIA

Benth. in *Benth. & Hook. f. Gen. Pl.* 1: 594 (1865); *Trans. Linn. Soc.* 30: 373 (1875).

- 1 A tree; leaves bipinnate; pinnae 1 pair, opposite, with a large gland at the base; leaflets 13–16 pairs, opposite, oblong-lanceolate, acuminate, 3–7 cm. long, 1–2 cm. broad, glabrous above, tomentellous beneath, with distinct lateral nerves; flowers in pedunculate axillary solitary or paired heads; heads 2 cm. diam.; peduncles 3–6 cm. long, tomentellous; stamens 10; anthers with a deciduous apical gland; ovary pilose; fruit compressed, oblong, subfalcate, woody, very hard, up to 20 cm. long, 5 cm. broad; seeds 4, obovate-elliptic, 2 cm. long, shining[evansii](#)

Xylia evansii *Hutch.* in Kew Bull. 1908: 258; Robyns in Rev. Zool. Bot. Afr. 16: 85; Bak. f. Leg. Trop. Afr. 3: 810; Aubrév. Fl. For. C. Iv. 1: 166, t. 57. *APD acc*

A tall tree of rain forest, with yellow flower-heads and hard, slightly bent pods.

S. L.: Kambui Lane-Poole 460! Bandajuma Deighton 3728! **Iv. C.:** Agboville Chev. 22338! And various localities fide Aubrév. l.c. **G. C.:** Evans 13! Tano R. (Feb.) Thompson 15! Tenewonan (Apr.) Thompson 55! Tappa Chipp 390! Kumasi (Feb.) Vigne FH 1593!

Xylia xylocarpa (*Roxb.*) *Taub.*

Xylia dolabriformis *Benth.*

A native of tropical Asia, it is occasionally cultivated in our area.

16. LEUCAENA

Benth. — F.T.A. 2: 337; *Benth.* in *Trans. Linn. Soc.* 30: 442 (1875).

- 1 A small tree; leaves bipinnate; pinnae about 5 pairs, sometimes with a gland between the lowest pair; leaflets about 12 pairs, opposite, lanceolate, slightly falcate, acute, about 1 cm. long and 3 mm. broad, slightly pubescent, the midrib not quite in the middle; flowers white, in pedunculate globose heads about 2.5 cm. in diam.; calyx funnel-shaped, teeth pubescent outside; petals minutely pubescent outside; stamens 10; anthers without an apical gland; fruits numerous in each head, stellately spreading, linear, flat, 15 cm. long or more, 1.5–2 cm. broad, glabrous, thin, with the numerous seeds slightly oblique to the margins[glauca](#)

Leucaena glauca (*Linn.*) *Benth.* — F.T.A. 2: 337; *Benth.* l.c. 443; Chev. Bot. 243; Bak. f. Leg. Trop. Afr. 3: 814; *Ic. Pl. Afr.*, t. 8.

APD: *Synonym of Leucaena leucocephala* (Lam.) de Wit

Mimosa glauca Linn. (1753).

Introduced; mostly cultivated or half naturalized by roadsides, etc.; to 50 ft. high.

Sen.: Roger! **Fr. G.:** Macenta (fr. Oct.) Baldwin 9755! **S. L.:** Freetown Lane-Poole 375! Magbille (Dec.) Thomas 5859! **N. Nig.:** Kaduna (Mar.) Lamb 89! Jebba (Dec.) Hagerup 681! **S. Nig.:** Olokemeji (fl. & fr. Oct.) A. F. Ross 5! Ibadan (fl. & fr. Apr.) Meikle 1429! **F. Po.:** (fl. & fr. Nov.) T. Vogel 79!

A native of America; now common in the warmer parts of both hemispheres.

Leucaena esculenta (DC.) Benth.

A native of tropical America, has been introduced into Senegal (fide Berhaut Fl. Sen. 28).

17. SCHRANKIA

Willd. — F.T.A. 2: 336; Benth. in Trans. Linn. Soc. 30: 441 (1875).

- 1 A slender trailer with numerous recurved setiform prickles on the quadrangular stems; leaves bipinnate, sensitive; pinnae 2–3 pairs, opposite; leaflets 10–20 pairs, broadly linear, mucronate, about 1 cm. long, glabrous; flowers in shortly pedunculate axillary heads; stamens 10, free; anthers not glandular; fruits several to each head, linear, up to 13 cm. long, 4-ridged, pubescent and with numerous straight short prickles spreading at right angles [leptocarpa](#)

Schranksia leptocarpa DC. — F.T.A. 2: 336; Benth. l.c.; Chev. Bot. 243; Bak. f. Leg. Trop. Afr. 3: 814.
APD acc

A straggling perennial herb resembling the “Sensitive Plant” (*Mimosa pudica*) but with continuous not jointed pods; introduced.

G. C.: Cape Coast (July) Ogilvie! T. Vogel 70! Accra Don! Moloney! **Dah.:** Le Testu 58! Cotonou (fl. & fr. Jan.) Chev. 22692! Debeaux 149! **S. Nig.:** Lagos Rowland! Abeokuta Millen 88!

A native of tropical America; also in East Indies.

18. MIMOSA

Linn. — F.T.A. 2: 335; Benth. in Trans. Linn. Soc. 30: 338 (1875).

- 1 Pinnae 1–2 pairs, petiole much longer than leaf-rhachis; leaflets sensitive, linear-oblong, about 1.5 cm. long, more or less bristly-hairy; branchlets and petioles bristly-pilose or almost glabrous, the former prickly here and there; peduncles up to 3 cm. long; stamens 4; fruits densely clustered, about 2 cm. long, margined with stiff bristles, segments few [1. pudica](#)

Pinnae 6–16 pairs, petiole shorter than leaf-rhachis; branchlets and leaf-rhachis prickly and roughly hirsute; leaflets small, linear, margined with bristly hairs and thinly appressed-pubescent on both surfaces; stamens 8; fruits densely bristly all over, 4–6 cm. long, segments narrow and numerous [2. pigra](#)

1. *Mimosa pudica* Linn. — F.T.A. 2: 336; Benth. l.c. 397; Bak. f. Leg. Trop. Afr. 3: 812; Berhaut Fl. Sen. 26. *APD acc*

A straggling prickly plant, the “Sensitive Plant”; introduced and rather local.

Sen.: fide Berhaut l.c. **Gam.:** Bathurst (Dec.) Lane-Poole 86! **S. L.:** George Water (Dec.) Sc. Elliot 4165! Bo (fl. & fr. Apr.) Deighton 1588! Moyamba (May) Deighton 1721! Sumbuya (Apr.) Common all over the tropics.

Mimosa invisa Mart.

A species native to tropical America, it has been introduced and are occasionally met with in our area.

Mimosa rubicaulis Lam.

A species native to India, it has been introduced and are occasionally met with in our area.

19. NEPTUNIA

Lour. — F.T.A. 2: 333; Benth. in Trans. Linn. Soc. 30: 383 (1875).

- 1 Aquatic herb with thickish stems rooting at the nodes; leaves sensitive, bipinnate; pinnae 2–3 pairs, opposite; leaflets in 8 or more pairs, linear-oblong, rounded at apex, about 1.5 cm. long, glabrous; submerged leaves finely dissected; stipules broadly ovate; flowers capitate on elongated stout peduncles up to 20 cm. long, the upper bisexual, the lower neuter; sepals and petals glabrous; stamens 10; anthers with a deciduous apical gland; fruit shortly stipitate, oblong, 2–2.5 cm. long, sharply beaked, flat, glabrous [oleracea](#)

Neptunia oleracea *Lour.* Fl. Cochinchin. 2: 654 (1790); F.T.A. 2: 334; Benth. l.c.; Chev. Bot. 242. *APD acc*

Neptunia prostrata Baill. (1883) — F.W.T.A., ed. 1, 1: 359; Bak. f. Leg. Trop. Afr. 3: 809.

Mimosa prostrata Lam. (illegitimate name), partly (1783).

Sen.: Perrottet 264! **Gam.:** Bansang, MacCarthy Isl. Duke 1! **Fr. Sud.:** Mopti (Sept.) Chev. 24964! **Dah.:** Porto Kovo Lagoon (fr. Jan.) Chev. 22784! **N. Nig.:** R. Yo, Bornu (fl. & fr. Sept.) Daggash FHI 24867! **S. Nig.:** Lagos Moloney!

Widespread in tropical Africa, also in Madagascar, tropical Asia and America.

20. ACACIA

Mill. — F.T.A. 2: 337; Benth. in Trans. Linn. Soc. 30: 444 (1875). *APD acc*

- 1 Flowers in spikes or racemes: 2
Flowers in globose heads: 9
- 2 Leaflets 1 pair on each pinna (rarely 2 pairs on occasional pinnae), obliquely obovate, very unequal-sided at base, 7–18 mm. long, 3–9 mm. broad; pinnae 3–4, rarely 2 or 5 pairs; spines in pairs at the nodes, infra-stipular, curved, about 5 mm. long; flowers distinctly pedicellate; fruit flat and thin, oblong, cuneate at base, acute or rounded at apex, 3–8–6 cm. long, 1–8–20 cm. broad, reticulate, glabrous; seeds few, orbicular, about 8 mm. diam. [L. gourmaensis](#)
- Leaflets 3 or more pairs on each pinna: 3
- 3 Prickles or spines only at the nodes of the branchlets (rarely altogether absent): 4
Prickles between the nodes of the branchlets, not stipular, the stipules soon deciduous; calyx glabrous; fruits thin, oblong, acute at both ends, 7–12 cm. long, 1.5–2 cm. broad: 8
- 4 Spines recurved, infra-stipular; fruits flat and relatively thin, dehiscent: 5

- Spines straight, thick, up to 1.5 cm. long, in pairs, stipular in origin; fruits at length sickle-shaped, thick, indehiscent, 10–15 cm. long, about 2.5 cm. broad; pinnae 3–7 pairs; leaflets 10–15 pairs, branchlets pale grey [6. *albida*](#)
- 5 Leaflets 3–5 pairs on each pinna, obliquely obovate-oblong, 6–12 mm. long, 2–5 mm. broad, glabrous; pinnae 2–5 pairs; spines in pairs, rarely with a third spine; fruit oblong, often once or twice constricted owing to non-development of seeds, 5–7.5 cm. long, 2–2.5 cm. broad; seeds few [2. *laeta*](#)
- Leaflets at least 10 pairs on each pinna, up to 4 mm. long and 1.25 mm. broad, pubescent: **6**
- 6 Spines in threes, with the lateral spines curved upwards and the central spine downwards; leaflets up to 25 pairs on each pinna fruit oblong, 4–14 cm. long, 2–2.5 cm. broad: **7**
- Spines in pairs, curved downwards with a very broad decurrent base; pinnae 10–40 pairs; leaflets 35–60 pairs, midrib close to one side towards the base of the leaflets; leaf-rhachis with a large disk-like gland towards the base and with a smaller gland between each of the upper pairs; fruits narrowly oblong, 7.5–15 cm. long, 1.5–2 cm. broad, glabrous, rather coriaceous, with a distinct margin [5. *polyacantha* subsp. *campylacantha*](#)
- 7 Pinnae 3–6 pairs, usually 4 or 5; leaflets up to 15 pairs, oblong, narrowed above to an obtuse or slightly pointed apex, not broader at apex except in the uppermost leaflets, about 4 mm. long, 1–1.25 mm. broad; fruit more or less densely appressed-pubescent when mature, fawn to pale olive-brown; seeds olive-brown [3. *Senegal*](#)
- Pinnae 7–16 pairs; leaflets up to 25 pairs; margins slightly revolute, more or less parallel, but leaflets slightly broader at the rounded apex, about 3 mm. long and 0.8 mm. broad; petiole and rhachis of whole leaf and of pinnae more densely pubescent when young than in the preceding species; fruit almost glabrous when mature, chestnut to pale chestnut-brown in colour, mottled; seeds purplish-brown [4. *dudgeoni*](#)
- 8 Leaf-rhachis with a large flat elliptic gland towards the base scarcely raised above the surface; pinnae 20–30 pairs; leaflets 35–50 pairs; axis of inflorescence rather villous; fruits slightly pubescent, few-seeded, flat [7. *macrostachya*](#)
- Leaf-rhachis with an ovoid gland towards the base standing well up from the surface; pinnae 8–15 pairs; leaflets 20–30 pairs; axis of inflorescence tomentellous; fruits glabrous, several-seeded [8. *ataxacantha*](#)
- 9 Flower-heads on simple or subsimple axillary peduncles: **10**
- Flower-heads in terminal much-branched panicles: **21**
- 10 Fruits subterete, more or less turgid when ripe, indehiscent, curved, up to about 10 cm. long and 1.5 cm. broad, longitudinally striate, becoming glabrous, black; bracteoles near the apex of the peduncle; flowers yellow; pinnae 4–10 pairs; leaflets 12–20 pairs, linear-oblong, up to 7 mm. long, glabrous; spines up to 3 cm. long, acicular; an introduced species [9. *farnesiana*](#)
- Fruits flattened; bracteoles mostly about or below the middle of the peduncle in open flower (but see No. 10); indigenous species: **11**
- 11 Valves of fruit thick and woody, straight or somewhat curved, smooth and glabrous, margins more or less parallel, 10–20 cm. long, 1.2–3 cm. broad, tardily dehiscent; bracteoles in the upper half of the peduncle; flowers white or cream; pinnae 10–25 pairs; leaflets 20–40 pairs: **12**
- Valves of fruit thin and membranous or coriaceous, or if thicker then margins sinuate or fruit moniliform; bracteoles about or below the middle of the peduncle: **13**
- 12 Branchlets glabrous or sparingly pubescent; median leaflets 2.5–4.5 mm. long [10. *sieberiana* var. *sieberiana*](#)
- Branchlets densely yellowish-tomentellous; median leaflets 2–2.5 (very rarely to 3) mm. long .. [10a. *sieberiana* var. *villosa*](#)
- 13 Fruits indehiscent, valves coriaceous, 1 cm. or more broad, margins sinuate or fruit moniliform; flowers bright yellow, or pink: **14**
- Fruits dehiscent, valves membranous or coriaceous, not more than 1 cm. broad: **17**
- 14 Segments of fruit very prominently umbonate in the middle; fruits broadly constricted between the seeds; flowers pink; pinnae 6–8 pairs; leaflets 8–15 pairs, 3–4 mm. long [11. *kirkii*](#)
- Segments of fruit not umbonate; flowers bright yellow; pinnae 3–6 pairs; leaflets 10–30 pairs; spines mostly long and straight, but some short and slightly curved: **15**
- 15 Fruits glabrous, narrowly constricted between the seeds [12. *nilotica* var. *nilotica*](#)
- Fruits densely tomentose: **16**
- 16 Fruits straight, narrowly constricted between the seeds [12a. *nilotica* var. *tomentosa*](#)
- Fruits usually curved, with sinuate margins, only slightly constricted between the seeds [12b. *nilotica* var. *adansonii*](#)
- 17 Fruit annular or spirally contorted, valves thinly coriaceous, glabrous, 4–6 mm. broad, somewhat constricted between the seeds; flowers white; some spines long and straight, others short and slightly recurved; pinnae 2–5 pairs; leaflets 6–15 pairs; branchlets glabrous or puberulous [13. *raddiana*](#)
- Fruit falcate; flowers yellow or white: **18**
- 18 Valves of fruit coriaceous, more than 6 mm. broad, densely pubescent at first; flowers white; some spines long

and straight, others short and slightly recurved; young branchlets densely pubescent; pinnae 4–7 pairs; leaflets 10–20 pairs [14. hebecladoides](#)

Valves of fruit membranous, up to 6 mm. broad; flowers bright yellow: **19**

- 19** Stems, except the very youngest branchlets, covered with powder yellow to red in colour, bark flaking off in subrectangular pieces; pinnae 2–7 (rarely 1 or 8–9) pairs; leaflets 8–20 pairs, leaflets up to 5 mm. long and 1 mm. broad; fruits up to 14 cm. long, 6 mm. broad, glabrous, somewhat constricted between the seeds [15. seyal](#)

Stems not covered with powder: **20**

- 20** Leaflets broadest above the middle, obovate-oblong to oblong-oblancoolate, rounded at apex; leaflets 6–12 pairs; pinnae 1–4 pairs; with long straight spines up to 6 cm. long, also with much shorter slightly recurved spines; buds and bracts forming a distinct cushion at the nodes, peduncles glabrous, not glandular; fruit glabrous, not glandular, narrowed between the seeds [16. ehrenbergiana](#)

Leaflets more or less parallel-sided but narrowed, towards the obtuse or acute apex; leaflets 12–28 pairs; pinnae 2–12 pairs; with straight spines only, up to 3 cm. long; peduncles and fruits usually glandular [17. hockii](#)

- 21** Branchlets with numerous prickles between the nodes and often on the leaf-rhachis and inflorescence; climber; pinnae in numerous pairs; leaflets numerous and very small, contiguous or nearly so, linear, with the nerve near one margin at the base; fruits linear-oblong, about 12 cm. long and 3 cm. broad, glabrous [18. pennata](#)

Branchlets without prickles between the nodes; tree; pinnae fairly numerous, leaflets fairly numerous, not contiguous, with the nerve nearly in the middle; fruits narrowly linear-oblong, about 12 cm. long and 1.5 cm. broad [19. macrothyrsa](#)

- 1. *Acacia gourmaensis* A. Chev.** in Bull. Soc. Bot. Fr. 58, Mém. 8: 167 (1912); Aubrév. Fl. For. Soud.-Guin. 264, t. 52, 6 (labelled *A. mellifera* in error). *APD acc*

Acacia mellifera of F.T.A. 2: 340, partly (Barter s.n.), not of (Vahl) Benth.; also of various authors in part, including: F.W.T.A., ed. 1, 1: 361; Bak. f. Leg. Trop. Afr. 3: 828.

Small tree, to 25 ft. high, often with more or less straight stem and numerous short branches; bole brown with small scales; bark of twigs yellowish, peeling; flowers cream.

IV. C.: Mossi fide Chev. l.c. Ouagadougou Aubrév. 2137. Gaoua Aubrév. 2138. **G. C.:** Aframsu Kwahu (fr. Jan.) Chipp 639! Nchenanchene to Kwahu Tafo Kitson 1150! Sekai to Boguboi Kitson 580! MacElderry FHI 16384! Yola (Oct.) Shaw 85! S. Bornu (fr. Dec.) Foster 87!

Widespread in tropical Africa.

21. ALBIZIA

Durazz. — F.T.A. 2: 355; Benth. in Trans. Linn. Soc. 30: 557 (1875). *APD acc*

- 1 Staminal tube included in the corolla-tube or only slightly exserted:2
 Staminal tube much exserted from the corolla tube:7
- 2 Leaflets 12–20 pairs, falcate-lanceolate, acute, about 1 cm. long, 2–3.5 mm. broad; pinnae 6–12 pairs; all parts greyish pubescent; fruits 10–15 cm. long, 2–2.5 cm. broad, minutely pubescent or nearly glabrous *L. chevalieri*
 Leaflets up to 13 pairs, exceeding 5 mm. broad; pinnae up to 7 pairs:3
- 3 Filaments 15–50 mm. long; calyx (2.5–) 3–6.5 mm. long; corolla 5–13.5 mm. long; fruits glabrous or nearly so:

-4
- Filaments 6–10 mm. long; calyx 1.5–2.5 (–3) mm. long; corolla 3–5.5 mm. long; pedicels 1.5–7 mm. long; pinnae 1–4 pairs; leaflets 3–5 pairs, obliquely oblong-elliptic or elliptic, pointed at apex, 10–48 mm. long, 6–20 mm. broad, minutely puberulous on the lamina beneath; fruits 15–26 cm. long, 2.5–4 cm. broad, puberulous [6. glaberrima](#)
- 4 Filaments red above and white below; pedicels 0–2 mm. long; pinnae (2–) 3–6 (–8) pairs; leaflets (4–) 6–11 (–12) pairs, narrowly oblong, 13–33 mm. long, 5–14 (–17) mm. broad, sparingly pubescent; fruits (10–) 14–21 cm. long, (2.3–) 3.2–3.7 (–4.8) cm. broad [2. coriaria](#)
- Filaments white to green or greenish-yellow, not red:.....5
- 5 Indumentum on outside of calyx and corolla conspicuously rusty (when dry); pedicels 0–3 mm. long; pinnae 3–6 (–9) pairs; leaflets 10–14 (–17) pairs on the two distal pairs of pinnae, fewer on the basal pairs; leaflets oblong, 11–23 mm. long, 4.5–10 mm. broad, terminal pair obovate; fruits 15–24 cm. long, 3–5 cm. broad [3. ferruginea](#)
- Indumentum on outside of calyx grey to whitish, not rusty:6
- 6 Pedicels 1.5–4.5 (–7.5) mm. long; leaflets not glaucous beneath; pinnae (1–) 2–4 (–5) pairs; leaflets 3–11 pairs, elliptic-oblong, 15–48 mm. long, (6–) 8–24 (–33) mm. broad, the terminal pair more or less obovate; fruits (12–) 15–33 cm. long, (2.4–) 2.9–5.5 (–6) cm. broad [4. lebbeck](#)
- Pedicels 0–0.75 mm. long; leaflets glaucous beneath; pinnae 2–6 pairs; leaflets 3–9 (–10) pairs, obliquely obovate-rhombic, 15–40 mm. long, 10–22 (–30) mm. broad; fruits 15–20 cm. long, 3.5–4 cm. broad [5. malacophylla var. ugandensis](#)
- 7 Pinnae 1–3 (rarely 4 pairs); leaflets 3–5 (rarely 6 pairs), the terminal pair larger than the others, the pinnae thus broadening upwards; leaflets not auriculate at base on the proximal side, obliquely obovate-elliptic, strongly nerved, glabrous beneath except on midrib and margins, 1.5–8 cm. long, 1–4.5 cm. broad; young parts minutely puberulous; bracts at base of peduncles, also stipules, very small and inconspicuous, about 1 mm. broad; fruits 10–20 cm. long, 2–3.5 cm. broad, glabrous [7. zygia](#)
- Pinnae 4–9 pairs (rarely 3 on occasional reduced leaves); leaflets 9–17 pairs, the terminal pair rather smaller than the others, the pinnae thus more or less narrowing upwards:8
- 8 Leaflets not auriculate at base on the proximal side, though the proximal margin may be more or less rounded into the insertion of the petiole:.....9
- Leaflets markedly auriculate at base on the proximal side: 10
- 9 Young parts, rachides of leaves and pinnae densely fulvous-pubescent; leaflets more or less pubescent all over lower surface, obliquely rhombic-quadrate or -oblong, 7–17 mm. long, 4–9 mm. broad; stipules and bracts at base of peduncles ovate, 5–9 mm. long, 3–6 mm. broad; fruits 9–19 cm. long, 1.9–3.2 cm. broad, more or less densely and persistently pubescent [8. adianthifolia](#)
- Young parts, rachides of leaves and pinnae finely and shortly pubescent; leaflets pubescent beneath only on midrib and margins, glabrous between or rarely (especially when young) some occasional hairs on primary lateral nerves; stipules and bracts at base of peduncles lanceolate, up to 6–7 mm. long and 2–3 mm. broad; fruits glabrescent [9a. gummifera var. ealaensis](#)
- 10 Leaflets pubescent beneath only on midrib and margins, glabrous between or rarely (especially when young) some occasional hairs on primary lateral nerves, obliquely rhombic-quadrate to rhombic-subfalcate, 10–17 mm. long, 4–8 mm. broad; stipules and bracts at base of peduncles lanceolate, up to 6–7 mm. long and 2–3 mm. broad; fruits 10–18 cm. long, 2–3 cm. broad, glabrescent [9. gummifera var. gummifera](#)
- Leaflets pubescent beneath on midrib and margins, and pubescent or puberulous on the surface between, often very inconspicuously so, obliquely rhombic-oblong, 9–11 mm. long, 4–6 mm. broad; stipules and bracts at base of peduncles oblong-elliptic about 4.5 mm. long and 2 mm. broad; fruits 11–17 cm. long, 3.2–3.8 cm. broad, minutely and persistently pubescent [10. intermedia](#)

1. **Albizia chevalieri** Harms in Engl. Bot. Jahrb. 40: 15 (1907); Bull. Soc. Bot. Fr. 54, Mém. 8: 17 (1907); l.c. 8: 169 (1912); Aubrév. Fl. For. Soud.-Guin. 297, t. 59, 1–3. *APD acc*

A tree, to 35 ft. high, with grey corky bark; petals pale crimson with white margins; filaments white; fruits pale brown; [in the drier savannah regions.](#)

Sen.: Berhaut 89. **Fr. Sud.:** Djenné (June) Chev. 1132! Birgo Dubois 56. Koulikoro Vuillet 657. **iv. C.:** Sakoini Aubrév. 2157. **G. C.:** Navrongo (fl. & fr. Mar.) Vigne FH 4693! **Fr. Degema Talbot!

Widespread in tropical Africa and in S. Africa.

[Hybrids between species of this group are known to occur. Within our area, Vigne 77 from the Gold Coast has been suggested by Brenan (in Kew Bull. 1952: 629) as *A. adianthifolia* X *zygia*.]

9. *Albizia gummifera* (J. F. Gmel.) C. A. Sm. **var. gummifera** — Kew Bull. 1930: 218, partly (excl. syn. *Mimosa adianthifolia*, *Zygia fastigiata* and *Albizia fastigiata*); Brenan in Kew Bull. 1952: 511 (q.v. for full synonymy); Gilbert & Boutique l.c. 3: 181. *APD acc*

Sassa gummifera J. F. Gmel. (1791).

Tree to 100 ft. high, mainly at high altitudes; corolla white, staminal tube white below, crimson above.

S. Nig.: Mt. Koloishe, Obudu, 4,800 ft. (Dec.) Keay & Savory FHI 25125! **Br. Cam.:** Bamenda, 5,000–6,500 ft. (Jan.) Migeod 416! Johnstone 272/32! Lightbody FHI 26280! Belo to L. Oku, 5,500 ft. (fl. & fr. Jan.) Keay FHI 28463!

Widespread in eastern and central tropical Africa and in **Madagascar**.

- 9a. *Albizia gummifera* **var. ealaënsis** (De Wild.) Brenan in Kew Bull. 1952: 518.

APD: Synonym of Albizia adianthifolia var. intermedia (De Wild. & T. Durand) Villiers

Albizia ealaënsis De Wild. (1907) — Gilbert & Boutique l.c. 3: 177.

A forest tree, to 110 ft. high.

S. Nig.: Oban Talbot 1314 (partly)!

Also in **French Cameroons, Belgian Congo, Uganda, Tanganyika** and **Angola**.

10. **Albizia intermedia** *De Wild. & Th. Dur.* in Bull. Herb. Boiss., sér. 2, 10: 751–2 (1901); Brenan l.c. 619; Gilbert & Boutique l.c. 3: 180.

APD: Synonym of Albizia adianthifolia (Schumach.) W. Wight

APD: Synonym of Albizia adianthifolia var. intermedia (De Wild. & T. Durand) Villiers

A forest tree, to 80 ft. high.

S. Nig.: Oban Talbot 1314 (partly)!

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Belgian Congo** and **Angola**.

Albizia falcata (*Linn.*) *Backer*

Albizia moluccana *Miq.*

A native of tropical Asia, it has been introduced into W. Africa.

Albizia caribaea (*Urb.*) *Britton & Rose*

Pithecellobium caribaeum *Urb.*

A native of the West Indies, it has been introduced into W. Africa.

Imperfectly known species.

Albizia gigantea *A. Chev.* *Vég. Util.* 5: 171 (1909); *Bot.* 249. *APD acc*

Pentaclethra gigantea *A. Chev.* *Bot.* 237, name only.

The specimen in Chevalier's herbarium is a barren leafy shoot; pinnae 4–5 pairs; rhachia pubescent with a fleshy gland near the base; leaflets 5–10 pairs, subequal, oblong, apiculate, 2.5–4.5 cm. long, 1–2 cm. broad, pubescent mainly on the midrib below.

Iv. C.: Yapo Chev. B. 22326! Bouroukrou Chev. 16151.

22. SAMANEA

(*Benth.*) *Merrill* in Journ. Wash. Acad. Sci. 6: 46 (1916).

- 1 A tall tree; branchlets and leaf-rhachis pubescent; leaves bipinnate; pinnae 20–30 pairs, opposite; rhachis with a gland towards the base and glands between some of the upper pinnae; leaflets up to 40 pairs, very close, linear, auriculate on one side at the base, about 3–4 mm. long, slightly ciliate when young; flowers capitate; peduncles often paired, axillary, about 2–4 cm. long, rusty-tomentellous; calyx tubular, dentate, 3 mm. long, like the corolla tomentellous; stamens 14–16; fruits more or less straight, woody or subwoody with distinct margins, 13–17 cm. long, 2–2.2 (–2.5) cm. broad [dinklagei](#)

Samanea dinklagei (*Harms*) *Keay* in Kew Bull. 1953: 488 (1954).

APD: Synonym of Albizia dinklagei (Harms) Harms

Mimosa dinklagei *Harms* in Engl. Bot. Jahrb. 26: 253 (1899).

Albizia dinklagei (*Harms*) *Harms* (1915).

Cathormion dinklagei (*Harms*) *Hutch. & Dandy* in F.W.T.A., ed. 1, 1: 364 (1928); Kew Bull. 1928: 401; partly (excl. descr. frts., excl. distrib. Fr. Cam., excl. syn. *Mimosa leptophylla* *Harms*).

Pithecellobium dinklagei (*Harms*) *Harms* (1918) — Aubrév. Fl. For. C. Iv. 1: 176, t. 61 A.

A tree, to 50 ft. high, especially in forest near rivers; flowers white.

Port. G.: Bissau (fl. & fr. Feb., Mar.) Esp. Santo 1747! Farim (fl. & fr. May) Esp. Santo 2385! Bafata (fl. & fr. July) Esp. Santo 2697! **Fr. G.:** Kouroussa Pobéguin 859! Konkoure (Mar.) Elliot 4561! **Lib.:** Grand Bassa (May) Dinklage 1827! Nekabozu, Vonjama Baldwin 9974! **Iv. C.:** Aubrév. 1169! And various localities fide Aubrév. l.c. **G. C.:** Kumasi (Feb.–Apr.) Vigne FH 1901! 3726! Akrofonso, Ashanti (June) Andoh FH 4711!

[I am not altogether sure that this plant should be included in Samanea, but a thorough revision of the whole group on a pantropical scale is needed before a more satisfactory classification can be produced — R.W.J.K.]

Samanea saman (*Jacq.*) *Merrill*

Pithecellobium saman (*Jacq.*) *Benth.*

Albizia flavovirens Hoyle

The “Rain-tree”, a native of tropical S. America, has been introduced into the forest regions of our area, and is widely cultivated in the moister parts of the tropics.

23. CATHORMION

Hassk. in Retzia 1: 231 (1855); Merrill in Journ. Wash. Acad. Sci. 6: 43 (1916).

- 1 Pinnae 2 (rarely 3) pairs; leaflets 3–6 pairs, oblong to obovate, unequal at base, rounded or obtuse at apex the uppermost pairs the largest (up to 4.5 cm. long and 2.5 cm. broad); pedicels 1.5–2 mm. long; fruit oblong, slightly curved, margins sinuate, reticulate on the surface, 8–9 cm. long, about 1.5 cm. broad, breaking into 1-seeded segments [1. *rhombofolium*](#)
- Pinnae 5–7 (rarely 4 or 8) pairs; leaflets 12–25 pairs, oblong-lanceolate, truncate at base obtuse at apex, 1–1.5 cm. long, about 4 mm. broad; flowers subsessile; fruit falcate to circinate, jointed, 15–20-seeded, 10–20 cm. long, 1–2 cm. broad, breaking into 1-seeded segments [2. *altissimum*](#)

1. *Cathormion rhombifolium* (Benth.) Keay in Kew Bull. 1953; 489 (1954). *APD acc*

Albizia rhombifolia Benth. in Hook. Lond. Journ. Bot. 3: 87 (1844); F.T.A. 2: 358; Benth. in Trans. Linn. Soc. 30: 563 (excl. syn. *Mimosa glaberrima* Schum. & Thonn.).

Albizia glaberrima of F.W.T.A., ed. 1, 1: 362, not of (Schum. & Thonn.) Benth.; Chev. Bot. 249.

Pithecellobium glaberrimum of Aubrév. in Notulae Syst. 14: 57 (1950) and in Fl. For. Soud.-Guin. 290, t. 59, 4–5, partly, not of (Schum. & Thonn.) Aubrév.

Tree, to 30 ft. high; in swamp forest; flowers white.

24. CALLIANDRA

Benth. — F.T.A. 2: 354; Benth. in Trans. Linn. Soc. 30: 536 (1875).

- 1 Shrub with slender unarmed branches; stipules persistent, lanceolate, nervose; leaves bipinnate; pinnae 2–5 pairs, opposite; leaflets 8 or more pairs, linear-oblong, subacute, 1–1.5 cm. long, about 4–5 mm. broad, slightly pubescent; flowers in small axillary heads on very slender peduncles up to 4 cm. long; stamens numerous, with very slender filaments; fruit flat, linear, narrowed to the base, dehiscent, 10–15 cm. long, with very prominent sutures and bulging seeds [portoricensis](#)

Calliandra portoricensis (Jacq.) Benth. — F.T.A. 2: 354; Benth. l.c. 543; Bak. f. Leg. Trop. Afr. 3: 855. *APD acc*

Mimosa portoricensis Jacq. (1790).

A glabrous shrub; flowers cream.

G. C.: Dalz. 92! Odumase (Aug.) Howes 1204! Aburi (Aug.) Irvine 137! **Togo:** Misahöhe (Nov.) Mildbr. 7333! **S. Nig.:** Lagos MacGregor 87! Bonny (Oct.) Mann 510! Aguku Thomas 622! 730! Oban Talbot 589! 1313!

Common in the West Indies and on the Atlantic coast of America.

Calliandra haematocephala Hassk.

A native of tropical America, this species has been introduced into W. Africa.

Calliandra surinamensis Benth.

A native of tropical America, this species has been introduced into W. Africa.

PAPILIONACEAE

Trees, shrubs, climbers or herbs. Leaves compound, often imparipinnate or 3-foliolate, or simple, usually stipulate; leaflets sometimes stipellate. Flowers zygomorphic, mostly hermaphrodite. Sepals usually 5, more or less connate. Petals 5, imbricate, free or rarely partially coherent, the upper (adaxial) exterior and forming the standard (vexillum), the two lateral the wings (alae) more or less parallel with each other, the lower two interior and connate by their lower margins into a keel (carina). Stamens often 10, monadelphous or diadelphous, rarely free, mostly all perfect; anthers usually opening lengthwise by slits. Fruit dehiscent or not. Seeds without endosperm or very rarely with scanty endosperm.

A large, homogeneous and easily recognized family, generally distributed throughout the world; most numerous in warmer regions.

Key to Tribes

- 1 Stamens 10, rarely 11, free (or nearly free) from each other, not united into a tube or sheath; petals 5; trees, tall shrubs or tall climbers (rarely dwarf shrubs); leaves imparipinnately multifoliolate or 1-foliolate; leaflets entire; fruit sometimes drupaceous [1. SOPHOREAE](#)
- Stamens all (or all but one) united into a tube or sheath: **2**
- 2 Fruit not jointed: **3**
- Fruit jointed, constricted between the seeds and breaking transversely into 1-seeded portions; stipels sometimes present [9. HEDYSAREAE](#)
- 3 Trees, woody shrubs or tall woody climbers (see also Erythrina): **4**
- Herbs erect, procumbent or climbing; or subshrubs: **6**
- 4 Fruit indehiscent; leaves pinnately 3- or more-foliolate or rarely 1-foliolate, mostly with stipels **2.**
- [DALBERGIEAE](#)
- Fruit dehiscent: **5**
- 5 Leaves pinnately compound; anthers usually uniform [3. GALEGEAE](#)
- Leaves digitately 3-foliolate; anthers usually of 2 kinds; stamens completely monadelphous [4. GENISTEAE](#)
- 6 Leaves with a terminal leaflet: **7**
- Leaves without a terminal leaflet, the rachis produced into a bristle; inflorescence axillary; slender woody twiners [8. VICIEAE](#)
- 7 Stipels absent; mostly erect herbs or subshrubs: **8**
- Stipels present; stamens not broadened at the apex; **11**
- 8 Stamens completely monadelphous; anthers usually of 2 kinds; leaves 3-foliolate; leaflets entire [4. GENISTEAE](#)
- Stamens diadelphous (mostly 9 and 1): **9**
- 9 Leaflets entire, or if toothed (in Cyamopsis) pinnate and hairs mainly medifixed, (in Psoralea undulate and gland-dotted beneath): **10**
- Leaflets toothed, digitate, hairs basifixed, not gland-dotted [6. TRIFOLIEAE](#)
- 10 Flowers in racemes or panicles; stamens filamentous, not broadened at the apex [3. GALEGEAE](#)
- Flowers umbellate; leaves digitately 3-foliolate, the stipules leaf-like; stamens (some or all) broadened at the apex [5. LOTEAE](#)
- 11 Ovary not surrounded by a disk; erect (rarely climbing) herbs; leaves pinnately 3- or multi-foliolate or simple; hairs sometimes medifixed [3. GALEGEAE](#)
- Ovary surrounded by a disk; procumbent, twining or erect herbs; leaves pinnately 3-foliolate, rarely 5-foliolate or simple; hairs never medifixed [7. PHASEOLEAE](#)

Tribe 1 — SOPHOREAE

- 1 Leaves pinnate or 3-foliolate; fruit indehiscent or dehiscent:2
 Leaves 1-foliolate; fruit dehiscent:5
- 2 Leaves pinnate; flowers small; fruit indehiscent:3
 Leaves 3-foliolate; flowers large; fruit oblong, flattened, dehiscent [4. Camoënsia](#)
- 3 Flowers racemose; fruit fleshy, more or less torulose:4
 Flowers paniculate; fruit dry, flat, with a faint intramarginal nerve; calyx lobed to about the middle [3. Afrormosia](#)
- 4 Sea-shore shrub; leaflets 11–17, rounded at apex; racemes terminating the young shoots [1. Sophora](#)
 Forest shrub or tree; leaflets 3–9, acute at apex; racemes on the older wood or terminal [2. Angylocalyx](#)
- 5 Calyx cupular, 5-toothed or -lobed:6
 Calyx 2-fid or split down one side, (rarely irregularly 5-fid in Baphia):7
- 6 Calyx 5-lobed to below the middle, thick; fruit flat, obovate-elliptic, large, 1-seeded; flowers few in short stout racemes [5. Haplormosia](#)
 Calyx 5-dentate, the teeth small, membranous; fruit ovoid, rather small, dehiscing to expose 1 (–2) scarlet seeds; flowers in short slender racemes [6. Bowringia](#)
- 7 Anthers linear, longer than the filaments; petals nearly equal; fruit 1-seeded, stipitate; seed with a large spongy aril [7. Leucomphalos](#)
 Anthers shorter than the filaments:8
- 8 Fruit straight, flat, oblong, oblanceolate or lanceolate, several-seeded [8. Baphia](#)
 Fruit twisted, convex, 1–2-seeded, constricted between the seeds [9. Baphiastrum](#)

Tribe 2 — DALBERGIEAE

- 1 Leaflets without stipels; fruit 1- to few-seeded:2
 Leaflets with stipels, alternate or subopposite; anthers medifixed, versatile, opening by longitudinal slits:4
- 2 Leaflets alternate; anthers basifixed, opening by a terminal pore or a longitudinal slit [10. Dalbergia](#)
 Leaflets opposite; anthers medifixed, opening by a longitudinal slit:3
- 3 Fruit oblong, thin [11. Dalbergiella](#)
 Fruit orbicular, thick, woody (see also below) [16. Ostryocarpus](#)
- 4 Leaflets alternate; fruit 1-seeded5
 Leaflets opposite; fruit 1- to few-seeded:7
- 5 Stipules not spinescent:6
 Stipules spinescent; fruit broadly sickle-shaped, laxly nervose, glabrous; flowers in small axillary and terminal panicles [14. Drepanocarpus](#)
- 6 Fruit suborbicular, winged, smooth, bristly or verrucose; inflorescence racemose or paniculate; sap red [12. Pterocarpus](#)
 Fruit ovoid, turgid; flowers in lax spreading panicles [13. Andira](#)
- 7 Wing-petals free from the keel; fruit not winged, flat [16. Ostryocarpus](#)
 Wing-petals adnate up to the middle of the keel:8
- 8 Flowers arranged in clusters on the raceme; fruit narrowly winged on one side only [16. Leptoderris](#)
 Flowers arranged more or less singly on the axis of the raceme:9
- 9 Fruit winged on each side [17. Ostryoderris](#)
 Fruit not winged [18. Lonchocarpus](#)

Tribe 3 — GALEGEAE

- 1 Trees, or tall woody climbers or shrubs; leaflets with spreading nervation; the hairs (when present) basifixed: ..2
 Herbs or undershrubs:5
- 2 Fruit at length dehiscent; calyx truncate or broadly toothed; mostly trees or woody climbers;3
 Fruit indehiscent; calyx-teeth linear; small shrub; flowers in terminal and leaf-opposed racemes ... [22. Mundulea](#)
- 3 Leaflets opposite; leaves never 3-foliolate:4
 Leaflets alternate or leaves 3-foliolate [21. Craibia](#)
- 4 Calyx bilabiate, upper lip very large, covering the standard [19. Platysepalum](#)

	Calyx equally toothed, or truncate	20. Millettia
5	Hairs on leaves etc. (if present), not medifixed:	6
	Hairs on the leaves medifixed (the arms sometimes very unequal), sometimes with basifixed hairs present as well; anthers nearly always apiculate; flowers usually red:	10
6	Racemes or panicles terminal or leaf-opposed:	7
	Racemes axillary:	9
7	Leaflets without stipels; vexillary stamens connate at least to the middle:	8
	Leaflets with stipels, with spreading not parallel nerves; leaves 3-foliolate; vexillary stamen free from the base upwards	76. Pseudarthria
8	Venation of leaves closely parallel; leaflets (1–) 3-many; vexillary stamen connate about the middle with the others; flowers racemose or fasciculate	23. Tephrosia
	Venation of leaves not parallel; leaves 1-foliolate; vexillary stamen connate its full length; prostrate herb; stipules scarious; flowers glomerate	79. Melliniella
9	Leaves pinnate, with numerous leaflets; fruit many-seeded, elongated, often torulose	24. Sesbania
	Leaves pinnately 3-foliolate, gland-dotted beneath; fruit 1-seeded	25. Psoralea
10	Vexillary stamens free from the others; standard usually pubescent outside, if glabrous then fruit not 4-ribbed	26. Indigofera
	Vexillary stamens united with the others; standard glabrous; fruit stout, erect, 4-ribbed in a short axillary congested raceme	27. Cyamopsis

Tribe 4 — GENISTEAE

1	Staminal tube slit in the upper part:	2
	Staminal tube not slit in the upper part:	3
2	Style straight; fruit inflated; small branched annual with leaf-opposed subsessile flowers	28. Rothia
	Style abruptly bent near base; fruit often turgid but hardly inflated; leaves 3-foliolate or sometimes 1– or 5-foliolate; flowers usually yellow	29. Crotalaria
3	Calyx-lobes longer than the tube; leaves digitately 5–7-foliolate; flowers laxly racemose	30. Lupinus
	Calyx-teeth shorter than the tube; leaves 3-foliolate; flowers in dense sessile terminal heads; fruit viscid	31. Adenocarpus

Tribe 5 — LOTEAE

1	Leaves digitately 3-foliolate with leaf-like stipules; flowers umbellate; fruit much longer than the calyx	32. Lotus
---	--	---------------------------

Tribe 6 — TRIFOLIEAE

1	Leaves digitately 3-foliolate, stipules not leaf-like; inflorescence a condensed raceme or subcapitate; fruit 1–5-seeded, shorter or but little longer than the calyx	33. Trifolium
---	---	-------------------------------

Tribe 7 — PHASEOLEAE

1	Leaves beneath (and frequently calyx) gland-dotted:	2
	Leaves not gland-dotted beneath:	7
2	Ovules 2:	3
	Ovules 4 or more:	6
3	Fruit compressed:	4
	Fruit turgid; erect shrubs; hilum of seed small	36. Moghania
4	Stems twining or trailing, with usually spike-like racemes of flowers; funicle of seed attached in centre of hilum	34. Rhynchosia
	Stems erect:	5
5	Style glabrous; stigma terminal; funicle of seed attached at one end of the long hilum	35. Eriosema
	Style bearded above; stigma hanging over the inner side at the apex; funicle of seed attached in the centre of the small hilum	56. Adenodolichos
6	Erect shrubs; flowers in subcapitate axillary racemes; fruit obliquely subtorulose	37. Cajanus
	Slender twiner; flowers paired in the leaf-axils; fruit septate between the seeds	38. Atylosia
7	Vexillary stamen free from near the base upwards:	8
	Vexillary stamen connate in the upper part with the others, free below:	27
8	Bracts or bracteoles large, conspicuous, more or less persistent:	9
	Bracts and bracteoles small and inconspicuous, caducous:	11

- 9 Style bearded along the inner face, leaves pinnate or 3-foliolate; bracts small; bracteoles broad at base of calyx [39. *Clitoria*](#)
- Style glabrous; leaves 3-foliolate: **10**
- 10 Inflorescence a lax, slender raceme, many-flowered with large persistent bracts; bracteoles absent [40. *Amphicarpa*](#)
- Inflorescence a short, rather dense, pedunculate raceme, few-flowered; bracts small and caducous; bracteoles large, enveloping the calyx [41. *Centrosema*](#)
- 11 Keel longer than the standard petal; fruit hispid with usually stinging hairs; flowers in zigzag racemes, short racemes or more or less umbellate [42. *Mucuna*](#)
- Keel shorter than the standard petal: **12**
- 12 Fruit ripening above ground-level: **13**
- Fruit ripening below ground-level: **26**
- 13 Style glabrous; herbaceous or woody: **14**
- Style bearded on one side or around the stigma; herbaceous twiners: **20**
- 14 Calyx entire or unilateral and irregularly jagged-lobate; trees or shrubs with large showy flowers; petals unequal, the standard much exceeding the wings and keel [43. *Erythrina*](#)
- Calyx more or less regularly lobed; petals subequal in length: **15**
- 15 Calyx 5-lobed; standard glabrous: **16**
- Calyx 4-lobed, upper lobe entire or shortly 2-toothed: **18**
- 16 Stems erect; for other characters see above [76. *Pseudarthria*](#)
- Stems twining: **17**
- 17 Stems long-pilose; fruit septate, densely pilose [44. *Calopogonium*](#)
- Stems tomentose; fruit not septate, pubescent [45. *Neorautanenia*](#)
- 18 Stems twining; fruit several-seeded: **19**
- Stems erect; fruit 2-seeded [48. *Pseudoeriosema*](#)
- 19 Nodes of raceme swollen; standard glabrous [46. *Galactia*](#)
- Nodes of raceme not swollen; standard mainly pubescent [47. *Glycine*](#)
- 20 Stigma laterally oblique: **21**
- Stigma terminal: **25**
- 21 Style hooded or flattened: **22**
- Style neither hooded nor flattened: **23**
- 22 Stigma with a large hood-like appendage attached on the outside; keel spirally twisted [49. *Physostigma*](#)
- Stigma flat and broad, more or less spatulate but not appendaged; keel not twisted [50. *Sphenostylis*](#)
- 23 Glands conspicuous beneath anthers of 5 of the stamens; keel not spirally twisted [51. *Haydonia*](#)
- Glands absent from all stamens: **24**
- 24 Stipules truncate at base; keel spirally twisted; fruit not septate [52. *Phaseolus*](#)
- Stipules cordate or appendaged below the base; keel straight or spirally twisted; fruit septate [53. *Vigna*](#)
- 25 Style glabrous; stigma surrounded by a ring of hairs [54. *Dolichos*](#)
- Style bearded down one side; stigma without a ring of hairs [65. *Lablab*](#)
- 26 Style bearded; calyx with short broad teeth [57. *Voandzeia*](#)
- Style glabrous; calyx deeply divided into narrow lobes [58. *Kerstingiella*](#)
- 27 Fruit 4-winged, 5–6-seeded; leaves 1–3-foliolate [59. *Psophocarpus*](#)
- Fruit not winged; leaves 3-foliolate: **28**
- 28 Fruit many-seeded; herbaceous twiners: **29**
- Fruit 1–3-seeded; nodes of raceme swollen; woody climber [63. *Dioclea*](#)
- 29 Nodes of raceme not swollen; alternate anthers aborted; fruit narrow, abruptly hooked at apex [60. *Teramnus*](#)
- Nodes of raceme swollen; apex of fruit not hooked; stamens all fertile: **30**
- 30 Calyx-lobes almost equal in size, all acute; fruit narrow [61. *Pueraria*](#)
- Calyx-lobes unequal in size, upper 2 rounded and larger than the lower 3; fruit broad, furrowed along the upper suture [62. *Canavalia*](#)

- 1 Slender woody twiners with pinnate leaves, the rachis ending in a bristle; stamens 9 connate in a sheath; flowers racemose [64. Abrus](#)
- Tribe 9 — HEDYSAREAE**
- 1 Leaflets without stipels: **2**
 Leaflets with stipels: **11**
- 2 Stamens monadelphous: **3**
 Stamens diadelphous: **5**
- 3 Fruit not ripening below ground-level: **4**
 Fruit ripening below ground-level; leaflets 2 pairs, without a terminal one; flowers axillary, solitary [67. Arachis](#)
- 4 Leaflets 3; calyx-tube resembling a stalk; flowers enclosed by 1 or more scarious bracts, inflorescence congested; stipules forming a sheath, not appendaged below the base [65. Stylosanthes](#)
 Leaflets 2; calyx-tube not like a stalk; flowers more or less enclosed by 2 opposite green bracts, inflorescence usually lax; stipules not sheathing, appendaged below the base [66. Zornia](#)
- 5 Calyx subregularly 5-toothed: **6**
 Calyx bilabiate: **7**
- 6 Stamens in 2 bundles of 5 each; shrubs or small trees [68. Ormocarpum](#)
 Stamens with 1 free and the rest connate; a slender herb [69. Antopetitia](#)
- 7 Fruit well exserted from calyx, or if included then stamens alternately long and short: **8**
 Fruit enclosed by the calyx; stamens all similar: **9**
- 8 Fruit straight or bent, if coiled then a prickly shrub [70. Aeschynomene](#)
 Fruit coiled in a ring; slender shrublet [71. Cyclocarpa](#)
- 9 Flowers not hidden by the bracts, the latter not reniform: **10**
 Flowers hidden by the large imbricate reniform bracts [74. Bryaspis](#)
- 10 Stipules not appendaged below point of insertion; inflorescence strobilate, a congested bracteate raceme, or few flowered; flowers reflexed [72. Kotschya](#)
 Stipules appendaged; inflorescence umbellate, bracts caducous; flowers erect [73. Smithia](#)
- 11 Fruit not bent backwards, more or less straight and exserted from the calyx: **12**
 Fruit bent backwards, included in the calyx [80. Uraria](#)
- 12 Calyx herbaceous; fruit compressed: **13**
 Calyx dry and glumaceous; fruit not compressed [78. Alysicarpus](#)
- 13 Leaf-rachis not winged; alternate filaments not flattened [75. Desmodium](#)
 Leaf-rachis winged, wing foliaceous; alternate filaments flattened [77. Droogmansia](#)

Gliricidia sepium (Jacq.) Walp.

Has been widely introduced into our area from tropical America

Derris microphylla (Miq.) Jacks.

From Burma, it is cultivated in Sierra Leone and Gold Coast.

Myroxylon balsamum Harms

From tropical America, it is cultivated in Sierra Leone and Gold Coast

Trigonella foenum-graecum Linn.

Is cultivated at Timbuktu

Melilotus indica (Linn.) All.

Has been recorded from Bilma, French Niger.

Medicago sativa Linn.

Has been recorded from Bilma, French Niger.

1. SOPHORA

Linn. — F.T.A. 2: 253.

- 1 Small shrub, covered with short white indumentum; leaves imparipinnate; leaflets about 7 pairs, opposite or alternate, elliptic, rounded at each end, about 4 cm. long and 2 cm. broad, shortly appressed-tomentellous beneath; racemes up to 25 cm. long; bracts linear-subulate, 6 mm. long; pedicels up to 1 cm. long; calyx cupular, nearly 1 cm. long, minutely tomentellous; corolla 1.5–2 cm. long; fruits long-stipitate, torulose, about 15 cm. long, minutely tomentellous[occidentalis](#)

***Sophora occidentalis* Linn. Syst., ed. 10, 2: 1015 (1759); Bak. f. Leg. Trop. Afr. 2: 595.**

APD: *Synonym of *Sophora tomentosa* subsp. *occidentalis* (L.) Brummitt*

***Sophora nitens* Schum. & Thonn. (1827).**

***Sophora tomentosa* of F.T.A. 2: 254, partly; Berhaut Fl. Sen. 41.**

A maritime plant with hoary foliage, yellow flowers and torulose fruits.

Sen.: fide Berhaut l.c. **S. L.:** Kent (fl. & fr. May) Deighton 2686! York (fl. & fr. May) Deighton 5528! **Lib.:** Cape Palmas (fl. & fr. July) T. Vogel 1! Garaway (fl. & fr. Mar.) Baldwin 11631! **G. C.:** Sekondi (fr. Dec.) Johnson 969! Axim (fr. Apr.) Chipp 166! **Togo:** Lome Warnecke 213! **S. Nig.:** Lagos (fl. & fr. Apr.) Dalz. 1367!

Also in **S. Tomé**, **West Indies** and east tropical S. America.

2. ANGYLOCALYX

Taub. in Engl. Bot. Jahrb. 23: 172 (1896). APD acc

- 1 Flowers amongst the leaves in racemes 10–15 cm. long; ovary glabrous; pedicels 10–12 mm. long; flowers about 1.5 cm. long; leaves 5–7-foliolate; leaflets alternate, ovate-lanceolate, rounded at base, acute but hardly acuminate at apex, 8–15 cm. long, 4–6 cm. broad, finely reticulate on both surfaces, lateral nerves obscure .[1. zenkeri](#)
- Flowers cauliflorous; ovary pubescent; pedicels about 4 mm. long:**2**
- 2 Racemes 4–5 cm. long, becoming twisted; standard not reflexed; leaves 3–7-foliolate; leaflets alternate or subopposite, ovate, cuneate or rounded at base, caudate at apex, 9–23 cm. long, 5–9 cm. broad, laxly reticulate; fruits torulose, up to 11 cm. long, long-beaked, glabrous [2. oligophyllus](#)
- Racemes 1–2 cm. long; standard reflexed; leaves 7–9-foliolate; leaflets alternate, oblong-elliptic, rounded at base, shortly acuminate at apex, 12–23 cm. long, 4.5–9 cm. broad, finely reticulate; fruits unknown [3. talbotii](#)

1. *Angylocalyx zenkeri* Harms in Engl. Bot. Jahrb. 45: 306 (1910); Bak. f. Leg. Trop. Afr. 2: 598; Kennedy For. Fl. S. Nig. 118.

APD: *Synonym of *Angylocalyx pynaertii* De Wild.*

A forest tree 50 ft. or more high, with thin brown bark.

S. Nig.: Sapoba (fl. & fr. Feb., Mar.) Kennedy 675! 2311! Okomu F.R., Benin Brenan 8545!

Also in **French Cameroons**.

2. *Angylocalyx oligophyllus* (Bak.) Bak. f. in Cat. Talb. 26 (1913); Leg. Trop. Afr. 2: 597. APD acc

***Sophora oligophylla* Bak. in F.T.A. 2: 254 (1871).**

***Angylocalyx ramiflorus* Taub. (1896) — Toussaint in Fl. Congo Belge 4: 37.**

***Angylocalyx trifoliolatus* Bak. f. (1913).**

A forest shrub 3–6 ft. high, with a single main stem, bark green or grey-brown; calyx and petals greenish-white with reddish spots; fruits yellow when ripe.

Lib.: Dukwia R. (Feb.) Cooper 203! 291! Bushrod Isl. (fl. & fr. Jan., Aug.) Baldwin 13077! 14071! **Dah.:** Tori-Kada Poisson! **S. Nig.:** Lagos (fl. & fr. Apr.) Moloney! Dalz. 1093! Ibadan (Sept.) Also in **French Cameroons**, **Gabon**, **Cabinda** and **Belgian Congo**.

3. *Angylocalyx talbotii* Bak. f. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 371 (1928); Kew Bull. 1928: 402; Bak. f. l.c. 598. APD acc

S. Nig.: Oban Talbot 239! 1205!

3. AFRORMOSIA

Harms in E. & P. Pflanzenfam. Nachtr. 3: 158 (1906). *APD acc*

- 1** Rain forest tree; leaf-rhachis glabrous or with a few rather long hairs, 8–15 cm. long; leaflets 7–9 (–11), alternate, ovate-elliptic, rounded at base, shortly acuminate, 3–7 cm. long, 1.5–3 cm. broad, upper leaflets longer than the lower, glabrous; stipels subulate, 3 mm. long; panicles terminal, short, many-flowered, with slender pubescent rhachis 2–6 cm. long; calyx appressed silky-pubescent, 1 cm. long, 5-toothed, upper 2 teeth almost connate, lower 3 teeth twice as long as the tube; flowers 13–14 mm. long; fruits 9–14 cm. long and about 2.5 cm. broad, flat, 1–3-seeded, pubescent when young becoming almost glabrous *1. elata*

Savannah tree; leaf-rhachis densely tomentose, at least in the groove of older leaves, 12–20 cm. long; leaflets 9–13, alternate or subopposite, variable in shape from narrowly lanceolate to broadly ovate-elliptic, usually cuneate or sometimes rounded at base, acumen emarginate, 3–7 cm. long, 2.5–5 cm. broad, glabrous or sparsely pubescent; stipels subulate, 2 mm. long; panicles terminal, lax, many-flowered, rhachis densely pubescent, 5–10 cm. long; calyx appressed-pubescent, 1 cm. long, 5-toothed, upper 2 teeth almost connate, lower 3 teeth about as long as the tube; flowers about 13 mm. long; fruits 5–15 cm. long, 2–3 cm. broad, flat, 1–3-seeded, glabrous, glaucous *2. laxiflora*

- 1. *Afrormosia elata* Harms** in Engl. Bot. Jahrb. 49: 430 (1913); Bak. f. Leg. Trop. Afr. 2: 600; Aubrév. Fl. For. C. Iv. 1: 282, t. 113, 4–5; Tousaaint in Fl. Congo Belge 4: 42, t. 3.

APD: Synonym of Pericopsis elata (Harms) Meeuwen

A large forest tree, to about 160 ft. high; surface of trunk somewhat fluted and with thin grey flaking bark leaving reddish patches beneath; in rain forest.

Iv. C.: Aubrév. 690! 1592; 1804! **G. C.:** Gambia, W. Ashanti Charmant! Bia Tano F.R. (fr. Dec.) Antah FH 5124! Goaso (fl. Apr., May, fr. May, June) Antah FH 5156! 5183! Charmant! Andoh FH 5505!

Also in **French Cameroons** and **Belgian Congo**.

- 2. *Afrormosia laxiflora* (Benth. ex Bak.) Harms** in Notizbl. 21, 2: 64 & fig. (1911); Engl. Pflanzenw. Afr. 3, 1: 527, t. 278; Chev. Bot. 218; Bak. f. l.c. 2: 600; Aubrév. Fl. For. Soud.-Guin. 306, t. 62, 1–3.

APD: Synonym of Pericopsis laxiflora (Benth.) Meeuwen

Ormosia laxiflora Benth. ex Bak. in F.T.A. 2: 255 (1871); Chev. Bot. 218.

A tree 30–40 ft. high, with usually tortuous trunk and red- or yellow-blotched bark, grey-pubescent pendulous branchlets and greenish-white or cream flowers; chiefly in savannah, often on rocky ground, sometimes in fringing forest.

Sen.: Berhaut 913. Bignona Serv. For. 51. **Fr. Sud.:** Yatenga Chev. 24786! **Fr. G.:** Kouroussa Pobéguin 663! Dentilla, 3,600 ft. (fr. Mar.) Sc. Elliot 5302! **S. L.:** Erimakuna (Mar.) Sc. Also in **French Cameroons**, **Ubangi-Shari** and **A.-E. Sudan**.

4. CAMOËNSIA

Welw. ex Benth. — F.T.A. 2: 251.

- 1** Climbing shrub; leaves digitately trifoliate; leaflets oblong to ovate-oblong, cuneate at base, subacute at apex, 8–11 cm. long, 4–5 cm. broad, coriaceous, glabrous; petiole 5–8 cm. long; flowers in erect, stoutly-pedunculate axillary racemes; pedicels about 2 cm. long with a pair of small ovate bracteoles at apex; calyx campanulate nearly 2 cm. long, with 5 broad deltoid teeth 6 mm. long; corolla about 5 cm. long; anthers medifixed, 5 mm.

long; ovary pubescent; fruits unknown [brevicalyx](#)

Camoënsia brevicalyx *Benth.* — F.T.A. 2: 251; Bak. f. Leg. Trop. Afr. 2: 602; Toussaint in Fl. Congo Belge 4: 34. *APD acc*

A woody forest climber, at least 60 ft. high; petals white or mauve with a yellow mark in the centre of the standard.

S. Nig.: Aboabam, Ikom Div. (Dec.) Keay!

Also in **Gabon**, **Spanish Guinea**, **Belgian Congo** and **Angola**.

5. HAPLORMOSIA

Harms in Engl. Pflanzenw. Afr. 3, 1: 532 (1915); Fedde Rep. 15: 23 (1919).

- 1 A tree; branchlets glabrous, purplish; leaves 1-foliolate, broadly elliptic, rounded or shortly cuneate at base, shortly and obtusely acuminate, 7–18 cm. long, 3.5–9 cm. broad, glabrous; lateral nerves about 6–8 pairs; petiole 2–3.5 cm. long; racemes lateral, few-flowered, up to 10 cm. long; pedicels 1 cm. long, with a pair of small bracteoles at the top; calyx glabrous outside except the margins of the 5 lobes; petals 5; stamens 10, free; fruit flat, obovate-elliptic, beaked, about 8 cm. long and 4–5 cm. broad, glabrous, 1-seeded [monophylla](#)

Haplormosia monophylla (*Harms*) *Harms* in Engl. Pflanzenw. Afr. 3, 1: 532 (1915); Bak. f. Leg. Trop. Afr. 2: 592; Aubrév. Fl. For. C. Iv. 1: 274, t. 107. *APD acc*

Crudia monophylla *Harms* (1901) — Chev. Bot. 233.

A tree 20–30 ft. or up to 100 ft. high, sometimes developing buttresses; flowers showy, blue; in swamps.

S. L.: Sherbro Dawe 465! Falaba (?) (Apr.) Aylmer 33! Baiama L. (Oct.) Deighton 5035! **Lib.:** Grand Bassa Dinklage 1912! 1913! Farmington R. (Feb.) Cooper 189! Brewersville (fr. Dec.) Also in **French Cameroons**.

6. BOWRINGIA

Champ. ex Benth. in Hook. Kew Journ. 4: 75 (1852).

- 1 Slender-stemmed climbing shrub; leaves 1-foliolate, alternate, rounded at base, long-acuminate, 5–10 cm. long, 3.5–5 cm. broad, prominently nerved on both surfaces, glabrous; petiole about 2 cm. long; stipules minute; flowers few, in short axillary racemes; peduncle 2–5 cm. long; standard about 11 mm. long, orbicular, emarginate, shortly clawed; wing falcate-oblong; keel as long as the wings; stamens free or slightly joined at the base, anthers 1 mm. long, oblong; ovary stipitate; style filiform; fruits shortly stipitate, woody, 2–3 cm. long, dehiscent, 1–2-seeded [mildbraedii](#)

Bowringia mildbraedii *Harms* in Engl. Bot. Jahrb. 49: 432, t. 2 (1913); Bak. f. Leg. Trop. Afr. 2: 592; Toussaint in Fl. Congo Belge 4: 7.

APD: *Synonym of Leucomphalos mildbraedii* (*Harms*) *Breteler*

A climber; fruits boat-shaped, gaping to expose 1 or 2 vivid scarlet glossy seeds attached to the suture.

S. Nig.: Shasha F.R. (fr. Mar.) Jones & Onochie FHI 17182! Sapoba (fl. & fr. Mar., Oct.) Jones FHI 807! Ujor FHI 23925! Idanre (fr. Jan.) Brenan 8677! 8716! Onitsha Unwin 76!

Also in **French Cameroons**, **Ubangi-Shari**, **Belgian Congo** and **Angola**.

7. LEUCOMPHALOS

Benth. ex Planch. — F.T.A. 2: 251.

- 1 A shrub; leaves 1-foliolate, ovate-elliptic, rounded at base, obtusely acuminate, 5–10 cm. long, 3.5–5 cm. broad, papery, glabrous, closely reticulate on both surfaces, with about 6 pairs of lateral nerves; petiole up to 6 cm. long, subterete; flowers in short axillary racemes towards the ends of the branches; axis of inflorescence pubescent, about 2 cm. long; pedicels 3–4 mm. long, puberulous; buds ovoid, 6 mm. long, glabrous; petals subequal; anthers longer than the filaments; fruits dehiscent, obliquely elliptic, beaked, 2–3 cm. long, stipitate, 1-seeded; seeds with a spongy aril [capparideus](#)

Leucomphalos capparideus *Benth. ex Planch.* — F.T.A. 2: 251; Bak. f. Leg. Trop. Afr. 2: 591. *APD acc*

A shrub or climber slightly branched from the base; petals and fruit white; seeds with a large white aril.

S. Nig.: Oban Talbot 1208! 1326! Akarara, Calabar (May) Ujor FHI 30840! **F. Po:** in woods (fl. & fr. Dec.) T. Vogel 264!

Also in **French Cameroons** and **Gabon**.

8. BAPHIA

Lodd. — F.T.A. 2: 247; Lester-Garland in J. Linn. Soc. 45: 221 (1921). *APD acc*

- 1 Calyx divided into two subequal parts:2
Calyx split down one side only (spathaceous):3
- 2 Branchlets and midrib shortly puberulous; inflorescence often branched towards the base; leaves oblong-elliptic, rounded or subcordate at base, rather long-acuminate, up to 14 cm. long and 7 cm. broad, slightly pubescent beneath; fruits linear, about 12 cm. long and 1.5 cm. broad, glabrous [1. polygalacea](#)
Branchlets and midrib densely rusty-tomentose; inflorescence not branched, 5–7 cm. long; leaves oblong-lanceolate, rounded at base, shortly acuminate, 7–11 cm. long, 2.5–4 cm. broad, hirsute on both surfaces on and towards the midrib; pedicels 5–7 mm. long; calyx 1 cm. long [2. heudelotiana](#)
- 3 Flowers in racemes, arranged singly on the axis:4
Flowers in axillary fascicles or solitary, or if apparently racemose (by falling of the leaves) then racemes terminal and pedicels fasciculate:5
- 4 Bracteoles oblong, nervose, about 2 mm. long; leaves ovate or oblong-elliptic, subcordate at base, long-acuminate, 9–20 cm. long, 4–6 cm. broad, glabrous, closely reticulate beneath; racemes axillary; pedicels nearly 1 cm. long; calyx about 7 mm. long; ovary tomentose [3. leptobotrys](#)
Bracteoles cupular, up to 1 mm. long; leaves elliptic, rounded at base, abruptly and obtusely acuminate, 8–13 cm. long, 4.5–6.5 cm. broad, glabrous and finely reticulate beneath; pedicels 6–10 mm. long; racemes clustered on the old wood, 2–5 (–20 cm.) long; calyx 8 mm. long; ovary glabrous [4. obanensis](#)
- 5 Ovary glabrous:6
Ovary tomentose:7
- 6 Petioles 13–25 mm. long (strictly, leaves are 1-foliolate); pedicels about 1 cm. long; calyx slightly pubescent in the upper part, about 1 cm. long; leaves oblong-elliptic to ovate, rounded at base, acuminate, 8–12 cm. long, 4–5 cm. broad, more or less pubescent on the nerves beneath; fruits oblanceolate, up to 15 cm. long, glabrous [5. nitida](#)
Petioles 5 mm. long (strictly, leaves are simple); pedicels about 1.5 cm. long; calyx glabrous, about 7 mm. long; leaves obovate, 6–9 cm. long, 2.5–4.5 cm. broad, abruptly acuminate, glabrous [6. gracilipes](#)
- 7 Petioles about 1 cm. long; lamina oblong, ovate-oblong or obovate, acuminate or caudate at apex:8
Petioles 2–7.5 cm. long; leaves suborbicular or very broadly elliptic, rounded or shortly cordate at base, abruptly and shortly triangular-acuminate at apex, 10–18 cm. long, 6–8 cm. broad, shortly pubescent on nerves beneath; lateral nerves 6–8 pairs; flowers axillary, bracteoles broadly ovate, 8 mm. long, tomentellous; calyx 1.4 cm. long; pedicels stout, 1 cm. long; ovary villous; fruits oblanceolate, 11–12 cm. long, glabrescent with a thickened margin [11. maxima](#)
- 8 Pedicels 15–22 mm. long, stiff, pubescent; anthers 3–4 mm. long; calyx about 1 cm. long, straight, in bud, appressed-pubescent; bracteoles small and cup-shaped; leaves oblong or ovate-oblong, 8–15 cm. long, 4–7 cm. broad, finely reticulate, leathery, glabrous except on the midrib [7. laurifolia](#)
Pedicels 5–9 mm. long; anthers 1–2 mm. long:9
- 9 Calyx abruptly curved towards apex in bud, about 1.5 cm. long, appressed-pubescent; leaves strongly reticulate and sparsely pubescent beneath, oblong-elliptic, rounded at base, acutely acuminate at apex, 8–10 cm. long, 3–4 cm. broad, lateral nerves about 6 pairs; fruits oblong, about 8 cm. long, rusty-pilose, becoming glabrous, very

acute at apex [8. *spathacea*](#)

Calyx straight in bud, up to 1 cm. long; leaves not reticulate, densely to sparsely pubescent beneath, often early becoming glabrescent, obovate to obovate-oblong, 4–12 cm. long, 2–5 cm. broad, lateral nerves 8–9 pairs; fruits oblanceolate, about 8 cm. long, glabrous, 1–3-seeded: **10**

- 10** Stipular bracts early caducous, linear-lanceolate, 3–5 mm. long, pubescent; calyx minutely and densely pubescent [9. *pubescens*](#)

Stipular bracts subpersistent, linear to slightly oblanceolate, 7–10 mm. long, strongly nerved, ciliate; calyx pubescent mainly towards the apex [10. *bancoensis*](#)

- 1. *Baphia polygalacea* (Hook. f.) Bak.** in F.T.A. 2: 248 (1871), excl. syn. *Delaria pyrifolia* Desv.; Lester-Garland in J. Linn. Soc. 46: 228; Chev. Bot. 217; Bak. f. Leg. Trop. Afr. 2: 573, incl. var. *nigerica* Bak. f. (1914); Tousseaint in Fl. Congo Belge 4: 12, fig. 2, F–G.

APD: *Synonym of Baphia capparidifolia subsp. polygalacea Brummitt*

APD: *Synonym of Baphia capparidifolia subsp. multiflora (Harms) Brummitt*

Bracteolaria potygalacea Hook. f. (1849).

Baphia pyrifolia Baill. (1885) — Milne-Redhead in Kew Bull. 1947: 26.

A shrub or small tree, sometimes scandent; flowers rather small, fragrant, with a silky calyx and white standard with a yellow spot, in copious short racemes or panicles.

Baphia orbiculata Bak. f. (1913) — F.W.T.A., ed. 1, 1: 373; Bak. f. l.c. 585.

Shrub or tree 10–40 ft. high with leathery leaves; flowers in axillary yellow-tomentose fascicles; corolla white with yellow streaks.

S. Nig.: Oron to Eket Talbot! Oban Talbot 23! 1557! Calabar (Jan.) Espley 10! **Br. Cam.:** Cameroon R. (Jan.) Mann 2224!

Also in **Gabon**.

1. **Baphia** sp. **A.**

Pedicels slender, about 18 mm. long; ovary pubescent; stipular bracts linear, persistent, striate, 6–11 mm. long. Allied to *B. bancoensis* Aubrév. but material poor.

S. Nig.: Oban Talbot 18!

Imperfectly known species.

2. **Baphia** sp. **B.**

Pedicels about 1 cm. long; ovary glabrous; leaves rather large and coriaceous. Material poor.

S. Nig.: Oban Talbot!

Imperfectly known species.

9. BAPHIASTRUM

Harms in Engl. Bot. Jahrb. 49: 435 (1913). *APD acc*

- 1 A shrub; branchlets and petioles rusty-pubescent; leaves 1-foliolate, broadly elliptic to elliptic-lanceolate, acutely and shortly acuminate, 7–18 cm. long, 3–7 cm. broad, reticulate and more or less rusty-pubescent beneath, lateral nerves 6–8 pairs; petiole 1.5–3 cm. long, with 2 small stipels at the top; stipules lanceolate, about 7 mm. long, caducous; flowers in axillary fascicles or in apparent racemes; pedicels about 1 cm. long; bracteoles about 5 mm. long, broadly ovate, usually reflexed; calyx 1.3 cm. long, straight in bud, 4-lobed and split down one side in flower; corolla about 2 cm. long; anthers 3 mm. long; ovary densely yellow-pubescent; fruit 1–3-seeded, twisted[confusum](#)

Baphiastrum confusum (Hutch. & Dalz.) Pellegr. in Bull. Soc. Bot. Fr. 90: 162 (1943).

APD: *Synonym of Airyantha schweinfurthii subsp. confusa* (Hutch. & Dalziel) Brummitt

Baphia confusa Hutch. & Dalz. F.W.T.A., ed. 1, 1: 373 (1928); Kew Bull. 1928: 402; Bak. f. Leg. Trop. Afr. 2: 587.

Baphia spathacea of F.T.A. 2: 250, partly; Chev. Bot. 217; not Hook. f.

Baphiastrum spathacea of Staner (1936); Fl. Congo Belge 4: 31; not *Baphia spathacea* Hook. f.

A shrub or sometimes a climber 6 ft. up to 25 ft. high; flowers white with a yellow centre; seeds scarlet.

Iv. C.: Bingerville Chev. 15297. **G. C.:** Princes (fr. Jan.) Akpabla 771! Wiresu (fr. Dec.) Brown 2390! **S. Nig.:** Idanre F.R. (July) Ejiofor FHI 26737! Onitsha (Dec.) Onyeagocha FHI 7793! 10. DALBERGIA

Linn. f. — F.T.A. 2: 231.

***Ecastaphyllum* Browne (1756).**

- 1 Fruits suborbicular or obovate-semilunar with one side straight, woody, smooth or rugose; leaflets 1–3 (–7):.....2
Fruits oblong, thin, neither rugose nor woody, but sometimes spiny; leaflets 5–many:6
- 2 Leaves 1-foliolate (or very rarely 3-foliolate in *D. ecastaphyllum* f. *trifoliolata*):.....3
Leaves 3–7-foliolate:4
- 3 Leaflet minutely pubescent beneath, lateral nerves about 7, slightly prominent, hardly reticulate between, 8–17 cm. long, 4–7 cm. broad; petioles 3–8 mm. long; fruits obovate-orbicular, flat, smooth, about 3 cm. diam. ...[1. ecastaphyllum](#)
Leaflet glabrous or laxly pubescent beneath, lateral nerves about 12, very prominent, reticulate between, 8–23 cm. long, 4–11 cm. broad; petioles (5–) 7–15 mm. long; fruits obliquely ellipsoid, strongly thickened, corrugated, 1.5–3.5 cm. long, 1–2 cm. broad, 5–8 mm. thick[2. louisii](#)
- 4 Indumentum on undersurface of leaflets consisting of minute hairs, appressed and lying in one direction; terminal leaflet usually much larger than the others, 10–15 cm. long; fruits ovate-semilunar with one side almost straight, young fruit smooth, ripe fruit bullate and wrinkled, about 3 cm. long and 2 cm. broad[3. heudelotii](#)
Indumentum on undersurface of leaflets tomentose or of crisped hairs not obviously lying in one direction, dense or sparse; fruits rugose or with a raised centre surrounded by a narrow undulate wing:5
- 5 Leaflets beneath and branchlets softly tomentose; fruits ovate or semilunar, obviously rugose, pubescent[4. rugosa](#)
Leaflets beneath with a very few crisped hairs, more on the nerves (young leaflets pubescent becoming almost glabrous), branchlets slightly pubescent; fruits obovate with a raised centre and surrounded by an undulate wing, tomentose[5. crispa](#)
- 6 Branchlets and leaflets densely brown-villous; flowers in axillary racemes, 1.5–5 cm. long; calyx-teeth short; bracteoles narrow about 1 mm. long; ovary glabrous:.....7
Branchlets and leaflets shortly pubescent or tomentose or glabrous:8
- 7 Leaflets ending in a setose point, lower leaflets ovate, uppermost oblong-elliptic to obovate, rounded at base, 1–6 cm. long, 1–3.5 cm. broad; stipules lanceolate, acuminate, about 1 cm. long; inflorescences very short, up to 2 cm. long[6. setifera](#)
Leaflets obtuse or slightly acute, broadly ovate-elliptic, terminal leaflet 9–11 cm. long and about 6 cm. broad, lower leaflets considerably smaller; stipules broadly lanceolate, 1 cm. or more long; inflorescences 2–5 cm. long; fruits narrowly oblong, rounded at each end, shortly stipitate, 6–9 cm. long, 1.5–2 cm. broad, glabrous and laxly reticulate, thin, 1–3-seeded[7. dalzielii](#)
- 8 Leaflets orbicular, or broader than long, broadly cuneate at base:9
Leaflets oblong or ovate, longer than broad:10
- 9 Leaflets rounded or slightly emarginate at apex, 5–6 cm. long, 4–5 cm. broad, glabrous; flowers in axillary panicles 8–12 cm. long; petals all about 7 mm. long; stamens connate into 2 bundles of 5 each; calyx and peduncles glabrous; fruits 5–10 cm. long, about 2 cm. broad, glabrous, 1–4-seeded[8. latifolia](#)
Leaflets abruptly acuminate, 4–5.5 cm. long, 3–4 cm. broad, sparsely appressed-pubescent on both sides with hyaline hairs; flowers in rather lax axillary panicles (6–) 10–15 cm. long; standard 9 mm. long, longer than the other petals; stamens connate into 1 bundle; calyx and peduncles sparsely pubescent; fruits 6–7 cm. long, about 8 mm. broad, glabrescent, 1–2-seeded[9. sissoo](#)
- 10 Branchlets ending in a spine; bark light grey; leaflets 4–6 on each side, obovate-elliptic, truncate and emarginate at apex, 1–3.5 cm. long, 1–2 cm. broad, becoming strongly nerved, laxly pubescent beneath; flowers in lax panicles about 10 cm. long; petals 4–5 mm. long; calyx-tube very slightly pubescent; fruits acute at both ends, about 3 cm. long and 1 cm. broad, glabrous[10. melanoxylon](#)
Branchlets not ending in a spine (but note axillary spines in No. 12); bark brown:11
- 11 Calyx glabrous, glabrescent or unevenly and shortly pubescent:12
Calyx evenly pubescent:.....14
- 12 Leaflets more or less acute at apex, elliptic or ovate, subopposite, reticulate but nerves not prominent, 2–3 cm. long, 1.5–2 cm. broad, glabrous; inflorescences terminal or axillary, 10–12 cm. long, lax; flowers about 6 mm. long; calyx glabrous; fruits oblong, rounded at apex, cuneate and stipitate at base, 5–6 cm. long, 1 cm. broad, glabrous, 1–2-seeded[11. boehmii](#)
Leaflets obtuse or emarginate;.....13
- 13 Standard petal deltoid, cuneate to a short claw, bifid at apex; flowers numerous in pedunculate cymes; fruits oblong, cuneate at base, 3–3.5 cm. long, about 8 mm. broad, glabrous, 1–2-seeded; plant with axillary spines (except on the youngest branchlets); leaflets 11–19, oblong to obovate, cuneate at base, truncate or rounded and

- rather broadly emarginate at apex, 1.5–4 cm. long, 1–2 cm. broad, young leaflets tomentose becoming glabrescent beneath [12. *hostilis*](#)
- Standard petal square, truncate to subcordate at base with a distinct claw, bifid at apex; flowers in lax terminal or axillary panicles 5–12 cm. long; fruit oblong, stipitate, 8–13 cm. long, 3–4 cm. broad, becoming glabrous and laxly reticulate, 1–2-seeded; plant without spines; leaflets 11–13, oblong-elliptic, rounded at both ends and often slightly emarginate at apex, 2.5–6 cm. long, 1.5–3.5 cm. broad, sparsely pubescent beneath [13. *saxatilis*](#)
- 14** Bracteoles 3 mm. long, ovate, equalling the calyx-tube, persistent; calyx-lobes 1–2 mm. long; flowers about 9 mm. long in elongate panicles; pedicels 3 mm. long; leaflets 19–23, oblong or slightly ovate-oblong, rounded at both ends, 3.5–7 cm. long, 1.5–2.5 cm. broad, appressed-pubescent beneath [14. *sp. A*](#)
- Bracteoles 1 mm. long, inconspicuous at base of bud, shorter than calyx-tube, caducous: **15**
- 15** Calyx-tube strongly ribbed and curved, 4 mm. long, minutely pubescent; fruits broadly oblong, about 10 cm. long and 3.5 cm. broad, glabrous, slightly reticulate outside the solitary seed; leaflets about 19, oblong, truncate or widely emarginate at apex, 1–1.5 cm. long, about 6 mm. broad, sparsely pubescent beneath; flowers few in simple racemes [15. *afzeliana*](#)
- Calyx-tube not strongly ribbed or curved, 2–3 mm. long; pedicels 1–2 mm. long: **16**
- 16** Fruits large, 10–15 cm. long, 4–5 cm. broad, glabrous, laxly reticulate, 1 (–2)-seeded; inflorescence a many-flowered panicle up to 30 cm. long; calyx densely pubescent; pedicels 1 mm. long; leaflets 3–7 cm. long, 1.5–2.5 cm. broad, rounded at both ends, slightly emarginate, glabrous to appressed-pubescent [16. *lactea*](#)
- Fruits 5–8 cm. long, 1–2 cm. broad: **17**
- 17** Ovary glabrous: **18**
- Ovary pubescent; fruits glabrescent, hispid or spiny: **19**
- 18** Leaflets 5–7, acute, narrowly elliptic or ovate-elliptic, 4–7 cm. long, 1.5–3 cm. broad, appressed-pubescent beneath; flowers in dense axillary and terminal fascicles [17. *oligophylla*](#)
- Leaflets 13–21, obtuse and sometimes slightly emarginate at apex, lateral ones oblong, the terminal obovate, 1–4 cm. long, 8–20 mm. broad, rather densely pubescent or tomentose beneath, especially the midrib; flowers in axillary and terminal racemes 2–6 cm. long [18. *rufa*](#)
- 19** Stamens connate into 2 bundles of 5 each; inflorescences much shorter than the leaves, 2–5 cm. long; fruits softly appressed-pubescent to glabrescent, oblong, flat, 6–9 cm. long, 1.5–2.5 cm. broad, 1–2-seeded, seeds not prominent; leaflets variable in shape and size, elliptic-oblong to broadly ovate, mucronate or acute at apex, 2–6 cm. long, 1–3 cm. broad [19. *oblongifolia*](#)
- Stamens connate into 1 bundle; inflorescences as long as, or much longer than the leaves, 10–30 cm. long; leaflets broadly obovate-elliptic, 2–4 pairs, 3–5 (–7) cm. long, 2–3 cm. broad, rounded to subcordate at base, ending in a setose point at apex, pubescent beneath, with 6–8 prominent nerves: **20**
- 20** Fruits evenly hispid, 1–2-seeded, prominent and reticulate on the seeds, oblong, 5–9 cm. long, about 2 cm. broad; stipules erect, about 6 mm. long, caducous [20. *albiflora* subsp. *albiflora*](#)
- Fruits densely pubescent and with thick-based, weak-pointed spines concentrated upon the prominent seed, oblong-elliptic, 6–7 cm. long, about 2 cm. broad, 1-seeded; stipules reflexed, about 10 mm. long, caducous [20a. *albiflora* subsp. *echinocarpa*](#)

1. *Dalbergia ecastaphyllum* (Linn.) Taub. in E. & P. Pflanzenfam. 3, 3: 335 (1894); Bak. f. Leg. Trop. Afr. 2: 532 (incl. forma *trifoliolata* Stapf). *APD acc*

Hedysarum ecastaphyllum Linn. (1759).

Ecastaphyllum brownii Pers. (1807) — F.T.A. 2: 236; Chev. Bot. 211; F.W.T.A., ed. 1, 1: 375.

A shrub, up to 20 ft. or more high, with dark purple branchlets and small crowded panicles of fragrant white flowers; **in swamps by the sea.**

Sen.: Heudelot 510! Tambana, Casamance (Feb.) Chev. 3427! **Gam.:** Bathurst Don 5! **Port. G.:** Cacine (Sept.) Esp. Santo 626! Bissau (Mar.) Esp. Santo 1885! Fulacunda (fr. May) Esp. Santo 2026! Po:** Mann 262!

Extends to **Angola**, also in West Indies and tropical S. America.

2. *Dalbergia louisii* Cronquist in Bull. Jard. Bot. Brux. 22: 217 (1952). *APD acc*

A climber or shrub up to 15 ft. high; flowers white; beside inland streams.

S. Nig.: Eket Dist. Talbot!

Extends southwards to **Belgian Congo**.

3. **Dalbergia heudelotii** *Stapf* in J. Linn. Soc. 37: 95 (1905); Bak. f. l.c. 533. *APD acc*

Ecastaphyllum heudelotii (*Stapf*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 375 (1928); Kew Bull. 1928: 403, partly.
E. monetaria of F.T.A. 2: 236; of Chev. Bot. 211; not of Pers.

A climbing shrub, but sometimes a tree or semi-prostrate shrub, branches purple; flowers white.

Fr. G.: Rio Nunez Heudelot 623! **S. L.:** Kowama (fr. Nov.) Deighton 5258! **Lib.:** Grand Bassa (Mar., Aug.) Dinklage 1986! Baldwin 11220! Sanokwele (Sept.) Baldwin 12501! Duport (Aug.) 4. **Dalbergia rugosa** *Hepper* in Kew Bull. 1956: 133, fig. 9B. *APD acc*

Ecastaphyllum heudelotii of F.W.T.A., ed. 1, 1: 375, partly (MacDonald 479, Aylmer 64).

A climber with white flowers turning yellow.

S. L.: Kenema MacDonald 479! Pujehun (Apr.) Aylmer 64! Matotoka (fr. July) Thomas 1285! **Lib.:** Mecca, Grand Cape Mount (Dec.) Baldwin 10838!

5. **Dalbergia crispa** *Hepper* in Kew Bull. 1956: 132, fig. 9A. *APD acc*

A climber, similar to the last.

S. L.: Thomas 10101! 10604! Batkanu (Apr.) Thomas 18! Njala (fl. May, fr. Mar.) Deighton 1733! 1822! Gbap (Mar.) Adames 20!

6. **Dalbergia setifera** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 374 (1928); Kew Bull. 1928: 403; Bak. f. l.c. 530.

APD: *Synonym of Dalbergia dalzielii Baker f. ex Hutch. & Dalziel*

A straggling shrub, rusty-villous on the young parts, with short clustered racemes of white flowers.

G. C.: Evans 24! Sekondi (Feb.) Vigne FH 4752!

7. **Dalbergia dalzielii** *Bak. f. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 374 (1928); Kew Bull. 1928: 402; Bak. f. l.c. 529. *APD acc*

A shrub, erect or half climbing, with densely clustered white flowers.

S. Nig.: Lagos Barter 2141! Ebute Metta, Lagos (Jan.) Millen 95! 211! Ikoyi Plains, Lagos (fl. & fr. Feb.) Dalz. 1220! 1368! Bonny Kalbreyer 55!

Also in **French Cameroons** and **Gabon**.

8. **Dalbergia latifolia** *Roxb.* Pl. Corom. 2: 7, t. 113 (1798). *APD acc*

A planted tree; flowers white; sometimes subspontaneous in western Nigeria.

S. Nig.: Ibadan (Feb., Sept.) Latilo FHI 27329! Ujor FHI 30499! Olokemeji (fr. Oct.) A. F. Ross 14!

A native of India.

9. **Dalbergia sissoo** *Roxb.* Fl. Ind., ed. Carey, 3: 223 (1832). *APD acc*

A planted tree; flowers pale yellow; sometimes subspontaneous.

S. L.: Batkanu (Nov.) Glanville 447! **G. C.:** Gambaga (Apr.) Morton GC 9027! **N. Nig.:** Samaru, Zaria (fr. May) Baldwin 12002! Jebba (fl. & tr. Feb.) Meikle 1184! **Br. Cam.:** Bama, Dikwa Div. (fl. & fr. Jan.) McClintock 170!

A native of India.

10. **Dalbergia melanoxylon** *Guill. & Perr.* —F.T.A. 2 233; Chev. Bot. 210; Bak. f. l.c. 520; Aubrév. Fl. For. Soud.-Guln. 311, t. 63, 1–3. *APD acc*

A small tree up to 20 ft. high, much-branched, glabrous, armed with woody spines which are the hardened tips of short branches often bearing leaves and flowers; [in savannah country](#).

Sen.: Lelièvre! Kouma Heudelot! **Iv. C.:** Yoko to Ouahigouya, Mossi (fr. Aug.) Chev. 24715! Kaya Aubrév. 2144. **N. Nig.:** Yola (fl. & fr. Apr.) Dalz. 6! Katagum Dalz. 34! Damaturu Kabau, Bornu (fr. Oct.) Daggash FHI 22014! Kiri, Adamawa (May) Rosevear FHI 26601!

Also in [Ubangi-Shari](#), [A.-E. Sudan](#), [Abyssinia](#) and southwards into Transvaal.

11. ***Dalbergia boehmii* Taub.** in Pflanzenw. Ost-Afr. C, 218 (1895); Aubrév. l.c. 311, t. 63, 4–6; Bak. t. l.c. 523. *APD acc*

***Dalbergia elata* Harms** (1899) — Bak. f. l.c. 522.

***Byrsocarpus caillei* A. Chev.**, name only.

A tree or shrub 12–30 ft. high; flowers white.

Sen.: Casamance Aubrév. **Port. G.:** Baba (fl. & fr. May) Esp. Santo 2479!

Also in [Ubangi-Shari](#), [Belgian Congo](#), [E. Africa](#), [Mozambique](#), [Nyasaland](#) and [N. & S. Rhodesia](#).

12. ***Dalbergia hostilis* Benth.** — F.T.A. 2: 232; Bak. f. l.c. 521. *APD acc*

Dalbergia rufa of F.W.T.A., ed. 1, 1: 375, partly (Chev. 1468!).

Dalbergia saxatilis of F.W.T.A., ed. 1, 1: 375, partly.

***Dalbergia djalensis* A. Chev.** Bot. 210, name only.

A shrub, climbing or erect, usually with axillary spines sometimes clustered and copious rusty-pubescent inflorescences of whitish flowers of variable size; [in dry woodland](#).

Port. G.: Bissau (fr. Jan.) Esp. Santo 1641! **Fr. G.:** Rio Nunez Heudelot 596! Mamou (Nov.) Caille in Hb. Chev. 14681! Kouria Caille in Hb. Chev. 14886! Nzérékore (fr. Oct.) Baldwin 9685! **S. 16. *Dalbergia lactea* Vatke in Oest. Bot. Zeit. 29: 251 (1879); Bak. f. l.c. 525. *APD acc*

Dalbergia preussi Harms (1899) — F.W.T.A., ed. 1, 1: 375; Bak. 1. l.c.

A scandent shrub; flowers white; in upper margins of montane forest.

S. Nig.: Ikwette Plateau, Obudu, 5,300 ft. (Dec.) Savory & Keay FHI 25190! **Br. Cam.:** Buea (fl. Jan., July, Dec.) Preuss 897! Dunlap 148! Maitland 46! 882! Lakom, 6,000 ft., Bamenda (fr. May) Maitland 1369! Lakka, 4,000 ft., Bamenda (fr. June) Maitland 1566!

Also in **French Cameroons**, **Gabon**, **Belgian Congo** and in eastern Africa from A.–E. **Sudan** and Abyssinia to Mozambique and S. Rhodesia.

17. *Dalbergia oligophylla* Bak. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 374 (1928); Kew Bull. 1928: 403; Bak. f. l.c. 532. *APD acc*

Dalbergia bakeri of F.T.A. 2: 235, partly.

A shrub 25 ft. high; in gullies at upper edge of montane forest.

Br. Cam.: Cam. Mt., 5,000–6,000 ft. (fl. Dec., fr. Mar.) Mann 2172! Maitland 496! 910!

18. *Dalbergia rufa* G. Don l.c. (1832); Bak. f. l.c. 534. *APD acc*

Dalbergia pubescens Hook. f. (1849) — F.T.A. 2: 234; Chev. Bot. 210; Bak. f. l.c. 527.

Dalbergia lagosana Harms (1899) — Bak. f. l.c. 526.

A lax-branched scrambling shrub; flowers white, fragrant; in secondary regrowth.

Port. G.: Catió (fr. July) Esp. Santo 2102! **Fr. G.:** Heudelot 895! Fouta Djallon (Mar.) Chev. 12454! **S. L.:** Bonthe (Feb.) Dalz. 954! Rokupr (May) Jordan 267! Messima (Apr.) Adames 29! Njala (Mar. Deighton 1579! **S. Nig.:** Lagos (Oct.) Moloney! Old Calabar Thomson 27! Eket Dist. Talbot!

19. *Dalbergia oblongifolia* G. Don l.c. (1832); Bak. f. l.c. 534. *APD acc*

Dalbergia dinklagei Harms (1899) — Chev. Bot. 210; Bak. f. l.c. 529.

A densely branched shrub or climber with short clusters of fragrant white flowers and rusty flat pods.

S. L.: Mapaki to Mabonto (Aug.) Deighton 1397! Njala (Oct., Dec.) Deighton 1538! 5187! Ronietta (fr. Nov.) Thomas 5329! **Lib.:** Grand Bassa (fl. Aug., fr. Oct.) Dinklage 1724! 1987! 2098! Gbanga (Sept.) Linder 526! Moala (fr. Nov.) Linder 1371! **Iv. C.:** Zaranou (Mar.) Chev. 17618.

20. *Dalbergia albiflora* A. Chev. ex Hutch. & Dalz. subsp. *albiflora* — F.W.T.A., ed. 1, 1: 374 (1928); Kew Bull. 1928: 403; Bak. f. l.c. 523. *APD acc*

A climber up to 40 ft. high; flowers white, fragrant.

S. L.: Rowala (July) Thomas 1142! 1203! Magburaka (fl. Aug., fr. Jan.) Deighton 1367! 3601! Njala (Aug.) Deighton 1844! Tikonko (fl. & fr. Nov.) Deighton 5263! **Iv. C.:** Soubré to Péhiri (June) Chev. 19175!

20a. *Dalbergia albiflora* subsp. *echinocarpa* Hepper in Kew Bull. 1956: 131, fig. 8B. *APD acc*

A straggling shrub or small tree 10–15 ft. high; on a sandy river bank and cliff top.

S. Nig.: Enugu Extension F.R., Ekulu R. (Fr. Sept.) Onochie FHI 34100! Cons. of For. 835! 336! Milliken Hill, Enugu (fl. & fr. May) Jones FHI 18863!

1. *Dalbergia* sp. nr. *macrosperma* Welw. ex Bak.

Dalbergia pachycarpa of Kennedy For. Fl. S. Nig. 121.

This has the minute indumentum of *D. heudelotii*; in other characters, such as the cuneate leaflet bases, it resembles *D. macrosperma*, although the fruits are thicker, semi-lunar and the indumentum is short and straight instead of tomentose. Further material is required.

S. Nig.: Sapoba Kennedy 183!

Imperfectly known species.

2. *Dalbergia* sp. nr. *pachycarpa* (*De Wild. & Th. Dur.*) *Uhlr. ex De Wild.* (1925), not of Ducke (1922).

Terminal leaflet 16 cm. long, 7.5 cm. broad, lateral leaflets smaller, euneate at base, shortly acuminate at apex, appressed-pubescent beneath; pedicels 3–4 mm. long; fruits similar to *D. crispa*. Further material is required.

G. C.: Kumasi F.R. (fl. & fr. Aug.) Akwa FH 1770! Mepe, Volta R. (Aug.) Adogla FH 4057!

Imperfectly known species.

3. *Dalbergia ajudana* *Harms* in Engl. Bot. Jahrb. 26: 295 (1899).

A shrub with rusty-pubescent branchlets and inflorescence; type presumably destroyed.

Dah.: Ajuda, on the banks of lagoons Newton.

Imperfectly known species.

11. DALBERGIELLA

Bak. f. in J. Bot. 66, suppl. 1: 128, t. A.–J. (1928).

- 1 A climbing shrub; leaves imparipinnate; leaflets 8–13 pairs, opposite or subopposite, oblong, rounded and slightly unequal-sided at base, subacute at apex, 3–7 cm. long, 1.5–3 cm. broad, sparsely pubescent beneath; inflorescence unbranched, 5–15 cm. long; flowers fasciculate on the rachis; pedicels about 1 cm. long, tomentellous; calyx deeply lobed, lobes acute, tomentellous; fruits oblong-lanceolate, 8–11 cm. long, flat, 1-seeded, slightly pubescent, laxly reticulate. [welwitschii](#)

Dalbergiella welwitschii (*Bak.*) *Bak. f.* l.c. (1928); *Bak. f. Leg. Trop. Afr.* 2: 535. *APD acc*

Ostryocarpus? *welwitschii* *Bak.* in F.T.A. 2: 240 (1871); F.W.T.A., ed. 1, 1: 378.

O. racemosus *A. Chev.* (1912) — Bot. 213.

A wide-climbing shrub, often in [riverain forest](#); flowers pinkish-white or yellow with a large red streak on the standard, fragrant.

Also in [Gabon](#), [Ubangi-Shari](#), [Belgian Congo](#) and [Angola](#).

12. PTEROCARPUS

Jacq. — F.T.A. 2: 237.

- 1 Fruit-body smooth or verrucose, glabrous or pubescent but not bristly:2
 Fruit-body bristly, fruits orbicular, broadly winged; leaves 10–15-foliolate:5
 2 Leaflets 1–5, opposite or subopposite, oblong-elliptic to suborbicular, emarginate at apex, 4–7.5 cm. long, 2–5 cm. broad, closely reticulate and shining above, glabrous; calyx about 6 mm. long, shortly lobed, glabrous outside; fruits obovate to obovate-elliptic, stipitate, 2.5–4.5 cm. long, about 3 cm. broad, reticulate .. [l. lucens](#)
 Leaflets (5–) 7–15, alternate; fruits orbicular:3

- 3 Fruits very broad, 8–9 cm. diam., with broad circular wing and slightly raised fruit-body, stipitate:4
Fruits 3–4 cm. diam., narrowly winged, fruit-body thick and verrucose, tomentellous; bracts subulate; calyx deeply lobed, densely pubescent; leaflets (5–) 7–9, ovate or elliptic-ovate or rarely oblong, rather abruptly acuminate, 5–12 cm. long, 3–3.5 cm. broad, glabrous and closely reticulate on both sides; stipules falcate ...4. [santalinoides](#)
- 4 Calyx almost glabrous outside, margins of lobes and inside densely tomentose; bracts linear-lanceolate, about 10 mm. long, bracteoles similar; fruits with old style about 1/4 round edge from stipe, margin smooth, glabrous; leaflets 7–9, upper leaflets oblong-elliptic, obtuse or shortly acuminate, 8–13 cm. long, 3.5–6 cm. broad, lower leaflets smaller in size, glabrous, lateral nerves prominent on both surfaces 2. [mildbraedii](#)
Calyx densely pubescent outside, almost glabrous inside; bracts linear-lanceolate, about 10 mm. long, bracteoles linear; fruits with old style about 1/6 round edge from stipe, margin undulate between, tomentose; leaflets 11–17, upper leaflets oblong, acuminate, 6–8 cm. long, 2–4 cm. broad, lower leaflets smaller and elliptic, midrib sometimes pubescent, lateral nerves less marked3. [soyauxii](#)
- 5 Savannah tree; branchlets not prickly; leaflets mostly oblong-elliptic, gradually and very shortly acuminate, 6–11 cm. long, 3–6 cm. broad, rather closely and shortly pubescent beneath; flowers precocious, in lax panicles; calyx softly tomentellous; fruits suborbicular, 4–7 cm. diam., the body with long slender bristles 5. [erinaceus](#)
Forest tree; branchlets with numerous short prickles; leaflets mostly oblong, rounded at each end, shortly and abruptly acuminate, 7–14 cm. long, 3–5 cm. broad, slightly pubescent beneath; flowers in lax panicles about as long as the leaves; calyx tomentellous; fruits orbicular, 9–14 cm. diam., the body shortly bristly 6. [osun](#)

1. **Pterocarpus lucens** *Lepr. ex Guill. & Perr.* — F.T.A. 2: 238; Chev. Bot. 212; Bak. f. Leg. Trop. Afr. 2: 539; Aubrév. Fl. For. Soud.-Guin. 312, t. 63, 1–2. **APD acc**

Pterocarpus simplicifolius Bak. in F.T.A. 2: 238 (1871).

Pterocarpus lucens var. **simplicifolius** (Bak.) A. Chev. Bot. 213 (1920); Bak. f. l.c. 540.

Pterocarpus abyssinicus Hochst. ex A. Rich. (1847) — F.W.T.A., ed. 1, 1: 376.

A small tree, 20–30 ft. high, with light yellow flowers; in [savannah forest](#)

Sen.: Perrottet! 257! Tambacounda Berhaut 708. **Fr. Sud.:** Quiébéfé (June) Chev. 1003! Bamako (June) Waterlot 11201 **Fr. G.:** Kadi Pobéguin 2098. **Iv. Po:** Gutridge Bay (Nov.) T. Vogel 107!

Also in **Spanish Guinea**, **Gabon** and **Belgian Congo**,

2. **Ostryocarpus major** *Stapf* in J. Linn. Soc. 37: 96 (1908); Bak. f. l.c. 546.

APD: Synonym of Aganope gabonica (Baill.) Polhill

Similar to the preceding species; flowers whitish, fragrant.

Lib.: Monrovia Whyte! Dukwia R. (Feb.) Cooper 194! Fortsville, Grand Bassa (Mar.) Baldwin 11165!

16. LEPTODERRIS

Dunn in Kew Bull. 1910: 386.

- 1 Leaves 3-foliolate; leaflets with 5–7 pairs of lateral nerves, elliptic, rounded at base, subacute at apex, young leaflets densely tomentose on both sides becoming glabrous above and coriaceous, 8–12 cm. long, 5–7 cm. broad; peduncle about 5 cm. long, densely pubescent at first; racemes axillary or subterminal, 10–30 cm. long with few-flowered fascicles on the rhachis; calyx densely grey-tomentose; keel about 8 mm. long, wing slightly shorter, standard hooded; fruits flat, 4–7 cm. long, about 1.5 cm. broad, densely yellow-brown, pubescent, very slightly winged on one edge [1. trifoliolata](#)
- Leaves 5–9-foliolate: **2**
- 2 Lateral nerves 5–7 pairs, 13–25 mm. apart; stipels 1–3 mm. long: **3**
- Lateral nerves 11–16 pairs, about 9 mm. apart; stipels 7–10 mm. long: **7**
- 3 Leaflets tomentose beneath, hairs more or less erect; branchlets and leaf-rhachis softly tomentellous: **4**
- Leaflets sparsely appressed-pubescent, with the hairs lying in one direction, or glabrous; branchlets and leaf-rhachis shortly pubescent, becoming glabrous: **5**
- 4 Keel yellow, 11–14 mm. long; calyx 3–4 mm. long; racemes of fascicles elongate and rather thick, 20–45 cm. long; leaflets obovate, broadly emarginate and usually mucronate or more or less rounded at apex, 10–15 cm. long, 6–10 cm. broad [2. brachyptera](#)
- Keel red, 6–7 mm. long; calyx 2 mm. long; racemes of fascicles slender, paniculate, about 15 cm. long; leaflets elliptic, rounded or mucronate at apex, 6–8 (–13) cm. long, 4–5.5 (–6.5) cm. broad [3. micrantha](#)
- 5 Fruits broadly elliptic, 4 cm. long, 3 cm. broad, glabrous, narrowly winged on one side; flowers 14–15 mm. long; leaves broadly obovate, shortly cuneate at base, rounded at apex with midrib extended into a mucronate tip, 9–12 cm. long, 4.5–6 cm. broad, sparsely and minutely pubescent beneath [4. cyclocarpa](#)
- Fruits oblong, 2–4 times as long as broad: **6**
- 6 Style glabrous or with a few hairs near base; keel petals triangular, 8–11 mm. long, with a folded pocket at the lower end, claw linear, appendage on upper edge conspicuous; upper edge of wing sometimes ciliate; standard flat, thin, oblong-obovate, more or less tapering to the claw; stipels 1 mm. long; leaflets elliptic to obovate-elliptic, rounded at base, shortly acuminate, 7–15 cm. long, 5–8 cm. broad, shortly appressed-pubescent beneath [5. fasciculata](#)
- Style pubescent with stiff dark hairs; keel petals obovate-oblong, 7–8 mm. long, without a pocket, claw short, adnate to staminal tube, hardly appendiculate; wing glabrous; standard hooded at apex, rather thick and striate, oblong, abruptly narrowed into the claw with 2 small appendages; stipels subulate, 2–3 mm. long; leaflets obovate-elliptic, rounded to subcordate at base, broadly reflexed at apex, 10–20 cm. long, 8–10 cm. broad; very minutely and sparsely pubescent beneath or glabrous [6. congolensis](#)
- 7 Flowers with pedicels 2 mm. long; bracts lanceolate, 10–12 mm. long, 3–4 mm. broad at base, appressed-pilose; calyx 3 mm. long, shortly 4-lobed, upper lobe entire; bracteoles subulate; fruits flat, 6–9 cm. long and about 2.5 cm. broad, appressed-pubescent, upper edge broadly winged; leaves 7-foliolate, upper leaflets with 14–16 pairs of lateral nerves, oblong to obovate-oblong, rounded at base, shortly and abruptly acuminate [7. aurantiaca](#)
- Flowers sessile; bracts ovate, 10–13 mm. long, about 8 mm. broad at base, densely pilose; calyx 4 mm. long, shortly 4-lobed, upper lobe toothed at apex; bracteoles lanceolate; young fruits densely yellow-pilose, upper edge narrowly winged; leaves 5–7-foliolate, upper leaflets with 11–12 pairs of lateral nerves, oblong to obovate-oblong, rounded to subcordate at base, very shortly acuminate [8. ledermannii](#)

1. *Leptoderris trifoliolata* Hepper in Kew Bull. 1956: 133. *APD acc*

A woody climber in flooded lowland; flowers pale yellow with wing petals pale mauve.

S. L.: Njala (fl. Nov., fr. Jan.) Deighton 4957! 5296!

2. *Leptoderris brachyptera* (Benth.) Dunn in Kew Bull. 1910: 388; Chev. Bot. 216; Bak. f. Leg. Trop. Afr. 2: 557. *APD acc*

Lonchocarpus brachypterus Benth. (1880).

Derris brachyptera Bak. in F.T.A. 2: 246 (1871).
Spatholobus ? africanus Bak. in F.T.A. 2: 188 (1871).
Leptoderris reticulata Dunn (1910) — Berhaut Fl. Sen. 42.

A widely climbing shrub, sometimes erect, with abundant inflorescences of pink or whitish flowers; flowering infrequently; in riverain forest.

Sen.: Berhaut 1641. **Port. G.:** Bissau (Mar.) Esp. Santo 1863! Uno-Am Onhô (fr. May) Esp. Santo 2013! **Fr. G.:** Fouta Djallon Heudelot 828! Kindia Chev. 13078; 13090! Kissidougou Chev. 20722. **S. L.:** Musaia, very common (Feb.) Deighton 4253! **G. C.:** Axim (Feb., Mar.) Vigne FH 2834! Irvine 2168! Morton GC 8466! Kumasi (Dec.) Also in **Spanish Guinea**, **Gabon** and **Ubangi-Shari**.

6. *Leptoderris congolensis* (De Wild.) Dunn in Kew Bull. 1910: 390; Bak. f. l.c. 560. *APD acc*

Derris congolensis De Wild. (1904).
Leptoderris fasciculata of F.W.T.A., ed. 1, 1: 379, partly (Talbot 3342).

A climber with leathery leaves.

S. Nig.: Eket Dist. Talbot 3342!

Also in **French Cameroons**, **Gabon**, **Belgian Congo** and **Angola**.

7. *Leptoderris aurantiaca* Dunn in Kew Bull. 1914: 245; Bak. f. l.c. 558. *APD acc*

A woody climber with stems covered with flaking scales; flowers white, in large pilose panicles.

S. Nig.: Omo F.R., Ijebu Ode Prov. (fi. Nov., fr. Mar.) Jones & Onochie FHI 16743! Tamajong FHI 20749!

Also in **French Cameroons** and **Gabon**.

8. *Leptoderris ledermannii* Harms in Notizbl. Bot. Gart. Bert. 9: 295 (1925); Bak. f. l.c. 557. *APD acc*

Scandent shrub; flowers white in yellow-pilose panicles.

Br. Cam.: Sabga Range, Bamenda (Jan.) Keay FHI 28461! Muti Mt., Bamenda (Oct.) Ledermann 5852.

Dunn in Kew Bull. 1911: 363.

- 1 Flowers precocious; branchlets very thick, marked by the large scars of the fallen leaves; panicles softly tomentose; calyx about 5 mm. long, tomentose; leaflets glaucous-grey, about 6 pairs, ovate-elliptic, rounded and emarginate at apex, 8–11 cm. long, 3–5.5 cm. broad, with about 5–7 pairs of lateral nerves; stipels inconspicuous; fruits flat and thin, with a line parallel within each margin, broadly oblong-linear, up to 15 cm. long and 3 cm. broad, reticulate within the parallel lines, slightly pubescent [1. *stuhlmannii*](#)
 Flowers not precocious; leaflets acuminate: [2](#)
- 2 Ovary densely pubescent all over; fruits glabrescent; leaflets rounded or subcordate at base: [3](#)
 Ovary pubescent only along upper suture; leaflets cuneate at base, acute to slightly acuminate at apex, oblong or elliptic-oblong, 7–11 cm. long, 2–3 cm. broad; bracts early caducous, probably lanceolate; fruit unknown ... [5. *brownii*](#)
- 3 Bracts large, ovate, covering the buds, semi-persistent: [4](#)
 Bracts small and narrow, not covering the buds, early caducous; leaflets about 4 pairs, ovate-elliptic, obtusely acuminate, rounded or subcordate at base, 9–15 cm. long, 4–8 cm. broad, glabrous; stipels subulate, persistent; panicles terminal, elongated; fruits similar to No. 1 but a little broader [4. *gabonica*](#)
- 4 Leaf-rhachis glabrous; leaflets about 5 pairs, oblong-elliptic or oblong-lanceolate, obliquely abruptly acuminate, 6–10 cm. long, 2–4 cm. broad, glabrous; stipels subulate, persistent; panicles elongate, terminal; bracts subacute; fruit flat, oblong-elliptic, 7–12 cm. long, 3–4 cm. broad [2. *leucobotrya*](#)
 Leaf-rhachis softly pubescent; leaflets 4–5 pairs, oblong-elliptic, abruptly acuminate, subcordate at base, 6–10 cm. long, 2.5–4.5 cm. broad, pubescent on the nerves beneath; stipels subulate, persistent; panicles elongated; bracts ovate, acuminate [3. *impressa*](#)

1. *Ostryoderris stuhlmannii* (Taub.) Dunn ex Harms in Engl. Pflanzenw. Afr. 3, 1: 644 (1915); Bak. f. Leg. Trop. Afr. 2: 563.

APD: *Synonym of Xeroderris stuhlmannii* (Taub.) Mendonça & E. C. Sousa

Deguelia stuhlmannii Taub. (1895).

Ostryoderris chevalieri Dunn (1914) — F.W.T.A., ed. 1, 1: 379; Bak. f. l.c. 562; Aubrév. Fl. For. Soud.-Guin. 317, t. 62, 4–7.

Xeroderris chevalieri (Dunn) G. Roberty (1954).

Lonchocarpus argentea A. Chev. Bot. 213, name only.

A deciduous tree of [savannah woodland](#), up to 40 or 50 ft. high, with bark separating in thick scales; trunk exuding blood-red sap when cut; flowers white in crowded grey- or rusty-tomentose panicles appearing before the leaves.

Sen.: Heudelot 347! Bakel (June) Chev. 26047! **Fr. Sud.:** Kita Dubois 50. **Port. G.:** Catió to Guebu (fr. June) Esp. Santo 2079! **Fr. G.:** Siguiiri (Feb.) Chev. 298! Mamou (Mar.) 3. *Ostryoderris impressa* Dunn in Kew Bull. 1911: 363; Bak. f. l.c.

APD: Synonym of Aganope impressa (Dunn) Polhill

A climbing shrub or small tree, up to 10 ft. high; flowers white.

S. Nig.: Ugbojiobo, Benin (May) Farquhar 5! Ibo country Cons. of For. 171! Calabar Williams 4! Aboabam, Ikom (fl. & fr. May) Latilo FHI 30984! Degema Talbot 3738!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

4. **Ostryoderris gabonica** (Baill.) Dunn in Kew Bull. 1911: 364; Bak. f. l.c.

APD: Synonym of Aganope gabonica (Baill.) Polhill

Andira ? gabonica Baill. (1866).

Lonchocarpus macrostachyus of F.T.A. 2: 243, partly (spec. Mann), not of Hook. f.

A straggling or climbing shrub; flowers white or pinkish in narrow brown-red panicles.

S. Nig.: Ila (Oct.) Thomas 1919! Eket Dist. Talbot 3070! Old Calabar R. (Feb.) Mann 2244! **Br. Cam.:** Cameroon R. (Jan.) Mann 2192!

Also in **Gabon** and **Belgian Congo**.

5. **Ostryoderris brownii** Hoyle in Kew Bull. 1932: 262.

APD: Synonym of Andira inermis subsp. rooseveltii (De Wild.) J. B. Gillett ex Polhill

A small tree about 25 ft. high; flowers pinkish; in savannah.

G. C.: Jema (Feb.) Brown FH2163! Drabonso (Feb.) Cansdale FH 4142!

18. LONCHOCARPUS

H. B. & K. — F.T.A. 2: 241.

- 1 Standard petal densely silky outside; flowers densely arranged in pendulous axillary racemes; pedicels usually paired; calyx truncate, cupular, 5 mm. long, tomentose; fruits 1–several-seeded, up to 12 cm. long, woody, tomentellous; branchlets flexuous; leaflets 7–11, ovate or elliptic, rounded or subcordate at base, obtusely acuminate, 6–14 cm. long and 3–9 cm. broad, shortly pubescent beneath, with prominent lateral nerves [1. sericeus](#)
Standard petal glabrous outside:..... [2](#)
- 2 Inflorescence a simple slender axillary raceme, either solitary or fasciculate; leaflets about 9 with the upper ones larger than the lower, more or less elliptic, markedly acuminate, 5–10 cm. long, 2–5 cm. broad, glabrescent; stipels subulate, persistent; calyx shallowly lobed, shortly pubescent; fruits flat, linear-lanceolate, 6–9 cm. long, glabrous [2. griffonianus](#)
Inflorescence a much-branched panicle; leaflets at most very slightly acuminate; stipels inconspicuous:..... [3](#)
- 3 Tree or erect shrub; flowers in panicles on older wood; calyx toothed, ciliate and shortly pubescent outside; fruits flat and thin, 7–12 cm. long, acute or rounded at apex, 1–4 seeded; leaflets (3–) 5, elliptic or ovate-elliptic, rounded or shortly cuneate at base, subacute to slightly emarginate at apex, 3–16 cm. long, 1.5–7 cm. broad, glaucous, minutely pubescent on both surfaces [3. laxiflorus](#)
Climber; flowers in panicles accompanying the leaves; calyx shortly lobed, pubescent outside; fruits 1–5-seeded, flat, glabrous, reticulate, the seeds very prominent; lateral branchlets of panicles very short; leaflets 9–11, ovate or elliptic, rounded at base, shortly acuminate, up to 16 cm. long and 8 cm. broad, glabrous [4. cyanescens](#)

1. **Lonchocarpus sericeus** (Poir.) H. B. & K. — F.T.A. 2: 241; Chev. Bot. 215; Bak. f. Leg. Trop. Afr. 2: 548; Aubrév. Fl. For. C. Iv. 1: 288, t. 114 Fl. For. Soud.-Guin. 315. *APD acc*

Robinia sericea Poir. (1804).

A tree up to 40 ft. or more high, with brownish downy branchlets and pale purple or lilac fragrant flowers; commonly flowering in the deciduous state; in fringing and semi-deciduous forest, usually near water.

Sen.: Perrottet 294! Casamance Chev. 342! **Gam.:** Skues! **Port. G.:** Bissau (fr. Jan.) Esp. Santo 1682! **Fr. G.:** Rio Nunez Heudelot 623a! Los Isl. Pobéguin 1172! **S. L.:** T. Vogel 169! 2. *Platysepalum violaceum* var. *vanhouttei* (De Wild.) Hauman in Fl. Congo Belge 5: 85 (1954). *APD acc*

Platysepalum vanhouttei De Wild. (1906).

Platysepalum ledermannii Harms (1913) — Bak. f. l.c. 2: 254.

Platysepalum tessmannii Harms (1913).

Platysepalum polyanthum Harms (1913).

A shrub or small spreading tree up to 40 ft. high.

S. Nig.: Udi F.R. (Nov.) Smith 14! Kennedy 3114! Ibuzo (Nov.) Thomas 1994! Idumuje (fr. Jan.) Thomas 2154! Ikom Catterall 31! **Br. Cam.:** Buea (fl. Dec., fr. Mar.) Maitland 897! 1171! Oji, Mamfe (Oct.) Johnstone 245/31!

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Belgian Congo** and **Angola**.

20. MILLETTIA

Wight & Arn. — F.T.A. 2: 126; Dunn in J. Linn. Soc. 41: 123 (1912).

- 1 Lower surface of leaflets completely covered or nearly so by a close felt of appressed silky hairs:2
 Lower surface of leaflets visible between the hairs, or glabrous:5
- 2 Calyx lobed nearly to the middle:.....3
 Calyx very shortly toothed, dark-brown pubescent; corolla 1·4 cm. long; pedicel 1 mm. long; panicle terminal or subterminal; leaflets 2–4 pairs, oblong to oblong-obovate, shortly and abruptly acuminate at apex, 8–15 cm. long, 3–5 cm. broad, lateral nerves about 15; fruits about 10 cm. long and 2 cm. broad, beaked [4. chrysophylla](#)
- 3 Flowers sessile or pedicel up to 1 mm. long:.....4
 Flowers on pedicels about 3 mm. long; calyx-lobes keeled in bud; leaflets 3–4 pairs, oblong-oblancoate, long-acuminate, 9–15 cm. long, 3–6 cm. broad; panicle terminal, with tomentose branches[3. hypolampra](#)
- 4 Lateral nerves 7–9 pairs; calyx-lobes not keeled; leaflets about 5 pairs, oblong, obtusely long-acuminate, 5–8 cm. long, 1·5–2·5 cm. broad; panicle longer than the leaves, narrow, the lateral branches short, tomentellous; fruits unknown[1. lucens](#)
 Lateral nerves 13–15 pairs; calyx-lobes markedly keeled especially in bud; leaflets 3–6 pairs, oblong-lanceolate, shortly and acutely acuminate, 4–8 cm. long, 1·5–3 cm. broad; panicle terminal, broad, branches tomentellous; fruits oblanceolate about 9 cm. long and 2 cm. broad, densely tomentose [2. dinklagei](#)
- 5 Standard glabrous outside (or pubescent towards the apex, but not wholly sericeous, in No. 9):6
 Standard pubescent outside: 13
- 6 Calyx-tube glabrous outside; leaflets oblong-oblancoate, long- and more or less triangular-acuminate, 4–5 cm. long, glabrous or nearly so; stipels very prominent, linear-subulate, persistent even after fall of leaflets; fruits oblanceolate, about 14 cm. long, glabrous[5. lane-poolei](#)
 Calyx-tube pubescent outside:.....7
- 7 Stipels present; flowers 1–1·5 cm. long:8
 Stipels absent; flowers 2–2·5 cm. long:..... 11
- 8 Bracts caducous:.....9
 Bracts persistent, ovate-lanceolate, pubescent; leaflets about 5 pairs, oblong or oblong-lanceolate, acuminate, 4–6 cm. long, 1·5–2·5 cm. broad, silky pubescent beneath; calyx 5 mm. long; fruits curved, linear, 10–12 cm. long, densely velvety-tomentose [8. irvinei](#)
- 9 Inflorescence simple, unbranched, longer than the leaves, 10–15 cm. long; calyx shortly brown-pubescent; fruits oblanceolate, 7–10 mm. long, about 2 cm. broad, shortly pubescent or glabrescent, 1–3-seeded; leaflets more or less oblong-oblancoate, cuneate at base, abruptly and obtusely acuminate, 4·5–5·5 cm. long, 1–2 cm. broad, pubescent beneath, especially on the midrib; stipels subulate, persistent. [6. rhodantha](#)
 Inflorescence branched, more or less pyramidal: 10
- 10 Indumentum of calyx brown or yellowish; leaflets oblong-oblancoate, acuminate and mucronate, 4–6 (–12) cm. long, about 2 cm. broad; stipels 3 mm. long, subulate; fruits 8–10 cm. long, tomentose, 1–3-seeded[7. warneckei var. warneckei](#)
 Indumentum of calyx black-purple; otherwise as above [7a. warneckei var. porphyrocalyx](#)
- 11 Calyx 5 mm. long; standard 2 cm. long and 1·4 cm. broad; fruits sparsely appressed-pubescent; leaflets oblong, abruptly and shortly acuminate, 6–15 cm. long, about 4 cm. broad, rather loosely to finely pubescent beneath [9. mannii](#)
 Calyx 8 mm. long; standard 2·5 cm. long and 1·8 cm. broad:..... 12
- 12 Leaflets minutely appressed-pubescent beneath, 5–6 pairs, broadly elliptic, shortly acuminate, rounded at base, 10–17 (–22) cm. long, 3–10 cm. broad; fruits oblanceolate, 15 cm. long, thinly tomentellous .[10. macrophylla](#)
 Leaflets rusty-pubescent beneath, about 7–8 pairs, narrowly oblong-elliptic, shortly acuminate, 8–15 cm. long, 3–4·5 cm. broad; fruits linear-oblancoate, beaked, about 15 cm. long, densely rusty-tomentose [11. aboensis](#)
- 13 Stipels absent or minute: 14
 Stipels present, 1–3 mm. long: 17
- 14 Flowers 2·5–3·5 cm. long; leaflets 7–8 pairs, oblong, caudate-acuminate, 5–12 cm. long, 1·5–6 cm. broad, with about 6 pairs of lateral nerves minutely pubescent beneath; leaf-rhachis pubescent to almost glabrous; fruits oblanceolate, about 10 cm. long and 2 cm. broad, shortly pubescent[12. zechiana](#)
 Flowers about 1·5 cm. long; leaflets 2–4 pairs:..... 15
- 15 Pedicels with a pair of bracteoles in the middle; fruits up to 16 cm. long and 2 cm. broad, glabrous; leaflets ovate or ovate-elliptic, 4–7 cm. long, 2–4 cm. broad, sparsely appressed-pubescent beneath and usually with a brush of stiff white hairs on either side of the midrib near the base[20. thonningii](#)
 Pedicels not jointed, bracteoles at the base of the calyx; fruits pubescent: 16

- 16** Petioles and nerves beneath pilose with dark-brown spreading hairs; leaflets obovate-elliptic, very abruptly acuminate, 8–11 cm. long, 3.5–5 cm. broad; inflorescence simple, slender, 20–25 cm. long [13. pilosa](#)
- Petioles and nerves beneath slightly pubescent with pale hairs; leaflets elliptic or obovate-elliptic, abruptly and obtusely acuminate, 9–15 cm. long, 4–8 cm. broad, inflorescence simple or branched, slender, 15–35 cm. long; fruits about 7 cm. long and 2 cm. broad, with thick margins, brown-pubescent [14. barteri](#)
- 17** Leaflets 2–3 pairs: **18**
- Leaflets 5–12 pairs, up to 10 cm. long and 4 cm. broad; stipels 2 mm. long, subulate: **19**
- 18** Calyx truncate; standard pubescent with whitish hairs; fruits linear, about 13 cm. long and 3 cm. broad, minutely pubescent to glabrescent; leaflets oblong-elliptic, rounded at base, abruptly acuminate, 10–20 cm. long, 5–8 cm. broad, glabrous [15. sanagana](#)
- Calyx shortly lobed; standard densely pubescent with purplish hairs; young fruits densely pilose; leaflets ovate-elliptic, acutely acuminate, 5–9 cm. long, 2.5–3.5 cm. broad, appressed-pubescent beneath. [16. leonensis](#)
- 19** Bracteoles at base of calyx, broadly ovate, 2–3 mm. long, persistent; standard markedly furrowed; young fruits curved, tomentose; rhachis of inflorescence about 3 mm. thick, angular; leaflets about 6 pairs, oblong-elliptic, caudate, 5–10 cm. long, 3–4 cm. broad, glabrous [17. conraui](#)
- Bracteoles narrow, 1 mm. long, persistent or caducous; standard slightly or not furrowed: **20**
- 20** Rhachis of inflorescence angular, shortly brown-tomentose, 2–3 mm. thick, 14–20 cm. long; leaflets 7–9 pairs, oblong, cuneate at base, acuminate, 4–7 cm. long, 1.5–2.5 cm. broad, glabrous or sparsely appressed-pubescent beneath [18. drastica](#)
- Rhachis of inflorescence almost terete, glabrous, slender, about 1 mm. thick (thickening slightly when in fruit), 7–15 cm. long; leaflets about 6 pairs, obovate-oblong, obtuse at base, caudate-acuminate, 5–11 cm. long, 3.5–5 cm. broad, glabrous [19. pallens](#)

Milletia aureocalyx *Dunn* (1911); Chev. Bot. 182.

A climber or tree about 20 ft. high, with white or pink flowers and golden or rusty-brown pubescence on the leaflets and inflorescence.

Fr. G.: Fouta Djallon (Mar., May) Chev. 12399! 25823! **S. L.:** Jigaya (fr. Sept.) Thomas 2529! Musaia (fr. Oct.) Thomas 2629! R. Seli, Kamadugu (fr. Dec.) T. S. Jones 124! **Lib.:** Vonjama (fr. Oct.) Baldwin 9890! **G. C.:** Accra (Mar.) Dalz. 84! Irvine 684! **Togo:** Lome Warnecke 108!

- 7a. **Milletia warneckei** **var. porphyrocalyx** (*Dunn*) *Hepper* in Kew Bull. 1956: 122. *APD acc*

Milletia porphyrocalyx *Dunn* in J. Bot. 49: 220 (1911); Chev. Bot. 183; F.W.T.A., ed. 1, 1: 383; Bak. f. l.c. 229.

Milletia scott-elliotti *Dunn* (1911).

A tree with branchlets and inflorescence clothed with dark coloured hairs.

Fr. G.: R. Konkouré to Timbo (Mar.) Chev. 12507! **S. L.:** Musaia (Mar.) Sc. Elliot 5126a!

8. **Milletia irvinei** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 383 (1928); Kew Bull. 1928: 404; Bak. f. l.c. 224. *APD acc*

Robinia multiflora *Schum. & Thonn.* (1827), not *Milletia multiflora* Coll. & Hemsl. (1890).

A shrub or small tree with branchlets, etc., brown-pubescent, and white flowers.

G. C.: Thonning. Accra Plains (fl. Apr., fr. June) Irvine 47! 99! 211! Ada road (June) Morton GC 9270!

9. **Milletia mannii** *Bak.* in F.T.A. 2: 127 (1871); Bak. f. l.c. 236. *APD acc*

A tree.

Br. Cam.: Barombi Preuss 258!

Also in **French Cameroons** and **Gabon**.

10. **Milletia macrophylla** *Benth.* in Hook. Ic. Pl. t. 788–9 (1848); F.T.A. 2: 127; Dunn in J. Linn. Soc. 41: 212; Bak. f. l.c. 236. *APD acc*

Milletia hookeriana *Taub.* (1894).

A tree 15–30 ft. high of **secondary forest**, with rather large leaflets and pink or purple flowers fasciculate on erect racemes 1–2 ft. long.

Br. Cam.: Victoria (Nov.) Maitland 782! Buea (Dec.) Maitland 883! Etam Bakossi, Kumba (fr. Dec.) Bamenda FHI 8434! **F. Po:** T. Vogel 117!

Also in **French Cameroons** and **French Congo**.

11. **Milletia aboensis** (*Hook. f.*) *Bak.* in F.T.A. 2: 130 (1871); Dunn l.c. 41: 214; Bak. f. l.c. 238. *APD acc*

Milletia macrophylla **var. aboensis** *Hook. f.* (1849)

Millettia macrophylla of F.W.T.A., ed. 1, 1: 382, partly (Talbot).

A tree 30–40 ft. high, with reddish-brown pubescence on the petioles, branchlets, inflorescence and fruits; flowers purple in erect woody racemes up to 18 in. long.

S. Nig.: Benin (fl. & fr. Nov.) Chizea FHI 24477! Angiama Barter 148! Aboh Ansell! Onitsha (Sept.) Barter 1806! Onochie FHI 34053! 34054! 34109! Degema Talbot!

Also in **French Cameroons** and **Spanish Guinea**.

12. *Millettia zechiana* Harms in Engl. Bot. Jahrb. 40: 36 (1907); Dunn in l.c. 41: 217; Chev. Bot. 184; Bak. f. l.c. 241. *APD acc*

Millettia stapfiana Dunn (1912) — F.W.T.A., ed. 1, 1: 382; Bak. f. l.c. 242; Aubrév. l.c. 1: 290, t. 115.

Millettia ivorensis A. Chev. Bot. 183, name only.

A shrub or tree 15–30 ft. high; flowers purple, standard brown outside; in grassland and secondary forest.

Fr. G.: Dyeke (Oct.) Baldwin 9680! **S. L.:** Panguma Smythe 127! Daru (fl. & fr. Apr.) Deighton 3144! Sefadu (Dec.) Deighton 3575! **Lib.:** Ganta (fr. Dec.) Barker 1112! Kondessu, Boporo (fr. Dec.) Also in [S. Tomé \(probably introduced\)](#), [Belgian Congo \(?\)](#) and [Angola \(introduced\)](#).

21. CRAIBIA

Harms & Dunn in J. Bot. 49: 107 (1911).

- 1** Leaves pinnate, with 5 alternate leaflets (or if 3 leaflets then a pair opposite), ovate-elliptic, shortly cuneate at base, subcaudate-acuminate, 8–10 cm. long, 4–6 cm. broad, glabrous; youngest branchlets sparsely pilose; racemes terminal, short, brown-tomentose; pedicels 5 mm. long; calyx cupular, 3 mm. long with short triangular teeth; corolla 1.5 cm. long; fruits obliquely obovate-lanceolate, about 5 cm. long, 2.5 cm. broad, 1-seeded, glabrous [1. atlantica](#)

Leaves 1-foliolate, ovate, sharply acuminate, 6–8 cm. long, 3–5 cm. broad, closely reticulate on both surfaces; branchlets glabrous; racemes glabrous; pedicels about 1 cm. long, slender; calyx 5 mm. long; corolla 2 cm. long [2. simplex](#)

1. *Craibia atlantica* Dunn in J. Bot. 49: 108 (1911); Bak. f. Leg. Trop. Afr. 2: 246; Aubrév. Fl. For. C.

Iv. 1: 294, t. 117 C. *APD acc*

A small tree about 30 ft. high. with crowded racemes of white flowers.

Iv. C.: Gankapleu, Man region Aubrév. 1052! **N. Nig.:** Lokoja Barter 501! **S. Nig.:** Lagos Foster 19! Ogbesse R., Owo F.R. (May) Jones FHI 3583! Olokemeji (fl. Mar., fr. Apr.) Macdonald 45! Ibadan (Apr.) Meikle 1437!

Also in **French Camerouns**.

2. **Craibia simplex** *Dunn* l.c. 107 (1911); Bak. f. l.c. 246. *APD acc*

A glabrous shrub or perhaps small tree with rather conspicuous flowers in a small panicle.

S. Nig.: Old Calabar Milne 1866!

Also in **Gabon**.

22. MUNDULEA

(*DC.*) *Benth.* — F.T.A. 2: 126.

- 1 Small shrub with corky bark; branchlets flexuose, softly tomentellous; leaflets 6–10 pairs, lanceolate, 2·5–5 cm. long, 1–2 cm. broad, glabrous above, appressed-pubescent beneath; flowers in terminal and leaf-opposed racemes up to 15 cm. long; pedicels 1–1·5 cm. long, pubescent; calyx with linear teeth, 3 mm. long; corolla about 2 cm. long, standard pubescent; fruit 7–12 cm. long, nearly 1 cm. broad, tomentose, about 6–8-seeded *sericea*

Mundulea sericea (*Willd.*) *A. Chev.* in *Compt. Rend.* 180: 1521 (1925). *APD acc*

Cytisus sericeus *Willd.* (1803).

Tephroisa suberosa *DC.* (1825).

Mundulea suberosa (*DC.*) *Benth.* (1852) — F.T.A. 2: 126; Chev. Bot. 182; F.W.T.A., ed. 1, 1: 283; Bak. f. Leg. Trop. Afr. 2: 216.

A shrub or small bushy tree with lilac or purplish flowers.

Fr. Sud.: Banan Chev. 527. **Fr. G.:** Beyla Chev. 20880. **Iv. C.:** Upper Sassandra Chev. 21500. **Dah.:** Atacora Mts. (fr. June) Chev. 24202! **N. Nig.:** Kaduna Lamb 97! Ilorin (Feb.) Ejiofor FHI 19834! **S. Nig.:** Abeokuta Irving 138! Lagos (Sept.) Dodd 425! Rowland! **Br. Cam.:** Wum (fr. June) Ujor FHI 29273!

Widespread in tropical and parts of S. Africa, the Mascarene Islands, Madagascar and East Indies; often planted.

23. TEPHROSIA

Pers. — F.T.A. 2: 104.

Requienia *DC.* (1825).

- 1 Leaves 1–3-foliolate, or occasionally a few 5-foliolate: 2
 Leaves all pinnately 5- or more-foliolate: 3
- 2 Leaflets solitary, broadly obovate, 1–3 cm. long, 8–20 mm. broad, truncate or rounded and sharply mucronate at apex, cuneate at base, with 5–6 pairs of prominent looped lateral nerves, both surfaces covered with whitish appressed hairs; flowers solitary or paired, subsessile, 5–6 mm. long; fruits ovoid, about 5 mm. long, villous, 1-seeded *1. obcordata*
 Leaflets 1–3 (–5), linear-oblongate, 3–9 cm. long, 6–12 mm. broad, deeply emarginate or mucronate at apex, cuneate at base, with numerous ascending lateral nerves nearly hidden by dense silky white hairs beneath, glabrous above; flowers solitary or paired, sessile, about 1 cm. long; fruits about 6 cm. long and 8 mm. broad, densely villous *2. elegans*
- 3 Flowers solitary or subsolitary, axillary: 4
 Flowers racemose, usually fairly numerous: 8
- 4 Fruits about 12 times as long as broad, or if shorter than leaflets about 1 cm. long: 5
 Fruits about 6 times as long as broad, thin and flat: 7
- 5 Leaflets obovate or obovate-lanceolate: 6

- Leaflets linear, 1–3 cm. long, 1–3 mm. broad; for other characters see below [19. linearis](#)
- 6** Leaflets obovate-lanceolate, rounded or slightly emarginate at apex, 1.5–4 cm. long, lower leaflets much smaller than the upper, villous beneath, glabrous or pubescent above; flowers about 8 mm. long; calyx lobes subulate, 4 mm. long; fruits about 6 cm. long, densely pilose, 10–12-seeded [3. uniflora](#)
- Leaflets obovate, truncate and widely and sometimes deeply emarginate at apex, 5–11 mm. long, all leaflets more or less the same size, equally villous on both surfaces; flowers about 6 mm. long; calyx lobes subulate, 2 mm. long; fruits 3–5 cm. long, densely pilose, 8–9-seeded [4. vicioides](#)
- 7** Branchlets villous with weak spreading hairs; leaflets rounded or acute at apex, mostly oblanceolate, 2.5–3.5 cm. long, thinly appressed-pilose beneath, midrib villous; corolla about 6 cm. long, slightly longer than calyx-teeth; fruits 2–3 cm. long, 4 mm. broad, sparsely appressed-pubescent with hairs of equal length [5. pedicellata](#)
- Branchlets pubescent with appressed hairs; leaflets truncate or emarginate at apex, broadly linear, 3–4 cm. long, thinly appressed-pilose beneath, midrib pilose; corolla about 11 mm. long, much longer than calyx teeth; fruits 3–4 cm. long, 6 mm. broad, sparsely appressed-pubescent with 2 kinds of hairs [6. platycarpa](#)
- 8** Stems procumbent: **9**
- Stems more or less erect: **11**
- 9** Leaves pinnate: **10**
- Leaves digitate; leaflets linear-lanceolate, acute, 4–5 cm. long, with numerous ascending lateral nerves, more or less densely hairy; stems covered with soft spreading hairs (or shortly pubescent in var. digitata); flowers few, in lax slender racemes; fruits 2.5–3 cm. long [9. lupinifolia](#)
- 10** Stipules broadly ovate; leaflets mostly 3 pairs, obovate-oblanceolate, emarginate and mucronate, about 2 cm. long, appressed-pilose beneath; flowers nearly 1 cm. long, few, in short racemes a little longer than the leaves; fruits 2 cm. long, 7–8 mm. broad, 2–3-seeded, very slightly pubescent [7. radicans](#)
- Stipules subulate; leaflets 2 pairs, obovate, emarginate and mucronate, 2–2.5 cm. long, nearly glabrous beneath; flowers 8 mm. long, few, in very short racemes [8. djalonica](#)
- 11** Leaflets 5 or more pairs: **12**
- Leaflets 2–4 pairs: **22**
- 12** Flowers 2 cm. or more long, densely crowded; fruits large, 8–12 cm. long, very densely villous or tomentose: **13**
- Flowers at most about 1 cm. long or rarely 1.8 cm. long, usually loosely arranged; fruits smaller, not more than 6 cm. long: **14**
- 13** Calyx-lobes 5 mm. long, oblong, the lowest lobe lanceolate, keeled, 7 mm. long; bracts broadly ovate, 10 mm. long, shortly acuminate, early caducous; leaflets oblanceolate, rounded or truncate and mucronate at apex, 4–7 cm. long, with numerous lateral ascending nerves appressed-silky-villous beneath [10. vogelii](#)
- Calyx-lobes 2 mm. long, triangular, the lowest lobe subulate, 5 mm. long; bracts linear-lanceolate, 7 mm. long, reflexed in flower, finally caducous; leaflets oblong-obovate, broadly emarginate and shortly mucronate at apex, 2.5–5 cm. long, with numerous lateral ascending nerves appressed-silky-pubescent beneath [11. densiflora](#)
- 14** Hairs on the stems rather long and spreading, about 1 mm. long; leaflets oblanceolate to almost linear, mostly emarginate and mucronate, up to 7 cm. long, densely silky beneath; fruits erect and downward curving: **15**
- Hairs on stems appressed or tomentose, not exceeding 0.5 mm. long (hairs on leaf-rhachis sometimes longer): **16**
- 15** Fruits about 4.5 cm. long, nearly 1 cm. broad, shortly pubescent with hairs of 2 lengths, usually about 8-seeded; leaflets sparsely pubescent above with fine white hairs [12. flexuosa](#)
- Fruits about 5–6 cm. long, 5 mm. broad, shortly pubescent with hairs of the same length, about 15-seeded; leaflets often glabrous above [13. barbiger](#)
- 16** Inflorescence shorter than the leaves: **17**
- Inflorescence longer than the leaves: **18**
- 17** Flowers numerous, crowded, with many persistent lanceolate bracts about 1.5 cm. long; fruits linear-oblong, 3 cm. long, 4–5 mm. broad, shortly pubescent, sharply deflexed; leaflets oblanceolate, widely emarginate and mucronate at apex, 3–6 cm. long, 7–15 mm. broad, thinly pubescent beneath, glabrous above [14. deflexa](#)
- Flowers few not densely crowded; bracts subulate about 7 mm. long; fruits erect; leaflets pubescent on both sides; for other characters see above [6. platycarpa](#)
- 18** Leaflets 4.5–8 cm. long, 3–5 (–7) mm. broad, linear, silky-pubescent beneath, glabrous above; bracteoles broadly ovate, 5 mm. long, enclosing the buds; flowers in rather lax long-pedunculate racemes about 20 cm. long; fruits narrowly linear, 5–9 cm. long, 4 mm. broad, erect and usually curved upwards, minutely pubescent [15. bracteolata](#)
- Leaflets 1–3.5 cm. long; bracteoles linear or subulate, up to 3 mm. long: **19**
- 19** Fruits densely pilose with long brown hairs, about 5 cm. long and 6 mm. broad, about 10-seeded; leaflets thinly appressed-pubescent beneath, surface visible between hairs, glabrous above, obovate-lanceolate, slightly emarginate and mucronate at apex, 2.5–3.5 cm. long, about 8 mm. broad; inflorescence lax, 20–30 cm. long

- [16. noctiflora](#)
- Fruits with short grey indumentum; leaflets densely pubescent beneath: **20**
- 20** Flowers numerous, 12 mm. long, rather crowded in the racemes; leaflets obovate, 2 cm. long, 7–15 mm. broad, tomentose and strongly reticulate beneath; fruits 6–7 cm long, 8 mm. broad, densely tomentose [17. mossiensis](#)
- Flowers few, 6–8 mm. long, in lax racemes; fruits 4–5 cm. long, 3–4 mm. broad, pubescent: **21**
- 21** Leaflets narrowly obovate, about 1.5 cm. long, 3–7 mm. broad, rounded or emarginate at apex, lateral nerves beneath usually reddish, visible beneath hairs; stems angular, densely pubescent to subglabrous [18. purpurea](#)
- Leaflets linear, 1.5–3.5 cm. long, 2–3 mm. broad, rounded at apex, lateral nerves beneath completely obscured by the dense silky pubescence; stems ribbed, appressed-pubescent [19. linearis](#)
- 22** Inflorescence overtopping the leaves: **23**
- Inflorescence shorter than the leaves; for other characters see above [6. platycarpa](#)
- 23** Calyx up to 10 mm. long, with long linear-subulate teeth, densely blackish pilose; flowers 15–20 mm. long in stout mostly terminal inflorescences; fruits very densely blackish-pilose; leaflets oblanceolate, mucronate, 2.5–5 cm. long, 1–2 cm. broad, with about 6–8 prominent lateral nerves [20. preussii](#)
- Calyx about 2 mm. long, with subulate teeth, sparsely pubescent; flowers about 5 mm. long in very slender axillary racemes; fruits sparsely pubescent; leaflets narrowly oblanceolate, 2–2.5 cm. long, 3 mm. broad ... [21. gracilipes](#)

1. *Tephrosia obcordata* (Lam. ex Poir.) Bak. in F.T.A. 2: 125 (1871); Chev. Bot. 181; Bak. f. Leg. Trop. Afr. 1: 215.

APD: Synonym of Requienia obcordata (Lam. ex Poir.) DC.

Podalyria obcordata Lam. ex Poir. (1804).

Requienia obcordata (Lam. ex Poir.) DC. (1825) — F.W.T.A., ed. 1, 1: 387.

Crotalaria arenaria of Chev. Bot. 167, partly (Chev. 1264).

A subwoody herb with rather long subsimple branches, 6 in. to 3 ft. long, covered all over with whitish hairs.

Sen.: Walo Perrottet 201! Heudelot! M'bidjem Thierry 65! **Fr. Sud.:** Timbuktu (fl. & fr. July) Chev. 1264! 212! **Fr. Nig.:** Niamey (fl. & fr. Oct.) Hagerup 516! **N. Nig.:** Sokoto (fl. & fr. July) Dalz. 336!

Also in **Ubangi-Shari** and **A.–E. Sudan**.

2. *Tephrosia elegans* Schum. — F.T.A. 2: 118; Chev. Bot. 179; Bak. f l.c. 183; Cronquist in Fl. Congo Belge 5: 96, t. 6. *APD acc*

An erect shrubby herb 2–5 ft. high, leaves silvery beneath and green above; flowers yellow; **usually in moist grassland**.

Sen.: Berhaut 1818. **Fr. Sud.:** Ségou (fr. Oct.) Chev. 3258! **Port. G.:** Cubisseque (fr. Dec.) Esp. Santo 2333! Bafata (fr. Nov.) Esp. Santo 2805! **Fr. G.:** Pobéguin 461! **S. L.:** Wallia (fr. Thomas K. 6! **N. Nig.:** Lokoja Barter! Kadaura (fl. & fr. Nov.) Lely 593! Benue R. Talbot! Ilorin (May) Bailey 8! **S. Nig.:** Olokemeji F.R. (Oct.) Keay FHI 28047! **Br. Cam.:** N. Cameroons Talbot 1221!

Also in **Cape Verde Islands**.

6. **Tephrosia platycarpa** *Guill. & Perr.* — F.T.A. 2: 109; Bak. f. l.c. 187. *APD acc*

Tephrosia humilis *Guill. & Perr.* — F.T.A. 2: 109; Bak. f. l.c.

Stems annual 6–12 in. high, woody at base, thinly grey-silky with pink or purple flowers; **in grassy roadsides, etc.**

Sen.: M'bidjem Thierry 75! Cayor Heudelot 363! 463! **Gam.:** Ingram! **N. Nig.:** Bauchi Plateau Batten Poole 152! Naraguta & Jos (fl. & fr. Nov.) Lely 584! Anara F.R., Zaria (Sept.) Olorunfemi FHI 24362!

Also in **A.–E. Sudan**.

7. **Tephrosia radicans** *Welw. ex Bak.* in F.T.A. 2: 121 (1871); Bak. f. l.c. 214; Cronq. l.c. 106. *APD acc*

An annual herb with prostrate branches 1–3 ft. long; flowers pink; **on rocks and bare soil.**

N. Nig.: Vodni, 4,600 ft. (fl. & fr. July) Lely 422! Bauchi Plateau (July) Lely P. 375!

Also in **Belgian Congo**, **Angola**, **Transvaal** and **N. and S. Rhodesia**.

8. **Tephrosia djalonica** *A. Chev. ex Eutch. & Dalz.* F.W.T.A., ed. 1, 1: 385 (1928); Kew Bull. 1928: 404; Chev. Bot. 179, name only. *APD acc*

A prostrate herb with slender striate nearly glabrous stems and reddish-purple flowers.

Fr. G.: Timbo to Ditinn, Fouta Djalon (Sept.) Chev. 18447!

9. **Tephrosia lupinifolia** *DC.* — F.T.A. 2: 107; Bak. f. l.c. 183; Cronq. l.c. 90. *APD acc*

Tephrosia digitata *DC.* (1825) — F.W.T.A., ed. 1, 1: 385.

Tephrosia lupinifolia var. *digitata* (*DC.*) *Bak.* f. l.c. 183 (1926).

Wide-climbing, slender, perennial herb, with tuberous roots and pink flowers; **in sandy places.**

Sen.: M'bidjem Thierry 88! Cape Verde (fl. & fr. Feb.) Döllinger! Walo Perrottet! Senegal R. Perrottet 209! **N. Nig.:** Nupe Barter 976! Jebba Barter!

Also in **A.–E. Sudan**, **French Congo** and **Belgian Congo**, **Angola**, **N. and S. Rhodesia** and **Nyasaland**.

10. **Tephrosia vogelii** *Hook. f.* — F.T.A. 2: 110; Chev. Bot. 181; Bak. f. l.c. 209; Cronq. l.c. 108, t. 7. *APD acc*

An erect shrub 6–10 ft. high, clothed with dense yellowish or rusty tomentum; flowers conspicuous, red or red-purple, in dense racemes; frequently cultivated as a fish-poison.

S. L.: Afzelius! Deighton 2000! Regent Sc. Elliot 3989! Samu country (Dec.) Sc. Elliot 4207! **Lib.:** Gbawia, Webo (July) Baldwin 6705! Yopla Chev. 19845. **iv. C.:** Zoanlé (fr. May) Chev. 21473! Also in **French Congo and Belgian Congo, Angola, A.-E. Sudan, Abyssinia, Kenya, Uganda and Tanganyika.**

14. *Tephrosia deflexa* Bak. in F.T.A. 2: 111 (1871); Bak. f. l.c. 194. *APD acc*

A woody erect undershrub 1–2 ft. high, more or less thinly silky-pubescent, with pink flowers.

Sen.: Bondou Heudelot 194! **Gam.:** Saunders 67! Kuntaur Ruxton 3! **Port. G.:** Bissau (Oct.) Esp. Santo 950! Dinklage 3205!

15. *Tephrosia bracteolata* Guill. & Perr. — F.T.A. 2: 116; Chev. Bot. 179; Bak. f. l.c. 201; Cronq. l.c. 112, t. 8. *APD acc*

APD: *Synonym of Tephrosia rigidula Welw. ex Baker*

Tephrosia elongata Hook. f. (1849) — F.T.A. 2: 111.

Tephrosia fasciculata Hook. f. (1849).

Tephrosia concinna Bak. in F.T.A. 2: 112 (1871); Bak. f. l.c. 190.

Tephrosia nigerica Bak. f. l.c. 198 (1926).

An erect branched undershrub, usually 2–3 ft. high, but sometimes up to 8 ft. high, with long straight thinly silky branches and bright pink to purple flowers; *in open country*.

Sen.: Cayor Heudelot 402! **Fr. Sud.:** Labbézenga (fr. Sept.) Hagerup 441! **Port. G.:** Antula, Bissau (Oct.) Esp. Santo 2561! **Fr. G.:** Pobéguin 437! Scaëtta 3155! **S. L.:** Wallia, Scarcies R. (fr. Feb.) Sc. Elliot 4281! Berria (fr. Feb.) Sc. Elliot 4959! Musaia (fl. Sept., fr. Dec.) Deighton 4413! 4855! **Iv. C.:** Mt. Kankaniboka (fl. & fr. July) Chev. 22163! Beoumi (fl. & fr. Dec.) Lowe! **G. C.:** Tamale (Nov.) Williams 386! Tumu (fr. Dec.) Adams & Akpabla GC 4368! Achimota (fl. & fr. May) Irvine 1768! **Togo:** Lome Warnecke 59! Amedzofe (fl. & fr. May) Morton GC 7242! Kpandu Robertson 63! **Dah.:** Agouagon (fr. May) Chev. 23545! **N. Nig.:** Lokoja Barter 147! Kontagora (fl. Sept., fr. Oct.) Dalz. 35! Anara F.R., Zaria (Sept.) Olorunfemi FHI 24359! Bui, Bornu, 2,500 ft. (fl. & fr. Sept.) Noble 27! **S. Nig.:** Abeokuta (fr. Jan.) Burt B. 22! Awba Hills F.R. (Oct.) Jones FHI 6350! Olokemeji (fr. Aug., Sept.) Okigbo FHI 24106! Oladoinbo FHI 24263!

Widespread in tropical Africa.

16. *Tephrosia noctiflora* Bojer ex Bak. in F.T.A. 2: 112 (1871); Bak. f. l.c. 193. *APD acc*

A rather spreading undershrub 2–3 ft. high; flowers yellow-green to white with a purple centre.

S. L.: Newton (fl. & fr. Aug.) Deighton 2207! **Lib.:** Gletown, Tchien Dist. (fl. & fr. July) Baldwin 6705a! **G. C.:** Achimota (fl. & fr. June, Nov.) Irvine 1797! Morton GC 6099! **Br. Cam.:** Victoria (fl. & fr. Mar.) Maitland FHI 8768!

Also in **Uganda**, **Kenya**, **Tanganyika**, Zanzibar and Nyasaland where it is probably native; introduced into our area, **Belgian Congo** and the West Indies.

17. *Tephrosia mossiensis* A. Chev. in Bull. Soc. Bot. Fr. 57, Mém. 8: 159 (1912); Chev. Bot. 180; Bak. f. l.c. 193. *APD acc*

A branched woody undershrub, 2–6 ft. high, shortly tomentose; flowers deep red in racemes 2–7 in. long; *amongst rocks*.

Sen.: Niokolo-Koba Berhaut 1571. **Fr. Sud.:** Macina Chev. 24844! Kita Massif (fl. July, fr. Sept.) Jaeger! **Iv. C.:** Mt. Zongapignié, Mossi (July) Chev. 24646! **G. C.:** Jowani, Gambaga Dist. (fl. & fr. June) Akpabla 671! **Fr. Nig.:** Kodjar rocks, Diapaga Chev. 24414. **N. Nig.:** Bauchi Plateau (July) Lely P. 503! Batten Poole 115!

18. *Tephrosia purpurea* (Linn.) Pers. — F.T.A. 2: 124 (incl. var. pubescens Bak.); Bak. f. l.c. 190; Cronq. l.c. 98. *APD acc*

Cracca purpurea Linn. (1753).

Tephrosia leptostachya DC. (1825) — F.W.T.A., ed. 1, 1: 385.

A variable perennial, 6–18 in. high, more or less erect, woody at the base; flowers purple or pink in very lax racemes with the lowest flowers appearing axillary and solitary; *in dry waste places*.

Sen.: Roger! Perrottet 202! Heudelot 408! Walo Heudetot! M'bidjem Thierry 47! **Gam.:** Boteler! **Fr. Sud.:** Timbuktu (fl. & fr. June, July) Hagerup 135! 217! 246b! **G. C.:** Prampram (fr. May) Irvine 1437! Morton GC 6087! Labadi (fl. & fr. Mar.) Deighton 580! **Dah.:** Cotonou (fr. Feb.) Debeaux 158! **N. Nig.:** Mokoye, Zaria (fl. & fr. Aug.) Keay FHI 28026! Sokoto (fl. & fr. (fl. & fr. Dec.) McClintock 39!

Widespread in tropical Africa.

20. **Tephrosia preussii** *Taub.* in Engl. Bot. Jahrb. 23: 182 (1896); Bak. f. l.c. 208.

APD: Synonym of Tephrosia paniculata Welw. ex Baker

Tephrosia lelyi Bak. f. l.c. 207 (1926).

A robust erect undershrub, up to 5 ft. high, with striate pubescent stems and purplish or orange flowers.

S. L.: Bintumane Peak, 5,000 ft. (fr. Jan.) T. S. Jones 159! **N. Nig.:** Vom, Bauchi Plateau, 3,000–4,500 ft. Dent Young 54! Naraguta & Jos (Sept.) Lely 572! **S. Nig.:** Sonkwala, Obudu Div. (Dec.) Savory & Keay FHI 25087! **Br. Cam.:** Buea (fl. & fr. Jan., Dec.) Lehm巴赫 63! Preuss 629! Mildbr. 10828! Bansa, Bamenda (Oct.) Tamajong FHI 23478!

21. **Tephrosia gracilipes** *Guill. & Perr.* — F.T.A. 2: 119; Bak. f. l.c. 189. *APD acc*

An erect slender annual, 1 ft. or more high, thinly appressed grey-silky, with small purplish flowers.

Sen.: Heudelot! Bakel (Sept., Oct.) Perrottet.

Also in [A.–E. Sudan](#) and [Abyssinia](#).

Tephrosia candida (*Roxb.*) *DC.* *APD acc*

Has been introduced from India into Sierra Leone and British Cameroons.

Tephrosia simplicifolia *Franch.* — *Berhaut Fl. Sen.* 192.

Recorded from Ouassadou, Senegal (Berhaut 1223); not previously known outside Somaliland.

The Senegal specimen has not been seen. Doubtfully recorded species.

24. **SESBANIA**

Scop. — F.T.A. 2: 133.

- 1 Appendages present at base of claw of standard:2
Appendages absent from claw of standard or reduced to a slight ridge, standard striate; fruits torulose, much constricted between the seeds, 12–15 cm. long, 3 mm. broad; leaflets 8–18 pairs, narrowly oblong, 6–13 mm. long, 2–3 mm. broad, finely punctate, cuneate at base, glabrous[9. leptocarpa](#)
- 2 Appendages free in the upper half or third and continuous with the adnate part; standard more or less spotted with purple, sometimes suffused purple; fruits up to 24 cm. long, at first torulose; inflorescence 4–8-flowered; peduncles smooth; leaves about as long as the inflorescence; leaflets 9–27 pairs, oblong-linear, mucronate, 2–3 cm. long and about 5 mm. broad, more or less pubescent[1. sesban](#)
- Appendages adnate or with their short apices free and at right angles to the standard:3
- 3 Flowers very large, 5–10 cm. long; fruits about 30 cm. long, flat; leaflets about 15–20 pairs, elongate-oblong, 2.5–3 cm. long and up to 1 cm. broad[2. grandiflora](#)
- Flowers much smaller, up to 2.5 cm. long:4
- 4 Stipules (seen in the youngest parts) 9–11 mm. long, about 2 mm. broad, linear, brown; peduncles angular, (8–) 12–20 cm. long with many small prickles at the base; calyx campanulate, teeth very small; flowers 1.2–1.8 cm. long; pedicels about 1 cm. long; fruits 20–25 cm. long, 7 mm. broad; leaves as long as the inflorescence, or rather shorter; leaflets 10–24 pairs, 9–24 mm. long, 2–6 mm. broad, oblong, mucronate at apex[3. macrantha](#)
- Stipules (seen in the youngest parts) 4–8 mm. long, 1 mm. broad, subulate, green with scarious margins; peduncles not prickly:5

- 5 Stems and leaves, or leaves only, rather densely pubescent; calyx 5-toothed; standard not spotted:6
 Stems and leaves glabrous or slightly pubescent especially on nerves and margins of young leaves; calyx 4- or 5-toothed; standard spotted:.....7
- 6 Calyx-teeth dark brown, triangular; leaflets 12–18 pairs, elongate-oblong, mucronate, up to 2.5 cm. long and 6 mm. broad, usually densely pubescent; flowers small, about 8 mm. long; fruits not torulose, curved, about 15 cm. long, 3 mm. broad with thick margins4. [pubescens](#)
 Calyx-teeth green; leaflets up to 40 pairs, linear-oblong, 8–25 mm. long, 2–3.5 mm. broad, sparsely appressed-pubescent on both surfaces; flowers 12–17 mm. long; fruits strongly torulose, about 20 cm. long ...5. [dalzielii](#)
- 7 Glands, at least on the older parts, in a line up the stem from each leaf-axil; inflorescences corymbose when young, often slightly pubescent; calyx-teeth triangular at base with filiform acumen; flowers about 1.5 cm. long; fruits slightly curved, margins conspicuously thickened, surface clearly but not deeply indented, apex acute, 15–25 cm. long6. [pachycarpa](#)
 Glands absent from stem:8
- 8 Stems thick and pithy; leaf-rhachis usually aculeate; leaves very long, up to 40 cm. long; leaflets numerous, 1–2 cm. long and 3–5 mm. broad, glabrous and glaucous; peduncle 6–8 cm. long, few-flowered; flowers about 1.5 cm. long; fruit-margins straight7. [bispinosa](#)
 Stems slender and wiry; leaf-rhachis smooth; leaves up to 15 cm. long; leaflets 5–30 pairs, obliquely unequally-sided at base, about 1.5 cm. long, 2.5–3 mm. broad, glaucous green; peduncle 2–4 cm. long, few-flowered; flowers about 2 cm. long; fruit-margins constricted8. [arabica](#)

1. **Sesbania sesban** (Linn.) Merril in Philipp. Journ. Sci. 7: 235 (1912); Cronquist in Fl. Congo Belge 5: 76, t. 5. *APD acc*

APD: *Synonym of Sesbania sesban var. nubica Chiov.*

APD: *Synonym of Sesbania sesban subsp. punctata (DC.) J. B. Gillett*

Aeschynomene sesban Linn. (1753).

Sesbania aegyptiaca (Poir.) Pers. (1807) — F.T.A. 2: 134; Chev. Bot. 184; Phill. & Hutch, in Bothalia 1: 44; F.W.T.A., ed. 1, 1: 387 (incl. var. *bicolor* Wight); Bak. f. Leg. Trop. Afr. 2: 259.

Sesbania punctata DC. (1825) — F.T.A. 2: 133; Chev. Bot. 185; Phill. & Hutch. l.c. 43; F.W.T.A., ed. 1, 1: 387; Bak. f. l.c. 259.

A shrub or small tree, up to 20 ft. high, copiously branched, more or less pale glaucous, with red-spotted yellow flowers; **common by streams and sandbanks.**

Sen.: Perrottet 231! 232! Roger! Heudelot! Richard Tol (Jan.) Döllinger 10! **Gam.:** Pirie 32! **Fr. Sud.:** fide Chev. l.c. **S. L.:** T. Vogel 24! **iv. C.:** R. Cavally Chev. 19776. **G. C.:** Black Volta R. (fr. Mar.) Kitson 968! **N. Nig.:** Attah (fr. Sept.) T. Vogel 45! Nupe Barter 970! Katagum (Dec.) Dalz. 7! Sokoto (Dec.) Dalz. 324! Lely 152! L. Chad (fl. & fr. Jan.) Lamb 107! **Br. Cam.:** Bama, Dikwa Div. (fl. & fr. Jan.) McClintock 162!

Widespread in tropical Africa and trough tropical Asia to N. Australia, also in **St. Helena.**

2. **Sesbania grandiflora** (Linn.) Poir. in Lam. Encycl. Méth. Bot. 7: 127 (1806); Phill. & Hutch. l.c. 46; Bak. f. l.c. 260. *APD acc*

Robinia grandiflora Linn. (1753).

A small tree or shrub, with rather stout branchlets pubescent when young; flowers very large, few, pink or red or cream-white.

Sen.: Roger! Perrottet 235! **S. L.:** Don! **G. C.:** Axim Chipp 391! **S. Nig.:** Lagos Rowland!

Widely cultivated in the tropics.

3. **Sesbania macrantha** Welw. ex Phill. & Hutch. l.c. 47 (1921); Bak. f. l.c. 261; Cronq. l.c. 79. *APD acc*

A shrub, 5–6 ft. high with stem and branches rough with small thorns; flowers yellow tinged pink.

Br. Cam.: Bamenda, 5,000 ft. (fr. Jan.) Migeod 403! Njinikom, 5,000 ft. (May) Maitland 1442! L. Bambili (Aug.) Ujor FHI 29998!

Also in **French Cameroons, A.–E. Sudan, Belgian Congo, Angola, Uganda, Kenya, Nyasaland, N. Rhodesia** and **S. Rhodesia** and **Transvaal.**

4. **Sesbania pubescens** DC. — F.T.A. 2: 135; Phill. & Hutch. l.c. 48; Chev. Bot. 184; Bak. f. l.c. 261;

Cronq. l.c. 83.

APD: Synonym of Sesbania sesban var. nubica Chiov.

APD: Synonym of Sesbania sericea (Willd.) Link

A slender shrub of **moist places**; inflorescence slender with rather small yellow flowers.

Sen.: Perrottet 228! M'bidjem Thierry 72! Chev. 3393! N'boro Brunner 79! **Fr. Sud.:** Timbuktu Chev. 1206. Kabarah Chev. 1325. **G. C.:** Accra Brown 419! Dalz. 79! Irvine 805! 822! Axim (fl. & fr. Apr.) Chipp 426! Aburi (Aug.) Johnson 950! **Dah.:** Cotonou Debeaux 150! Zagnanado (Mar.) Chev. 23302! **N. Nig.:** Kwarre Sampson 22!

Also in **Chad Territory**, **A.–E. Sudan**, **Belgian Congo**, **E. Africa**, **Angola** and **S. Tomé**.

5. **Sesbania dalzielii** *Phill. & Hutch.* l.c. 49 (1921); Bak. f. l.c. 261; Berhaut Fl. Sen. 33. *APD acc*

APD: Synonym of Sesbania sudanica subsp. occidentalis J. B. Gillett

A slender shrub 4–5 ft. high, with weak slightly pubescent branches and yellow flowers; **in marshy places**.

Sen.: fide Berhaut l.c. **Fr. Sud.:** Koulikoro (Oct.) Chev. 3390! **G. C.:** Akuse (fl. & fr. Oct.) Vigne FH 4050! **Fr. Nig.:** Labbézenga (fl. & fr. Sept.) Hagerup 457! **N. Nig.:** Baikie 9! Jebba Barter! Katagum (fl. & fr. Oct.) Dalz. 8! Abinsi (fl. & fr. Oct.) Dalz. 614! Benue R. (Sept.) Talbot!

6. **Sesbania pachycarpa** *DC.* Prod. 2: 265 (1825); Berhaut in Bull. Soc. Bot. Fr. 99: 297 (1953); F.W.T.A., ed. 1, 1: 387, partly (Perrottet 230). *APD acc*

APD: Synonym of Sesbania rostrata Bremek. & Oberm.

Sesbania pubescens of F.W.T.A., ed. 1, 1: 887, partly (Roger 23; Heudelot 252).

Sesbania aculeata of F.W.T.A., ed. 1, 1: 387, partly (Perrottet 229).

Sesbania aegyptiaca of F.W.T.A., ed. 1, 1: 387, partly (Talbot 1242).

A herb 2–5 ft. high with yellow flowers, the standard purple-spotted; **usually by water or introduced**.

Sen.: Roger 23! Perrottet 230! Richard Tol (Sept.) Perrottet 229! Galam Heudelot 252! **Fr. Sud.:** Buia, Ansongo Hagerup 404! **N. Nig.:** Bornu (Nov.) Johnston N. 64! Talbot 1242! Clapperton 5! **Br. Cam.:** Dikwa (fl. & fr. Nov.) Johnston N. 96!

Also in **Mauritania**, **A.–E. Sudan** and **Madagascar**.

(The name *S. pachycarpa* DC. seems to be misapplied by Cronquist in Fl. Congo Belge 5: 81.]

7. **Sesbania bispinosa** (*Jacq.*) *W. F. Wight* in U.S. Dept. Agric., Bur. Pl. Indust. Bull. 137; 15 (1909); Sprague & Milne-Redhead in Kew Bull. 1939: 159. *APD acc*

Aeschynomene bispinosa *Jacq.* (1793).

Sesbania aculeata *Pers.* (1807) — F.T.A. 2: 134; Phill. & Hutch. l.c. 50; F.W.T.A., ed. 1, 1: 387 (excl. Perrottet 229); Bak. f. l.c. 262.

Sesbania pachycarpa of F.W.T.A., ed. 1, 1: 387 (excl. Perrottet 230).

Stem glabrous, erect, branched from the base, often thick but soft and pithy, reaching 15 ft.; flowers yellow, purple-spotted; **in muddy swamps**.

Sen.: Heudelot 502. **Gam.:** Kuntaur Ruxton 146! **Port. G.:** Bissau (Oct.) Esp. Santo 2542! **Fr. G.:** Nzérékoré Baldwin 9736! **S. L.:** Falaba (fl. & fr. Mar., Apr.) Sc. Elliot 5220! Deighton 5401! Njala (fr. Nov.) Deighton 1790! Jagbwema (Oct.) Small 402! **G. C.:** Williams 549! Accra T. Vogel! Legon (fl. & fr. Nov.) Morton A. 90! **N. Nig.:** Bornu (fl. & fr. Nov.) E. Vogel 79! Katagum (fl. & fr. Oct.) Dalz. 9! Abinsi (fl. & fr. Nov.) Dalz. 615! Naraguta & Jos (fl. Aug., fr. Nov.) Lely 534! 586! Vom, 3,000–4,500 ft. Dent Young 58! Lokoja Richardson! **S. Nig.:** Lagos Phillips 13! Dalz. 1227! **Br. Cam.:** Bama, Dikwa Dist. (fl. & fr. Nov.) McClintock 32!

A common weed in the tropics.

8. **Sesbania arabica** *Steud. & Hochst. ex Phill. & Hutch.* l.c. 51 (1921).

APD: Synonym of Sesbania sudanica J. B. Gillett

Stems glabrous; sometimes very slender, decumbent or erect.

N. Nig.: Benue R., Muri Prov. (Nov.) Lamb 69! Bornu (Sept.) Gwynn 138!

Extends to A.–E. **Sudan** and **Arabia**.

9. *Sesbania leptocarpa* DC. — F.T.A. 2: 135; Phill. & Hutch. l.c. 50; Chev. Bot. 184; Bak. f. l.c. 262.
APD acc

APD: Synonym of Sesbania microphylla Harms

A slender glabrous undershrub up to 8 ft. high; flowers small.

Sen.: Roger! Senegal R. Heudelot 489! **Fr. Sud.:** San Chev. 1060. **Iv. C.:** Baoulé-Nord Chev. 22030. Ouagadougou to Lai Chev. 24692. **G. C.:** Tamale (fr. Dec.) Morton GC 9915! **Fr. Nig.:** Gourma Chev. 24526. Bilma Chev. 28641. **N. Nig.:** Kwarre (fr. Nov.) Sampson 23!

[Cronquist l.c. 80, records this species from the Belgian Congo and indicates that it occurs in other parts of tropical Africa and in Arabia; his description shows that he has adopted a broad view of the species and not the strict view taken by Phillips and Hutchinson which is followed here.]

25. PSORALEA

Linn. — F.T.A. 2: 64.

- 1** A low shrub with rigid branchlets; leaves pinnately 3-foliolate; leaflets oblanceolate or oblong, 1–1.5 cm. long, closely and minutely pubescent, glandular; petiole short; racemes axillary, stout; calyx strongly nerved; fruit as long as the calyx, ellipsoid, hairy, 1-seeded [plicata](#)

Psoralea plicata Del. — F.T.A. 2: 64; Bak. f. Leg. Trop. Afr. 1: 93.

APD: Synonym of Cullen plicatum (Delile) C.H. Stirt.

Undershrub up to 4 ft. high, with ribbed weakly spiny branchlets and whitish flowers.

Sen.: Berhaut 1719. **N. Nig.:** Kukawa, banks of L. Chad (fl. & fr. Feb.) E. Vogel 33!

Extends to A.–E. **Sudan** and Nile land.

26. INDIGOFERA

Linn. — F.T.A. 2: 65; Tisserant in Bull. Mus. Hist. Nat., sér. 2, 3; 163–172, 258–272 (1931).

Microcharis Benth. — F.T.A. 2: 132.

The corolla is red or pink in Indigofera unless otherwise stated.

KEY TO THE NATURAL GROUPS

- 1** Pods falcate, subtriquetrous, 1-seeded, beset with spines; inflorescence an axillary raceme; fruiting pedicels reflexed; leaves simple, elliptic [Subgenus 1. ACANTHONOTUS, 1. nummulariifolia](#)
Pods not as above: **2**
- 2** Pods flattened, 3- or more-seeded; fruiting pedicels reflexed; inflorescence an axillary raceme; calyx more than half as long as stamens, its lobes much longer than the tube; standard pubescent outside; leaflets 3–7, the lateral ones opposite; annuals [Subgenus 2. AMECARPUS, spp. 2–5](#)
Pods not flattened, or, if so, remaining characters not as above: **3**
- 3** Stipules approaching the leaflets in size; flowers almost hidden by the stipular part of the bracts; indumentum long, softly silky; fruits 2–4-seeded [Subgenus 3. INDIGOFERA. Sect. latestipulatae, spp. 6–7.](#)
Stipules not approaching the leaflets in size: **4**
- 4** Standard pubescent outside, or, if glabrous (in No. 37) then fruits erect, flattened 1-seeded; keel rarely rostrate but having a spur-like pouch at each side; all stamens fertile [Subgenus 3. INDIGOFERA](#)
Standard glabrous; keel without a spur-like pouch at each side, usually rostrate; pod more than 4-seeded

- [Subgenera 4. INDIGASTRUM, spp. 71–72, and 5. MICROCHARIS, spp. 73–76](#)
- 5** Inflorescence a panicle, sometimes condensed and subcapitate; bracts passing more or less gradually into the foliage leaves; calyx deeply divided; fruits (except in No. 9) short, 1–4-seeded, straight .. [Section Paniculatae, spp. 8–25](#)
 Inflorescence an axillary raceme; bracts sharply distinct from foliage leaves [Section Indigofera, spp. 26–70](#)
- 6** Fruiting pedicels not definitely deflexed (except sometimes in No. 36, where the inflorescence has 3–6 flowers); fruits erect or spreading, straight; inflorescence 2-many-flowered; lateral leaflets opposite (except in No. 27): **7**
 Fruiting pedicels definitely deflexed; inflorescence 10-many-flowered: **12**
- 7** Plants free from glandular hairs (sepals and stipules may be gland-tipped in Nos. 41 and 42): **8**
 Plants with glandular hairs on the fruit or elsewhere [Subsection Viscosae, spp. 46–52](#)
- 8** Peduncles very short (under 5 mm.) or, if more, less than 1/4 length of floriferous axis: **9**
 Peduncles more than 5 mm. long, more than 1/4 length of floriferous axis; leaves, at least the lower ones, always compound: **10**
- 9** Fruits, at least when mature, all erect, or nearly so [Subsection Brevi-erectae spp. 26–35](#)
 Fruits 1–3 in each inflorescence, 6- or more-seeded, spreading in all directions; leaflets 1–5, about 7 mm. long [36. suaveolens](#)
- 10** Pods 1-seeded, flattened; whole plant, including standard, glabrous or almost so; inflorescence with 4–7 flowers [37. scarriesii](#)
 Pods 4- or more-seeded; standard pubescent: **11**
- 11** Calyx less than 1/2 as long as stamens; stipules not above 5 mm. long, or 0–5 mm. wide [Subsection Dissitiflorae, spp. 38–43](#)
 Calyx more than 1/2 as long as stamens; stipules often over 5 mm. long and 0–5 mm. wide; leaflets 1–5; indumentum of both long spreading basifixed and appressed medifixed hairs; stipules and calyx lobes sometimes gland-tipped [Subsection Pilosae, spp. 44–45](#)
- 12** Lateral leaflets opposite: **13**
 Lateral leaflets alternate, or some or all leaves simple [Subsection Alternifoliolae, spp. 66–70](#)
- 13** Leaflets not gland-dotted beneath: **14**
 Leaflets dotted beneath with more or less impressed glands; calyx deeply divided; raceme dense, fruits short [65. microcarpa](#)
- 14** Calyx-lobes not more than twice as long as tube; corolla much longer than calyx; indumentum on standard closely appressed and parallel, giving a shiny appearance; pods 4- or more-seeded, often curved ... [Subsection Tinctoriae, spp. 53–60](#)
 Calyx-lobes many times as long as tube; corolla not twice as long as calyx; indumentum of standard not dense, close-appressed and shining; pods 3–8-seeded, straight [Subsection Hirsutae, spp. 61–64](#)
- Subgenus 2 — AMECARPUS**
- 1** Pods over 2–4 mm. wide, with separate eminences over each seed: **2**
 Pods less than 2–2 mm. wide: **3**
- 2** Pods more or less curved, 5–9-seeded; fruiting peduncle 5 mm. long or less, not above half as long as a fruit .. [2. hochstetteri](#)
 Pods nearly straight, 3–6-seeded; fruiting peduncle 10 mm. long or more, as long as or longer than a fruit [3. senegalensis](#)
- 3** Pods 1.6–2 mm. wide, with a more or less continuous lateral ridge; infructescence shorter than its subtending leaf; leaflets rarely over 3 mm. wide [4. charlieriana var. sessilis](#)
 Pods 1.1–5 mm. wide, the lateral ridge broken into separate swellings above the seeds; infructescence usually more than twice as long as subtending leaf; wider leaflets over 4 mm. wide [5. aspera](#)
- Subgenus 3 — INDIGOFERA**

Section Latestipulatae

- 1** Flowers single in the axils of bracts which do not form a strobilus; bracts each with a well-developed lamina and stipules free almost to the base [6. berhautiana](#)
 Flowers two together in the axils of bracts which are aggregated to form a strobilus; lamina of bracts absent or much reduced; stipules of bracts usually united to above the middle [7. strobilifera](#)

Section Paniculatae

- 1** Pedicel, even when jointed and perhaps equivalent to a reduced peduncle, not over 4 mm. long: **2**

- Pedicle slender, jointed, probably equivalent to a reduced peduncle, 5 mm. or more long; leaflets up to 7 or 9 in number: **16**
- 2** Leaves always simple, the lower more than 2 cm. long: **3**
- Lower leaves often pinnate, simple leaves, if present, usually under 2 cm. long: **5**
- 3** Fruiting calyx 4–5 mm. long with conspicuous rufous hairs [8. polysphaera](#)
- Fruiting calyx 1–2 mm. long: **4**
- 4** Fruits about 5 times as long as wide; stem 3-winged [9. trialata](#)
- Fruits up to 3 times as long as wide; stem ridged, not winged [10. paniculata](#)
- 5** Fruiting calyx-lobes much broadened, wider than the usually 1-seeded fruit which is hidden within them: **6**
- Fruiting calyx-lobes not so wide as fruit: **7**
- 6** Straggling herb; fruiting inflorescence compact, usually over 15 mm. wide, and less than twice as long; without glands, or with glands less frequent than the usual type of hairs [11. macrocalyx](#)
- Stiff semiwoody plant; fruiting inflorescence less compact, usually under 15 mm. wide, and often more than twice as long; with numerous short glands between the less frequent usual type of hairs [12. terminalis](#)
- 7** Inflorescences compact, subglobose, congested panicles, without separate flowers away from the rest in leaf-axils: **8**
- Inflorescences much less compact, many flowers separate in the axils of leafy bracts (or simple leaves): **11**
- 8** Inflorescences less wide than the shoots which they terminate are long; fruiting calyx about 6 mm. long, or more: **9**
- Inflorescences mostly lateral, sessile in leaf-axils or wider than the shoots which they terminate are long; fruiting calyx about 3 mm. long: **10**
- 9** Leaflets often 3–5 cm. long; inflorescences 3–4 cm. across; fruiting calyx about 11 mm. long .. [13. megacephala](#)
- Leaflets rarely over 2 cm. long, up to 9 in number; inflorescences under 3 cm. across; fruiting calyx about 6–8 mm. long [14. capitata](#)
- 10** Leaflets up to 7 in number [15. congesta](#)
- Leaflets 11–13 in number [16. dasycephala](#)
- 11** Fruiting calyx 3–4 mm. long, about as long as fruit, its indumentum brownish: **12**
- Fruiting calyx not above 2–5 mm. long: **13**
- 12** Leaves all pinnate, the longer with about 17 leaflets [17. brassii](#)
- Leaves often simple or 3-foliolate, the longer with about 9 leaflets [18. pulchra](#)
- 13** The lobes of fruiting calyx subequal, not above half as long as pod: **14**
- The 2 upper lobes of fruiting calyx much wider than the rest, about 3/4 as long as pod; hairs on calyx and pod white; some lower leaves usually pinnate with up to 11 leaflets [22. bracteolata](#)
- 14** Pods 2–4-seeded; most lower leaves pinnate (up to 5-jugate): **15**
- Pods 1-seeded, more or less oval; leaves simple; indumentum sparse; herbaceous shoots from a woody rootstock [21. leptoclada](#)
- 15** A stiffly erect annual; leaflets 4 or more times as long as wide; branches of inflorescence leafless and flowerless below, crowded with 1–3-foliolate leaves or bracts in their upper half; hairs on calyx and fruit dense, spreading, about 0–5 mm. long, often black or dark brown [19. nigricans](#)
- A woody suffrutex; leaflets twice as long as wide; branches of inflorescence without a leafless lower portion; hairs on calyx and fruit sparser, about 0–2 mm. long, white [20. oubanguiensis](#)
- 16** Calyx-lobes widest at the base: **17**
- Calyx-lobes twice as wide just below the middle as at the base; bushy herb, woody below; hairs long, spreading [25. latisejala](#)
- 17** Slender annual, up to 30 cm. tall; indumentum more or less spreading [23. trichopoda](#)
- Stiff erect bushy herb, up to 2 m. tall; indumentum closely appressed [24. nigritana](#)

Section Indigofera

Subsection Brevi-erectae

- 1** Pods not glabrous; **2**
- Pods glabrous, about 1·4 mm. wide, 19–22 mm. long; leaflets 3–5 [35. omissa](#)

- 2 Inflorescence extremely congested, so that the axis and pedicels are hidden by the flowers or fruits; leaflets or simple leaves under 17 mm. long and about half as wide:3
 Inflorescence less congested, axis and pedicels not hidden:4
- 3 Leaves simple, oval, cordate at base; pods oblong, not torulose, 2-seeded [26. cordifolia](#)
 Leaves with 3–11, usually alternate, leaflets; pods more or less torulose, 3–6-seeded [27. sessiliflora](#)
- 4 Leaves simple, several times as long as wide, usually over 17 mm. long; pods 4-or more-seeded, elongate:5
 Leaves pinnate:7
- 5 Pods 1.8–2.5 mm. wide; leaves up to 3 mm. wide; calyx teeth about 1 mm. long:6
 Pods about 4 mm. wide; leaves up to 10 mm. wide; calyx teeth about 5 mm. long [30. leprieurii](#)
- 6 Hairs on upper surface of leaf set at an angle of 80–90° with midrib; pod more or less flattened, about 2.5 mm. wide, 3–6-seeded, ending in a short point (persistent style base) about 0.3 mm. long [28. tetrasperma](#)
 Hairs on upper surface of leaf set at an angle of about 45° with midrib; pod more or less tetragonal, about 1.8–2.0 mm. wide, usually 8–12-seeded, ending in a point (persistent style base) about 1.1 mm. long [29. simplicifolia](#)
- 7 Calyx-lobes as long as tube, or longer, or, if shorter, then the leaflets much less than 3 cm. long and 1 cm. wide: 8
 Calyx-lobes much shorter than the tube; leaflets 7, about 3 cm. long and 1 cm. wide; standard densely covered outside by a golden-brown appressed indumentum [34. pobeguinii](#)
- 8 Pods 12–40 mm. long, leaflets usually over 17 mm. long:9
 Pods 3–5 mm. long; leaflets 5–9 in number, up to 17 mm. long [33. mildbraediana](#)
- 9 Leaflets usually more than 11, often 15–23 in number, about 2–5 times as long as wide; pods more or less 4-winged; hairs on calyx long (about 1 mm.), more or less spreading; flowers erect in bud, later reflexed and lastly the fruits erect again [31. priureana](#)
 Leaflets usually fewer than 11, 4–10 times as long as wide; pod not winged: 10
- 10 Hairs on calyx about 0.5 mm. long, more or less appressed; flowers erect throughout [32. stenophylla var. stenophylla](#)
 Hairs on calyx about 1 mm. long, more or less spreading, flowers deflexed after opening and later again becoming erect [32a. stenophylla var. ampla](#)

Subsection Dissitiflorae

- 1 Leaf-rhachis prolonged beyond distal pair of leaflets; flowers borne one above the other on the axis of the inflorescence:2
 Leaf-rhachis usually not, or hardly, prolonged beyond distal pair of leaflets; flowers borne 2 together at the tip of the peduncle [43. geminata](#)
- 2 Fruiting pedicel over 2 mm. long:3
 Fruiting pedicel less than 2 mm. long; racemes 2–4-flowered:6
- 3 Pods minutely strigose, usually over 17 mm. long; racemes often more than 12-flowered; leaflets 11–31 [38. dendroides](#)
 Pods glabrous or almost so, less than 17 mm. long:4
- 4 Raceme 6–12-flowered, its axis pubescent; stems more or less pubescent with spreading hairs; leaflets 7–13: ...5
 Raceme 3–5-flowered, its axis (with peduncle) under 15 mm. long; stems sub-glabrous, the few hairs appressed, leaflets 3–9 [40. elliotii](#)
- 5 Leaflets rarely over 8 mm. wide; peduncle rarely over 15 mm. long; leaves subtending inflorescences usually shorter than the lower leaves (1–3-jugate instead of 4–6-jugate) [39. heudelotii var. heudelotii](#)
 Leaflets up to 12 mm. wide; peduncles up to 30 mm. long; leaves subtending inflorescences 3- or more-jugate, much like lower leaves [39a. heudelotii var. fairchildii](#)
- 6 Petioles under 1 mm. long; leaflets 7–13, with glandular margins; stipellae obscure [41. wituensis var. occidentalis](#)
 Petioles 3–7 mm. long; leaflets 5–9, without glandular margins; stipellae filiform about 1 mm. long [42. congolensis](#)

Subsection Pilosae

- 1 Inflorescence 1–4-flowered; hairs all whitish; leaflets often more or less acute [44. pilosa](#)
 Inflorescence 5–20-flowered; many hairs yellowish brown; leaflets more or less obtuse [45. fulvopilosa](#)

Subsection Viscosae

- 1 Non-glandular hairs of inflorescence white:2
 Non-glandular hairs of inflorescence largely blackish-brown; leaflets 5–13; fruit about 2 mm. wide:7

- 2 Inflorescence much more than 5 mm. long; fruits usually over 3 mm. long:.....3
 Inflorescence compact, not over 5 mm. long, pods 2-seeded, about 3 mm. long[51. conferta](#)
- 3 Pods about 1–1.7 mm. wide:4
 Pods about 2 mm. wide:6
- 4 Petiole usually shorter than basal leaflets; leaflets rarely more than 9, finely appressed-strigose above; epidermis of stems and glandular hairs usually more or less reddish-purple; fruit not over 12 mm. long ..[46. mimosoides](#)
 Petiole usually longer than basal leaflets (if shorter, leaflets more than 11); leaflets often 11 or more; epidermis of stems usually yellowish green:.....5
- 5 Glandular hairs present on fruits and leaflets; inflorescence not markedly secund; fruits up to 20 mm. long ...[47. colutea](#)
 Glandular hairs absent on fruits and leaflets, rather sparse elsewhere; inflorescence markedly secund; fruits 6–10 mm. long[48. barteri](#)
- 6 Inflorescence dense, secund, many-flowered; pods 4–6 mm. long, with black glandular hairs as well as a dense silvery coat of appressed medifixed hairs[49. secundiflora](#)
 Inflorescence not secund, with 3–5 flowers only; glandular hairs very short and sparse[50. argentea](#)
- 7 Erect multicellular hairs present on pods, scarce or absent on stems [52. atriceps subsp. atriceps](#)
 Erect multicellular hairs abundant on both pods and stems[52a. atriceps subsp. alboglandulosa](#)

Subsection Tinctoriae

- 1 Stamens more than 10 mm. long; leaflets 5–9, often over 3 cm. long [53. garckeana](#)
 Stamens less than 10 mm. long; leaflets 3–13:.....2
- 2 Hairs on fruit mostly dark brown, those on standard dense, appressed, golden brown to black; fruit straight:3
 Hairs on fruit usually white; stamens not over 4 mm. long:4
- 3 Raceme almost sessile, usually shorter than subtending leaf; stamens 5–6 mm. long; plant drying brownish green[54. emarginella](#)
 Raceme pedunculate, up to 15 cm. long, very slender, longer than subtending leaf; stamens about 4 mm. long; plant drying blackish[55. macrophylla](#)
- 4 Fruits more or less tetragonous, curved; infructescence much longer than subtending leaf:5
 Fruits not tetragonous; infructescence not, or but little, longer than subtending leaf:6
- 5 Leaflets 3 [56. subulata var. subulata](#)
 Leaflets 5–9 [56a. subulata var. scabra](#)
- 6 Pods torulose; seeds up to 5 or 6; stem densely silvery; leaflets 5–9 [57. coerulea](#)
 Pods not torulose, or if so, seeds more than 6; leaflets usually 11 or more:7
- 7 Fruits straight, about 6-seeded, less than 2 cm. long; indumentum on flowers and inflorescence more or less brown [58. arrecta](#)
 Fruits more or less curved, or, if almost straight, then more than 6-seeded and over 2 cm. long:8
- 8 Pods definitely curved, reddish brown, short (about 1–1.5 cm. from end to end in a straight line), about 5–8-seeded; indumentum of inflorescence brownish [59. suffruticosa](#)
 Pods usually slightly curved or almost straight, over 2 cm. from end to end in a straight line, greyish black, 8–12-seeded; indumentum of inflorescence whitish [60. tinctoria](#)

Subsection Hirsutae

- 1 Spreading hairs on calyx and fruit conspicuous, more than 0.8 mm. long; leaflets usually more than 5:2
 Hairs on calyx and fruit much less conspicuous, 0.5 mm. long or less, those on the fruit white; fruit 1–1.5 mm. wide; leaflets 3–5[64. deightonii](#)
- 2 Leaflets rarely over 18 mm. long or 10 mm. wide; petiole often under 4 mm. long;3
 Leaflets often more than 18 mm. long and 10 mm. wide; petiole almost never less than 4 mm. long; peduncle usually shorter than inflorescence; pods over 8 mm. long; seeds angular, coarsely pitted:4
- 3 Peduncle usually longer than the dense inflorescence; ovules about 3; seeds oblong, rounded, minutely dotted, not coarsely pitted; pods usually dark brown or black[61. longebarbata](#)
 Peduncle usually shorter than the lax slender inflorescence; hairs on young fruit mainly white . [62a. hirsuta var. pumila](#)
- 4 Peduncle well-developed, at least twice as long as a fruit; fruits usually 6-seeded, about 2 mm. wide and 7 times as long; hairs on dorsal side of fruit usually mostly brown or black; upper surface of leaflets usually with minute pale dots on a darker background [62. hirsuta var. hirsuta](#)
 Peduncle short, rarely twice as long as a fruit; fruits usually 2–4- sometimes 5–6-seeded, about 2.5–3 mm. wide,

less than 7 times as long, more or less tetragonous; hairs on dorsal side of fruit usually mostly white; upper surface of leaflets usually having minute dark dots on a paler background [63. astragalina](#)

Subsection Alternifoliolae

- 1 Leaflets less than 3 cm. long, or, if so, then calyx lobes hardly longer than tube: [2](#)
 Leaflets mostly over 3 cm. long; calyx lobes much longer than the tube: [5](#)
- 2 Leaflets 2; pod not above 10 mm. long, densely clothed with long, more or less spreading, hairs; calyx deeply divided, nearly as long as corolla. [66. diphylla](#)
 Leaflets usually more than 2; hairs on pod usually appressed: [3](#)
- 3 Pods much longer than wide, 3- or more-seeded: [4](#)
 Pods not much longer than wide, 1-seeded; stipules broad, scarious [69. kerstingii](#)
- 4 Calyx much less than half as long as corolla, the lobes not much longer than the tube; standard densely covered outside with stiff shining hairs; pod more or less curved, torulose; leaflets 1-5, the terminal often much longer than the others [67. oblongifolia](#)
 Calyx more than half as long as corolla, lobes much longer than the tube; hairs on standard relatively sparse; pod more or less straight; stipules broad, scarious; leaflets 4 or more [68. spicata](#)
- 5 Hairs on stems, petioles and inflorescences closely appressed; leaflets 1-5 [70. conjugata var. conjugata](#)
 Hairs on stems, petioles and inflorescences crisped, spreading at the tips; leaflets usually 1, less often 2-3 .. [70a. conjugata var. occidentalis](#)

Subgenera 4 — INDIGASTRUM and 5 — MICROCHARIS

- 1 Leaves pinnate; the lateral leaflets opposite; calyx less than half as long as corolla: [2](#)
 Leaves simple; dorsal stamen sterile; bracts persistent; [4](#)
- 2 Pedicel about 1 mm. long; bracts not persistent in fruit; all stamens fertile: [3](#)
 Pedicel 2-3 mm. long; bracts persistent in fruit; dorsal (free) stamen sterile; leaflets 3-5 in number [73. welwitschii var. remotiflora](#)
- 3 Inflorescence pedunculate, the peduncle longer than a leaflet; leaflets 11-15 in number; corolla 5-6 mm. long [71. costata](#)
 Inflorescence sessile or peduncle shorter than a leaflet; leaflets 3-9 in number; corolla about 4 mm. long [72. parviflora var. occidentalis](#)
- 4 Calyx as long as or longer than the corolla; petiole much shorter than stipules, not separated from lamina by a distinct joint; margin of leaf at the base forming an angle of about 15° with the midrib; fruiting pedicel 2-4 mm. long; seeds 16-19 [74. longicalyx](#)
 Calyx shorter than corolla; petiole separated from lamina by a distinct joint; margin of leaf forming an angle of 40° or more with midrib at base; seeds 12 or fewer; [5](#)
- 5 Hairs on stems more or less spreading; petiole shorter or hardly longer than stipules; racemes usually longer than subtending leaf; fruiting pedicel about 2 mm. long [75. hutchinsoniana](#)
 Hairs on stems dense, closely appressed; petiole much longer than stipules; racemes usually shorter than subtending leaf; fruiting pedicel about 1 mm. long [76. disjuncta](#)

1. *Indigofera nummulariifolia* (Linn.) *Livera ex Alston* in Trim. Fl.Ceyton 6, suppl .72 (1931). *APD acc*

Hedysarum nummularifolium Linn. (1753).

Indigofera echinata Willd. (1803) — F.T.A. 2: 69; Chev. Bot. 173; F.W.T.A., ed. 1, 1: 393; Bak. f. Leg. Trop. Afr. 1: 96; Cronquist in Fl. Congo Belge 5: 125.

A prostrate annual, **usually a weed**.

Sen.: Bondou Heudelot 174! **Port. G.:** Pusaubé, Bissau (Oct.) Esp. Santo 973! **Fr. G.:** Fouta Djallon Chev. 18874! **IV. C.:** Bobo Dioulasso Chev. 910. **G. C.:** Nalerigu N.T. (Dec.) Adams GC 4231! **N. Nig.:** R. Niger (Sept.) T. Vogel 57! Zaria (Aug.) Keay FHI 28010! Bauchi Plateau (Aug.) Keay FHI 12733! **S. Nig.:** Onitsha Barter 1802! Enugu (Sept.) Ujor FHI 34119!

Extending to East and South tropical Africa, India, Ceylon and Indo-China.

2. *Indigofera hochstetteri* Bak. in F.T.A. 2: 101 (1871); Cronq. l.c. 150. *APD acc*

Indigofera anabaptista Steud. ex Bak. (1876); Bak. f. l.c. 164.

An annual of **subarid areas**.

Fr. Sud.: Timbuktu Hagerup! **Fr. Nig.:** Air Chopard & Villiers! **N. Nig.:** Kontagora (Jan.) Meikle 1097! Nabardo (Sept.) Lely 621!

Extends from Mauritania to Madras and south to **Tanganyika**.

3. **Indigofera senegalensis** Lam. Encycl. Méth. Bot. 3: 248 (1789); F.T.A. 2: 102 (excl. syn. *I. tenella*); Chev. Bot. 177. *APD acc*

Indigofera parviflora Heyne of F.W.T.A., ed. 1, 1: 391, partly, not of Heyne ex Wight & Arn.

An erect annual of subarid areas.

Sen.: Perrottet! Kouma Heudelot! **Fr. Sud.:** Mopti (Aug.) Chev. 24906! **N. Nig.:** Fodama (Dec.) Moiser 252!

Also in **Chad Territory**.

4. **Indigofera charlieriana** var. **sessilis** (Chiov.) Gillet in Kew Bull. 1955: 573 (1956). *APD acc*

Indigofera limaris var. **sessilis** Chiov. Fl. Somalia 2: 160 (1932).

Indigofera aspera of Chev. Bot. 172; F.W.T.A., ed. 1, 1: 392 and Tisa. in Bull. Mus. Hist. Nat. 3: 272, partly, not of Perr. ex DC.

An annual herb, chiefly of maritime sands.

Dah.: Porto Novo, in sand by lagoon (Jan.) Chev. 22718! A S. African species extending up the East and West coasts of Africa.

5. **Indigofera aspera** Perr. ex DC. Prod. 2: 229 (1825); F.T.A. 2: 102; Chev. Bot. 172, partly; Bak. f. l.c. 165. *APD acc*

Indigofera tenella Schum. (1827).

An erect annual of subarid areas.

Sen.: Richard Tol (June) Perrottet! Heudelot 428! **Fr. Sud.:** Timbuktu (Aug.) Hagerup! **G. C.:** Keta (Nov.) Thonning! **N. Nig.:** Jebba Barter! Sokoto (Sept.) Dalz. 326!

Also in **A.-E. Sudan**.

6. **Indigofera berhautiana** Gillet l.c. 573 (1956). *APD acc*

Indigofera sericea Benth. ex Bak. in F.T.A. 2: 76 (1871) and Bak. f. l.c. 112, mostly; F.W.T.A., ed. 1, 1: 393; not of Linn.

Indigofera sp. aff. **I. strobilifera** of Chev. Bot. 177.

A more or less shrubby, silky, erect herb.

Sen.: Cayor Heudelot! M'bidjem (Aug.) Thierry 89! (Sept.) Farmar 73! Niayes (Dec.) Chev. 3385! Berhaut 950! **G. C.:** Gonja Domongo, N.T. (Dec.) Morton GC 9959! **Fr. Nig.:** Niamey (Oct.) Hagerup 475 (partly)! **N. Nig.:** Nupe Barter 973!

7. **Indigofera strobilifera** (Hochst.) Hochst. ex Bak. in F.T.A. 2: 75 (1871); Bak. f. l.c. 113. *APD acc*

Eilemanthus strobilifera. Hochst. (1846).

A silky, much-branched, half-woody herb.

Fr. Sud.: Dioura (Dec.) Davey 122! **Fr. Nig.:** Niamey (Oct.) Hagerup 475 (partly)! **N. Nig.:** Sokoto (Jan.) Dalz. 330!

Extends to A.-E. **Sudan** and southwards to S. Rhodesia.

8. **Indigofera polysphaera** Bak. in Kew Bull. 1895: 65; Bak. f. l.c. 103; Cronq. l.c. 128. *APD acc*

Indigofera baoulensis A. Chev. (1912).

Erect scabrid herb up to 3 ft. tall or more.

Iv. C.: Bouaké to Langouassou (July) Chev. 22146! **G. C.:** Krobo plains (Oct.) Johnson 774! Aboma F.R. (Nov.) Vigne FH 3441! Ejura (Nov.) Darko 749! **Togo:** Dyola Kpuita (Nov.) Morton GC 9347! **N. Nig.:** Zaria (Sept.) Olorunfemi FHI 24365! Lokoja (Oct.) Dalz. 18! Share F.R., Ilorin (Jan.) Ujor FHI 31607! Abinsi (Sept.) Dalz. 594! **S. Nig.:** Lagos McGregor 288! Oyo (Sept.) Latilo FHI 23542!

Extends to A.-E. **Sudan**, **Uganda**, W. **Tanganyika** and **Angola**.

[Ujor FHI 31607 has the inflorescence much more condensed than usual and may represent an undescribed variety.]

9. **Indigofera trialata** A. Chev. in Bull. Soc. Bot. Fr. 58, Mém. 8: 157 (1912); Bak. f. l.c. 105. *APD acc*

An erect, almost leafless, herb up to 5 ft. high.

IV. C.: Mt. Kankoroma, Baoulé (July) Chev. 22173! 22182! **G. C.:** Dukwesein, N. Agogo, Ashanti (Dec.) Chipp 618! Kwabia, E.P. (Oct.) Vigne FH 4020!

10. **Indigofera paniculata** *Vahl ex Pers.* Syn. 2: 325 (1807); Tiss. in Bull. Mus. Hist. Nat., sér. 2, 2: 680; Cronq. l.c. 126, t. 9; not of DC., nor Bak. F.T.A. 2: 71, nor Bak. f. l.c. 102. *APD acc*

Indigofera procera *Schum. & Thonn.* (1827) — F.T.A. 2: 71; Chev. Bot. 176, partly; Bak. f. l.c. 102; F.W.T.A., ed. 1, 1: 393.

An erect branched herb up to 3–6 ft. high.

Gam.: Ruxton A. 47! **Port. G.:** Bissau (Jan.) Esp. Santo 1716! **Fr. G.:** Heudelot 683! **S. L.:** Batkanu (Feb.) Deighton 4185! Masisa (Aug.) Deighton 5126! Mabang (Jan.) Glanville 147! Nig.:** Lagos Millen 174!

Also in **Chad Territory**.

12. **Indigofera terminalis** *Bak.* in F.T.A. 2: 70 (1871); Bak. f. l.c. 99, including var. *chevalieri*. I. sp. art. *APD acc*

Indigofera macrocalyx of Chev Bot. 174.

A woody undershrub up to 5 ft. high.

Sen.: Walo Heudelot 365! **Fr. Sud.:** Kati (Jan.) Chev. 187! Koulikoro (Oct.) Chev. 3233. **IV. C.:** Aubrév. 1816!

13. **Indigofera megacephala** *Gillett* l.c. 574 (1956). *APD acc*

Woody-stemmed herb, 4 ft. high; flowers yellow.

Fr. G.: Betagya, 1,000 ft. (Oct.) Small 498!

14. **Indigofera capitata** *Kotschy* in Sitzb. Ak. Wien. 51, Abt. 2: 365, t. 6A (1865); F.T.A. 2: 75, partly; Berhaut Fl. Sen. 51; not of Cronq. l.c. 152, Pl. 11. *APD acc*

APD: *Synonym of Indigofera paracapitata J. B. Gillett*

Erect branched woody herb up to 3 ft. high.

Sen.: Diéouniella Berhaut 1819. **Fr. Sud.:** Ouacoro (Dec.) Chev. 79! **Port. G.:** Gabú (Oct.) Esp. Santo 2305! **Fr. G.:** Rio Nunez Heudelot 642! 00 Pobéguin 472! **S.:** Wallia (Feb.) Sc. Elliot 4295! Lusenya (Dec.) Sc. Elliot 4063! Kitchom (Jan.) Deighton 1002! **N. Nig.:** Kadaura (Nov.) Lelyl 596! Lokoja (Oct.) Dalz. 24! Zaria (Dec.) Meikle 832! **S. Nig.:** Lagos MacGregor 273! Olokemeji to Eruwa (Nov.) Ejiofor & Olorunfemi FHI 30780.

Extends to A.-E. **Sudan**, **Uganda**, N. Rhodesia and **Angola**.

15. **Indigofera congesta** *Welw. ex Bak.* in F.T.A. 2: 70 (1871); Bak. f. l.c. 99; Cronq. l.c. 151. *APD acc*

Indigofera terminalis of Chev. Bot. 178, not of Bak.

Stiff, semiwoody, much-branched herb, up to 3–6 ft. high.

Port. G.: Bula (Nov.) Esp. Santo 2434! Gabú (Nov.) Esp. Santo 3153! **S. L.:** Wallia (Feb.) Sc. Elliot 4252! Lusenya (Dec.) Sc. Elliot 4308! **IV. C.:** Toumodi (Aug.) Chev. 22404! **Togo:** Misahöhe (Nov.) Mildbr. 7251! **N. Nig.:** Ilorin Bailly 9! **S. Nig.:** Ibadan (Oct.) Jones FHI 5989! Onitsha Barter 1791!

Extends to A.-E. **Sudan**, E. Africa and S. Tropical Africa.

16. *Indigofera dasycephala* **Bak. f.** l.c. 100 (1926). *APD acc*

A straggling herb.

N. Nig.: Denchira, Bauchi Plateau (Nov.) Lely 637!

Also in **Northern French Cameroons**.

17. *Indigofera brassii* **Bak.** in F.T.A. 2: 76 (1871); **Bak. f.** l.c. 110. *APD acc*

An erect, grey, softly woody herb, closely related to *I. pulchra* of which it is perhaps but a form.

G. C.: Cape Coast Brass!

18. *Indigofera pulchra* **Willd.** Sp. Pl. 3: 1239 (1802); F.T.A. 2: 76; Chev. Bot. 176; **Bak. f.** l.c. 111; Tiss. l.c. 262; Cronq. l.c. 154. *APD acc*

Indigofera dupuisii **Mich.** (1897), not of F.W.T.A. ed. 1, 1: 393.

An erect, stiff, grey-pubescent softly woody undershrub up to 5 ft. high; varies considerably, especially in the extent to which the leaves are divided.

Sen.: Heudelot 179! **Gam.:** Ingram! **Fr. Sud.:** Ségou (Sept.) Chev. 3229! **Port. G.:** Bissau (Nov.) Esp. Santo 1027! Gabu (Sept.) Esp. Santo 2783! **Fr. G.:** Kouroussa (Oct.) Pobéguin 567! **S. L.:** Kamrasoi (Dec.) Thomas 7041! **IV. C.:** Chev. 20076. **G. C.:** Navrongo (May) Andoh FH 5174! Tamale (Apr.) Williams 131! **Togo:** Kpedsu (Dec.) Howes 1046! Extends to Abyssinia, **Tanganyika** and **Angola**.

19. *Indigofera nigricans* **Vahl ex Pers.** Syn. 2: 327 (1807); DC. Prod. 2: 230; ampl. **Bak. f.** in J. Bot. 41: 193; **Bak. f.** Leg. Trop. Afr. 1: 112; not of **Bak. F.T.A.** 2: 78, nor of F.W.T.A., ed. 1, 1: 391. *APD acc*

Indigofera elegans **Schum. & Thonn.** (1827).

Indigofera dupuisii of **Bak. f.** l.c. 111, partly and of F.W.T.A., ed. 1, 1: 393, not of **Mich.** (1897). I. sp. aff.

Indigofera bracteolata of Chev. Bot. 172.

An erect stiff, probably annual, herb up to 2 ft. high.

Fr. Sud.: Kerekoro (Sept.) Chev. 3220! Koulikoro (Sept.) Chev. 25015! **G. C.:** Thonning! Accra (July) Irvine 735! Ada Morton GC 9255! **Togo:** Mahoux 228! **N. Nig.:** Abinsi (Oct.) Dalz. 598!

20. *Indigofera oubanguiensis* **Tiss.** l.c. 164 (1931). *APD acc*

Indigofera sp. aff. *I. parviflora* of Chev. Bot. 175.

A half woody shrublet, about 2 1/2 ft. high.

IV. C.: Zorgo, Mossi (July) Chev. 24653 bis!

Extends to A.-E. **Sudan**.

[Chev. 24653 bis is imperfect and may be incorrectly determined.]

21. *Indigofera leptoclada* **Harms** in Engl. Bot. Jahrb. 40: 38 (1907); **Bak. f.** l.c. 97; **Berhaut** l.c. partly. *APD acc*

Indigofera sp. aff. *I. procera* of Chev. Bot. 176.

Indigofera bracteolata of F.W.T.A., ed. 1, 1: 393, partly; not of DC.

Rootstock woody, shoots erect, herbaceous, up to 12–16 in. long.

Gam.: MacCarthy Is1. (Jan.) Dalz. 8027! **Fr. Sud.:** Ianfolo (Mar.) Chev. 651! Bellamy 702! **G. C.:** Tamale (Apr.) Williams 116.

22. *Indigofera bracteolata* DC. Prod. 2: 223 (1825); F.T.A. 2: 77; Bak. f. l.c. 111; Tiss. l.c. 262. *APD acc*

***Indigofera grisea* Bak.** (1871), partly; Bak. f. l.c. 120, partly; not of Desv. (1814).

A much-branched herb, about 1 ft. high, with a woody base; **in savannah.**

Sen.: Heudelot 422! Kouma Perrottet 88! **Fr. Sud.:** Scaëtta 3209! **G. C.:** Salaga (Nov.) Alcpabla 363! Deloro to Tankara, N.T. (Dec.) Adams & Akpabla GC 4324! **Dah.:** Gironcourt 116. **Fr. Nig.:** Niamey (Oct.) Hagerup 489! **N. Nig.:** Nupe Barter 945! Lokoja (Oct.) Dalz. 22! Kontagora (Jan.) Dalz. 241 Katagum Dalz. 419! **S. Nig.:** Abeokuta Irving!

Extends to A.-E. **Sudan.**

[Plants not showing compound leaves are readily confused with *I. leptoclada*.]

23. *Indigofera trichopoda* Lepr. ex Guill. & Perr. Fl. Seneg. 1: 177, t. 47 (1832); F.T.A. 2: 78, Bak. f. l.c. 114. *APD acc*

An erect annual 8–16 in. high.

Sen.: Heudelot 272! M'bidjem Thierry 223! Tambacounda (Nov.) Berhaut 710!

A variety occurs in Ubangi-Shari.

24. *Indigofera nigritana* Hook. f. in Fl. Nigrit. 294 (1849); F.T.A. 2: 78; Bak. f. l.c. 111; Tiss. l.c. 262; Cronq. l.c. 151. *I. sp. aff. APD acc*

Indigofera suaveolens of Chev. Bot. 177, not of Jaub. & Spach.

Erect, branching, half woody herb up to 6–10 ft. high; **chiefly near rivers.**

Sen.: Collin 8. **Fr. Sud.:** Dogo (Mar.) Davey 48! Nyamina to Koulikoro (Oct.) Chev. 3235! **G. C.:** Burufo, N.T. (Dec.) AdaTims GC 4448! Tb **Togo:** Yendi (Dec.) Adams & Akpabla GC 4086! Sao Forest (Apr.) Asanay 150! **N. Nig.:** Katagum (Oct.) Dalz. 23! R. Niger (Sept.) T. Vogel 7! **S. Nig.:** Degema Talbot 3762!

Extends to A.-E. **Sudan** and **Belgian Congo.**

25. *Indigofera latiseppala* Gillet l.c. 575 (1956). *APD acc*

Indigofera nigricans of F.T.A. 2: 78; F.W.T.A., ed. 1, 1: 391; not of Vahl ex Pers. (1807).

Grey bushy herb, woody below.

N. Nig.: R. Niger Baikie 20!

26. *Indigofera cordifolia* Heyne ex Roth Nov. Pl. Sp. 357 (1821); F.T.A. 2: 72; Bak. f. l.c. 102. *APD acc*

A grey branching **desert** herb up to 1 ft. high.

Maur.: Monod IFAN 10986! **Fr. Nig.:** Air Chopard & Villiers!

From Cape Verde Isles to Socotra, also in **Afghanistan**, **W. Pakistan**, **India** and **Timor.**

27. *Indigofera sessiliflora* DC. Prod. 2: 228(1825); F.T.A. 2: 79; Bak. f. l.c. 116. *APD acc*

A grey branching herb **of arid areas.**

Sen.: Perrottet 183! Walo Heudelot 421! **Fr. Sud.:** Timbuktu (July) Chev. 1266. Hagerup 174! 215! **Fr. Nig.:** Agades De Wailly 5242! 5258!

Extends east to Eritrea, also in **W. Pakistan.**

28. *Indigofera tetrasperma* Vahl ex Pers. Syn. 2: 325 (1807); Sebum. & Thonn. Beskr. Guin. Pl. 365 (1827); F.T.A. 2: 72 and Bak. f. in J. Bot. 41: 189, partly; Bak. f. Leg. Trop. Afr. 1: 103. *APD acc*

Indigofera procera of Chev. Bot. 176, partly, not of Schum. & Thonn.

Indigofera simplicifolia of F.W.T.A., ed. 1, 1: 393, partly, not of Lam.

A herb up to 4 ft. high; in grassland, roadsides and waste places.

Iv. C.: Middle Nzi valley, Baoulé (July) Chev. 222101 **G. C.:** Sunyani, N.W. Ashanti (Sept.) Vigne FH 2475! Achimota (June) Irvine 570! (Aug.) Irvine 792! Accra (Aug.) Irvine 128! Thonning. **Togo:** Büttner 122!

29. *Indigofera simplicifolia* Lam. Encycl. Méth. Bot. 3: 251 (1789); F.T.A. 2: 72; Bak. f. l.c. 103; Tiss. l.c. 260; Cronq. l.c. 129. *APD acc*

Indigofera tetrasperma of F.T.A. 2: 72, partly; Chev. Bot. 178; not of Vahl ex Pers., nor of Schum. & Thonn.

Erect stiff half woody herb up to 4 ft. high.

Sen.: Palenée Heudelot 196! **Fr. Sud.:** Nyamina to Koulikoro (Oct.) Chev. 3224. **Fr. G.:** Fouta Djallon (Sept.) Chev. 18402! **S. L.:** Kambia (Dec.) Sc. Elliot 4198! Newton (Dec.) Deighton 4390! Musaia (Dec.) Deighton 4467! **Lib.:** Vonjama (Oct.) Baldwin 10026! **Iv. C.:** Mankono (July) Chev. 22007. **N. Nig.:** Katagum (Oct.) Dalz. 26! **S. Nig.:** Ibadan (Mar.) Schlechter 12333! Sobo Plains (Sept.) Butler-Cole 26! Aguku Thomas 957!

Extends to A.-E. **Sudan**, **Uganda** and **Angola**, also in **Zanzibar** and **Mozambique**.

30. *Indigofera leprairiei* Bak. f. in J. Bot. 41: 190 (1903); Leg. Trop. Afr. 1: 104; Tiss. l.c. 261; Cronq. l.c. 130. *APD acc*

Indigofera macrocarpa Lepr. ex Bak. F.T.A. 2: 72 (1871); Chev. Bot. 175, not of Desv. (1826).

Indigofera simplicifolia of F.W.T.A., ed. 1, 1: 393, partly, not of Lam.

Stiffly erect herb up to 3 ft. high.

Sen.: Leprieur. Perrottet. **Gam.:** Hayes 567! **Fr. Sud.:** Macina (Sept.) Chev. 24853. **Port. G.:** Bissau (Oct.) Esp. Santo 2555! (Nov.) Esp. Santo 1743! **S. L.:** Kabala (Sept.) Thomas 2187! Musaia (Mar.) Deighton 5433! **G. C.:** Zuarungu (Sept.) Hughes FH 5338! Tamale (Feb.) Williams 484! **Togo:** Yendi (Dec.) Adams & Akpabla **N. Nig.:** Nupe Barter 1079! 1229! R. Niger T. Vogel 58! 94! **S. Nig.:** Abeokuta Rowland!

Also in **Belgian Congo** fide Cronquist.

31. *Indigofera priureana* Guill. & Perr. Fl. Seneg. 1: 187 (1832); F.T.A. 2: 84; Bak. f. l.c. 129. I. sp. aff. *APD acc*

Indigofera sutherlandioides of Chev. Bot. 178.

Indigofera stenophylla of F.W.T.A., ed. 1, 1: 392 partly, not of Guill. & Perr.

Indigofera komiensis Tiss. (1931).

Herbaceous, more or less woody, up to 18 in. high.

Sen.: Galam Heudelot! **Fr. Sud.:** Nyamina to Koulikoro (Sept.) Chev. 3226! **Fr. Nig.:** 20 miles N. of Zinder (Nov.) Money Kyrle Fe 13! **N. Nig.:** Sokoto (Nov.) Moiser 4! Abinsi (Sept.) Dalz. 622! Yola (Aug.) Dalz. 27! **Br. Cam.:** Bama, Dikwa Div. (Nov.) McClintock 13!

Extends eastwards to N. Abyssinia.

32. *Indigofera stenophylla* Guill. & Perr. var. *stenophylla* — Fl. Seneg. 1: 188, t. 48 (1832), incl. var. *macrocarpa*; F.T.A. 2: 83; Chev. Bot. 177; Bak. f. l.c. 129; Cronq. l.c. 160. *APD acc*

A stiffly erect, half woody herb, up to 3 ft. high.

Sen.: Galam Heudelot 277! **Gam.:** Hayes 566! **Fr. Sud.:** Macina (Sept.) Chev. 24836. **Fr. G.:** Kouroussa (Aug.) Pobéguin 595! **G. C.:** Sandema Hughes 324! **N. Nig.:** Jebba Barter 520! Lokoja (Oct.) Dalz. 21! Katagum Dalz. 44! Biu (Aug.) Noble 2!

Extends to A.-E. **Sudan**, **Uganda** and N.W. **Tanganyika**.

- 32a. *Indigofera stenophylla* var. *ampla* Sprague in Kew Bull. 1909: 185. *APD acc*

A more or less woody herb up to 3 ft. high.

Fr. Sud.: Scaëtta 3212! **G. C.:** Tumu, N.T. (Dec.) Adams GC 4366! Tonga, N.T. Adams & Akpabla! Banda, N.T. (Dec.) Morton GC 25291! **S. Nig.:** Lagos (Sept.) Dodd 427! Abeokuta Millen 69!

In several respects intermediate between *I. stenophylla* and *I. prieureana*.

33. *Indigofera mildbraediana* Gillett l.c. 575 (1956). *APD acc*

A much-branched herb up to 4 ft. high.

N. Nig.: Oke Opin, Ilorin (fr. Dec.) Ajayi FHI 19297! Bauchi Plateau (July) Lely 395! (Aug.) Lely 504!

Extends to **Tanganyika** and **Angola**.

34. *Indigofera pobeguinii* Gillet l.c. 577 (1956). *APD acc*

An erect half-woody herb.

Fr. G.: Kouroussa Pobéguin 976!

[Resembles *I. emarginella*, but differs in its erect fruits, mucronate leaflets and subpersistent short bracts.]

35. *Indigofera omissa* Gillett l.c. 580 (1956). *APD acc*

An erect, half woody, herb, remarkable for its slender glabrous fruits.

Fr. Sud.: Macina (Sept.) Chev. 24900! Koulikoro (Oct.) Chev. 3234! Bandiagara (July) Ganay 62! **Dah.:** Atacora Mt. (June) Chev. 24071!

36. *Indigofera suaveolens* Jaub. & Spach Illus. Pl. Or. t. 489 (1856); F.T.A. 2: 80; Bak. f. l.c. 125, partly; not of Cronq. l.c. 160. *APD acc*

APD: *Synonym of Indigofera vohemarensis Baill.*

An argenteous shrublet of **arid mountains**, smelling of coumarin.

Fr. Nig.: Aouderas, Aïr (fr. Sept.) Buchanan!

Also in **A.-E. Sudan**, **Eritrea** and **N. Abyssinia**.

37. *Indigofera scarciesii* Sc. Elliot in J. Linn. Soc. 30: 76 (1894); Bak. t. l.c. 98; F.W.T.A., ed. 1, 1: 391. *APD acc*

Herbaceous shoots about 8 in. long, probably from a woody rootstock.

Fr. G.: Buyabuya (Feb.) Sc. Elliot 4765! Diakrane, Kankan Brossart in Hb. Chev. 11673! Santa, Timbo Chev. 12590!

38. *Indigofera dendroides* Jacq. Ic. Pl. Bar. 3, t. 571 (1788–9); F.T.A. 2: 100; Chev. Bot. 173; Bak. f. l.c. 128; Cronq. l.c. 166, t. 13. *APD acc*

Indigofera sesbaniifolia A. Chev. (1912) — Bak. f. l.c. 128.

Indigofera dalabaca Chev. Bot. 172, name only.

Indigofera phyllanthoides of Tiss. l.c. 266, not of Bak.

An elegant, erect, wiry, herb, up to 3 ft. high. Varies considerably; forms with more numerous leaflets and flowers having been distinguished as *I. sesbaniifolia*.

Sen.: Heudelot 219. **Fr. Sud.:** Goundam (Aug.) Chev. 3249. **Port. G.:** Bissau (Oct.) Esp. Santo 2535! **Fr. G.:** Nzérékoré (Oct.) Baldwin 9683! Fouta Djallon (Aug., Oct.) Chev. 18318! 18359. **S. L.:** Kenema (Oct.) Deighton 5204! **IV. C.:** Mt. Kangoroma (July) Chev. 22181! **G. C.:** Ejura (Nov.) Andoh FH 5439! **Togo:** Büttner 140! Lome Warnecke 62! 375! **N. Nig.:** Zaria (Sept.) Olorunfemi FHI 24368~ Biu (Aug.) Noble 7! **S. Nig.:** Ibadan (Jan.) Meikle 967!

Throughout the non-arid parts of tropical Africa.

39. *Indigofera heudelotii* Benth. ex Bak. var. *heudelotii* — in F.T.A. 2: 85 (1871), partly, emend. Gillett l.c. 577 (1956); Bak. f. l.c. 124 partly. *APD acc*

Indigofera sofa Sc. Elliot (1894) — Chev. Bot. 177.

Indigofera djalonica A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 391 (1928); not of Bak. f. l.c. 147 (1926).

An erect, branched, softly woody plant, up to 6 ft. high; **in margins of evergreen forest**.

Port. G.: Bissau (Jan.) Esp. Santo 1714! **Fr. G.:** Rio Nunez Heudelot 611 (partly)! Kouroussa (Nov.) Pobéguin 69! Fouta Djallon (Sept.) Chev. 18584 (partly) 1 **S. L.:** Falaba Sc. Elliot 5083 I Kofla Mt. Sc. Elliot 4613! Musaia Sc. Elliot 5080! Dunnia Sc. Elliot 4831! Jaiama (Dec.) Deighton 3462! **N. Nig.:** Vom Dent Young 49! Kafanchan (Dec.) Sampson 42! 39a. **Indigofera heudelotii** var. **fairchildii** (*Bak. f.*) *Gillett* l.c. 577 (1956). *APD acc*

Indigofera fairchildii *Bak. f.* in J. Bot. 70: 252 (1932).

Port. G.: Bafata (Mar.) Esp. Santo 2908! **Fr. G.:** Fouta Djallon Fairchild 1275!

40. **Indigofera elliotii** (*Bak. f.*) *Gillet* l.c. 578 (1956). *APD acc*

Indigofera heudelotii var. **elliotii** *Bak. f.* in J. Bot. 41: 261 (1903); Leg. Trop. Afr. 1: 124.

Indigofera heudelotii *Benth. ex Bak.* (1871), partly; F.W.T.A., ed. 1, 1: 391, partly; Berhaut l.c. 52.

A softly woody plant up to 5 ft. high.

Sen.: Sangalkam Berhaut 960! **Fr. G.:** Rio Nunez Heudelot 611 (partly)! **S. L.:** Morson! Lusenya Sc. Elliot 4063! Sherbro Sc. Elliot 5841! Kambia (Dec.) Deighton 892! Rokupr (Nov.) Jordan 676! **Lib.:** Monrovia (Nov.) Linder 1553!

41. **Indigofera wituensis** var. **occidentalis** *Gillett* l.c. 578 (1956). *APD acc*

A slender branching sticky annual 18 in. high.

N. Nig.: Bauchi Plateau (Sept.) Lely P. 693!

42. **Indigofera congolensis** *De Wild. & Th. Dur.* in Bull. Herb. Boiss., Sér. 2, 1: 11 (1901); *Bak. f.* l.c. 126. *APD acc*

Indigofera geminata of Chev. Bot. 173, partly; F.W.T.A., ed. 1, 1: 391, partly, not of *Bak.* (1871).

Indigofera sparsa of Cronq. l.c. 158, not of *Bak.* (1871).

Indigofera sparsa var. **bongensis** of Tiss. l.c. 263, partly, not of *Bak. f.* (1903).

Indigofera adami *Berhaut* (1955).

Annual herb about 8 in. high.

Sen.: Galam Heudelot 265! Koutango to Koular Adam 10148. Ouasaadou Berhaut 1132! **Gam.:** Hayes 560! **Fr. Sud.:** Nyamina to Koulikoro (Oct.) Chev. 3219! **Fr. Nig.:** Niamey (Oct.) Hagerup 499! **N. Nig.:** Lokoja (Oct.) Dalz. 20! Bauchi Plateau (July) Lely P. 539! (Aug.) Lely P. 646! Bichikki (Sept.) Lely 629! Anara F.R., Zaria (Oct.) Keay FHI 20144! **S. Nig.:** Sobo Plains A. F. Ross FHI 12067!

Also in **Ubangi-Shari**, **Belgian Congo** and **Uganda**.

[The type of *I. adami* was not available in the Paris herbarium at the time of writing: the opinion here expressed as to its identity with *I. congolensis* is thus based on the description only.]

43. **Indigofera geminata** *Bak.* in F.T.A. 2: 81 (1871); *Bak. f.* l.c. 121, partly; Tiss. l.c. 265; Berhaut l.c. 52, partly. *APD acc*

Indigofera sp. **aff. geminata** of Chev. Bot. 173.

Branching, semiwoody herb up to 2 ft. high.

Sen.? **Iv. C.:** Mossi (Aug.) Chev. 24772! **Dah.:** Cotonou (Jan.) Chev. 22694! **N. Nig.:** Nupe Barter 966! **S. Nig.:** Lagos (May) Dalz. 1221! Rowland!

[This plant and *I. congolensis* have been much confused. The description given by Berhaut l.c. fits this species but the specimen cited is *I. congolensis* in fruit.]

44. **Indigofera pilosa** *Poir.* in Lam. Encycl. Méth. Bot., Suppl. 3: 151 (1813); F.T.A. 2: 82; *Bak. f.* l.c. 120, excluding var. *multiflora*; Brenan in Mem. N.Y. Bot. Gard. 8: 251; Berhaut l.c., partly. *APD acc*

A spreading woody herb up to 8 in. high.

Sen.: Perrottet. **Fr. Sud.:** Gao (Sept.) Hagerup 359! **Port. G.:** Bissau (Oct.) Esp. Santo 2554! **G. C.:** Sandema (Sept.) Hughes 326! Accra Thonning. **N. Nig.:** Nupe Barter 977! Katagum (Oct.) Dalz. 31! Sokoto (Sept.) Dalz. 335! Moiser 89! Bichikki (Nov.) Lely 628!

Eastwards to Eritrea

With a variety in Angola.

45. *Indigofera fulvopilosa* **Brenan** in Mem. N.Y. Bot. Gard. 8: 250 (1953); Cronq. l.c. 140. *APD acc*

Indigofera pilosa var. *multiflora* **Bak. f.** in J. Bot. 41: 243 (1903).

Indigofera pilosa of F.W.T.A., ed. 1, 1: 391, partly; Berhaut l.c., partly.

Branching, half woody herb, up to 3 ft. high.

S. L.: Musaia to Kabala (Sept.) Deighton 4870! Warantamba (Oct.) Small 356! **G. C.:** Morton GC 25125! **N. Nig.:** Naraguta & Jos (Aug.) Lely 556! Vom Dent Young 50! Bauchi Plateau (Aug.) Lely P. 571! (Sept.) Lely P. 687!

Extends to **Uganda**, **Tanganyika**, Nyasaland and S. Rhodesia.

46. *Indigofera mimosoides* **Bak.** in F.T.A. 2: 90 (1871); Bak. f. Leg. Trop. Afr. 122. *APD acc*

Indigofera brevipetiolata **Cronq.** l.c. 145.

A branching, somewhat woody, sparingly glandular, herb, up to 4 ft. high; on edges of montane forest.

Br. Cam.: Bamenda (Oct.) Johnstone 182! in moister montane regions extending to Abyssinia, E. Africa, S. Rhodesia and Angola.

[A most variable species, closely allied to the next.]

47. *Indigofera colutea* (**Burm. f.**) **Merrill** in Phil. J. Sci. 19: 355 (1921). *APD acc*

APD: *Synonym of Indigofera zenkeri Harms ex Baker f.*

Galega colutea **Burm. f.** (1768).

Indigofera viscosa **Lam.** (1789) — F.T.A. 2: 81; Bak. f. l.c. 123; F.W.T.A., ed. 1, 1: 391; Tiss. l.c. 265; Cronq. l.c. 144.

A half woody, viscid, branching herb, about 18 in. high.

Sen.: Cayor Leprieur! Lelièvre! **Fr. Sud.:** Timbuktu (Aug.) Hagerup 243! **N. Nig.:** Barter 1051! Bauchi Plateau Batten Poole FHI 13175!

A variable species, extending through **Arabia**, India and Indonesia to Australia and south to the Transvaal.

48. *Indigofera barteri* **Hutch. & Dalz.** F.W.T.A., ed. 1, 1: 391 (1928); Kew Bull. 1929: 16; Bak. f. l.c. 880. *APD acc*

APD: *Synonym of Indigofera brevifilamenta J. B. Gillett*

A branching slightly woody herb up to 18 in. high.

G. C.: L. Sorri, N.T. (Dec.) Morton GC 25017! Daboya Ferry, N.T. (Dec.) Morton GC 6197! **N. Nig.:**

Jebba Barter! Nupe Barter 951! 1604!

[Closely related to the next species.]

49. *Indigofera secundiflora* **Pair.** in Lam. Encycl. Méth. Bot., Suppl. 3: 148 (1813); Bak. F.T.A. 2: 94; Bak. f. l.c. 152; Cronq. l.c. 145. *APD acc*

A grey spreading glandular herb up to 1 ft. high.

Sen.: Heudelot 227! **Fr. Sud.:** Koulikoro Chev. 3232! **G. C.:** Prampram (Oct.) Morton A. 78! **Fr. Nig.:** Niamey (Oct.) Hagerup 513! 120 miles S. of Agadez (Nov.) Money Kyrle Fe 3! **N. Nig.:** Sokoto (Nov.) Moiser 32! 45! Ilorin Bailey 5! Funtua (Dec.) Meikle 821! Kalkala, L. Chad (Oct.) Gwynn 90!

Extends eastwards to Abyssinia: a variety southwards to **Tanganyika**, Nyasaland and N. Rhodesia.

50. *Indigofera argentea* **Burm. f.** Fl. Ind. 171 (1768), not of Linn. (1771); Bak. f. l.c. 152; Tiss. l.c. 270.

*APD acc**APD: Synonym of Indigofera brachynema J. B. Gillett**APD: Synonym of Indigofera tinctoria L. var. tinctoria**Indigofera semitrijuga* of Bak. Throughout tropical Africa and in Natal.

A variable species.

- 56a. *Indigofera subulata* var. *scabra* (Roth) Meikle in Kew Bull. 1950: 352.

APD: *Synonym of Indigofera trita* subsp. *scabra* (Roth) de Kort & G. Thijssse

Indigofera scabra Roth Nov. Pl. Sp. 359 (1821).

Indigofera retroflexa Baill. (1883) — Bak. f. l.c. 145.

Indigofera subulata of F.T.A. 2: 87, etc., partly.

Lax, erect herb, up to 2 ft. high.

N. Nig.: Jos (Aug.) Keay FHI 20195!

Extends east to India and Madagascar, south to the Transvaal; introduced in America.

57. *Indigofera coerulea* Roxb. Fl. Ind. 3: 377 (1832). I. articulata of Bak. f. l.c. 154, partly, not of Gouan. APD acc

An erect, silvery, softly woody plant of arid areas, up to 6 ft. high, sometimes cultivated.

Fr. Nig.: Air Chopard & Vtliers!

Extends eastwards through Arabia to W. Pakistan and India, southwards to N. Kenya.

58. *Indigofera arrecta* Hochst. ex A. Rich. Tent. Fl. Abyss. 1: 184 (1847); F.T.A. 2: 97; Bak. f. l.c. 155; Tiss. l.c. 271; Cronq. l.c. 162, t. 12. APD acc

Indigofera tinctoria of Chev. Bot. 178, partly, not of Linn.

Indigofera tinctoria var. *arrecta* Berhaut l.c. 50.

Erect, branched, softly woody plant, up to 8 ft. high; much cultivated.

Sen.: Perrottet 176! **Gam.:** Dudgeon 9! **Fr. Sud.:** San Chev. 1029! **Port. G.:** Mansoa (Oct.) ESP. Santo 2318! **Fr. G.:** Heudelot 686! **G. C.:** Accra (Jan.) Irvine 1109! **N. Nig.:** Sokoto Dalz. 329! Katagum (Oct.) Dalz. 57! Zaria Meikle 833! **S. Nig.:** Lagos MacGregor 144! Meko Johnson!

Extends to S. Arabia and eastern Cape Province.

Often hardly separable from I. tinctoria in W. Africa. In E. Africa it is more distinct.

59. *Indigofera suffruticosa* Mill. Gard. Dict., ed. 8: 2 (1768); Bak. f. l.c. 135; Tiss. l.c. 271; Cronq. l.c. 162. APD acc

Indigofera anil Linn. (1771); F.T.A. 2: 98.

Indigofera suffruticosa var. *uncinata* G. Don of Berhaut l.c. 50.

A branched undershrub up to 6 ft. high; **formerly much cultivated, probably not indigenous.**

Sen.: Heudelot 480. **Port. G.:** Catió (Oct.) Esp. Santo 2278! **S. L.:** Makunde (Apr.) Sc. Elliot 5712! Njala (June) Deighton 731! **Lib.:** Gbanga (Dec.) Baldwin 10532! Peahtah (Oct.) Linder 926! **S. Nig.:** Shasha F.R. (Apr.) Jones & Onochie FHI 17244! Barter!

Also (introduced) in central and south central tropical Africa and Madagascar; native of America.

60. **Indigofera tinctoria** *Linn.* Sp. Pl. 2: 751 (1753); F.T.A. 2: 99; Chev. Bot. 178, partly; Bak. f. l.c. 156; Tiss. l.c. 271; including var. *torulosa* Bak. f. l.c. 157. *APD acc*

Softly woody plant up to 6 ft. high, **formerly much cultivated, perhaps indigenous.**

Sen.: Perrottet. **Gam.:** Brown-Letter 49! **Fr. Sud.:** Macina (Sept.) Chev. 24870! Dende (July) Chev. 1153! **Port. G.:** Mansoa (Oct.) Esp. Santo 23231 **Fr. G.:** Kouroussa (Oct.) Pobéguin 327! **G. C.:** Accra (Feb.) Johnson 1074! **Togo:** Lome Warnecke 292! **Dah.:** Debeaux 161. **N. Nig.:** Jebba Barter! Sokoto (Aug.) Dalz. 327! Katagum (Sept.) Dalz. 58! (Nov.) Dalz. 59! Damaturu (July) Ujor FHI 23906! **S. Nig.:** Lagos (Dec.) Dalz. 1218!

Extends through **Arabia** to India, the Philippines and New Guinea, also in east and south tropical Africa but apparently absent from the Congo.

61. **Indigofera longebarbata** *Engl.* Hochgebirgsflora Afr. 257 (1892); Bak. f. l.c. 147; Cronq. l.c. 141.

APD: Synonym of Indigofera longibarbata Engl.

Erect, sub-woody herb, up to 3 ft. high.

N. Nig.: Naraguta (Aug.) Lely 510! Keay FHI 20063! Vom Dent Young 45! Bauchi Plateau (Aug.) Lely P. 577! **Br. Cam.:** Bambulue, Bamenda Johnstone 221/31!

Usually above 4,800 ft., from Abyssinia to **Angola** and east Cape Province.

[Closely related to *I. hirsuta* and replacing it at higher altitudes; intermediate plants occur.]

62. **Indigofera hirsuta** *Linn. var. hirsuta* — Sp. Pl. 2: 1062 (1753); F.T.A. 2: 88; Bak. f. l.c. 146; Tias. l.c. 268; Cronq. l.c. 140, t. 10. *APD acc*

Erect or straggling herb up to 3 ft. high, a weed.

Sen.: Lelièvre! **Gam.:** Brown-Lester 47! **Fr. Sud.:** Chev. 324! bis. fide Tiss. l.c. **Fr. G.:** Kouroussa (Aug.) Pobéguin 382! **S. L.:** Falaba (Apr.) Sc. Elliot 5437! Bonthe Isl. (Nov.) Deighton 2319! York Deighton 4585! **Lib.:** Monrovia Johnston! **Iv. C.:** Chev. 17342. **G. C.:** Bjury (July) Chipp 511! Achimota Irvinne 656! Elmina (Aug.) Andoh FH 5557! **Togo:** Lome Warnecke 343! **Dah.:** Allada (Mar.) Chev. 23376! **N. Nig.:** Sokoto Lely 137! Katagum (Dec.) Dalz. 28! **S. Nig.:** Lagos (Sept.) Dawodu 8! Ibadan (Sept.) Tamajong FHI 20955! Aguku Thomas 973!

Eastwards to China and N. Australia, southwards to Bechuanaland.

- 62a. **Indigofera hirsuta var. pumila** *Welw. ex Bak.* in F.T.A. 2: 89 (1871); Bak. f. l.c. 146.

APD: Synonym of Indigofera hirsuta L. var. hirsuta

N. Nig.: Bauchi Plateau Batten-Poole FHI 13187!

Also in **Angola**.

[In several respects intermediate between *I. hirsuta* and *I. longebarbata*.]

63. **Indigofera astragalina** *DC.* Prod. 2: 228 (1825); F.T.A. 2: 89; Bak. f. l.c. 147. *APD acc*

Erect or straggling grey herb, about 18 in. high.

Sen.: Perrottet! Heudelot 255! 411! **Fr. Sud.:** Goura, Gao (Sept.) De Wailly 5212! **Fr. Nig.:** 170 miles S. of Agadez (Nov.) Money Kyrte Fe 5! **N. Nig.:** Sokoto Lely 135! (Nov.) Moiser 54! Fodama (Dec.) Moiser 200! Maifoni Parsons! Katagum (Oct.) Dalz. 27!

Extends eastwards to Madras and southwards to the Transvaal.

[Closely related to *I. hirsuta* but occupying, on the whole, drier areas; intermediates occur where the two species overlap.]

64. *Indigofera deightonii* Gillet l.c. 580 (1956). *APD acc*

A weak, spreading herb, up to 18 in. high; **a weed, or on rocky outcrops.**

Fr. G.: Nzérékoré. Mt. Koiré (Sept.) Baldwin 13301! **S. L.:** Magbile (Dec.) Thomas 6186! Masactaba, N. Prov. (Oct.) Glanville 34! Newton (Nov.) Deighton 3283! Musaia (Sept.) Deighton 4864! Also in **A.-E. Sudan.**

65. *Indigofera microcarpa* Desv. in Journ. de Bot. 3: 79 (1814); Bak. f. l.c. 153; Tiss. l.c. 270. *APD acc*

Indigofera perrottetii DC. (1825) — F.T.A. 2: 94; Chev. Bot. 176.

Herb, with a strong taproot and prostrate branches, **often a weed, doubtfully native.**

Sen.: Walo Heudelot! Perrottet! **Fr. Sud.:** Ségou (Sept.) Chev. 3230! Macina (Aug.) Chev. 24930! **G. C.:** Babilc, Lawra (Oct.) Hinds 5002! **Togo:** Paliba Adams GC 4124! **Fr. Nig.:** Zinder (Oct.) Hagerup 584! **N. Nig.:** Katagum (Oct.) Dalz. 56!

Also in **E. Africa, S. tropical Africa** and **Madagascar**, but native, probably, only in America.

66. *Indigofera diphylla* Vent. Choix. t. 30 (1803); F.T.A. 2: 74, mostly; Bak. f. l.c. 110; F.W.T.A., ed. 1, 1: 393, excl. syn.; Tiss. l.c. 262. *APD acc*

A semiwoody, spreading, grey herb **of the drier areas.**

Sen.: Perrottet! Leprieur! Sieger 38! Heudelot 419! Lelièvre! **Fr. Sud.:** Fereirbo (Aug.) Chev. 3241! **Togo:** Lome Warnecke 329! **Dah.:** Gironcourt 89. **Fr. Nig.:** Niamey (Oct.) Hagerup 512! **N. Nig.:** Sokoto (Nov.) Moiser 15! Fodama (Dec.) Moiser 198! Katagum (July) Dalz. 30!

Eastwards to A.-E. **Sudan.**

67. *Indigofera oblongifolia* Forsk. Fl. Aegypt.-Arab. 137 (1775); Bak. f. l.c. 138. *APD acc*

Indigofera paucifolia Del. (1812) — F.T.A. 2: 88; Chev. Bot. 175.

An erect silvery glaucous shrublet **of arid areas**, up to 6 ft. high.

Sen.: Walo Heudelot! Perrottet! Lelièvre! **Fr. Sud.:** Timbuktu Chev. 1212. **Fr. Nig.:** Zinder (Oct.) Hagerup 578! **N. Nig.:** Sokoto (Nov.) Dalz. 328! Kalkala, L. Chad Golding 63!

Eastward to **Egypt, Arabia**, India, Ceylon and Java, also in **Angola.**

68. *Indigofera spicata* Forsk. l.c. 138 (1775). *APD acc*

Indigofera hendecaphylla Jacq. (1788); by mistake endecaphylla in Bak. F.T.A. 2: 96; Bak. f. l.c. 134; F.W.T.A., ed. 1, 1: 392; Tiss. 1: 267; Cronq. l.c. 149.

Suberect or prostrate herb, woody below; **a weed of disturbed ground sometimes cultivated.**

Sen.: Perrottet 197! **Fr. Sud.:** Ségou Chev. 3231. **Port. G.:** Boé (Jan.) Esp. Santo 2862! **Lib.:** Cape Palmas (July) T. Vogel 4! Grand Bassa (July) T. Vogel 106! Eastwards to the Philippines and Indonesia, southwards to Madagascar and Natal.

A very variable plant.

69. *Indigofera kerstingii* Harms in Engl. Bot. Jahrb. 45: 308 (1910); Bak. f. l.c. 98. *APD acc*

Indigofera oxalidea of Tiss. l.c. 297, partly, not of Welw. ex Bak.

A prostrate **wayside** herb.

Togo: Basari Kersting 662! Paliba Adams & Akpabla GC 4122! **N. Nig.:** Lokoja (Oct.) Dalz. 19! Abinsi (July) Dalz. 580! Zaria (Sept.) Olorunfemi FHI 24378! **S. Nig.:** Oyo (Sept.) Latilo FHI 23548!

70. *Indigofera conjugata* Bak. var. *conjugata* — in F.T.A. 2: 75 (1871); Chev. Bot. 172; Bak. f. l.c. 110; Cronq. l.c. 150. *APD acc*

Indigofera dalzielii Hutch. (1921), mostly; Bak. f. l.c. 108, mostly; F.W.T.A., ed. 1, 1: 393, mostly.

Indigofera knoblecheri of Chev. Bot. 174, not of Kotschy.

Herb, erect, up to 18 in. high, from a stout woody rootstock.

Fr. G.: Balato (Feb.) Chev. 340! Coumana (Feb.) Chev. 364! **Dah.:** Djougou (June) Chev. 23913! **N. Nig.:** Jos (Mar.) Hill 4! Naraguta Lely 20! Vom Dent Young 42! Birnin Gwari (Mar.) Meikle 1348! Kaduna (Dec.) Meikle 771!

Eastward to A.-E. **Sudan**, **Kenya** and **Tanganyika**, with another variety in **Angola** and N. Rhodesia.

70a. *Indigofera conjugata* var. *occidentalis* Gillett l.c. 581 (1956). *APD acc*

Indigofera dalzielii Hutch. (1921), partly.

Fr. Sud.: Bougouni (Feb.) Roberty 3496! **N. Nig.:** Kontagora (Oct.) Dalz. 27! Liruwen-Kano Hills Carpenter! Bichikki (May) Lely 188! Birnin Gwari (Aug.) Keay FHI 25999! Giwa (June) Keay FHI 25909! **Br. Cam.:** Gashaka Dist. (Feb.) Latilo & Daramola FHI 34470!

71. *Indigofera costata* Guill. & Perr. Fl. Seneg. 1: 187 (1832); F.T.A. 2: 95; Bak. f. l.c. 163. *APD acc*

Indigofera theuschii of Tiss. l.c. 272, partly, not of Hoffm.

An erect herb about 18 in. high, in subarid areas.

Sen.: Perrottet! Huard in Heudelot 508! Diohine (Sept.) Berhaut 569! **Fr. Nig.:** Gaillard in Mission Tilho! **N. Nig.:** Biu, Bornu (Sept.) Noble 28!

Extends to A.-E. **Sudan**, with subspecies in eastern and southern Africa from Abyssinia to **Angola** and the eastern Cape.

72. *Indigofera parviflora* var. *occidentalis* Gillett l.c. 582 (1956).

APD: *Synonym of Indigastrum parviflorum subsp. occidentalis (J. B. Gillett) Schrire*

Indigofera linearis of Guill. & Perr. Fl. Seneg. 184 (1832), not of DC. (1825); Bak. f. l.c. 162; Tiss. l.c. 272.

Indigofera parviflora of F.T.A. 2: 83, partly; Chev. Bot. 175, partly; F.W.T.A., ed. 1, 1: 391, partly; Berhaut l.c. 52.

A branched annual up to 1 ft. high, in subarid regions.

Sen.: Leprieur! Heudelot 525! Basgny (Sept.) Berhaut 1731! **Fr. Sud.:** fide Chev. l.c.

Also in the **Cape Verde Isles**, **Angola**, **N. Rhodesia** and **Bechuanaland**

var. *parviflora* is in India, Australia and eastern Africa from the A.-E. Sudan to the Orange Free State.

73. *Indigofera welwitschii* Bak. var. *remotiflora* (Taub. ex Bak. f.) Cronq. l.c. 172 (1954).

APD: *Synonym of Microcharis remotiflora (Taub. ex Baker f.) Schrire*

APD: *Synonym of Microcharis praetermissa (Baker f.) Schrire*

Indigofera remotiflora Taub. ex Bak. f. l.c. 121 (1926).

Delicate straggling herb, on rocky hills in areas of high rainfall.

N. Nig.: Panshanu, rocks 35 miles E. of Naraguta (Sept.) Lely 610! Bauchi Plateau (July) Lely P. 504! **S. Nig.:** Idanre Hills, Ondo (Oct.) Keay & Onochie FHI 20247! Keay FHI 22593!

Extends to **Tanganyika**, Nyasaland and **Angola**.

74. *Indigofera longicalyx* Gillett l.c. 582 (1956).

APD: *Synonym of Microcharis longicalyx (J. B. Gillett) Schrire*

Indigofera lateritia A. Chev. Bot. 174, name only, not of Willd.

Microcharis tenella of Bak. f. l.c. 256 and F.W.T.A., ed. 1, 1: 388, partly, not of Benth.

An annual, about 8 in. high.

Fr. G.: Fouta Djallon (Oct.) Chev. 18873! **S. L.:** Kabala (Sept.) Thomas 2265! **N. Nig.:** Jos Plateau (Aug.) Lely P. 643! Naraguta (Aug.) Lely 504! Vom Dent Young 51!

Also in **Ubangi**.

75. *Indigofera hutchinsoniana* Gillett l.c. 584 (1956).*APD: Synonym of *Microcharis tenella* Benth.**Microcharis tenella* Benth. in Trans. Linn. Soc. 25: 297, t. 33A (1866); F.T.A. 2: 132; Bak. f. l.c. 256, partly, excl. syn.; F.W.T.A., ed. 1, 1: 388, partly.*Indigofera welwitschii* of F.W.T.A., ed. 1, 1: 383, not of Bak.

An annual, up to 1 ft. high; on rocks after rain.

N. Nig.: Nupe Barter 1601! Jebba Barter! R. Niger (Sept.) T. Yogel 99! Lokoja (Oct.) Parsons L. 34!**76. *Indigofera disjuncta* Gillett l.c. 584 (1956).***APD: Synonym of *Microcharis disjuncta* (J. B. Gillett) Schrire var. *disjuncta***Indigofera arenaria* of F.T.A. 2: 79, mostly, not of A. Rich.; nor of E. Mey.

A desert annual.

Fr. Nig.: Mt. Tarraouagi, Air Chopard & Villiers!

Local from Mauritania to the Hejaz and in S.W. Africa and N.W. Cape Colony, a variety in Socotra.

The species with glandular hairs (Nos. 43–49) form a difficult group to which belong several undetermined sheets at Kew, some of which may represent undescribed species. It is to be hoped that collectors will pay especial attention to this group, taking care to secure fruits as well as flowers.

***Indigofera heterocarpa* Welw. ex Bak. F.T.A. 2: 90 (1871).**

An imperfectly understood Angolan species is reported (F.W.T.A., ed. 1, 1: 391) from Lokoja, N. Nigeria. The specimen. Parsons 12, has not been found. Imperfectly known species.

Indigofera variabilis*?**Is reported by Berhaut (l.c. 15, 265) from Senegal; his specimens have not been seen. Presumably *I. variabilis* N.E. Br. is meant; the correct name for which is *I. bainesii* Bak. This species has hitherto only been found in Bechuanaland and the Transvaal. Imperfectly known species.Indigofera galeoides* DC.**

An East Asian species, it has been grown as a cover crop at Victoria, British Cameroons.

27. CYAMOPSIS**DC. — F.T.A. 2: 65.**

- 1 Leaflets oblong to linear-subulate, rarely obovate, 3–7 to each leaf, mucronate, 1.5–4 cm. long, 2–5 mm. broad, thinly silky with medifixed hairs beneath or white-pubescent on both surfaces; stipules subulate; flowers in lax axillary racemes; bracts 4 mm. long, linear; corolla 5 mm. long, the standard petals shortest; fruit linear, 2.5–4 cm. long, about 5 mm. broad, finely appressed-setulose, rather abruptly beaked, light brown when dry

.....[*senegalensis*](#)***Cyamopsis senegalensis* Guill. & Perr. Fl. Seneg. 1: 171, t. 45 (1832); F.T.A. 2: 65; A. Chev. in Rev. Bot. Appliq. 19: 246(1939). *APD acc****Cyamopsis stenophylla* (Bonnet) A. Chev. l.c. (1939).*Cyamopsis senegalensis* var. *stenophylla* Bonnet in Bull. Bot. Fr. 11, Mém. 20: 6 (1911).

Erect herb about 1 ft. high, woody at the base; flowers pinkish.

Sen.: Dagana, Walo Dist. fide Guill. & Perr. l.c. **Gam.:** Albreda, in alluvium after inundation, fide Guill. & Perr. l.c. **Fr.****Sud.:** Dayet en Nahret Chudeau.Also in **A.-E. Sudan**, **Abyssinia**, **Eritrea**, **Arabia** and **S.W. Africa**.***Cyamopsis tetragonoloba* (Linn.) Taub.**

This Indian species has been introduced into Sierra Leone and other parts of tropical Africa. It is a laxly branched annual about 3 ft. high with ovate-rhomboid leaflets and erect fruits.

28. ROTHIA

Pers. — F.T.A. 2: 7.

A small branched annual about 15 cm. high; branches long-silky pubescent; leaflets 3, subsessile, oblanceolate, acute, about 1.5 cm. long, silky-pilose on both sides; flowers 2–5 in axillary clusters, subsessile; calyx lobed to about the middle, 5 mm. long, lobes lanceolate; corolla very short; fruit sessile, 1–1.5 cm. long, silky-pilose, several-seeded [hirsuta](#)

Rothia hirsuta (Guill. & Perr.) Bak. in F.T.A. 2: 7 (1871); Bak. f. Leg. Trop. Afr. 1: 21. *APD acc*

Xerocarpus hirsutus Guill. & Perr. (1832).

Erect or decumbent, diffusely branched herb 6 in. high. with small pink or mauve flowers; in sandy places.

Sen.: Walo Leprieur. **Gam.:** Galam (fr. Sept.) Leprieur! **Port. G.:** Bissau (Dec.) Esp. Santo 1438! **Fr. Nig.:** Niamey (fr. Oct.) Hagerup 476! **N. Nig.:** Naraguta & Jos (Sept.) Lely 583! P. 699! Sokoto Moiser 88! Lema, Ilorin (fr. Aug.) Ejiofor FHI 29392!

Also in **Spanish Guinea**, **Angola** and **S. Africa** and in eastern Africa from Eritrea to Mozambique.

29. CROTALARIA

Linn. — F.T.A. 2: 7; E. G. Baker in J. Linn. Soc. 42: 241 (1914).

- 1 Leaves all 1-foliolate; 2
- Leaves all 3- or 5-foliolate or rarely a few also 1-foliolate towards the inflorescences: 13
- 2 Flowers axillary or in extremely short racemes; leaflets sessile: 3
- Flowers racemose: 5
- 3 Flowers solitary: 4
- Flowers few together, deflexed; calyx about 5 mm. long; leaflet oblanceolate, 2–5 cm. long, shortly pubescent; fruits 8 mm. long, glabrous [3. polygaloides](#)
- 4 Calyx large, about 30 mm. long, densely villous, enclosing flower and fruit; pedicels 1 cm. long, thick, densely villous; leaflet linear to obovate-lanceolate, mucronate, 6–12 cm. long, silky-pilose beneath; fruits 2 cm. long, glabrous [1. calycina](#)
- Calyx small, 3 mm. long, more or less minutely pubescent; pedicels 2–3 cm. long, filiform, appressed-pubescent; leaflet oblong, rounded at both ends, more or less clasping the stem, 8–23 mm. long, 3–6 mm. broad, shortly appressed-pubescent beneath; fruits 1.3 cm. long, glaucous [2. occidentalis](#)
- 5 Racemes very densely flowered; leaflet petiolate, lanceolate, mucronate, 4–8 cm. long, appressed-pilose on both surfaces; petiole about 1 cm. long; stipules and bracteoles subulate, about 8 mm. long; standard petal 7 mm. long, glabrous, very striate [4. anthyllopsis](#)
- Racemes lax: 6
- 6 Stipules foliaceous, amplexicaul; leaflet broadly obovate, emarginate, about 4.5 cm. long, 2–3 cm. broad, very shortly pubescent beneath; peduncle angular; flowers glabrous; fruits 2.5 cm. long, pubescent [5. verrucosa](#)
- Stipules absent or very small or subulate; 7
- 7 Leaflet oblanceolate, rounded or refuse at apex, 4–7 cm. long, 1.5–2.5 cm. broad, minutely and rather closely pubescent beneath; flowers numerous in stiff racemes; calyx thinly puberulous; fruits 4.5 cm. long, glabrous [6. retusa](#)
- Leaflet linear to elliptic, broadest in the middle: 8
- 8 Leaflet elliptic, sessile, about 1.5 cm. long and 8 mm. broad, brown-pilose on both surfaces, thick; racemes very few-flowered; flowers about 1 cm. long; fruits 1 cm. long, densely pilose [7. arenaria](#)
- Leaflet linear to linear-lanceolate, acute: 9
- 9 Plant glabrous or shortly appressed-pubescent, not pilose: 10

- Plant long-pilose or densely pubescent; leaflet linear to linear-lanceolate, 3–9 cm. long, 2–8 mm. broad; fruits 6–10-seeded, pubescent: **12**
- 10** Leaflet subsessile, petiole absent, fracturing in 1 place (therefore strictly a leaf); keel sharply angled, long-beaked: **11**
- Leaflet with a petiole 2–5 mm. long, fracturing in 2 places, stem terete, striate, glabrous; lamina narrowly linear, 6–12 cm. long, 2–4 mm. broad, acute; calyx glabrous, 5 mm. long; a pair of bracteoles at top of pedicel; fruits glabrous, sessile [10. *deightonii*](#)
- 11** Stem and leaflet glabrous; stem terete; lamina linear to oblong-lanceolate, 1.5–6 cm. long, acute and mucronate at apex; calyx glabrous or shortly pubescent, 5–6 mm. long; a pair of minute bracteoles, or their scars, about the middle of pedicel; fruits glabrous, stipitate [8. *glauca*](#)
- Stem and leaflet minutely appressed-pubescent with white hairs arising from red bases; stem angular; lamina oblong-lanceolate, 1.5–4 cm. long, obtuse and mucronate at apex; calyx pubescent 5 mm. long; a pair of bracteoles at top of pedicel; fruits pubescent, sessile [9. *lugardiorum*](#)
- 12** Corolla about 9 mm. long; calyx 5 mm. long; fruits 10 mm. long; stipules present, 1 mm. long [11. *vogelii*](#)
- Corolla about 3 mm. long; calyx 2 mm. long; fruits 7 mm. long; stipules absent [12. *bongensis*](#)
- 13** Plant armed with axillary spines 1–2 cm. long; flowers 1 cm. long, 1 or 2 arising from about the middle of most spines; fruits 9–12 mm. long, many-seeded; stems and leaves puberulous; stipules minute [13. *aculeata*](#)
- Plant unarmed: **14**
- 14** Stipules large and foliaceous, mostly falcate, usually at least 2 mm. broad; fruits 6 or more seeded: **15**
- Stipules small and subulate, at most 1.5 mm. broad, or absent: **18**
- 15** Stems weakly pilose with slender spreading hairs; fruits long-stipitate, oblong, bladder-like, about 2.5 cm. long and 1 cm. broad, glabrous; petiole as long as the leaflets, the latter oblong-lanceolate, acute, about 3 cm. long, thinly pilose on the midrib; flowers 1.5 cm. long [14. *podocarpa*](#)
- Stems glabrescent or variously pubescent with appressed or more or less ascending hairs; fruits not stipitate: **16**
- 16** Stems and leaves rather roughly pilose-pubescent; petiole nearly as long as the leaflets, the latter oblanceolate, conspicuously mucronate, 3–4 cm. long; flowers 1.5 cm. long; fruits densely ferruginous-tomentose, 2.5–3.5 cm. long [15. *lachnophora*](#)
- Stems and leaves very shortly and finely pubescent or glabrescent; petiole as long as or longer than the leaflets, the latter variable, obovate to almost linear, mucronate or emarginate: **17**
- 17** Flowers over 1 cm. long; fruits 2.5–3 cm. long, very shortly pubescent, seeds yellow; hairs on stem very short and closely appressed [16. *cylindrocarpa*](#)
- Flowers usually under 1 cm. long; fruits less than 2 cm. long, shortly pubescent, seeds reddish; hairs on stem rather long, appressed but with some patent [17. *goreensis*](#)
- 18** Leaves subsessile or very shortly petiolate; petiole at most 1 cm. long: **19**
- Leaves long-petiolate; petiole at least 1.5 cm. long: **36**
- 19** Stipules absent; fruits on erect pedicels: **20**
- Stipules present: **24**
- 20** Fruits oblong-cylindrical, 20–25 mm. long, densely pilose, about 20-seeded; flowers about 1 cm. long, a few together at the ends of branches; leaflets oblanceolate, cuneate at base, slightly emarginate and mucronate at apex, 7–15 (–25) mm. long, 2–7 (–10) mm. broad, appressed-pubescent beneath [18. *harmsiana*](#)
- Fruits globose or subglobose, 2–7 mm. long, 2–8-seeded: **21**
- 21** Inflorescence capitate: **22**
- Inflorescence racemose: **23**
- 22** Flowers few together in a cluster on a slender peduncle; leaves sessile; leaflets oblanceolate, up to 1.5 cm. long, long-pilose beneath; fruits weakly pilose [19. *microcarpa*](#)
- Flowers very crowded in a short broadly pyramidal head-like raceme scarcely exerted from the leaves; petioles 1–3 cm. long, villous; leaflets narrowly oblanceolate, the lateral ones falcate, 1–4 cm. long; fruits about 7 mm. long, villous-tomentose [20. *cephalotes*](#)
- 23** Perennial; flowers 7 mm. long; inflorescences up to 15 cm. long; fruits subglobose, 5 mm. long, pubescent; seeds triangular, 2 mm. long, with a deep depression at the hilum; leaflets broadly obovate, 8–15 mm. long, 4–7 mm. broad, emarginate at apex [21. *graminicola*](#)
- Annual; flowers 5 mm. long; inflorescences 2–7 cm. long; fruits globose, 4 mm. long, pubescent; seeds usually subglobose, 1 mm. long, with a large oil gland at the hilum; leaflets oblanceolate, 4–11 mm. long, 2–3 mm. broad, rounded and mucronate at apex [22. *hyssopifolia*](#)
- 24** Flowers 5–15 mm. long: **25**
- Flowers 20–25 (–30) mm. long, standard and keel densely pubescent; calyx about 15 mm. long; fruits oblong, about 3 cm. long, densely villous; bracts ovate-lanceolate, often 3-fid, 1–1.5 cm. long, persistent; leaflets

- oblong-oblancheolate, mucronate, 4–7 cm. long, 2–3 cm. broad, appressed-tomentose on both surfaces[33.](#)
[lachnosema](#)
- 25 Fruits laxly pilose, pubescent or glabrous; calyx up to 9 mm. long, not accrescent: 26
Fruits covered with a dense velvet of short stiff hairs; keel glabrous or with a few hairs on the edges;
inflorescences glomerate at the ends of branches; leaflets glabrous above; calyx 10–15 mm. long, enlarging in
fruit up to 20 mm.: [34](#)
- 26 Calyx 2–3 (–4) mm. long: 27
Calyx 7–9 mm. long: [30](#)
- 27 Leaflets glabrous above, pubescent or glabrous beneath, obovate to linear; stipules subulate with a broader base,
1–2 mm. long; ripe fruits subglobose, 5 mm. long, on pendulous pedicels; seeds triangular with a deep
depression at the hilum: [28](#)
Leaflets (at least the upper ones) pilose above: [29](#)
- 28 Plant pubescent to pilose with brown hairs; flowers 6–7 mm. long; leaflets 1.5–3 cm. long, 3–8 mm. broad ..[23.](#)
[sphaerocarpa](#) var. [sphaerocarpa](#)
Plant glabrous in all parts; flowers 5 mm. long; leaflets 1.5–2 cm. long, 5–9 mm. broad ..[23a.](#) [sphaerocarpa](#) var.
[polycarpa](#)
- 29 Stipules subulate, erect, 2 mm long, pilose; petioles 7–10 mm. long; leaflets oblong-oblancheolate, rounded and
mucronate at apex, 2.5–3.5 cm. long, 7–9 mm. broad, pubescent beneath; racemes terminal, rather dense and
with several flowers in axils of upper leaves, 3–8 cm. long; flowers 7–8 mm. long; fruits ovoid, pubescent, 6
mm. long [24.](#) [sp. A](#)
Stipules lanceolate, reflexed and falcate, 4–5 mm. long, 1 mm. broad; petioles 3–5 mm. long; leaflets elliptic,
subacute and with a tuft of hairs at apex, 1.5–2 cm. long, 4–7 mm. broad, silky beneath; racemes terminal,
dense, 1.5–3 cm. long; flowers 5–6 mm. long; fruits ovoid, pilose, 7 mm. long [25.](#) [bamendae](#)
- 30 Keel glabrous, or with a few hairs about the lower edge: [31](#)
Keel pubescent; leaves frequently 1-foliolate towards the inflorescences: [33](#)
- 31 Bracteoles linear-subulate, as long or nearly as long as the calyx-lobes and very similar to them: [32](#)
Bracteoles broader than above, about 2 mm. broad, as long as the calyx-lobes but dissimilar to them;
inflorescence conical, many-flowered; calyx densely villous; leaflets oblancheolate, obtuse at apex, 4–6.5 cm.
long, 8–23 mm. broad, glabrous above, appressed-pilose beneath; standard densely pubescent outside[28.](#)
[ebenoides](#)
- 32 Standard pubescent only on the fold outside; leaflets glabrous above, oblong-elliptic to oblancheolate, subacute at
apex, 1–6 cm. long, 5–20 mm. broad; fruits subglabrous, 8–10 mm. long; calyx loosely pilose; inflorescence
more or less globular [26.](#) [ononoides](#)
Standard densely pubescent outside; leaflets sparsely pilose above, oblancheolate, rounded at apex, 1–3 cm. long,
3–8 mm. broad; fruits loosely pilose, about 10 mm. long; calyx densely villous-pilose; inflorescence sub-
spiciform to globular [27.](#) [atrorubens](#)
- 33 Stems tomentose with recurved brown hairs; leaflets lanceolate, acute, 2.5–5.5 cm. long, 7–10 mm. broad,
appressed-pilose beneath; inflorescence short and glomerate or subspicate, 5–10-flowered; calyx densely
brown-villous; standard orbicular [29.](#) [perrottetii](#)
Stems appressed-pilose with silvery hairs; leaflets oblong-lanceolate; standard broader than long ..[28.](#) [ebenoides](#)
- 34 Stems appressed-pubescent, hairs directed upward; corolla 12–15 mm. long; bract at base of pedicel 1–2 mm.
broad: [35](#)
Stems tomentose with more or less erect recurved hairs; corolla about 10 mm. long; calyx densely villous, 10–13
mm. long; bracteoles linear, nearly as long as calyx; bract linear, 1 mm. broad; leaves all 3-foliolate; leaflets
obovate to oblancheolate, rounded at apex, sometimes slightly emarginate, minutely mucronate, 1.5–3 cm. long,
5–12 mm. broad [32.](#) [confusa](#)
- 35 Calyx densely villous with long hairs dissimilar to those on the fruits, 12–15 mm. long; bracteoles at base of
calyx linear-lanceolate, 10–11 mm. long; leaves frequently 1-foliolate towards the inflorescence; leaflets
narrowly lanceolate, acute, 2.5–7 cm. long, 5–18 mm. broad [30.](#) [macrocalyx](#)
Calyx covered with a dense felt of short stiff curved hairs similar to those on the fruits, 15–20 mm. long;
bracteoles at base of calyx linear, 5–6 mm. long, frequently reflexed; leaves all 3-foliolate; leaflets
oblancheolate, subacute to obtuse and mucronate at apex, 2.5–4–5 cm. long, 5–12 mm. broad [31.](#) [mortonii](#)
- 36 Stipules 5–11 mm. long, filiform to linear, persistent: [37](#)
Stipules absent or up to 2 (–3 mm.) long: [40](#)
- 37 Flowers 2–3 in each inflorescence, 1–5 cm. long; calyx-lobes broad and leafy, auriculate at base; leaflets
obovate, rounded at apex, about 3.5 cm. long and 2 cm. broad, sparsely pilose beneath; stipules subulate, about
10 mm. long; fruits stipitate, about 2 cm. long, pilose, bladder-like [34.](#) [barkae](#)
Flowers numerous in each inflorescence: [38](#)

- 38 Calyx pilose, 8 mm. long; fruits oblong, 4 cm. long, pilose; leaflets obovate, cuneate at base, rounded at apex, 3–4 cm. long, 2–3 cm. broad [35. *incana*](#)
 Calyx appressed-pubescent to glabrous, 10–12 cm. long; 39
- 39 Bracts linear-lanceolate, 10–12 mm. long, persistent; inflorescence terminal, rhachis stout and strongly grooved; fruits sessile, 4 cm. long [36. *recta*](#)
 Bracts subulate, 2–4 mm. long, persistent; inflorescence leaf-opposed, rhachis not as stout, slightly striate; fruits stipitate, 4–5 cm. long [37. *longifoliolata*](#)
- 40 Flowers 5–12 mm. long: 41
 Flowers 14–25 mm. long: 49
- 41 Flowers very crowded in a short broadly pyramidal head-like raceme scarcely exerted from the upper leaves; fruits subglobose, 7 mm. long; for other characters see above [38. *cephalotes*](#)
 Flowers racemose, well exerted from the leaves; fruits oblong to oblong-ellipsoid: 42
- 42 Inflorescence 2–6 (–8)-flowered, very lax; bracts subulate, 2 mm. long; calyx-lobes linear; keel rounded; fruits 2 cm. long, stipitate, appressed-pubescent; leaflets linear or linear-lanceolate, 3–6 cm. long, (1–) 3–10 mm. broad [38. *glaucoides*](#)
 Inflorescence many-flowered, dense or rather lax: 43
- 43 Keel petals sharply bent from near the base; fruits oblong-ellipsoid, about 1.3 cm. long, softly pubescent; leaflets ovate-oblong to obovate, cuneate at base, 2–4 cm. long, about 1 cm. broad [39. *senegalensis*](#)
 Keel petals rounded; fruits oblong, 2–3.5 cm. long: 44
- 44 Bracts persistent, 3–9 mm. long, reflexed: 45
 Bracts either early caducous, 5–9 mm. long, or persistent and 1–2 mm. long: 46
- 45 Petioles 3–7 cm. long; leaflets linear-lanceolate, 5–15 cm. long, those on the branchlets usually much smaller than those on the main stem; keel petals dark purple and striate; standard striate, wings yellow; fruits 13–17 mm. long, appressed-pubescent [40. *comosa*](#)
 Petioles 1.5–2 cm. long; leaflets elliptic to linear, acute at both ends, 3–5 cm. long; all petals more or less equally striate; fruits 11 mm. long, tomentose to pilose [41. *acervata*](#)
- 46 Leaflets linear to linear-lanceolate, (1–) 2–6 cm. long, 2–7 mm. broad; stipules absent; calyx 3 mm. long; fruits 2 cm. long, shortly pubescent [42. *lathyroides*](#)
 Leaflets ovate, obovate or elliptic, 1.5–7 cm. broad: 47
- 47 Fruits 3–3.5 (–4) cm. long; keel conspicuously striate: 48
 Fruits 2–2.5 cm. long; keel inconspicuously striate or with a purple blotch; leaflets obovate to elliptic, 3–6 cm. long, 2–5 cm. broad, cuneate at base, rounded or subacute at apex; calyx 6–7 mm. long [45. *naragutensis*](#)
- 48 Leaflets ovate or oblong-ovate, 5–10 (–15) cm. long, 3–5 (–7) cm. broad, cuneate at base, acute (rarely obtuse) at apex; usually with minute stipules; fruits straight, 3–3.5 (–4) cm. long; calyx 6 mm. long [43. *mucronata*](#)
 Leaflets obovate, 3–5.5 cm. long, 1.5–3 cm. broad, cuneate at base, rounded at apex; stipules absent; fruits curved, about 3 cm. long; calyx 4 mm. long [44. *falcata*](#)
- 49 Flowers axillary, solitary or few together, about 2 cm. long; calyx-lobes narrowly lanceolate, acute, nearly 1 cm. long; pedicels 1 cm. long, shortly pubescent; keel bent below the middle; petiole 5 cm. long; leaflets obovate, mucronate, about 6 cm. long and 3.5 cm. broad, thinly pubescent beneath [46. *axillaris*](#)
 Flowers racemose: 50
- 50 Calyx glabrous, with teeth much shorter than the tube; fruits oblong-cylindrical, 3–6.5 cm. long, 1.5–2 cm. broad, appressed-pubescent to glabrous; leaflets lanceolate to oblong-linear, 5–10 cm. long, 3–25 mm. broad [47. *ochroleuca*](#)
 Calyx pubescent: 51
- 51 Leaves all 3-foliolate: 52
 Leaves 3- and 5-foliolate on the same plant, elliptic, acute at apex, cuneate at base, 5–10 cm. long, 2–5 cm. broad; calyx pubescent; fruits narrowly cylindrical, about 4 cm. long and 4 mm. broad [51. *cleomifolia*](#)
- 52 Pedicels not jointed, small bracteoles at base of calyx; leaflets linear to oblong-lanceolate; calyx appressed-pubescent, with teeth about equalling the tube; fruits cylindrical, 2.5–4 cm. long, 4–6 mm. broad, sparsely appressed-pubescent; inflorescence long, many-flowered [48. *intermedia*](#)
 Pedicels jointed in the middle with 2 subulate bracteoles; calyx-teeth much longer than the tube: 53
- 53 Inflorescence few- and lax-flowered; leaflets rhomboid-elliptic to ovate, 2.5–5 cm. long, 1.5–3 cm. broad; fruits bladder-like, 3 cm. long, 1 cm. broad, transversely nerved, loosely pilose [49. *doniana*](#)
 Inflorescence many- and close-flowered; leaflets elliptic, 3–6 cm. long, 1–2 cm. broad [50. *sp. B*](#)

Wilczek in Fl. Congo Belge 4: 84, t. 4. *APD acc*

Erect annual herb, up to 2 ft. high, simple or with few branches, densely brown-silky; flowers yellow, few, about 1 in. long, enclosed by the conspicuously villous calyx; *in savannah*.

Sen.: Heudelot 119! **Fr. Sud.:** Koulikoro Chev. 3380. San Chev. 3381. **Port. G.:** Bafata Esp. Santo 2810! **Fr. G.:** Kouroussa Pobéguin 460! **S. L.:** Kambia (fl. & fr. Dec.) Deighton 928! Bauchi Plateau (Oct.) Lely P. 825! Yola (fr. July) Dalz. 1!

Throughout tropical Africa, also in tropical Asia and N. Australia.

2. *Crotalaria occidentalis* *Hepper* in Sew Bull. 1956: 113, fig. 1. *APD acc*

(?) *C. uniflora* *Bak.* in F.T.A. 2: 13 (1871); *Bak. f. l.c.* 273; not of *Koen. ex Roxb.* (1832).

A slender ascending herb up to 2 ft. high, *of seasonally flooded land*; flowers red and yellow.

Sen.: Perrottet. **Port. G.:** Antula, Bissau (Dec.) Esp. Santo 2858! **S. L.:** Mateboi (fl. & fr. Nov.) Jordan 826!

3. *Crotalaria polygaloides* *Welw. ex Bak.* in F.T.A. 2: 15 (1871); *Bak. f. l.c.* 255; Wilczek l.c. 99. *APD acc*

Branched herb, 1 ft. high; flowers pale yellow; *in savannah*.

S. L.: Wallia (fr. Feb.) Sc. Elliot 4280! Musaia (fl. & fr. Dec.) Deighton 4425! Gbinti (fl. & fr. Jan.) Deighton 5731! Batkanu (fl. & fr. Nov.) Jordan 967!

Also in *Upper Ubangi*, *Belgian Congo* and *Angola*.

4. *Crotalaria anthyllopsis* *Welw. ex Bak.* in F.T.A. 2: 15 (1871); *Bak. f. l.c.* 263; Wilczek l.c. 81. *APD acc*

A branched herb, ascending to 1 ft. high, brown-pilose; flowers yellow or purplish with darker veining; *in savannah*.

N. Nig.: Naraguta & Jos (Sept.) Lely 564! Bauchi Plateau (Sept.) Lely P. 695! Vom Dent Young 33!

Extends to Abyssinia, E. Africa, Rhodesia and to *Angola*.

5. *Crotalaria verrucosa* *Linn.* — F.T.A. 2: 14; *Bak. f. l.c.* 254. *APD acc*

Erect shrub, 2–3 ft. high, with angular branches; flowers pale yellow tinged blue, in leaf-opposed and terminal racemes.

S. L.: Welw. 1940! Tower Hill, Freetown (fl. & fr. Dec.) Deighton 802! **S. Nig.:** Calabar Mine.

A native of India, widespread in the tropics.

6. *Crotalaria retusa* *Linn.* — F.T.A. 2: 13; *Bak. f. l.c.* 270; Chev. Bot. 170; Wilczek l.c. 90. *APD acc*

A half-shrubby herb, 2–4 ft. high, of waste land; flowers conspicuous, 3/4–1 in. long, in long loose racemes, yellow with purple veining.

Sen.: Dakar Caille! Chev. 3195; Chev. 15820. Karang (fl. & fr. Oct.) Monod 8644! **Gam.:** Hayes 501! Kombo Dawe 6! Kuntaur Ruxton 4! **Fr. G.:** Conakry Chev. 12076; 12128; 12149. **S. Widespread in tropical Africa.

A specimen from an old garden patch, Udi, Onitsha, S. Nigeria (Jones FHI 5015) is allied to *C. glauca* but has leaves about 1 cm. long and very small flowers.

9. *Crotalaria lugardiorum* A. A. Bullock in Kew Bull. 1932: 493; Wilczek l.c. 93.

APD: *Synonym of Crotalaria karagwensis Taub.*

A slender erect herb, 1–3 ft. high; flowers yellow; in mountain grassland.

Br. Cam.: Nchun, Bamenda, 5,000 ft. (fl. & fr. May) Maitland 1523!

Also in **Uganda**, **Kenya**, **Tanganyika** and **Belgian Congo**.

10. *Crotalaria deightonii* Hepper l.c. 113 (1956). *APD acc*

Crotalaria spartea of F.T.A. 2: 12 (1871), partly; of F.W.T.A., ed. 1, 1: 388; of Bak. f. l.c. 262, partly; not of R.Br. ex Bak.

An erect annual, up to 5 ft. high; flowers yellow, strongly purple-veined; in savannah grassland.

S. L.: Afzelius! Makali (Oct.) Glanville 11! Bundulai (Nov.) Deighton 5664!

11. *Crotalaria vogelii* Benth. — F.T.A. 2: 14; Bak. f. l.c. 284; Wilczek l.c. 83. *C. parsonsii* Bak. f. (1913).

APD: *Synonym of Crotalaria leprairiei Guill. & Perr.*

A pilose herb, 2–3 ft. high, or more when in tall grass; flowers yellow in elongated racemes.

Sen.: Ouassadou Berhaut 1240. Toubacouta (fr. Oct.) Monod 8457! **G. C.:** Tamale Williams 389! Aframso (Oct.) Vigne FH 4036! **Togo:** Kete Krachi Zech 192. **N. Nig.:** Nupe Barter 992; 1629! Also in **French Cameroons**, **Chad**, **A.-E. Sudan**, **Uganda**, **Belgian Congo** and **Angola**.

12. *Crotalaria bongensis* Bak. f. l.c. 256 (1914); Wilczek l.c. 96. *APD acc*

An erect branched pilose annual, slightly woody below, a few inches to 2 ft. high; flowers yellow, strongly purple-veined; in savannah.

Port. G.: Pirada, Gabú (fr. Nov.) Esp. Santo 3163! **N. Nig.:** Naraguta (fl. & fr. Aug.) Lely 506! Vom Dent Young 39! Kaduna (fl. & fr. Dec.) Meikle 793!

Also in **A.-E. Sudan**, **Uganda**, **Tanganyika**, **Nyasaland** and **Belgian Congo**.

13. *Crotalaria aculeata* De Wild. in Ann. Mus. Congo Beige, sér. 4, 1: 185, t. 46 (1908); Wilczek l.c. 107. *APD acc*

APD: *Synonym of Crotalaria virgulata subsp. forbesii (Baker) Polhill*

Crotalaria spinosa of Berhaut Fl. Sen. 12, not of Hochst. ex Benth.

Sen.: fide Berhaut l.c.

Also in **A.-E. Sudan**, **Uganda**, **Tanganyika**, **Belgian Congo**, **Angola**, **Rhodesia** and **Nyasaland**.

14. *Crotalaria podocarpa* DC. — F.T.A. 2: 17; Bak. f. l.c. 406. *APD acc*

An erect herb, 1–2 ft. high; flowers pale yellow.

Sen.: Richard Tol (fr. Sept.) Perrottet 167! M'bidjem Thierry 45! Podor (Aug.) Martine 80! **Fr. Sud.:** Sompi Chev. 3193.

Widespread in eastern tropical Africa and Madagascar.

15. *Crotalaria lachnophora* Hochst. ex A. Rich. Tent. Fl. Abyss. 1: 151 (1847); Wilczek l.c. 129. *APD acc*

Crotalaria lachnocarpa Hochst. ex Bak. in F.T.A. 2: 33 (1871); Bak. f. l.c. 404; F.W.T.A., ed. 1, 1: 397; Chev. Bot. 169.

A spreading bush, 3–6 ft. high, clothed with brown hairs; flowers conspicuous, yellow becoming reddish; **in usually wet grassland**.

Fr. Sud.: fide Chev. l.c. **N. Nig.:** Bauchi Plateau (Aug., Sept.) Lely P. 608! 669! 723! Jos (Aug.) Keay FHI 12716! Sho to Barakin Ladi (Nov.) Keay FHI 21022! **Br. Cam.:** Bamenda, 5,000–5,500 ft. (Jan., Aug., Sept.) Migeod 305! Savory UCI 352! 387!

Widespread in tropical Africa.

16. *Crotalaria cylindrocarpa* DC. — F.T.A. 2: 40; Bak. f. l.c. 414; Wilczek l.c. 126. *APD acc*

A branched shrubby herb, up to 6 ft. high; flowers yellow tinged red.

Sen.: Roger 28! **Fr. Sud.:** Fafa, Gao (fl. & fr. Mar.) De Wailly 5368! **G. C.:** Tefli (fl. & to. Jan.) Morton GC 8318! Gambaga (fl. & fr. Apr.) Morton GC 8995! **N. Nig.:** Sokoto (fl. & fr. Po:** Mann 37!

Widespread in tropical Africa.

18. *Crotalaria harmsiana* Taub. in Engl. Pflanzenw. Ost-Afr. C, 205 (1895); Bak. f. l.c. 397.

APD: *Synonym of Crotalaria orthoclada* Welw. ex Baker

APD: *Synonym of Crotalaria caudata* Welw. ex Baker

An undershrub 1–3 ft. high; flowers yellow.

S. Nig.: Ikette Plateau, 5,200 ft., Obudu (fr. Dec.) Savory & Keay FHI 25232! **Br. Cam.:** Babanki, Bamenda (fl. & fr. Jan.) Johnstone 3!

Also in the mountains of east and south tropical Africa.

19. **Crotalaria microcarpa** *Hochst. ex Benth.* in Hook. Lond. Journ. Bot. 2: 573 (1843); F.T.A. 2: 16; Bak. f. l.c. 402; Chev. Bot. 169. *APD acc*

A variable diffusely branched herb, woody at the base, from a few inches to a foot or more long; flowers deep yellow or orange; [in savannah](#).

Fr. Sud.: San Chev. 3228. **G. C.:** Babile, Lawra (fr. Oct.) Hinds 5019! Kulnaba, Navrongo (fl. & fr. Oct.) Hushes FH 5340! **N. Nig.:** Nupe Barter 997! Sokoto Moiser 18! Katagum (fl. & fr. Oct.) Dalz. 17! Alagbede F.R. (fl. & fr. Jan.) Ejiofor FHI 30808! Yola (fl. Aug.) Dalz. 301!

Also in [French Camerouns](#), [A.-E. Sudan](#), [Abyssinia](#), [Eritrea](#), [Uganda](#), [Tanganyika](#), [Belgian Congo](#), [N. Rhodesia](#) and [Nyasaland](#).

20. **Crotalaria cephalotes** *Steud. ex A. Rich.* — F.T.A. 2: 23; Bak. f. l.c. 276; Wilczek l.c. 200. *APD acc*

A slightly woody herb, 6–18 in. high, often unbranched, with a tuft of leaves around the raceme, densely silky; flowers small, yellow; [in rocky places](#).

G. C.: Banda, Wenchi Dist. (fr. Dec.) Morton GC 25161! 25284! **Dah.:** Savé (fr. May) Chev. 23579! **N. Nig.:** Nupe Barter 801! Patti Lokoja (fl. & fr. Nov.) Dalz. 13! Bauchi Plateau (fl. & fr. Oct.) Lely P. 830! Anara F.R., Zaria (Sept., Oct.) Keay FHI 5441! Olorunfemi FHI 24401!

Widespread in tropical Africa, also in Transvaal.

21. **Crotalaria graminicola** *Taub. ex Bak. f.* l.c. 291 (1914); Hepper in Kew Bull. 1956: 118. *APD acc*

A perennial herb, [usually in burnt grassland](#), with numerous nearly simple tufted stems 6–12 in. high, from a woody base; flowers yellow.

Togo: Sokode Kersting 128. **N. Nig.:** Kontagora (fl. & fr. Jan.) Dalz. 40! Zaria (fl. & fr. Feb.) Dalz. 377! Milne-Redhead 5028! Otobi, Benue (fl. & fr. Feb.) Jones FHI 4575! Naraguta, 4,000 ft. Deighton 4475! 5697! **N. Nig.:** Fodama (fl. & fr. Dec.) Moiser 250! Bauchi Plateau (fl. & fr. Oct.) Lely P. 815! 848!

Also in [French Camerouns](#), [Abyssinia](#), [Uganda](#), [Kenya](#), [Tanganyika](#), [Nyasaland](#), [N. Rhodesia](#), [Belgian Congo](#) and [Mozambique](#).

23. **Crotalaria sphaerocarpa** *Perr. ex DC. var. sphaerocarpa* — F.T.A. 2: 23; Bak. f. l.c. 289, partly; Hepper l.c. 118, for synonymy. *APD acc*

A branched herb from a woody base 1–2 ft. high; flowers yellow, in lax racemes; [in sandy ground](#).

Sen.: Perrottet! M'bidjem (fl. & fr. Aug.) Thierry 84! Kouma (fr. Oct.) Roger! **Fr. Sud.:** Balasoko valley, Bamako (fl. & fr. Dec.) Monad! **Fr. Nig.:** Zinder (fl. & fr. Oct.) Hagerup 590! **N. Nig.:** Kalkala, L. Chad (fr. Oct.) Gwynn 87!

Extends to A.-E. [Sudan](#) and southwards to Orange Free State and west to [Angola](#).

- 23a. **Crotalaria sphaerocarpa var. polycarpa** (*Benth.*) Hepper in Kew Bull. 1956: 119.

APD: Synonym of Crotalaria sphaerocarpa subsp. polycarpa (Benth.) Hepper

Crotalaria polycarpa Benth. (1843).

Crotalaria sphaerocarpa of F.T.A. 2: 23; Bak. f. l.c.; F.W.T.A., ed. 1, 1: 398, partly, in syn.

Similar to the last, but entirely glabrous.

Sen.: Perrotte! 171! Cayor Heudelot 483! Dakar Rattray! M'pao, Dakar (fl. & fr. Nov.) Monod! Cape Verde Talmy! Hann Berhaut 1150!

24. *Crotalaria* sp. **A.** *APD acc*

An annual herb 1–2 ft. high, sparingly branched above; flowers yellow, veined purple; in savannah. Further material required.

N. Nig.: Bauchi Plateau (fl. & fr. Oct.) Lely P. 789!

25. *Crotalaria bamendae* Hepper in Kew Bull. 1956: 119. *APD acc*

A branched herb with densely pubescent stems, about 2 ft. high, leaflets silky-silvery beneath.

Br. Cam.: Bamenda (Dec.) Egbuta FHI 3763! Bansa, Bamenda (Oct.) Tamajong FHI 23479! Gembu, Gashaka Dist. (fr. Jan.) Latilo & Daramola FHI 34369!

26. *Crotalaria ononoides* Benth. — F.T.A. 2: 22; Bak. f. l.c. 307. *APD acc*

Herb, woody at base, 1–4 ft. high, suberect, the lower branches often procumbent, brownish-pilose; flowers yellow turning orange in heads at the ends of the branches.

S. L.: Afzelius! Don! **N. Nig.:** Ilorin Clarke 3! Anara F.R., Zaria (Sept.) Olorunfemi FHI 24363! Naraguta & Jos (Nov.) Lely 559! Vom Dent Young 38!

Extends to A.-E. **Sudan**, E. Africa, **Belgian Congo**, S. Rhodesia and Madagascar.

27. *Crotalaria atrorubens* Hochst. ex Benth. in Hook. Lond. Journ. Bot. 2: 572 (1843); F.T.A. 2: 22; Bak. f. l.c. 307; Chev. Bot. 168. *APD acc*

Chrysocalyx rubiginosa Gulll. & Perr. (1831), not *Crotalaria rubiginosa* Willd. (1803).

Crotalaria ononoides of F.W.T.A., ed. 1, 1: 397, partly (Moiser 75).

Erect or suberect herb, 1–3 ft. high, woody below, yellowish silky-hairy; flowers yellow or reddish tinged, densely crowded at the ends of the branches; in savannah.

Sen.: St. Louis Perrottet. Galam (fl. & fr. Sept., Oct.) Leprieur in Hb. Perrottet 162! **Gam.:** Mungo Park! Saunders 70! Hayes 582! **Fr. Sud.:** Ségou Chev. 3200. **G. C.:** Zuarungu (fr. Dec.) Adams & Akpabla GC 4273! **N. Nig.:** Nupe Barter 1052! Sokoto (fl. & fr. Sept.) Dalz. 345! Moiser 75! Bauchi Plateau (fl. & fr. Oct.) Lely P. 838! Bin, Bornu Prov. (Sept.) Noble 20!

Extends to A.-E. **Sudan**.

28. *Crotalaria ebenoides* (Guill. & Perr.) Walp. — F.T.A. 2: 20; Bak. f. l.c. 305; Chev. Bot. 168. *APD acc*

Chrysocalyx ebenoides Gulll. & Perr. (1831).

Erect herb, 1–1½ ft. high, with long slender branches, densely brown-silky; flowers in dense oblong terminal heads.

Sen.: Walo Perrottet 161! Galam Heudelot 253! **Fr. Sud.:** Koulikoro (Apr.) Chev. 3197! Ségou (Oct.) Roberty 3027! **Port. G.:** Pirada, Gabú (fl. & fr. Nov.) Esp. Santo 3160!

29. *Crotalaria perrottetii* DC. — F.T.A. 2: 19; Bak. f. 305, t. 11 B. *APD acc*

Chrysocalyx gracilis Guill. & Perr. (1831) — F.T.A. 2: 20; Bak. f. l.c. 306.

Crotalaria gambica Taub. (1896).

Herb 1–2 ft. high, with more or less straggling branches, brownish-silky; flowers yellow turning red.

Sen.: Roger! Kouma Perrottet! Cayor Heudelot 409! M'Bambey (Oct.) Monod 8732 bis! **Gam.:** Brown-Lester 28! 53! 65! Kudang (fl. & fr. Jan.) Dalz. 8023! Cape St. Mary (Jan.) Dalz. 8024!

30. *Crotalaria macrocalyx* Benth. — F.T.A. 2: 20; Bak. f. l.c. 306. *APD acc*

Crotalaria perrottetii of F.W.T.A., ed. 1, 1: 397, partly (Lely 598), not of DC.

Erect or procumbent herb, 1–2 ft. high, with woody taproot; flowers yellow to orange, crowded at the ends of branches, standard purple-veined; **in savannah**.

Sen.: Heudelot 209! **Gam.:** Saunders 116! **G. C.:** Bosomoa F.R. (fl. & fr. Dec.) Vigne FH 3195! Kintampo (Nov.) Andoh FH 5418! Ejura Scarp (Dec.) Morton GC 9746! Banda, Wenchi (fl. & fr. Dec.) Apr.) Maitland 1644!

Also in **French Cameroons**, **A.-E. Sudan** and **Belgian Congo**.

34. *Crotalaria barkae* Schweinf. in Bull. Herb. Boiss. 4, app. 2: 228 (1896); Bak. f. l.c. 390. *APD acc*

Crotalaria quartiniana of F.T.A. 2: 42; of F.W.T.A., 1, 1: 397.

A herb with prostrate branches, 1–2 ft. long, thinly hairy; flowers yellow; **in dry rocky places**.

G. C.: Zuarungu (fr. Nov.) Akpabla 401! **N. Nig.:** Katagum (fr. Sept.) Dalz. 13! Sokoto (Sept.) Dalz. 342! Ako (Oct.) Lely 651! Fika, Bornu (Oct.) Daggash FHI 24897! **Br. Cam.:** Gwoza, Dikwa Div. (fl. & fr. Dec.) McClintock 64!

Also in **Cape Verde Islands**, **Belgian Congo**, **Kenya**, **Abyssinia** and **Eritrea**.

35. *Crotalaria incana* Linn. — F.T.A. 2: 31; Bak. f. l.c. 357; Wilczek l.c. 148. *APD acc*

A herb, 2–4 ft. high, with coarsely hairy stems and fruits; flowers yellow, veined purple.

S. L.: Don.! Russell (fl. & fr. May) Deighton 2667! **Br. Cam.:** Lakom, Bamenda (fl. & fr. June) Maitland 1458! Kumbo, Bamenda (Nov.) Egbuta FHI 3765!

In many parts of tropical Africa and in the tropics generally.

36. *Crotalaria recta* Steud. ex A. Rich. — F.T.A. 2: 40; Bak. f. l.c. 352; Wilczek l.c. 153, t. 9. *APD acc*

Crotalaria crepitans *Hutch.* (1921) — F.W.T.A., ed. 1, 1: 398; Bak. f. Leg. Trop. Afr. 1: 46.

Erect herb or undershrub, 3–6 ft. high, with ribbed stems, shortly brownish-pubescent; flowers yellow, strongly brown-purple veined.

N. Nig.: Hepham to Ropp, 4,600 ft. (July) Lely 378! Bauchi Plateau (Aug.) Lely P. 616! **Br. Cam.:** Bamenda Station (May) Maitland 1427! Bali-Ngemba, Bamenda (June) Ujor FHI 30440!

Extends throughout tropical Africa and also into Transvaal.

37. **Crotalaria longifoliolata** *De Wild.* in Ann. Mus. Congo Beige, sér. 4, 1: 187, t. 45, figs. 1–10 (1903); Bak. f. l.c. 854; Wilczek l.c. 127.

APD: *Synonym of Crotalaria glaucifolia Baker*

Erect herb, 1–2 ft. high; flowers with standard purple outside, grey inside.

Br. Cam.: Bum-Nchan, Bamenda, 4,500 ft. (June) Maitland 1608!

Also in **French Cameroons**, **Belgian Congo** and **Tanganyika**.

38. **Crotalaria glaucoides** *Bak. f.* l.c. 393 (1914). *APD acc*

Crotalaria paludosa *A. Chev.* in Bull. Mus. Hist. Nat., sér. 2, 5: 230 (1933), excl. Chev. 34315.

A slender annual with the appearance of *C. glauca* but with trifoliolate leaves and very sparsely pubescent.

Sen.: Cape Manuel Talmy 12. Tivaouane (fl. & fr. Dec.) Chev. 3208! Toubacouta (fl. & fr. Oct.) Monod 8689! **Port. G.:** Pussubé, Bissau (fl. & fr. Nov.) Esp. Santo 1403! Antula, Bissau (fl. & fr. Dec.) Esp. Santo 1584!

39. **Crotalaria senegalensis** (*Pers.*) *Bacle ex DC.* — F.T.A. 2: 31; Bak. f. l.c. 337. *APD acc*

Crotalaria uncinella var. **senegalensis** *Pers.* Syn. 2: 285 (1807).

Crotalaria maxillaris of Bak. f. l.c., partly, not of Klotsch.

Suberect or prostrate, half-woody, 1–2 ft. high, shortly pale-pubescent; flowers yellow turning orange; in dry fields.

Sen.: Roger! Heudelot 113! Almadies (fr. Jan.) Monod 10988! Dakar (fl. & fr. Oct.) Giovanetti! **N. Nig.:** Katagum (fl. & fr. Oct.) Dalz. 12! Sokoto (Mar., Sept.) Dalz. 340! Moiser! Kano to Katsina (fl. & fr. Dec.) Meikle 812! **Br. Cam.:** Gulumba, Dikwa Div. (fl. & fr. Dec.) McClintock 41!

Also in **Belgian Congo**, **A.-E. Sudan** and **Abyssinia**.

40. **Crotalaria comosa** *Bak.* in F.T.A. 2: 34 (1871); Bak. f. l.c. 380; Wilczek l.c. 268. *APD acc*

Crotalaria astragalina of F.W.T.A., ed. 1, 1: 368, partly (Lely 617).

A stout erect herb, 5–6 ft. high; flowers yellow and dark purple; in savannah and cultivated land.

Port. G.: Esp. Santo 1418! **S. L.:** Musaia (fr. Dec.) Deighton 4515! **G. C.:** Savelugu, Tamale (fl. & fr. Dec.) Morton GC 9897! Banda, Wenchi (fl. & fr. Dec.) Morton GC 25132! 25193! Also in **French Cameroons** and **Belgian Congo**.

50. **Crotalaria** sp. **B.** *APD acc*

A shrub up to 8 ft. high.

Br. Cam.: Victoria (Dec.) Maitland 834! Cam. Mt. (Dec.) Maitland 839!

51. *Crotalaria cleomifolia* Welw. ex Bak. in F.T.A. 2: 43 (1871); Bak. f. l.c. 350; Wilczek l.c. 158. *APD acc*

A shrubby plant, 3–6 ft. or more high; flowers yellow; **beside streams.**

S. L.: Kamakwie (fl. & fr. Feb.) Deighton 4047! 4281! Musaia (Dec.) Deighton 4542! Kamiendo to Saiama (Dec.) Deighton 5285! **Togo:** fide Wilczek l.c. **N. Nig.:** Bauchi Plateau (Sept.) Lely P. 735! Batten-Poole 219!

Also in **French Cameroons, Belgian Congo, Uganda, Kenya, Angola, Rhodesia, Nyasaland** and **Mozambique.**

***Crotalaria alata* Buch.-Ham. ex Roxb.**

An Indian species with a winged stem has been introduced into Gold Coast.

***Crotalaria juncea* Linn.**

Has been introduced into Senegal, Gold Coast and S. Nigeria

***Crotalaria spectabilis* Roth**

Crotalaria sericea Retz., not of Burm. f.

Has been introduced into S. Nigeria

***Crotalaria zanzibarica* Benth.**

Crotalaria usaramoensis Bak. f.

This E. African species has been introduced into Senegal at Hann.

30. LUPINUS

Linn. — F.T.A. 2: 44.

- 1** Annual; stems silky-villous; leaves digitately 5–7-foliolate; leaflets sessile, oblanceolate, 2.5–3.5 cm. long, up to 1 cm. broad, silky-pilose beneath; flowers in lax racemes; calyx campanulate, nearly 1 cm. long, 2-lobed to nearly the middle, the upper lobe entire or emarginate, the lower slightly 3-toothed; stamens united in a tube; fruit compressed, dehiscent, silky-pilose, septate between the seeds *tassilicus*

***Lupinus tassilicus* Maire** in Mém. Soc. Hist. Nat. Afr. Nord. 3: 266 (1933); A. Chev. & Trochain in Rev. Bot. Appl. 17: 92, t. 1 (1937). *APD acc*

(?) **L. termis** of F.T.A. 2: 44, partly; of Bak. f. Leg. Trop. Afr. 1: 60, partly; of F.W.T.A., ed. 1, 1: 399.

Erect annual 12–18 in. high; flowers bluish.

Sen.: Leprieur. Perrottet 243! Diorbivol to Oré Fonde Trochain 2927. Podor Berhaut 944.

Also in **Central Sahara.**

A. Chev. & Trochain l.c. 97 consider *L. tassilicus* to be the only species reaching our area, but they do not indicate whether this is *L. termis* of F.W.T.A., ed. 1. I have insufficient material at my disposal to make a decision.

31. ADENOCARPUS

DC. — F.T.A. 2: 47. *APD acc*

- 1** Branches rigid, densely silky-pilose; leaves often fasciculate, digitately 3-foliolate; leaflets oblong-lanceolate, acute, about 5–8 mm. long; flowers in dense sessile terminal heads; calyx pubescent, the upper two teeth lanceolate, acuminate, the lower 3-dentate; corolla about twice as long as the calyx; fruits about 2–2.5 cm. long, 5–6-seeded, viscous-glandular *mannii*

***Adenocarpus mannii* (Hook f.) Hook f.** in J. Linn. Soc. 7: 189 (1864); F.T.A. 2: 47; Bak. f. Leg. Trop. Afr. 1: 69. *APD acc*

Cytisus mannii Hook. f. (1862).

A shrub up to 6 ft. or more high, with yellow flowers and shortly bristly fruits.

Br. Cam.: Cam. Mt., 8,000–12,000 ft. (Jan.) Mann 1308! 2180! Hutch. & Metcalfe 63! Dalz. 8316! Dunlap 209! Bamenda Nkwe (Sept.) Ujor FHI 30218! L. Bambulue (fr. Jan.) Keay & Lightbody FHI 28378! **F. Po:** Mildbr. 7174. Clarence Peak, 9,000 ft. Mann 594!

Also in French Cameroons and the mountains of eastern Africa from A.-E. **Sudan** to Nyasaland.

32. LOTUS

Linn. — F.T.A. 2: 61; Brand in Engl. Bot. Jahrb. 25: 166 (1898).

- 1 Style dentate; inflorescence 3–6-flowered; fruits about 2.5 cm. long, glabrous; peduncle longer than the leaves; leaves petiolate: **2**
Style not dentate: **3**
- 2 Flowers purple, 13 mm. long; bracts 1–3, longer than calyx; branches, etc, subglabrous and subglaucous; leaflets linear-oblongate, acute at apex [1. jacobaeus](#)
Flowers yellow, 10–11 mm. long; bracts 3, shorter than calyx; branches etc. pilose or tomentose; leaflets variable, subacute to obtuse at apex [2. arenarius](#)
- 3 Flowers in terminal heads of 5–7, corolla about 10 mm. long; calyx 5-fid, teeth about half as long as corolla, shortly brown-pubescent; bracts 3, amongst the flowers; peduncles 3–7 cm. long; fruits 1.5–2.5 cm. long, glabrous; leaflets narrowly oblanceolate, acute at apex, appressed-pubescent, especially along midrib and margins beneath, terminal leaflet 9–11 mm. long, 2 mm. broad [3. discolor](#)
Flowers 1–3 in axil of leaves, corolla about 7 mm. long; calyx 5-fid, teeth almost as long as corolla, pubescent; flowers subtended by a single leafy bract; peduncles 1–4 cm. long; fruits 2–3 cm. long, glabrous; leaflets obovate, shortly pubescent to long-pilose beneath, variable in size, 5–20 mm. long [4. arabicus](#)

1. *Lotus jacobaeus* *Linn.* Sp. Pl. 2: 775 (1753); Brand l.c. 203; Bak. f. Leg. Trop. Afr. 1: 86. *APD acc*

Herbaceous, woody at base, with purple flowers.

Gam.: Mungo Park!

Also in **Cape Verde Islands**.

2. *Lotus arenarius* *Brot.* Fl. Lusit. 2: 120 (1804); Brand l.c. 198. *APD acc*

A much-branched perennial herb with a woody stock, about 6 in. high; flowers yellow.

Sen.: Irvine 3250!

Also in **Spain**, **N. Africa** and **Canary Islands**.

3. *Lotus discolor* *E. Mey.* Comm. Pl. Afr. Austr. 92 (1835); Brand l.c. 213; Bak. f. l.c. 88; Brenan in Mem. N.Y. Bot. Gard. 8: 249; Boutique in Fl. Congo Belge 4: 302, fig. 20, A–B. *APD acc*

APD: *Synonym of Lotus mlanjeanus J. B. Gillett*

APD: *Synonym of Lotus goetzei Harms*

An ascending herb with wiry branches from a woody stock; flowers yellow.

Br. Cam.: Bamenda Johnstone 205/31! L. Bambili, Bafut-Ngemba F.R. (Aug.) Ujor FHI 29973!

Also in **French Cameroons**, **Belgian Congo**, **Abyssinia**, **E. Africa**, **Nyasaland**, **S. Rhodesia**, **Mozambique** and in **S. Africa**.

4. *Lotus arabicus* *Linn.* — F.T.A. 2: 62; Brand l.c. 219; Bak. f. l.c. 90. *APD acc*

Lotus mossamedensis Welw. ex Bak. (1871).

A procumbent annual, woody at base, variable in all its parts; branches 1 ft. or more long; flowers pink or whitish.

Sen.: Roger! Heudelot! Perrottet 199! **Gam.:** Kantora (fl. & fr. Jan) Frith 164! **Fr. Sud.:** Dogo (fr. May) Davey 105! **N. Nig.:** Katagum Dalz. 46!

Extends to [Egypt](#) and Baluchistan, [Tanganyika](#), Mozambique and [Angola](#)

33. TRIFOLIUM

Linn. — F.T.A. 2: 53.

- | | | |
|---|--|--|
| 1 | Petiole adnate to stipules almost throughout its length:..... | 2 |
| | Petiole, at any rate in lower leaves, free from the stipules for the greater part of its length. | 3 |
| 2 | Calyx-nerves 15–20;; inflorescence more than 1 cm. broad, usually broader than long, leaflets narrowly oblanceolate, more than 4 times as long as broad. | 1. <i>simense</i> |
| | Calyx-nerves 10–12; inflorescence not more than 1 cm. broad, usually longer than broad; leaflets broadly oblanceolate, less than 4 times as long as broad | 2. <i>usambarensis</i> |
| 3 | Standard 5–7 mm. long; ovules 4–5; leaflets 1.5–3 cm. long, not emarginate | 3. <i>rueppellianum</i> var. <i>preussii</i> |
| | Standard 3–5 mm. long; ovules 2; leaflets less than 1.5 cm. long, emarginate | 4. <i>baccarinii</i> |

1. **Trifolium simense** *Fres.* — F.T.A. 2: 57; Gillett in Kew Bull. 1952: 375, figs. 2, 1–7; 3; Fl. Congo Belge 4: 293; Jac.-Fél. in Agronom Trop. 8: 288, t. 1 C. *APD acc*

Straggling perennial herb up to 11/2 ft. high, with purple flowers; [in mountain grassland](#).

Br. Cam.: Cam. Mt., 7,000–9,000 ft. (Nov.–Feb.) Johnston 4! Mann 2018! Mildbr. 10862! Maitland 915! 1006! 1210! Migeod 168! L. Oku, Bamenda, 7,700 ft. (Jan.) Keay FHI 28466! F. Po.: 8,500 ft. (Dec.) Mann 602! Mildbr. 7170.

Also in the mountains of French Cameroons, Abyssinia and eastern Africa.

2. **Trifolium usambarensis** *Taub.* in Engl. Pflanzenw Ost. Afr. C. 208 (1895); Gillett in Kew Bull 1952: 370, fig. 1, 13–15; Fl. Congo Belge 4: 292; Jac.-Fél. l.c., t. 1 B. *APD acc*

Straggling herb up to 11/2 ft. high, with purple (occasionally white) flowers; [in mountain grassland and forest margins](#).

Br. Cam.: Bamenda, 5,000–7,700 ft (Jan., Feb., June) Migeod 452! Keay FHI 28351! 28436! 28486a! 28506! Maitland 139! **F. Po:** (Mar.) Guinea 2907!

Also in the mountains of French Cameroons, S. Abyssinia and eastern Africa

3. **Trifolium rueppellianum** var. **preussii** (*Taub. ex Bak. f.*) *Gillett* in Kew Bull. 1952: 389, fig. 4, 2–6, Fl. Congo Belge 4: 296.

APD: *Synonym of Trifolium rueppellianum Fresen. var. rueppellianum*

Trifolium preussii *Taub. ex Bak. f.* Leg. Trop. Afr. 1: 82 (1926) — F.T.A. 2: 58, 59.

A weak herb up to 3 ft. high, with bluish purple flowers.

Br. Cam.: Cam. Mt., 7,000–8,500 ft. (Nov.) Preuss 972! Migeod 203! Jakiri, 5,000–7,000 ft. (fl. & fr. Nov.) McCulloch 1! **F. Po:** 9,000 ft. (Dec.) Mann 603!

The typical form of the species is found in the mountains of Abyssinia and eastern Africa in the latter area var. *preussii* also occurs together with numerous intermediates. The identification of var *preussii* with *T. goetzenii* *Taub. ex Engl.* seems to be incorrect.

4. **Trifolium baccarinii** *Chiov.* Ann. Bot. Rom. 9: 57 (1911); Gillett in Kew Bull. 1952: 391, fig. 4, 1; Fl. Congo Belge 4: 298; Jac.-Fél. l.c. 288, t. 1 A. *APD acc*

A herb up to 8 in. high, with bluish purple (occasionally white) flowers.

Br. Cam.: Bango, Bamenda, in moist grass by roadside, 6,000 ft. (Jan.) Keay FHI 28449! Jakiri, 5,000–7,000 ft. (Nov.) McCulloch 3!

Also in the mountains of French Cameroons, Abyssinia and eastern Africa

34. RHYNCHOSIA

Lour. — F.T.A. 2: 216.

15

- 1 Leaves 3-foliolate: 2
 Leaves 1-foliolate; flowers solitary or geminate, axillary, calyx-teeth lanceolate-acuminate, nearly as long as petals [16. chevalieri](#)
- 2 Calyx conspicuous, persistent and often accrescent, basal lobe 1 cm or more long, linear-lanceolate, almost as long or longer than the corolla: 3
 Calyx small, caducous, not accrescent, basal lobe generally less than 1 cm. long, much shorter than corolla (if nearly as long then lobes subulate lanceolate) Calyx-lobes rounded or very obtuse at apex; leaflets rhomboid, acute, 5–8 cm long, up to 6 cm broad, pubescent beneath; racemes elongate, softly tomentellous; seeds blue black. [10. buettneri](#)
- 3 Calyx villous or pubescent, not glandular viscid; seeds blue or blue-black 4
- 4 Lateral calyx-lobes very small, about 1/4 as long as the others, upper calyx lobes connate, much longer than the vexillum; leaves more or less glabrous above, closely felted beneath. [1. preussii](#)
 Lateral calyx-lobes nearly as long as the others: 5
- 5 Leaflets pubescent above and beneath; calyx narrowly lanceolate acuminate, as long as, or a little shorter than the corolla. [2. congensis](#)
 Leaflets densely and softly tomentose beneath: 6
 Leaflets glabrous or nearly so: 8
- 6 Calyx lobes densely grey pubescent, oblanceolate, acute or subobtuse, usually longer than the cream coloured corolla. [3. albiflora](#)
 Calyx lobes densely brown pubescent, acuminate, slightly shorter than the red corolla. [4. brunnea](#)
- 7 Calyx lobes acute or subobtuse, densely grey-pubescent. [5. pycnostachya](#)
 Calyx lobes acuminate, thinly and minutely puberulous. [6. manni](#)
- 8 Calyx densely glandular-viscid; seeds dark brown: 9
- 9 Flowers in elongate, branched or unbranched racemes; terminal leaflet rhomboid or ovate, acuminate, usually 4–6 cm. long, 2–5 cm. broad, obscurely veined beneath: 10
 Flowers in cylindrical densely congested racemes; terminal leaflet depressed-rhomboid, obtuse, 5–8 cm. long, 5–9 cm. broad, strongly reticulate-veined beneath, plant trailing. [9 floribunda](#)
- 10 Racemes lax, branched; plant twining or subscandent [7. resinosa](#)
 Racemes rigid, unbranched; plant erect or suberect [8. orthobotrya](#)
- 11 Calyx lobes acute to acutely acuminate; seeds brown: 12
- 12 Flowers in dense, short, subsessile racemes, fruits small, 1–1.5 cm. long, pilose, with weak, spreading hairs. [11. densiflora](#)
 Flowers in slender, pedunculate racemes: 13
- 13 Upper portions of stems, inflorescences and fruits conspicuously glandular viscid. 14
 Stems, inflorescences and fruits glabrous or pubescent, but not viscid:
- 14 Racemes long and lax, fruits with long, scattered, golden, viscid hairs; stipules large, persistent; plant trailing or climbing. [12. violacea](#)
 Racemes short and rather rigid; fruits with dense, short, pale, viscid indumentum, stipules small, caducous; plant suberect. [13. nyasica](#)
- 15 Flowers conspicuous, 1–1.5 cm long; fruits large, inflated, 2–3 cm. long, leaflets obtusely rhomboid, 2.5–7 cm. or more long, 2–5 cm. broad, subglabrous or shortly puberulous. [14. sublobata](#)
 Flowers inconspicuous, less than 1 cm. long; fruits small, not inflated, 1–2 cm. long; leaflets 1.5–4 cm. long, 1.5–3 cm. broad: 16
- 16 Flowers minute, about 5 mm long; petals scarcely exceeding calyx: 17
 Flowers larger, up to 1 cm. long; leaves subrotund or bluntly rhomboid, shortly and sparsely pubescent above and beneath [15b. minima var prostrata](#)
- 17 Leaflets acutely rhomboid or subrotund, glabrous or pubescent on nerves beneath, plant usually climbing. [15. minima var. minima](#)
 Leaflets subrotund, densely silvery-pubescent above and beneath; fruits silvery-pubescent; plant usually trailing

15a. minima var. memnonia

1. **Rhynchosia preussii** (*Hanns*) *Taub. ex Harms* in Engl. Pflanzenw. Afr. 3, 1 671 (1915) Bak. f. Leg. Trop. Afr. 2 468. *APD acc*

Cylista preussii *Harms* in Engl. Bot. Jahrb. 26: 303 (1899)

Rhynchosia cyanosperma of F.W.T.A. ed 1, 1: 401, partly (Barter 1615).

Twiner in forest.

Br. Cam.: Barombi (May) Preuss 190. **F. Po:** (June) Barter 1615!

Also in **French Cameroons** and **Gabon**.

2. **Rhynchosia congensis** *Bak.* in F.T.A. 2: 217 (1871) *APD acc*

Rhynchosia cyanosperma *Benth. ex Bak.* in F.W.T.A., ed 1, 1: 401, partly.

A stout twiner with elongate racemes of cream coloured flowers, grey velvety fruits and conspicuous blue seeds.

Port. G.: Prabis, Bissau (fr. Mar.) Esp. Santo. 1848! **N. Nig.:** Oke Opin, Ilorin (Dec) Alayi FHI 19267! Gwari Hill, Minna (fl. & fr. Dec.) Meikle 704! **S. Nig.:** Lagos Millen 116!

Also in **French Cameroons**, **Belgian Congo**, **Uganda** and **Angola**.

3. **Rhynchosia albiflora** (*Sims*) *Alston* in Fl. Ceyl. 6, Suppl. 85 (1931), not of Berhaut (1954)

APD: *Synonym of Rhynchosia albae-pauli Berhaut*

APD: *Synonym of Rhynchosia hirta (Andrews) Meikle & Verdc.*

Cylista albiflora *Sims* in Bot. Mag. t. 1859 (1816).

Rhynchosia cyanosperma *Benth. ex Bak.* in F.T.A. 2: 218 (1871), F.W.T.A., ed. 1, 1: 401, partly Bak. f. l.c. 2: 469.

A robust twiner with pale yellow, purple streaked petals, and soft tomentose leaves.

N. Nig.: Naraguta (Nov.) Lely 689! Bauchi Plateau Batten Poole 232!

Widespread in tropical E. Africa, Mascarene Islands India and Ceylon.

4. **Rhynchosia brunnea** *Bak. f.* Leg. Trop. Afr. 2: 468 (1929). *APD acc*

Robust twiner with red flowers and dense brownish indumentum.

S. L.: Wilford! **G. C.:** Tano Offin F.R. (Jan.) Vigne FH 1007!

5. **Rhynchosia pycnostachya** (*DC*) *Meikle* in Kew Bull 1954: 274. *APD acc*

Cylista? pycnostachya *DC.* Prod. 2: 410 (1825).

Rhynchosia calycina *Guill. & Perr.* Fl. Seneg. 1: 214 (1832); F.T.A. 2: 217; Chev. Bot. 205; Bak. f. l.c. 467; F.W.T.A., ed. 1, 1: 401.

Robust twiner with glossy green leaves and long racemes of cream-coloured flowers petals persistent, rusty red in fruit, seeds blue.

Sen.: Cape Verde Perrottet. Zigumchor Chev. 3406 **Gam.:** Ingram! Abuko (fr. Jan.) Dalz. 8028! **Fr. Sud.:** Medinani Chev. 506. **Fr. G.:** Farmar 205! Conakry, Kouria & Fouta Djallon fide Chev. l.c. **S. L.:** T. Vogel 66! Barter! Njala (Dec.–Jan.) Dalz. 8069! Deighton 1855! Kitchom, Samu (fr. Dec.) Sc. Elliot 4318! Port Loko (Dec.) Thomas 6573! Irine 168! **S. Nig.:** Ominla (fr. Apr.) Symington FHI 3385! Agulu (Nov) Keay FHI 25591! Eket Talbot! Oban Talbot 1748! **Br. Cam.:** Amba Bay (Jan.) Mann 730! **F. Po:** Mann 88a! (See Appendix p. 259.)

6. **Rhynchosia mannii** *Bak.* in F.T.A. 2: 217 (1871), Bak. f. l.c. 2: 468.

Slender climber with glossy leaves, petals cream with red markings; seeds dark blue; in forest clearings.

S. Nig.: Akure F.R. (fr. Nov.) Latilo FHI 15281! Okomu F.R. (Jan) Brenan 8785! Usonigbe F.R. (Nov.) Meikle & Keay 579! Oban Talbot 1206. **Br. Cam.:** Buea (fr. Jan.) Maitland 195! **F. Po:** (fr. Dec.) Mann 88!

Also in **French Cameroons**, **Ubangi Shari**, **Gabon**, **Belgian Congo**, **Uganda** and **Angola**

7. **Rhynchosia resinosa** (*Hochst. ex. A Rich*) *Bak.* in F.T.A. 2 218 (1871) *Bak. f. l.c. 480. APD acc*

APD: Synonym of Rhynchosia procurrens subsp. latisepala (Hauman) Verdc.

Fagelia resinosa *Hochst. ex A. Rich.* (1847).

Subscandent viscid perennial with yellow flowers

Fr. G.: Timbo (Dec.) Chev. 14631! **N. Nig.:** Bauchi Plateau (Jan.) Lely P. 115! Batten Poole 218! Jos (Nov.) Keay FHI 21436!

Widespread in east central and south tropical Africa

8. **Rhynchosia orthobotrya** *Harms* in Engl. Bot. Jahrb. 54 390 (1917), *Bak f. l.c. 478. APD acc*

Rhynchosia gorsii *Berhaut* in Mém. Soc. Bot. Fr. 1953–54: 6 (1954).

Erect or suberect perennial with erect unbranched racemes of pale yellow flowers fruits glandular-pilose.

Sen.: Niokola-Koba (fr. Apr.) Berhaut 1533!

Also in **A.–E. Sudan**, **eastern Africa** and **Belgian Congo**

9. **Rhynchosia floribunda** *Bak.* in Kew Bull 1897: 262; *Bak. f. l.c. 479.*

APD: Synonym of Rhynchosia procurrens subsp. floribunda (Baker) Verdc.

APD: Synonym of Rhynchosia procurrens subsp. latisepala (Hauman) Verdc.

Trailing plant on open ground with leaves pale green above and greyish beneath, flowers yellow, tinged brown, calyx viscid.

G. C.: Wenchì (Dec) Morton GC 25151! **N. Nig.:** Abuja to Kaduna (Dec) Meikle 741! Sho, Plateau Prov (Nov) Keay FHI 21446! **Br. Cam.:** Mai Idoanu, Gashaka Dist (Jan) Latilo & Daramola FHI 28989!

Also in **Belgian Congo**, **Uganda**, **Kenya**, **Tanganyika**, **Nyasaland**, **N. Rhodesia** and **S.**

10. **Rhynchosia buettneri** *Harms* in Engl Bot Jahrb 30: 90 (1901); *Bak. f. l.c. 469. APD acc*

Scrambling subshrub, stems slightly viscid, leaves dark green above, pale and softly grey felted beneath, flowers yellow-green with dark purple lines, fruits grey felted, seeds dark blue

Fr. G.: Kouroussa (Oct.) Pobégun 961! **G. C.:** Jaketi (Oct.) Morton A. 89! **Togo:** Bismarckburg (Oct.) Buttner 149 **S. Nig.:** Lagos MacGregor 137! Ibadan (fl. & fr. Dec.) Meikle & Keay 858! Wumuye (fr. Jan.) Thomas 2162!

Also in **French Cameroons** and **Upper Ubangi** (See Appendix, p 259)

11. **Rhynchosia densiflora** (*Roth*) *DC.* Prod. 2: 386 (1825); *Bak. f. l.c. 2: 470. APD acc*

Glycine densiflora *Roth* (1821).

Rhynchosia debilis *G. Don* (1832) — F.T.A. 2: 222; F.W.T.A., ed. 1, 1: 401.

Slender twiner, by forest margins, leaves dull green, petals greenish-yellow striped red

Port. G.: Pobresa, Cubisseque (fr. Feb.) Esp. Santo 2375! S. L: Yonibana (Nov.) Thomas 4748! **G. C.:** Kumasi Cummins 240! Morton GC 9685! Ejura Scarp (Dec.) Morton GC 9800! Dedeman (fr. Dec.) Irvine 2102! **S. Nig.:** Lagos (fl. & fr. Mar) Millen 90! Ibadan (fl. & fr. Nov.) Meikle 660! Igbara Oke, Ondo Prov (fl. & fr. Nov) Meikle & Keay 510! Ogwashi (Dec.) Thomas 2056! Oban Talbot 1311! **Br. Cam.:** Victoria (fl. Dec., fr. Feb.) Mann 1249! Maitland 428!

Widespread in tropical Africa, in **S. Tomé** and also in **India**.

12. **Rhynchosia violacea** (*Hiern*) *K. Schum.* in Just. Bot. Jahr. 27, 1: 496 (1901), *Bak. f. l.c. 47.*

APD: Synonym of Rhynchosia viscosa subsp. violacea (Hiern) Verdc.

Dolicholus violaceus Hiern in Cat. Welw. Afr. Pl. 1: 269 (1896).

Rhynchosia viscosa of F.T.A. 2: 222, partly; of F.W.T.A., ed. 1, 1: 401; not of DC.

Perennial herb with straggling shoots, viscid; petals yellow with purple-brown or yellow markings, pods viscid.

Port. G.: Bafata (Oct.) Esp. Santo 2313! **S. L.:** Musaia (fl. & fr. Dec) Deighton 4417! **Togo:** Vane (Nov.) Morton GC 9375! **N. Nig.:** Lokoja (Oct.) Parsons 97! **S. Nig.:** Lagos (fr. Mar.) Millen 157! Ibadan (fl. & fr. Nov.–Jan.) Meikle 663! 970! Kishi to Igoboho (Feb.) Keay FHI 22511!

Also in **Belgian Congo**, **Uganda** and **Angola**.

13. Rhynchosia nyasica Bak. in Kew Bull 1897: 263; Bak. f. l.c. 2: 478. *APD acc*

Rhynchosia glutinosa Harms (1899) — Chev. Bot. 206.

Rhynchosia kerstingii Harms (1913).

Suberect, with lax viscid-hairy branches, flowers yellow with purple streaks.

Fr. Sud.: Balato & Koundian fide Chev. l.c. **Fr. G.:** Beyla (Mar.) Chev. 20899! **S. L.:** Falaba (Mar.) Sc. Elliot 5173! **Togo:** Salaga Krause! Sokode-Basari Kersting 482. **N. Nig.:** Kontagora (fl. & fr. Jan.) Dalz. 45! Meikle 1066! Alagbede F.R. (Feb.) Ejiofor FHI 19809! Ilorin-Jebba road (fr. Mar.) Meikle 1234! Vom Dent Young 68! Bauchi Plateau (Jan.) Lely P. 58!

Also in **French Cameroons**, **Belgian Congo**, **A.–E. Sudan**, **N. Rhodesia**, **Angola** and **Nyasaland**.

14. Rhynchosia sublobata (Schum. & Thonn.) Meikle in Kew Bull. 1951: 176, fig. 3. *APD acc*

Glycine sublobata Schum. & Thonn. (1827).

Rhynchosia caribaea of various authors, including: — F.T.A. 2: 220, partly; Chev. Bot. 205, F.W.T.A., ed. 1, 1: 402, partly; Bak. f. l.c. 2: 474, partly; not of DC.

Rhynchosia macinaca A. Chev. Bot. 206, name only.

Trailing or twining herb with perennial woody rootstock; flowers yellow, lined deep red.

Sen.: Heudelot 401! Tambacounda (fl. & fr. Sept) Berhaut 1710! **Fr. Sud.:** Macina (Sept.) Chev. 24851! **G. C.:** Thonning! Accra Plains (fl. & fr. Oct) Dalz. 9! Irvine 820! Akuse (Oct.) Vigne FH 4049! **Togo:** Yendi (Dec.) Adams & Akpabla GC 4049! Amedzofe (May) Morton GC 7732! Kete Krachi (fl. & fr. Apr.) Morton GC 9099! **Dah.:** fide Chev. l.c. **N. Nig.:** Kontagora (fl. Dec. fl. & fr. Jan.) Dalz. 44! Meikle 1033! Abinsi (Apr.) Dalz. 612! **S. Nig.:** Ado Rowland!

Widespread throughout the drier parts of tropical Africa.

15. Rhynchosia minima (Linn.) DC. var. minima — Prod. 2: 385 (1825); F.T.A. 2: 219, partly, F.W.T.A., ed. 1, 1: 402, partly, Bak. f. l.c. 471. *APD acc*

Dolichos minimus Linn. (1753).

Slender twiner, in **open savannah**, flowers small, brownish yellow.

Sen.: Roger! Heudelot 532! **S. L.:** Musaia (Mar.) Deighton 4604! **G. C.:** Irvine 1611! Accra Plains (July) Brown 335! Irvine 3029! Wa (Dec.) Adams GC 4473! **N. Nig.:** Kano (fr. Dec.) Meikle 808! Katagum (fl. & fr. Sept.) Dalz. 38!

Widespread through the drier parts of tropical Africa, also in W. Indies, tropical America and Asia.

15a. Rhynchosia minima var. memnonia (Del.) Cooke Fl. Bombay, 1: 389 (1903).

APD: Synonym of Rhynchosia minima (L.) DC.

Dolichos memnonia Del. Fl. Egypt 254, t. 38, 3 (1813).

Rhynchosia memnonia (Del.) DC. — F.T.A. 2: 220; Chev Bot 206, F.W.T.A., ed 1, 1: 401; Bak. f. l.c. 473; Berhaut Fl. Sen. 18.

Greyish pubescent trailing herb, with small yellow flowers.

Sen.: Berhaut 705. **Fr. Sud.:** Tile (Aug.) Chev. 3399! **N. Nig.:** Katagum (fl. & fr. July) Dalz. 35! Kukawa (fl. & fr. Jan) E. Vogel 8!

Extends to **Egypt**, **Arabia**, **A.–E. Sudan** and **Somaliland**

15b. Rhynchosia minima var. prostrata (Harv.) Meikle in Kew Bull. 1954: 275. *APD acc*

Rhynchosia memnonia var. *prostrata* Harv. in Fl. Cap. 2: 253 (1862). *R. minima* of F.W.T.A., ed 1, 1: 402, partly

Creeping, or rarely climbing, perennial herb with yellow, brown or purple tinged petals.

G. C.: Accra Brown 388! Akuse A. S. Thomas 23! N. Nig.: Nupe Barter 1590! Jebba (Dec.) Meikle 681! Funtua (fl. & fr. Feb.) Meikle 1226! Lokoja Barter! Mamu (Mar.) Lely 163! S. Nig.: Ogbomosho Hb. Calcut. 15!

Throughout the drier parts of tropical and S. Africa.

16. *Rhynchosia chevalieri* Harms in Engl. Bot. Jahrb. 40: 39 (1907), Chev Bot 206, Bak f. l.c. 2: 471.

Eriosema chevalieri (Harms) Hutch & Dalz F.W.T.A., ed 1, 1: 404 (1928), Kew Bull. 1929: 17.

Stems short and erect from a woody rhizome, upper leaves much reduced, bract like, flowers whitish

Fr. Sud.: Koundian (Feb.) Chev. 422!

Imperfectly known species

1. *Rhynchosia albiflora* Berhaut in Mém Soc. Bot. Fr. 1953–54: 6 (1954), not of (Sims) Alston (1931).

A climbing plant with thinly pubescent stems and leaves, and large subglabrous, falcate fruits Near *R. viscosa* (Roth) DC., but type material inadequate and abnormal.

Sen.: Messira (fl. & fr. Nov) Berhaut 1182!

Imperfectly known species

2. *Rhynchosia* sp.

R. minima of F.W.T.A., ed 1, 1: 402, partly.

Slender climber with yellow flowers and small, ovate leaflets, mature fruits wanted.

N. Nig.: Lely 688! Vom Dent Young 69!

Near to *R. usambarensis* Taub. Imperfectly known species

35. ERIOSEMA

(DC) Desv. — F.T.A. 2: 223.

- | | | |
|---|---|---|
| 1 | Leaves 3 foliolate (or rarely 4–5-foliolate):..... | 2 |
| | Leaves 1-foliolate:..... | 13 |
| 2 | Leaves linear, very acute, up to 18 cm. long and 1–3 cm. broad, softly white-tomentose beneath and with scattered black glands; petiole very short; stipules lanceolate, acute, ribbed, about 1 cm. long, caducous; racemes terminal, slender, with numerous reflexed flowers about 8 mm. long; fruit broadly elliptic, 1 cm. long, densely long-pilose | 1. linifolium |
| | Leaves lanceolate or oblong to ovate, not linear: | 3 |
| 3 | Leaves petiolate, petiole nearly as long as lateral leaflets: | 4 |
| | Leaves sessile or very shortly petiolate, petiole much shorter than the lateral leaflets: | 5 |
| 4 | Flowers 6–9 mm. long; racemes (9–) 14–30-flowered and long-pedunculate; fruits elliptic, 1.3–1.5 cm. long, long-pilose; leaflets ovate or ovate-elliptic, 3–9 cm. long, 1.5–2.5 cm. broad, pubescent on the nerves beneath; stipules subulate-lanceolate, up to 10 mm. long | 2. parviflorum subsp. parviflorum |
| | Flowers 12–15 mm. long; racemes 5–15-flowered; fruits elliptic about 1.5 cm. long; leaflets elliptic to ovate, rather small, 1–3 cm. long, 0.5–2 cm. broad; stipules subulate-lanceolate, about 7 mm. long ... | 2a. parviflorum subsp. collinum |
| 5 | Flowers in long spike-like racemes: | 6 |
| | Flowers capitate or subcapitate: | 12 |
| 6 | Leaflets completely covered or nearly completely covered beneath with a close felt of hairs, usually white: | 7 |
| | Leaflets loosely pilose or pubescent beneath:..... | 9 |
| 7 | Leaves digitately 5-foliolate; leaflets oblanceolate, apex rounded, minutely hairy above, about 2 cm. long and 7 mm. wide; stipules ovate-lanceolate, acute, about 3 mm. long; racemes axillary about as long as the leaves; flowers about 1 cm. long; fruits shortly elliptic about 1.4 cm. long, brown-pilose | 3. molle |

- Leaves 3-foliolate:.....8
- 8 Leaflets digitately 3-foliolate, glabrous above, subsessile, oblanceolate, apex rounded, up to 4 cm. long and 1.2 cm. broad; stipules persistent, lanceolate, acute, about 4 mm. long; racemes axillary, with 15–25 flowers; flowers about 1.2 cm. long; fruits shortly elliptic, about 1.4 cm. long, long-pilose[4. andohii](#)
- Leaflets pinnately 3-foliolate, usually shortly hairy above, oblong-lanceolate, acute to emarginate, 4–10 cm. long, up to 3.5 cm. broad; stipules caducous, triangular, acute, about 2 mm. long; racemes axillary, longer than the leaves, many-flowered; flowers up to 1.5 cm. long; fruits broadly elliptic, 1.5–2 cm. long, densely pilose[5. psoraleoides](#)
- 9 Leaflets ciliate or pubescent with long slender hairs:.....10
- Leaflets pubescent with very short hairs:11
- 10 Leaflets oblong, 2.5–6 cm. long, 1–2.5 cm. broad; stipules lanceolate, about 8 mm. long, long-ciliate; racemes about twice as long as the leaves, shortly pubescent; flowers about 1 cm. long; fruits broadly elliptic, about 1.5 cm. long, long-pilose[6. bauchiense](#)
- Leaflets elongate-lanceolate, 5–11 cm. long, up to 1.5 cm. broad, more or less densely pilose with long slender hairs; stipules lanceolate, about 1.5 cm. long, closely nerved; racemes pedunculate, usually as long as or longer than the leaves; flowers about 9 mm. long; fruits densely pilose, 1.5 cm. long[7. shireense](#)
- 11 Racemes long and slender, 10–20 cm. long, flowers laxly arranged about 1 cm. apart on the rhachis; fruits elliptic, 2 cm. long, loosely pilose; leaflets lanceolate, mucronate, yellow-green above when dry, 3.5–7 cm. long, 0.5–2 cm. broad; stipules subulate-lanceolate, erect, about 1 cm. long[8. sparsiflorum](#)
- Racemes dense, 6–13 cm. long, flowers very closely arranged; fruits elliptic, about 1.5 cm. long, long-pilose; leaflets elliptic or oblanceolate, apiculate, acute, dark-green above when dry, 4–10 cm. long, 1.5–3 cm. broad; stipules triangular, usually reflexed, 1–1.5 cm. long[9. montanum](#)
- 12 Leaflets pubescent mainly on the nerves; bracts linear, shorter than the flowers; leaflets lanceolate, very acute or mucronate, up to 12 cm. long and 2 mm. broad; stipules lanceolate-acuminate, up to 1.5 cm. long; calyx-lobes filiform, long-pilose; valves of fruit curling up, glossy inside[10. glomeratum](#)
- Leaflets covered all over the lower surface with a soft white indumentum; bracts broadly lanceolate, longer than the flowers, with long slender tips; leaflets oblanceolate, rounded or broadly emarginate, 2.5–5 cm. long, 1–2.5 cm. broad, subulate on the upper surface; stipules lanceolate, strongly nerved; valves of fruit curling up, pilose outside, glossy inside[11. griseum](#)
- 13 Leaflet linear or linear-lanceolate, more or less narrowed to base:14
- Leaflet broadly cordate at base:.....16
- 14 Leaflet softly tomentose on both surfaces, white beneath, linear-lanceolate, 7–11 cm. long, 1–1.5 cm. broad; stipules lanceolate, acuminate, 1–1.3 cm. long, tomentellous; stem slender and white with oppressed hairs; flowers about 1.3 cm. long, 5–13 on peduncles 6–8 cm. long; calyx-lobes linear-lanceolate; fruits oblong-elliptic, about 1 cm. long, densely pilose[12. monticolum](#)
- Leaflet villous with long slender hairs especially on margin and midrib:15
- 15 Calyx and leaflet not gland-dotted; stipules about 1.5 cm. long; other characters as above[7. shireense](#)
- Calyx and leaflet strongly gland-dotted; leaflet linear, 4–10 cm. long, about 5 mm. broad; stipules ribbed, lanceolate, acuminate, 5–9 mm. long, ciliate; stem slender and long-pilose; flowers 4–5 mm. long, 2–4 on peduncles 2–4 cm. long; fruits elliptic, 1 cm. long, pilose[13. tenue](#)
- 16 Leaflet densely silky beneath17
- Leaflet loosely or very shortly pubescent beneath.....18
- 17 Leaflet ovate or broadly elliptic, mucronate, rounded or subcordate at base, 7–16 cm long, 3–8 cm. broad, with about 10 pairs of lateral nerves; stipules very large, up to 3 cm. long, appressed-pilose; flowers in a short dense cylindrical raceme; fruits very densely villous[14. pulcherrimum](#)
- Leaflet lanceolate, acute, sessile and rather broad at base, 11–16 cm. long, 2.3 cm broad, glabrous above except the midrib, softly whitish-tomentose beneath, obscurely nerved, stipules lanceolate, 1.5–2 cm long, villous, racemes dense, cylindric, about 7 cm. long in flower, up to 15 cm in fruit; flowers small, reflexed; fruits crowded, about 1 cm long, densely silky-villous and glandular[15. afzelii](#)
- 18 Leaflet almost orbicular, (2)–7–10 cm. long and 5–8 cm. broad, mucronate, cordate, nerves prominent above and beneath and ferruginous with short brown hairs; petiole about 1 cm. long; stipules broadly lanceolate, ribbed, long-acuminate, 1–2 cm long; flowers reflexed in axillary racemes; calyx-lobes linear-lanceolate, less than half as long as corolla; fruits oblong-elliptic, densely pilose[16. chrysadenium](#)
- Leaflet broadly lanceolate, subsessile, cordate and amplexicaule:19
- 19 Peduncle 3–5 cm long, raceme 2–3 cm. long, axillary; leaflet acute, pilose, 4–5 cm. long, 1–2 cm. broad, stipules lanceolate, acute, about 1 cm. long[17. schoutedenianum](#)
- Peduncle 1–2 cm long, raceme about 1.5 cm. long, terminal or axillary; leaflet subacute, shortly pubescent, 4–9 cm. long, 2–3 cm. broad, stipules lanceolate, acute, about 5 mm. long[18. cordifolium](#)

1. **Eriosema linifolium** *Bak. f.* in J. Bot. 33: 228 (1895); *Bak. f. Leg. Trop. Afr.* 2: 499; *Chev. Bot.* 208. *APD acc*

Erect, 1–3 ft. high, from a woody more or less tuberous base; flowers greenish-yellow in a raceme 2–6 in. long.

Fr. Nig.: Gourma to Konkobiri (July) *Chev.* 24310! **N. Nig.:** Abinsi (fr. Nov) *Dalz.* 608! Mando F.R., Birnin Gwari (fl. & fr. Aug.) *Keay FHI* 25998! Anara F.R., Zaria (fl. & fr. July) *Keay FHI* 25957!

Also in **N.E. tropical Africa**.

2. **Eriosema parviflorum** *E. Mey. subsp. parviflorum* — *F.T.A.* 2: 225; *Bak. f. l.c.* 504; *Staner & De Craene* in *Ann. Mus. Congo Belge, sér. 6*, 1: 60 (1934); incl. var. *laxiuscula*, var. *sarmentosa* *Staner & De Craene* (1934). *APD acc*

APD: *Synonym of Eriosema spicatum Hook. f. subsp. spicatum*

Eriosema spicatum *Hook. f.* (1849) — *F.W.T.A.*, ed. 1, 1: 403; *Bak. f. l.c.*

Eriosema djalense *A. Chev. Bot.* 208, partly, name only.

Eriosema caillei *A. Chev. Bot.* 207, name only.

Half shrubby, softly tawny-hairy, erect from a woody base or half-straggling; flowers reddish yellow or yellow.

Fr. G.: Farfar 248! Fouta Djallon Heudelot 759! Mamou (fl. & fr. Mar.) *Dalz.* 8393! **S. L.:** Don! Barter! Lusenya (fr. Dec.) *Sc. Elliot* 4123! Serabu (Apr.) *Deighton* 1683! Mano (Apr.) *Deighton* 1701! Jordan 218! **Lib.:** Grand Bassa (July) *T. Vogel* 1! *Ansell!* *Monrovia* (fl. & fr. Nov.) *Linder* 1520! **G. C.:** Atwabo Fishlock 64! 85! **S. Nig.:** Eket Talbot! **F. Po:** *Mildbr.* 7024. *Tessmann* 2837; 2844. Also in east tropical and S. Africa.

[A specimen from Anara F.R., Zaria, N. Nigeria, *Keay FHI* 22964; has large stipules about 2 cm. long and may be a distinct species.]

- 2a. **Eriosema parviflorum subsp. collinum** *Hepper* in *Kew Bull.* 1956: 130.

APD: *Synonym of Eriosema spicatum subsp. collinum (Hepper) J. K. Morton*

Eriosema djalense *A. Chev. Bot.* 207, partly, name only.

A smaller montane herb similar to the last but with larger flowers

Fr. G.: Kaoulendougou (fl. & fr. Mar.) *Chev.* 21071! **S. L.:** Bintumane Peak, 6,000 ft (May) *Deighton* 5608!

3. **Eriosema molle** *Hutch. ex Milne-Redhead* in *Kew Bull.* 1950: 360 (1951). *APD acc*

Eriosema cajanoides of *F.W.T.A.*, ed. 1, 1: 403, partly.

An erect shrub, up to 6 ft. high, with softly hairy leaflets silvery beneath; flowers yellow.

Iv. C.: Bouaké Scaëtta 3068! **G. C.:** Achimota (fl. & fr. Aug.) *Milne-Redhead* 5124! Shai Hills (Apr.) *Irvine* 1429! Anum, Krepri (Jan.) *Johnson* 567! Sesiamang, Kwahu (Feb.) *A. S. Thomas D.* 139! Dawa R. (fl. & fr. Feb.) *Morton GC* 6461!

4. **Eriosema andohii** *Milne-Redhead* l.c. 361 (1951). *APD acc*

Eriosema cajanoides of *F.W.T.A.*, ed. 1, 1: 403, partly.

Similar in appearance to *E. molle*, but the leaves are 3-foliolate.

G. C.: Afram Plains (Jan.) *Irvine* 620! Mampong Dist. (Nov.) *Vigne FH* 3465! Kintampo (Mar.) *Dalz.* 14! Damongo (July) *Andoh FH* 5191! Wa Dist. (Apr.) *Kitson* 829! Also in **A.-E. Sudan**, **French Congo** and **Belgian Congo** and **Angola**.

12. *Eriosema monticolum* Taub. in Engl. Bot. Jahrb. 23: 196 (1896); Bak. f. l.c. 507. *APD acc*

Stems short from a woody rhizome; leaves white beneath; flowers reflexed.

Togo: Agome Mts., 2,200 ft. (Mar.) Bauman 10. **N. Nig.:** Vom, 3,000–4,500 ft., Dent Young 83!

13. *Eriosema tenue* Hepper in Kew Bull. 1956: 130, fig. 7.

APD: *Synonym of Eriosema youngii Hiern ex Baker f. var. youngii*

Eriosema shireense of F.W.T.A., ed. 1, 1: 403, partly (Chev. 13261).

A slender-stemmed herb with linear leaves; flowers yellow tinged red.

Fr. G.: Kaba to Mamou (May) Chev. 18261! **N. Nig.:** Mando, Birnin Gwari (fl. & fr. June) Keay FHI 25868! Vom, 3,000–4,500 ft., Dent Young 70!

14. *Eriosema pulcherrimum* Taub. in E. & P. Pflanzenfam. 3, 3: 375 (1894). *APD acc*

Erect herb, softly white-tomentose, a few inches high up to 1 ft. from a woody rootstock, the leaves folding up over the short raceme of yellow flowers.

G. C.: Drobo (Apr.) Thompson 63! Gambaga (July) Vigne FH 4535! Akpabla 701! **N. Nig.:** Sokoto (June) Dalz. 533! Anara F.R., Zaria (May) Keay FHI 25771! Bauchi Plateau (May) Lely P. 322! **S. Nig.:** Kitson! Lagos colony (fr. Aug.) Phillips!

Also in **A.-E. Sudan**, **French Congo** and **Belgian Congo**, **Gabon** and **Cameroons**.

15. *Eriosema afzelii* Bak. in F.T.A. 2: 225 (1871); Bak. f. Leg. Trop. Afr. 2: 500. *APD acc*

Eriosema subacaulis A. Chev. Bot. 209, name only.

A stiff erect herb, 2–3 ft. high, clothed with silky hairs; flowers reddish, in spike-like racemes.

Sen.: Ouassadou Berhaut 1217; 3041. **Port. G.:** Bafata (Aug.) Esp. Santo 2742! 2753! **S. L.:** Afzelius! Port Loko (fr. Sept.) Glanville 443! Benikoro (Oct.) Thomas 2951! Masisa (fl. & fr. Aug.) Deighton 5127! Bubuya (Sept.) Adames 189!

16. *Eriosema chrysadenium* Taub. in Engl. Bot. Jahrb. 23: 195 (1896); Bak. f. l.c. 501. *APD acc**Eriosema cordatum* of Bak. f. l.c., partly.

Erect undershrub, stem 6 in to 1 ft. high, from a woody rootstock; flowers purple; in grassland.

Br. Cam.: Bum (fr. June) Maitland 1674! Fang (Apr.) Maitland 1403! Bamenda (Apr.) Maitland 1424! Ujor FHI 30057!Also in **French Cameroons**, **French Congo** and **Belgian Congo**, **Angola**, **Uganda** and **Tanganyika**.**17. *Eriosema schoutedenianum* Staner & De Craene** l.c. 74 (1934).*APD: Synonym of Eriosema verdickii var. schoutedenianum (Staner & De Craene) Verdc.**APD: Synonym of Eriosema lebrunii Staner & De Craene*

A slender suberect herb with pilose stems; flowers yellow in oblong racemes.

Br. Cam.: Nkambe, Bamenda (Sept.) Ujor FHI 30225!Also in **French Cameroons**, **A.-E. Sudan**, **Belgian Congo**, and **N. Rhodesia**.**18. *Eriosema cordifolium* Hochst. ex A. Rich.** — F.T.A. 2: 224; Bak. f. l.c. 502. *APD acc*

Stem pubescent, herbaceous and flexuous, from a rootstock which may become fusiform or turnip-like; flowers yellow, in head-like racemes.

N. Nig.: Vom Dent Young 80! Naraguta (fl. & fr. Aug.) Lely 482!Also in **Abyssinia**, **Uganda**, **Kenya** and **Belgian Congo**.**36. MOGHANIA****J. St.-Hil.** in Desv. Journ. Bot. 1: 61 (1813); Hui-Lin Li in Amer. Journ. Bot. 31: 224–228 (1944).**Flemingia Roxb. ex Ait. f.** (1812) — F.T.A. 2: 230; not of Roxb. ex Rottl. (1803).

- 1** Leaves 1 foliolate; leaflet ovate to suborbicular, subacute, 3–8 cm. long, 2.5–5.5 cm. broad, pubescent on both sides; stipules subulate lanceolate; flowers about 1 cm. long, solitary or paired on short pedicels; calyx-lobes linear, acute; corolla a little longer than the calyx; fruits oblong, 1.8 cm. long, slightly pubescent [1. faginea](#)

Leaves 3 foliolate; terminal leaflet oblong-lanceolate, acute, about 8 cm. long and 4 cm. broad, pubescent beneath, upper surface pubescent at first becoming glabrous; stipules lanceolate; flowers about 1 cm. long, in dense axillary clusters; calyx-lobes linear, acute; corolla equalling calyx; fruits oblong, 1.2 cm. long, covered with red gum [2. grahamiana](#)

1. *Moghania faginea* (Guill et Perr.) O. Ktze. Rev. Gen. Pl. 1: 199 (1891).*APD: Synonym of Flemingia faginea (Guill. & Perr.) Baker***Rhynchosia faginea** Guill. & Perr. (1832).**Flemingia faginea** (Guill. & Perr.) Bak. in F.T.A. 2: 230 (1871); Chev. Bot. 209, incl. var. glabra A. Chev.: Bak. f. Leg. Trop. Afr. 2: 513; F.W.T.A., ed. 1, 1: 404.

An erect shrubby plant up to about 10 ft. high, with chestnut-brown branchlets, grey or rufous tomentose; flowers white or purplish.

Sen.: R. Casamance Leprieur 366! **Gam.:** Heudelot! **Fr. Sud.:** Bamako (fl. & fr. Jan.) Chev. 241! **Fr. G.:** Diaguissa Chev. 13605. **IV. C.:** Lower Comoé Chev. 17585. **G. C.:** Nangodi (fl. Moghania rhodocarpa (Bak.) Hauman in Fl. Congo Belge 6: 258 (1955).

Eriosema erythrocarpon Beck (1888).

A shrub with woody branches; flowers pale green.

G. C.: Asampanie (fl. & fr. Jan.) Brown FH 2150! R. Ofro F.R. (fl. & fr. Jan.) Vigne FH 2737!

Extends from Ubangi-Shari to Abyssinia, eastern and central tropical Africa, Transvaal, Natal and in **Aden**, southern India and (?) China.

Moghania guineensis (G. Don) O. Ktze. l.c. (1891).

Flemingia guineensis G. Don Gen. Syst. 2: 309 (1832).

The type of this species is not known, but from the description it might be *Bryaspis lupulina* (Planch. ex Benth.) Duvign. Imperfectly known species

37. CAJANUS

DC. — F.T.A. 2: 215.

- 1** A shrub with ribbed shortly silky-pubescent branches; leaves 3-foliolate; leaflets lanceolate, acute, up to 10 cm. long and 3.5 cm. broad, minutely tomentellous and glaucous grey beneath; stipules lanceolate, acute; flowers yellow in subcapitate axillary racemes 6–8 cm. long; corolla 1.5–1.8 cm. long; fruits obliquely subtorulose, beaked, 5–6 cm. long, 3–4-seeded, shortly tomentellous; seeds shining [1. cajan](#)

As above in habit but leaflets obliquely elliptic or obovate, subacute, up to 3.5 cm. long and 1.5 cm. broad, silky-tomentellous beneath, stipules deciduous; fruits oblong, 2–4-seeded, 3 cm. long, tomentose [2. kerstingii](#)

- 1. *Cajanus cajan* (Linn.) Millsp.** in Publ. Field Mus. Nat. Hist. Bot., ser. 2: 53 (1900); Bak. f. Leg. Trop. Afr. 2: 459.

APD: *Synonym of *Cajanus cajan* (L.) Huth*

Cytisus cajan Linn. (1753).

Cajanus indicus Spreng. (1826) — F.T.A. 2: 216; Chev. Bot. 204.

Native of East Indies, cultivated throughout the tropics.

The Pigeon Pea.

- 2. *Cajanus kerstingii* Harms** in Fedde Rep. 14: 196 (1915); Bak. f. l.c. 460. **APD acc**

A shrub 3–7 ft. high with stems less angular than in the preceding species; branchlets and undersurface of leaves shortly white-silky; **in open savannah.**

Sen.: Niokolo-Koba Berhaut 1218. **G. C.:** FH 4578! **Togo:** Sokode-Basari (fr. Sept.) Kersting 570.

38. ATYLOSIA

Wight & Arn. Prod. 257 (1834).

APD: *Synonym of *Cajanus Adans.**

- 1** A slender twiner; stems softly pubescent; leaves 3-foliolate; leaflets obovate, rounded at apex, 2–3 cm. long, 1–2 cm. broad, softly tomentose on both surfaces; flowers in axillary pairs, shortly pedicellate; fruits 3–6-seeded, oblong, 2–2.5 cm. long, septate between the seeds, softly tomentellous, apiculate [scarabaeoides](#)

- Atylosia scarabaeoides* (Linn.) Benth.** in Miq. Pl. Jungh. 242 (1852); Chev. Bot. 205; Bak. f. Leg. Trop. Afr. 460.

APD: *Synonym of *Cajanus scarabaeoides* (L.) Thouars var. *scarabaeoides**

*APD: Synonym of *Cajanus scarabaeoides* (L.) Thouars*

Dolichos scarabaeoides Linn. (1753).

Sen.: Zinguichor, Casamance Chev. 3405. **Port. G.:** Bissau Esp. Santo 1419! **S. L.:** Franziga, Tambakka country Sc. Elliot 5048! **G. C.:** Labadi (fl. & fr. Feb.) Irvine 2740! Tefli to Ada (fl. & fr. June) Morton GC 9265!

Also in **Zanzibar** the **Mascarene Islands** and widely spread in Asia

39. CLITORIA

Linn. — F.T.A. 2: 176.

- 1 Leaves pinnate; leaflets 5–7, elliptic, rounded or emarginate at apex, 3–4.5 cm. long, 1.5–3 cm. broad, shortly pubescent beneath; flowers solitary, very shortly pedicellate, 4–5 cm. long; bracteoles rounded, nervose, about 1/3 as long as the calyx; calyx about 1.5 cm long, lobes nervose, acute; fruits flat, linear, beaked, about 10 cm. long and 1 cm. broad, sparingly pubescent *L. ternatea*

Leaves 3 foliolate; leaflets elliptic or ovate-elliptic, rounded or emarginate at apex, 4–7 cm. long, 1.5–3.5 cm. broad, more or less pubescent beneath; flowers 2–3 on axillary peduncles; bracteoles ovate, pointed; fruits about 4 cm. long, with a rib up the middle of the valves *2. rubiginosa*

1. *Clitoria ternatea* Linn. — F.T.A. 2: 177; Chev. Bot. 194; Bak. f. Leg. Trop. Afr. 2: 428; Wilczek in Fl. Congo Belge 6: 265, fig. 7. *APD acc*

A climber, somewhat shrubby below, with flowers deep blue, occasionally pure white

Sen.: Roger! Heudelot 437! Dakar Chev. 3395, 15818. **Gam.:** Kuntaur Ruxton 20! **Fr. G.:** Conakry Chev. 12039. **S. L.:** Barter! **G. C.:** Irvine 1407! Accra Brown 401! **Dah.:** Abbo to Massé (Feb.) Chev. 22990! **N. Nig.:** Sokoto (Nov.) Moiser 26! Lokoja (fl. & fr. Oct.) Parsons L. 84! Gombe (Oct.) Lely 664! **S. Nig.:** Abeokuta Barter 3394!

Widely grown for ornament in the warmer parts of the world.

2. *Clitoria rubiginosa* Juss. ex Pers. Syn. 3: 303 (1807); Bak. f. l.c. 429.

*APD: Synonym of *Clitoria falcata* Lam.*

Clitoria glycinoides DC. (1825).

A more or less pubescent twiner, with fragrant flowers about 2 in. long, white streaked with mauve or red.

Sen.: Niayes Berhaut 1619. **Port. G.:** Fulacunda (May) Esp. Santo 2024! **Lib.:** Gbau, Sanokwele (fr. Sept.) Baldwin 9412! **S. Nig.:** Lagos Millen 129! Foster 16! Olokemeji (Aug.) Foster 319! Oban Talbot 1305!

A native of tropical America, presumably introduced.

Clitoria laurifolia Poir.

It has been introduced from tropical America and is sometimes cultivated in our area.

Clitoria cajanifolia (Presl) Benth.

It has been introduced from tropical America and is sometimes cultivated in our area.

40. AMPHICARPA

Elliott in Journ. Acad. Nat. Sci. Philadelp. 1: 372 (1817). APD acc

- 1 Climber; branchlets slender, hirsute with reflexed hairs; leaves 3-foliate; leaflets ovate, with long mucronate tip, about 5 cm. long and 3 cm. broad, softly pubescent on both surfaces; lateral nerves about 7 pairs; stipules lanceolate, about 1 cm. long, closely striate and pubescent; stipels filiform; racemes axillary, about as long as the leaves, calyx lobes with filiform tips; fruits flat, linear-oblong, about 3.5 cm. long, ciliate on each margin *africana*

Amphicarpa africana (Hook. f.) Harms in Fedde Rep. 17: 136 (1921); Bak. Leg. Trop. Afr. 2: 355. *APD acc*

Shuteria africana Hook. f. (1864) — F.T.A. 2: 177; F.VV.T.A., ed. 1, 1: 405.

A herbaceous climber, fruits often marked with a dark longitudinal band.

Br. Cam.: Cam. Mt. 7,000 ft. (fr. Nov.) Mann 1974!

Also in eastern tropical Africa from Abyssinia to Nyasaland.

41. CENTROSEMA

DC. — F.T.A. 2: 176.

- 1 Calyx truncate, 3 mm. long, 10 mm. broad; fruits linear, about 15 cm. long and 1 cm. broad, with 2 prominent longitudinal ribs, and a straight beak 2 cm. long; racemes 3–4 flowered; standard about 4 cm. long; a pair of bracteoles 1.3 cm. long envelops bud, caducous later; leaves 3 foliolate; terminal leaflet rhomboidal to broadly lanceolate, glabrous, apiculate, 6–10 cm. long, 3–8 cm. broad; stipules lanceolate, about 1 cm long and 5 mm. broad [1. plumieri](#)

Calyx deeply 5 fid, lowest lobe much longer than the others; beak of fruit about 1 cm. long: **2**

- 2 Leaflets sparsely pubescent, elliptic, 4–6 cm. long, 2–3 cm. broad, slightly acuminate, mucronate; stipules lanceolate, 2–3 mm. long; racemes 2–3-flowered; standard about 3 cm. long; a pair of bracteoles 7 mm. long envelops bud; calyx lobes triangular, acute, the lowest linear 6 mm. long; fruits linear with broad margins, 8–12 cm long, 6 mm. broad [2. pubescens](#)

Leaflets glabrous, oblong lanceolate, 2–4 cm. long, 1–2 cm. broad, obtuse to subacute, mucronate; stipules lanceolate, 1 mm. long; racemes 2–3-flowered; standard about 1.5 cm. long; a pair of bracteoles about 4 mm. long envelops bud; calyx-lobes subulate, the lowest 4 mm. long; fruits linear, 6–8 cm. long, 3 mm. broad [3. virginiana](#)

1. *Centrosema plumieri* (Turp.) Benth in Ann. Wien. Mus. 2: 118 (1839); Wilczek in Fl. Congo Belge 6: 272. *APD acc*

Clitoria plumieri Turp. (1807).

A twiner with large pale yellow flowers.

G. C.: Axim (fr. Feb.) Irvine 2211! Aburi Akpabla 955! Kumasi (fr. Oct.) Baldwin 13474! **S. Nig.:** Benin Lamb! Sapoba (fr. Nov.) Meikle 536! Ujor FHI 23930!

Introduced from tropical America as a cover crop and green manure.

2. *Centrosema pubescens* Benth. l.c. 119 (1839); Wilczek l.c. *APD acc*

A creeper with shortly pubescent stems and leaves; flowers pink mauve or white with purple markings.

S. L.: Freetown (June) Deighton 2701! Njala (fl. & fr. Nov.) Deighton 2549! Rokupr (fl. & fr. Nov.) Jordan 372! 373! **G. C.:** Achimota (Oct) Morton A. 62! Axim (Mar.) Morton GC 8517! Kumasi (Oct.) Baldwin 13465! **Togo:** Kpeve (fl. & fr. Jan.) Irvine 1738!

Introduced from America as a cover crop

3. *Centrosema virginiana* (Linn.) Benth. — F.T.A. 2: 176; Bak. f. Leg. Trop. Afr. 2: 429. *APD acc*

Clitoria virginiana Linn. (1753).

A slender stemmed almost glabrous climber flowers pale blue.

G. C.: Cape Coast (fl. & fr. Sept.) Dalz. 91! T. Vogel.

Introduced from America as a cover crop.

42. MUCUNA

Adans. — F.T.A. 2: 184.

- 1 Stems erect; leaves 3 foliolate; leaflets all similarly ovate, equal in size, margins slightly undulate, apex

mucronate or emarginate, lateral leaflets only slightly unequal-sided at base, closely appressed pubescent beneath, 6–7 cm. long and about 3 cm. broad; petiole about 4 cm long; rhachis of inflorescence short, about 4 cm. long; bracts ovate, about 1 cm. long; calyx 4-lobed to about 1/2, lobes lanceolate; flowers purple, rather clustered; standard about 2.5 cm. long; fruits oblong, shortly beaked, covered with non-urticating hairs, about 6 cm long and 1.3 cm. broad, laterally compressed [1. stans](#)

Stems climbing; leaves 3 foliolate, terminal and lateral leaflets of different shapes: **2**

2 Flowers white, cream or yellow; fruits with urticating bristles: **3**

Flowers purple, about 4 cm. long; calyx rather deeply 4 lobed, grey silky pubescent; bracts caducous: **5**

3 Flowers more or less umbellate; leaves silky-pubescent beneath; leaflets obliquely ovate, shortly acuminate, up to 15 cm. long and 14 cm. broad; peduncle short; calyx 4 lobed to about 1/2, lobes lanceolate; fruits oblong, up to 15 cm. long, prominently and obliquely transversely ridged, hispid with urticating hairs; seeds suborbicular, about 2.5 cm. diam. with a long hilum around about 4/5 of the circumference [2. sloanei](#)

Flowers arranged in elongated, often zigzag, or short racemes: **4**

4 Rhachis of inflorescence very zigzag; peduncle very long and whip like; calyx subtruncate; standard very broad, about 4 cm long; fruits oblong or obovate, up to 20 cm. long and 6 cm. broad, transversely and obliquely ridged, covered with urticating hairs; seeds orbicular, 3.5 cm. diam., hilum as in No. 2; leaves glabrous or sparsely pilose beneath; leaflets obliquely ovate, rounded at base, abruptly acuminate and mucronate at apex, up to 15 cm. long and 8 cm. broad, 3-nerved at base, finely reticulate on both surfaces [3. flagellipes](#)

Rhachis of inflorescence almost straight, not zigzag; calyx 4 lobed with upper lobe emarginate at apex, lowest lobe frequently 1–2 cm. long; standard 5–8 cm. long; fruits irregularly twisted, about 7 cm. long, old style persistent when young, densely covered with brown or reddish-yellow urticating hairs; leaves with fine appressed pubescence on both surfaces; terminal leaflet rhomboid, cuneate at base, acute at apex; lateral leaflets very unequal-sided at base [4. poggei var. occidentalis](#)

5 Fruits very setose with yellowish urticating hairs, curved, about 9 cm. long, faintly longitudinally ribbed; seeds small, broadly elliptic, mottled reddish, with a short hilum; leaves appressed pilose on both sides, especially beneath; leaflets very obliquely ovate, unequal-sided and rounded at base, acutely mucronate, up to 20 cm. long and 14 cm. broad; stem furrowed [5. pruriens var. pruriens](#)

Fruits appressed-pubescent with brown, becoming grey, non-urticating hairs, slightly curved, with a marked short beak, about 7 cm long, with irregular longitudinal ribs; seeds black and shining, 10–12 mm. long, with a white hilum; leaves sparsely appressed-pubescent on both sides; leaflets very obliquely ovate, unequal-sided, very acutely mucronate, up to about 17 cm. long and 10 cm. broad; stem striate [5a. pruriens var. utilis](#)

1. *Mucuna stans* Welw. ex Bak. in F.T.A. 2: 187 (1871); Bak. f. Leg. Trop. Afr. 2: 381. *APD acc*

An erect much branched shrub 4–6 ft high; flowers deep purple.

Br. Cam.: Bamenda Johnstone 189/31.

Also in **Belgian Congo, Angola, Nyasaland, N. Rhodesia, Tanganyika** and **Uganda**.

2. *Mucuna sloanei* Fawc. & Rendle in J. Bot. 55: 36 (1917); Fl. Jam. 4: 53, fig. 16 (1920). *APD acc*

Mucuna urens of F.T.A. 2: 185; Chev. Bot. 196; F.W.T.A., ed. 1, 1: 406; Bak. f. l.c. 379; not of (Linn.) Medic.

A climber; stem with appressed whitish hairs; flowers creamy or yellowish of waxy consistence, 2 in long or more, the standard broad about 1/2 length of the wings and keel

Port. G.: Bissau Esp. Santo 1654! **S. L.:** Jigaya (Sept.) Thomas 2728! Regent (Dec.) Sc. Elliot 4325! Njala (fl. & fr. Dec.) Deighton 1802! **Lib.:** Gbanga (Sept.) Linder 470! **IV. Nig.:** Ogun R. Millen 124! Oban Talbot 1316! Abokum (fr. Jan.) Holland 292!

Widespread in the tropics. (See Appendix. p. 252.)

5a. **Mucuna pruriens** var. **utilis** (Wall. ex Wight) Bak. ex Burck in Ann. Jard. Bot. Buitenzorg 11: 187 (1893). *APD acc*

Mucuna utilis Wall. ex Wight (1840).

A tall climber with silky pods about 4 in long; flowers purple. A Velvet Bean.

Port. G.: Bissau (fl. & fr. Dec.) Esp. Santo 1588! **Fr. G.:** Nzérékoré (fl. & Fr. Oct.) Baldwin 9729! **S. L.:** Njala (Sept.) Deighton 2102!

Cultivated in many parts of the tropics and introduced to Africa from tropical Asia.

Mucuna cochinchinensis (Lour) A. Chev.

Mucuna nivea (Roxb.) DC.

Which has white flowers and fruits with non-urticating hairs is cultivated in S. Nigeria and in Senegal.

43. **ERYTHRINA**

Linn. — F.T.A. 2: 181.

- 1 Leaves, petioles and branchlets, densely tomentose; leaflets usually broader than long, 8–13 cm. long, 9–15 cm. broad, broadly cuneate at base, rounded, emarginate or mucronate at apex, sometimes with prickles on nerves above; petioles about 17 cm. long with a few prickles; flowers 2–3 cm. long, standard narrow and curved like an S; calyx with 5 equal lobes, about 1 cm. long; fruits moniliform, 3–4-segmented; a savannah tree [1. sigmoidea](#)
- Leaves glabrous or slightly tomentellous, longer than broad, more or less acute: [2](#)
- 2 Limb of calyx linear-lanceolate, bifurcate at apex, about 2.5 cm long, tube about 1 cm. long, glabrous or minutely pubescent; flowers in twos and threes on stiff, many flowered racemes; leaflets (of young shoots) prickly above on nerves as on rhachis, 12–23 cm long, 10–16 cm. broad, the lateral leaflets obliquely ovate, the terminal broadly elliptic; a tall forest tree [2. excelsa](#)
- Limb of calyx variously dissected or entire, tomentellous [3](#)
- 3 Savannah tree; calyx without a dissected limb, almost glabrous; standard 2.5–4 cm. long; bracts inconspicuous, 4 mm. long, early caducous; fruits moniliform, stipitate, becoming twisted, about 12 cm. long, closely puberulous; seeds bright red, smooth and shiny; leaflets lanceolate to broadly ovate, rounded or cuneate at base, rounded to shortly acuminate at apex, 7–15 cm. long, 4–10 cm. broad; petioles slightly grooved above, about 2 mm. diam., thorny [3. senegalensis](#)
- Forest trees; limb of calyx not entire: [4](#)
- 4 Small trees 6–15 m. high; flowers scarlet: [5](#)
- Large tree, 20–30 m. high; flowers pink; limb of calyx 1.5–3 cm. long, about 1 cm. broad, jagged lobate at apex,

contracted at base; leaflets ovate, 10–15 cm. long, 6–9 cm broad, shortly acuminate; fruits moniliform, 5–15 cm. long, twisted or curved, grey puberulous; seeds oblong, shining red [6. mildbraedii](#)

- 5 Petioles with a definite groove above, 1–2 mm. diam., thorny; leaflets oblong to ovate, rounded to shortly acuminate at apex, rounded or obtuse at base, 9–16 cm. long, 5–9.5 cm. broad; limb of calyx variable, with from 3 or 4 lobes 2–3 mm. long, to several irregular linear lobes 4–9 mm. long; bracts more or less conspicuous, longer than the young buds, 5–9 mm. long, caducous; standard 3–5 cm. long; fruits similar to No. 3 [4. vogelii](#)

Petioles terete and only slightly longitudinally striate, 3 mm. diam; leaflets rhomboid ovate, 14–22 cm. long, 11–22 cm. broad, minutely pubescent beneath; calyx with 5 similar lobes at apex 1–10 mm. long; fruits strongly moniliform about 3 cm. diam., the segments eventually hanging together by strands; seeds keel shaped, scarlet, 13 mm. long [5. addisoniae](#)

1. *Erythrina sigmoidea* *Hua* in Bull. Mus. Hist. Nat., sér. 1, 3: 327 (1897); Bak. f. Leg. Trop. Afr. 2: 370; Aubrév. Fl. For. Soud.-Guin. 322, t. 66, 6, t. 67. *APD acc*

Erythrina dybowskii *Hua* (1898) — Bak. f. l.c. 371.

Erythrina eriотricha *Harms* (1913) — Bak. f. l.c., Aubrév l.c. t. 66, 1–2.

A small [savannah](#) tree, 10–20 ft. high, stems armed with stout recurved prickles; flowers red, in racemes nearly as long as the leaves.

Port. G.: Bafatá (June) Esp. Santo 2693! **Fr. G.:** Timbo, Fouta Djallon (May) Maclaud & Miquel 49! **IV. C.:** Samankono Serv. For. 2853. **N. Nig.:** Bauchi Plateau (fl. & fr. Apr.) Lely P. 213! Vom (Apr.) Morton K. 384!

Also in [French Cameroons](#) and [Chad](#).

2. *Erythrina excelsa* *Bak.* in F.T.A. 2: 183 (1871); Bak. f. l.c. 377; Louis in Bull. Jard. Bot. Brux. 13: 317. *APD acc*

Erythrina sereti *De Wild.* (1907).

A tall tree, with bole 60–80 ft. high, pale bark armed with strong prickles; flowers red when tree is leafless.

Br. Cam.: Ambas Bay (Jan.) Mann 704! Buea (Feb.) Dalz. 8181!

Also in [Belgian Congo](#), [A.-E. Sudan](#), [Uganda](#) and [Tanganyika](#).

3. *Erythrina senegalensis* *DC.* — F.T.A. 2: 181, excl. syn. *E. vogelii* Hook. f.; Chev. Bot. 195; Bak. f. l.c. 369, Aubrév. Fl. For. C. Iv. 1: 296, t. 118 A; Fl. For. Soud.-Guin. 322, t. 66, 3–4. *APD acc*

Usually a small tree, 10–15 ft. but sometimes attaining a height of 40–50 ft.; armed with stout prickles slightly recurved from a woody base; conspicuous with scarlet flowers, usually when leafless; standard petal folded flat; [in savannah country and commonly planted as a hedge](#).

***Erythrina glauca* Willd.**

Is cultivated in Victoria Botanic Gardens, British Cameroons, and may be naturalized in the Calabar district of S. Nigeria.

***Erythrina poeppigiana* (Walp.) O. F. Cook**

Occurs in Sierra Leone and S. Nigeria (Calabar).

***Erythrina pallida* Britton & Rose**

Has been introduced into Sierra Leone. These are all tropical American species. The Asiatic species

***Erythrina fusca* Lour.**

Is recorded from the Gold Coast

***Erythrina indica* Lam**

From Senegal.

***Erythrina* sp. cf. *E. buesgenii* Harms** in Engl. Bot. Jahrb. 49: 443 (1910). **APD acc**

S. Nig.: Rosevear 7/30!

[Incomplete material, flowers only; same as Mildbr. 7787 from French Cameroons.] Imperfectly known species.

44. CALOPOGONIUM

Desv. in Ann. Sci. Nat., sér. 1, 9: 423 (1826).

- 1 Stem climbing or prostrate, densely brown pilose; leaves 3-foliolate, leaflets elliptic, lateral leaflets rounded and unequal-sided at base, apex obtuse or slightly apiculate, pubescent; racemes short, long pedunculate; calyx deeply 5-lobed, lobes narrowly lanceolate, pilose, about 8 mm. long; corolla little longer than calyx; fruit narrowly oblong, 3–4 cm long, 5 mm. broad, very densely brown pilose, 5–8-seeded; seeds square, light brown, 3 mm. broad [mucunoides](#)

***Calopogonium mucunoides* Desv.** l.c. (1826); Amshoff in Fl. Suriname 2: 196. **APD acc**

A hairy climber with deep blue flowers

Port. G.: Bissau (fl. & fr. Oct.) Esp. Santo 2569! **Fr. G.:** Nzérékoré (Oct.) Baldwin 9719! **Lib.:** Gbanga (fr. Dec.) Daniel 41! **G. C.:** Aburi (fr. Feb.) Akpabla 949! Kumasi (fl. & fr. Dec.) Morton GC 9692!

A native of tropical America; naturalized and cultivated in Africa.

45. NEORAUTANENIA

Schinz. in Bull.

Herb Boiss. 7: 35 (1899).

- 1 Climbing herb; stems tomentose or glabrescent; leaves 3-foliolate; leaflets irregularly 3-lobed to subentire, very broadly and obliquely ovate, cuneate at base, acute at apex, 6–12 cm. long, thinly pubescent beneath; stipules lanceolate, 6 mm. long; stipels spreading, linear subulate, 4–5 mm. long; racemes axillary, leafless, (5–) 10–20 cm. long; flowers about 1 cm. long; fruits 12–15 cm. long, 1.5 cm. broad, softly tomentellous

.....[pseudopachyrhiza](#)

Neorautanenia pseudopachyrhiza (*Harms*) *Milne-Redhead* in Kew Bull. 1950: 355 (1951). Wilczek in Fl. Congo Belge 6: 289, fig. 12.

APD: *Synonym of Neorautanenia mitis* (*A. Rich.*) *Verdc.*

Dolichos pseudopachyrhizus *Harms* in Engl. Bot. Jahrb. 26: 320 (1899), incl. var. *subintegrifolia* *Harms*; Engl. Pflanzenw. Afr. 3, 1: 680, fig. 312; Bak. f. Leg. Trop. Afr. 2: 452; F.W.T.A., ed. 1, 1: 410.

A strong climber over shrubs or sometimes suberect; flowers blue purple.

G. C.: Gambaga (June) Akpabla 666! **Togo:** Kling 20. **N. Nig.:** Nupe Barter 1625! Kontagora Dalz. 555! Munchi country (Feb.) Dalz. 604! Panyam (July) Lely 419! **S. Nig.:** Lagos MacGregor 201!

Extends to E Africa, **Belgian Congo** and **Angola**.

46. GALACTIA

Adans. — F.T.A. 2: 188.

- 1 Twiner; branches elongated, softly pubescent; leaves 3-foliolate; leaflets oblong elliptic, rounded at both ends, mucronate at apex, 2–3.5 cm. long, 1–1.5 cm. broad, thinly pubescent beneath; stipules subulate-lanceolate; racemes axillary, few-flowered, up to 10 cm. long; calyx divided to the middle, the lowermost lobe the longest; fruits broadly linear, 4–5 cm long, with a curved beak at the tip, shortly pubescent[tenuiflora](#)

Galactia tenuiflora (*Willd.*) *Wight & Arn.* — F.T.A. 2: 188; Bak. f. Leg. Trop. Afr. 2: 382. *APD acc*

Glycine tenuiflora *Willd.* (1803).

Galactia hedysaroides of F.W.T.A., ed. 1, 1: 407, partly (T. Vogel; Dalz. 80).

Twining or trailing; flowers pink or blue, the standard petal glabrous.

G. C.: T. Vogel! Accra (July) Dalz. 80! Deighton 3405! Achimota (Apr.) Irvine 843! 1607! Winnebah Plain (fr. Feb.) Dalz. 8294! **N. Nig.:** Abinsi (June) Dalz 587!

Also in east tropical Africa, **Mascarene Islands** and **India**.

47. GLYCINE

Linn. — F.T.A. 2: 178.

- 1 Flowers clustered in axils of leaves; standard petal pubescent; stem shortly pubescent with spreading hairs; leaflets narrowly elliptic, rounded at each end, mucronate, 3–5 cm. long, 1.5–2.5 cm. broad, pubescent beneath; stipules subulate; calyx lobes linear lanceolate, pilose, shorter than the corolla; fruits broadly linear, slightly curved, flat, about 4 cm. long and 8 mm. broad, thinly appressed-pubescent[l. hedysaroides](#)

Flowers in slender racemes, 8–20 cm. long; standard petal glabrous; stem pilose with reflexed hairs; terminal leaflet more or less rhomboidal elliptic, 5–12 cm. long, 3–8 cm. broad, lateral leaflets unequal-sided at base,

appressed-pubescent beneath; stipules lanceolate, 8 mm. long; calyx-lobes subulate, pilose, equalling the corolla; fruits linear, slightly torulose when ripe, about 3 cm. long, 5 mm. broad, glabrous or with appressed hairs [2. javanica](#)

1. **Glycine hedysaroides** Willd. — F.T.A. 2: 179; Chev. Bot. 194; F.W.T.A., ed. 1, 1: 407, partly (excl. spec. T. Vogel s.n., Dalz. 80 which are *Galactia tenuiflora* (Willd.) Wight & Arn.); Bak. f. Leg. Trop. Afr. 2: 360.

APD: Synonym of Ophrestia hedysaroides (Willd.) Verdc.

Stems woody at the base, wide climbing above; flowers white; easily confused with *Galactia tenuiflora* which has a glabrous standard petal.

Iv. C.: Bingerville Chev. 20087. **G. C.:** Accra (fl. & fr. June) Don! Dalz. 85! Brown 369! Achimota (fl. & fr. Apr.) Irvine 674! 1606! **Togo:** Lome Warnecke 238! **Dah.:** Atacora Mts. Chev. 24278.

Also in **Kenya Tanganyika** and **Angola**.

2. **Glycine javanica** Linn. — F.T.A. 2: 178; Bak. f. l.c. 360.

APD: Synonym of Neonotonia wightii var. longicauda (Schweinf.) J. A. Lackey

APD: Synonym of Neonotonia wightii var. mearnsii (De Wild.) J. A. Lackey

APD: Synonym of Neonotonia wightii subsp. pseudojavanica (Taub.) J. A. Lackey

A variable climber with racemes of purple or white flowers.

S. L.: Musaia (fr. Dec.) Deighton 4421! **Lib.:** Zuie, Boporo (fl. & fr. Dec.) Baldwin 10683! Ganta, Sanokwele (fr. Feb.) Baldwin 11014! **G. C.:** Anum (Nov.) Morton GC 7990! **S. Nig.:** Thomas 2158! **Br. Cam.:** Bamenda Dept. Agric. 16!

Widespread throughout tropical Africa and tropical Asia.

[Note that the W. African plants differ from the Indian and most of the E. African in having narrower, glabrescent or glabrous fruits and less congested racemes, but the British Cameroons plant differs from the others from W. Africa in leaf shape, size and pubescence. Various extremes have been recognized as species, though these are of doubtful value.]

48. PSEUDOERIOSEMA

Hauman in Bull. Jard. Bot. Brux. 25: 96 (1955).

- 1 Erect herb; leaves 1-foliolate; leaflet ovate, broadly rounded at base, mucronate at apex, loosely pubescent on both sides, 8–15 cm. long, 6–8 cm. broad; stipules linear, persistent, about 1 cm. long; flowers in short cylindrical racemes; bracts and bracteoles linear, pedicels 2-flowered; fruits 2-seeded, oblong, 1.5–2 cm. long, rigidly pilose outside, satiny inside [andongense](#)

Pseudoeriosema andongense (Welw. ex Bak.) *Hauman* in Bull. Jard. Bot. Brux. 25: 97 (1955); Fl. Congo Belge 6: 107, t. 9. *APD acc*

Psoralea andongensis Welw. ex Bak. in F.T.A. 2: 65 (1871).

Glycine holophylla (Bak. f.) Taub. (1896) — Bak. f. Leg. Trop. Afr. 2: 361.

Eriosema holophyllum Bak. f. (1895) — F.W.T.A., ed. 1, 1: 404.

E. atacorensis A. Chev. Bot. 207, name only.

Erect, half woody branched herb, 18 in. high; flowers whitish, small, in subglobose or spike like axillary and terminal racemes.

Togo: Yendi to Demon (fr. May) Akpabla 553! **Dah.:** Atacora Mts. Chev. 23952; 24114; **N. Nig.:** Anara F.R., Zaria (May) Keay FHI 19194! Birnin Gwari (June) Keay FHI 25873! Naraguta, 4,000 ft. Lely 240! Bauchi Plateau (fl. & fr. May) Lely P. 273!

Also in **French Cameroons**, **Ubangi-Shari**, **A.-E. Sudan**, **Uganda**, **Tanganyika**, **Belgian Congo** and **Angola**.

49. **PHYSOSTIGMA***Balfour* — F.T.A. 2: 191.

- 1 Climber; branches glabrous; leaves 3-foliolate, the central one broadly ovate, the lateral obliquely ovate, rounded at base, abruptly acuminate, up to 16 cm. long and 10 cm. broad, prominently 3-nerved at base, glabrous; stipels semi-lunar; racemes axillary, drooping, the axis stout and zigzag with swollen nodes; pedicels curved, up to 5 mm. long; calyx broadly cupular, shortly lobed; standard enclosing the wings and keel, much curved round towards the calyx; fruits straight, narrowed at both ends, up to 15 cm. long and 4 cm. broad, glabrous; seeds few, 3 cm. long, ellipsoid, with one side nearly straight, the other side grooved by the depressed hilum. [venenosum](#)

Physostigma venenosum *Balfour* — F.T.A. 2: 191; Chev. Bot. 197; Bak. f. Leg. Trop. Afr. 2: 386; Wilczek in Fl. Congo Belge 6: 342. *APD acc*

Shrubby at the base, with lofty-twining branches; flowers curved like a shell, pink or purple. The Calabar Bean.

S. L.: Seli R. (Aug.) Deighton 1218! **Lib.:** Tappita (Aug.) Baldwin 9046! Monroviatown (Aug.) Baldwin 9001! **IV. C.:** Man to Zagoué Chev. **G. C.:** Akropong, Akwapim (Aug.) Irvine 777! Keay FHI 26385!

Also in **Angola** and **Mozambique**.

51. HAYDONIA

Wilczek in Bull. Jard. Bot. Brux. 24: 405 (1954).

- 1** Twiner; stems slender, angled or slightly winged, glabrous; leaves 3-foliolate; leaflets oblong-lanceolate to subhastate, truncate or slightly rounded at base, apex obtuse, 3.5–7 cm. long, 5–30 mm. broad, glabrous, nerves prominent on both sides; stipules lanceolate, 3–6 mm. long, 2 mm. broad, not produced below the base, glabrous, persistent; racemes axillary, few-flowered; peduncle 5–9 cm. long, the lower part 3-winged; calyx shortly lobed, glabrous but ciliate on the margins; vexillary stamen free to the base; alternate stamens shorter than the rest and with 2 conspicuous glands beneath the anthers; fruits suberect, 2.5–4–5 cm. long, about 2 mm. broad, appressed glandular-puberulous [triphylla](#)

Haydonia triphylla Wilczek l.c. 408, t. 12 (1954); Fl. Congo Belge 6: 263, t. 24. *APD acc*

A glabrous, twining, annual herb, with angular stems 4–6 ft. long; flowers mauve or yellow; usually amongst grasses.

N. Nig.: Bauchi Plateau (Oct.) Lely P. 828!

Also in **Ubangi-Shari**, **Belgian Congo** and **Angola**.

52. PHASEOLUS

Linn. — F.T.A. 2: 191.

- 1** Fruits with 10 or more seeds, linear, 10–14 cm. long, 1–1.4 cm. broad, nearly flat, with thicker margins; flowers in rather stout racemes, glabrous, about 2.5 cm. long; leaflets broadly ovate, subacute, 7–12 cm. long, 4–8 cm. broad, glabrous beneath except on the nerves; stipels rather large, elliptic [I. adenanthus](#)
- Fruits 2–4-seeded, obliquely oblanceolate, 6–8 cm. long, 1.5–2 cm. broad, the margins not thickened; flowers in very slender racemes, about 1 cm. long, softly pubescent; leaflets ovate-triangular, slightly and obtusely acuminate, 6–12 cm. long, 5–8 cm. broad, glabrous beneath or nearly so; stipels small and inconspicuous ... [2. lunatus](#)

1. Phaseolus adenanthus G. F. W. Mey. — F.T.A. 2: 192; Chev. Bot. 197; Bak. t. Leg. Trop. Afr. 2: 389; Wilczek in Fl. Congo Belge 6: 338.

APD: *Synonym of Vigna adenantha (G. Mey.) Maréchal, Mascherpa & Stainier*

A wide-climbing nearly glabrous perennial with fairly large pink and white flowers turning yellow; on the sea-shore, the banks of river estuaries or occasionally by inland streams.

Sen.: Sedhiou, Casamance Chev. 3408; 3409. **Gam.:** Kudang (fl. & fr. Jan.) Dalz. 8017! 8019! **Port. G.:** Fulacunda (fl. & fr. Dec.) Esp. Santo 2332! **Fr. G.:** Conakry Maclaud! **S. Widely cultivated in the tropics.

Phaseolus vulgaris Linn.

Is widely cultivated in our area.

Phaseolus calcaratus Roxb.

Is widely cultivated in our area.

53. VIGNA

Savi — F.T.A. 2: 194.

- 1 Calyx-lobes as long as or longer than the calyx-tube, subulate from a lanceolate base; stipules cordate, without an entire appendage at the base:2
- Calyx-lobes much shorter than calyx-tube, sometimes quite broad; stipules cordate or appendaged at the base: 5
- 2 Leaflets all sessile on the petiole, narrowly linear-lanceolate, acute, 12-20 cm. long, 5-10 mm. broad, with 3 longitudinally parallel nerves, slightly pubescent on the nerves; flowers paired on long peduncles; calyx hirsute and ribbed1. *longissima*
- Leaflets all petiolulate, with 1 main nerve:3
- 3 Peduncles with a few short recurved hairs; tertiary nerves lax and more or less reticulate; leaflets ovate or lanceolate to linear, acute, obliquely and broadly wedge-shaped at base, 5-10 cm. long, 5-35 mm. broad; flowers few and clustered at the end of long peduncles; keel with a very large pocket on one side, rostrum large and recurved; stigma capitate; calyx about 1-4 cm. long; fruits bristly hairy; seed with a small central hilum 2. *vexillata*
- Peduncles densely clothed with long sharply reflexed or spreading hairs; keel without a large pocket on either side, rostrum not large and recurved:4
- 4 Calyx 10-14 mm. long, lobes subulate, much longer than the tube, pilose; flowers few at the end of long peduncles; peduncles with sharply reflexed hairs; stigma oblique, acute; fruits appressed-bristly; seeds oblong, 5 mm. long, hilum 2-3 mm. long; leaflets variable, from linear to ovate-lanceolate, 5-15 cm. long, 1-4 cm. broad, setose-pubescent on both surfaces, tertiary nerves close and parallel3. *reticulata*
- Calyx 4 mm. long, lobes lanceolate, only slightly longer than the tube, pilose; flowers clustered in a short raceme at the end of long peduncles; peduncles with spreading hairs; stigma capitate; young fruits densely pilose; leaflets elliptic, not apiculate, 3-nerved at base, 2-4 cm. long, 1-3 cm. broad, pilose on both surfaces4. *maranguensis*
- 5 Stipules more or less cordate but not long-appendaged below the base:6
- Stipules with an appendage below the base:25
- 6 Leaflets linear or lanceolate:7
- Leaflets broadly lanceolate to ovate or lobed:14
- 7 Leaflets with very numerous lateral nerves spreading at right angles from the midrib, 6-10 cm. long, 5-8 mm.

- broad, strongly reticulate, glabrous; stipules ovate-lanceolate, rounded at base; flowers small, in short racemes; peduncles about as long as the petiole; fruits 6 cm. long, glabrous [5. multinervis](#)
- Leaflets with fewer and more or less oblique lateral nerves: **8**
- 8** Stipules 3–5-nerved: **9**
- Stipules about 8-nerved, 3 mm. long; leaflets linear-lanceolate, rounded at base, lateral nerves obscure, appressed-pubescent beneath, 4–7 cm. long, about 5 mm. broad; stipels about 2 mm. long; flowers few, the peduncle at length much elongated and thickened [11. lancifolia](#)
- 9** Keel rostrum short and not recurved; flowers at the end of the peduncle: **10**
- Keel petal with long strongly incurved rostrum; raceme lax with flowers in pairs about 1 cm. apart; peduncles rather long; pedicels 2 mm. long; fruit about 8 cm. long and 4 mm. broad, sutures prominent; leaflets lanceolate or ovate-lanceolate, 3-nerved and cuneate at base, 3–5 cm. long, 1–2.5 cm. broad, rather thick, glabrous ... [10. macrorrhyncha](#)
- 10** Leaflets glabrous above and only younger parts of stems, etc., with a few hairs: **11**
- Leaflets pubescent above (at least on the midrib) rhachis of inflorescence with several large glands: **12**
- 11** Rhachis of inflorescence without glands, 1–3-flowered, leaflets linear, very acute, 5–15 cm. long, 3–6 mm. broad, nervose; stipels subtending terminal leaflet at least as long as petiolule; fruits acutely beaked about 6 cm. long and 5 mm. broad, glabrous [6. stenophylla](#)
- Rhachis of inflorescence with several large glands, few-flowered; leaflets lanceolate to linear-lanceolate, 3–4.5 cm. long, 5–10 mm. (rarely up to 20 mm.) broad, laxly nervose; stipels subtending terminal leaflet about half as long as petiolule; fruits 3–4 cm. long, about 3 mm. broad, minutely pubescent [7. venulosa](#)
- 12** Peduncles filiform, 2–3 cm. long; inflorescence few-flowered; fruits up to 2 cm. long, 4 mm. broad, pendulous, glabrescent; leaflets oblong, 1–5 cm. long, 5–10 mm. broad [8. filicaulis](#)
- Peduncles stout and erect, 4–20 cm. long, angular: **13**
- 13** Fruits pendulous, sparsely pilose, torulose before maturity; peduncles long, thick and angular at base; other characters as below [18. luteola](#)
- Fruits erect, minutely puberulous, 3–4 cm. long, 3–4 mm. broad; peduncles not thickened at base; leaflets subhastate to lanceolate, 4–5 cm. long, 6–20 mm. broad; stems more or less pilose [9. nigrizia](#)
- 14** Standard petal pubescent outside; seeds oblong, about 5 mm. long, hilum oblique across one end, with a caruncle: **15**
- Standard petal glabrous outside: **16**
- 15** Rhachis of inflorescence very short, with up to about 7 large glands; leaflets lanceolate to ovate, mucronate, 5–10 cm. long, (1–) 2–4.5 cm. broad, pubescent; stipules cordate; flowers few, crowded; fruits about 5 cm. long, thinly appressed-pubescent [12. pubigera](#)
- Rhachis of inflorescence rather long, with numerous large glands; leaflets oblong-lanceolate, up to 12 cm. long and 3 cm. broad, pubescent; stipules small, hastate; fruits about 4 cm. long, thinly pubescent .. [13. ambacensis](#)
- 16** Flowers precocious; leaflets elliptic or more or less 3 lobed, cuneate at base, 3.5–7 cm. long, 2–5.5 cm. broad, silky pubescent when young; flowers few and clustered at the end of a very stout peduncle up to 30 cm. long; calyx puberulous; fruits silky pubescent, 11 cm. long, erect; seeds about 3 mm. long, hilum small and central [14. violacea](#)
- Flowers not precocious: **17**
- 17** Leaflets hastately lobulate, 2–3 cm. long, about 2 cm. broad, thinly pubescent beneath; stipules narrowly subulate; flowers very small, subcapitate on a peduncle 3–4 cm. long; fruits broadly linear, 2 cm. long, minutely pubescent, seeds 4 mm. long, hilum not central, with a caruncle [15. micrantha](#)
- Leaflets lanceolate or ovate, not lobed: **18**
- 18** Calyx densely pilose with brown hairs; peduncles slightly thickened towards base, terete, almost glabrous, 21–27 cm. long; leaflets lanceolate, 5.5–9 cm. long, about 1.5 cm. broad, rounded at base, acute at apex; flowers 1.5–1.7 cm. long; bracteoles linear, equalling calyx; fruits densely brown pilose, straight ... [16. sp. nr. oblongifolia](#)
- Calyx glabrous or pubescent with whitish hairs: **19**
- 19** Peduncles angular and thicker near the stem than at the other end; mature fruits about 6 cm. long, sutures almost straight, pendulous, immature dried fruits torulose, sparsely pilose; seeds elliptic, 4–5 mm. long, hilum central, without a caruncle: **20**
- Peduncles not thickened towards the base, terete: **21**
- 20** Leaflets emarginate at apex, glabrous, setose on midrib, ovate to broadly oblong-lanceolate, 4–7 cm. long, 1.5–4 cm. broad [17. marina](#)
- Leaflets acute and mucronate at apex, lanceolate, 3–7 cm. long, 8–16 mm. broad [18. luteola](#)
- 21** Stems pubescent or glabrous, not long-villous; fruits pendulous: **22**
- Stems more or less villous with long spreading or reflexed hairs; fruits pendulous or erect: **23**

- 22 Leaflets more or less ovate-triangular, hardly acuminate, very variable on the same plant, usually about 3 cm. long and 2 cm. broad; fruits about 2 cm. long (rarely 3 cm.) [19. gracilis](#)
- Leaflets very broadly ovate, acutely acuminate, all similar, usually about 6–7 cm. long and 5 cm. broad; fruits nearly 4 cm. long [20. multiflora](#)
- 23 Stipules distinctly sagittate, about 8 mm. long; peduncles 8–20 cm. long; racemes rather lax; leaflets ovate to ovate lanceolate, 4–9 cm. long, 2.5–4 cm. broad, rounded at base, acuminate, fruits 2–3 cm. long, about 3 mm. broad [21. racemosa](#)
- Stipules cordate, about 5 mm. long: **24**
- 24 Fruits pendulous, setose, 2–3 cm. long, 3–4 mm. broad, slightly torulose and curved; seeds with a small hilum on one side; peduncles 1–2 (–3) cm. long; leaflets broadly ovate, 5–11 cm. long, 4–8.5 cm. broad, rounded to subcordate at base, acuminate [22. desmodioides](#)
- Fruits erect, villose with brown hairs, 4–5 cm. long, 5 mm. broad, not torulose, straight; seeds with a long hilum along one side; peduncles 8–20 cm. long, at least in fruit; leaflets ovate, 4–7 cm. long, 2.5–4 cm. broad, rounded at base, acute [23. campestris](#)
- 25 Stems pilose; flowers 1.2 cm. long at the end of long, pilose peduncles which do not thicken in fruit; fruits 3–4 cm. long, 7 mm. broad, black when ripe, densely pilose; seeds with hilum oblique at one end [24. paludosa](#)
- Stems glabrous; flowers about 2 cm. long, at the end of the long, glabrous peduncles, which thicken in fruit; fruits in the wild form about 10 cm. long and soon dehiscent with the valves spirally twisted, in the cultivated form about 15 cm. long and not dehiscent, not spirally twisted; seeds with a small median hilum [25. unguiculata](#)

1. **Vigna longissima** *Hutch.* in Kew Bull. 1921: 367; Bak. f. Leg. Trop. Afr. 2: 414; Wilczek in Fl. Congo Belge 6: 377. *APD acc*

A slender herb with laxly pilose, prostrate, or perhaps twining, stems and fairly large mauve flowers.

N. Nig.: Bauchi Plateau, between Hephram and Ropp, 4,600 ft. (Aug.) Lely 360! P. 324! Vom, 3,000–4,500 ft. Dent Young 71!

Also in **N. Rhodesia** and **Belgian Congo**.

2. **Vigna vexillata** (*Linn.*) *Benth.* — F.T.A 2: 199 (incl. vars. α and β); Bak. f. l.c. 413; Chev. Bot. 202; Wilczek l.c. 379, t. 29, fig. 18C. *APD acc*

Phaseolus vexillatus *Linn.* (1753).

Plectrotropis angustifolia *Schum. & Thonn.* (1827).

Vigna angustifolia (*Schum. & Thonn.*) *Hook. f.* (1849) — F.W.T.A. ed. 1, 1: 409; Bak. f. l.c.

Plectrotropis hirsuta *Schum. & Thonn.* (1827), not *Vigna hirsuta* Feay ex Wood (1861).

Strophostylis capensis *E. Mey.* (1835).

Vigna capensis (*E. Mey.*) *Walp.* (1839) — *Berhaut Fl. Sen.* 20.

Vigna thonningii *Hook. f.* (1849) — F.W.T.A., ed. 1, 1: 409; Bak. f. l.c.

Vigna senegalensis *A. Chev.* (1944).

Stems twining or prostrate, root tuberous and spindle-shaped, flowers pink or purplish turning yellow.

Sen.: Döllinger! Roger! Walo country (fl. & fr. Feb.) Perrottet 227! **Gam.:** Brown-Lester 41! **S. L.:** Regent (Dec.) Sc. Elliot 4113! Gene (Nov.) Deighton 462! Njala (Dec.) Deighton 1578! Cam.:** Bansa (Oct.) Tamajong FHI 23480!

Extends to eastern Africa and **Angola**.

4. **Vigna maranguensis** (*Taub. ex Engl.*) *Harms* in Engl. Pflanzenw. Afr. 3, 1: 686 (1915); Wilczek l.c. 369.

APD: Synonym of Vigna parkeri subsp. maranguensis (Taub.) Verdc.

Dolichos maranguensis *Taub. ex Engl.* (1892).

A semi-prostrate creeper or twiner, rooting at the lower nodes; whole plant densely yellow pilose; flowers pink or whitish yellow.

Br. Cam.: Bafut Ngemba F.R., near L. Batuli, 6,000 ft., Bamenda (Aug., Oct., Nov.) Lightbody FHI 26271! Ujor FHI 29972!

Also in eastern Africa

5. **Vigna multinervis** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 409 (1928); Kew Bull. 1929: 17; Bak. f. l.c. 398; Wilczek l.c. 357. *APD acc*

Vigna linearifolia *Hutch.* in Broun & Massey (1929), not of Hook. f. (1849).

A glabrous twiner, with wiry stems to 6 ft. long, and blue or yellow flowers; amongst grass, etc.

Togo: Kadjakpe, Togo Plateau F.R. (Nov.) St. C. Thompson 1620! **N. Nig.:** Bauchi Plateau Batten-Poole 124! **S. Nig.:** Onitsha Barter 1799!

Also in **A.-E. Sudan, Uganda, Tanganyika, Belgian Congo** and **Angola**.

6. **Vigna stenophylla** *Harms* in Notizbl. Bot. Gart. Berl. 5: 210 (1911); Bak. f. l.c. 398. *APD acc*

APD: Synonym of Vigna unguiculata subsp. stenophylla (Harv.) Maréchal, Mascherpa & Stainier

Vigna dauciformis *A. Chev* in Bull. Soc. Bot. Fr. 58, Mém 8: 162 (1912), incl. var. *elata*.

Stem suberect with trailing glabrous branches and a spindle-shaped tuberous root; flowers bluish-purple.

S. L.: Sherbro Isl. (Nov.) Hunter 4! **IV. C.:** Mbayakro, Baoulé (Aug.) Chev. 22298! **G. C.:** Akuse (fl. & fr. June) Dalz. 83! **Togo:** Yendi (fr. May) Akpabla 506! **Dah.:** Kouandé Chev. 24234. **Fr. Nig.:** Gourma (July) Chev. 24377!

Also in **northern French Cameroons**.

7. **Vigna venulosa** *Bak.* in F.T.A. 2: 203 (1871); Chev. Bot. 202 (incl. var. *lathyroides* *A. Chev.* (1912)); Bak. f. l.c. 399. *APD acc*

APD: Synonym of Vigna multinervis Hutch. & Dalziel

A slender climber amongst grasses; flowers purple or yellow.

Sen.: Berhaut 844! **Fr. Sud.:** Nyamina to Koulikoro (Oct.) Chev. 3214! **Fr. G.:** Sambadougou (fr. Feb.) Chev. 20555! **S. L.:** Regent (Dec.) Sc. Elliot 4038! Bonthe Isl. (fl. & fr. Nov.) 8. **Vigna filicaulis** *Hepper* in Kew Bull. 1956: 128. *APD acc*

Vigna venulosa of Chev. Bot 202, partly (Chev. 22259)

Vigna venulosa var. **pubescens** *A. Chev* in Bull. Soc. Bot. Fr. 58, Mém 8: 163 (1912); Bak. f. l.c. 399.

Stems slender and wiry up to 2 ft. long, flowers yellow; **in grassland**.

Iv. C.: Baoulé-Nord (Aug.) Chev. 22259! 22359! **G. C.:** Ejura (fl. & fr. Dec.) Morton GC 9508! 9714!

9. **Vigna nigrizia** *Hook. f.* in Fl. Nigrit. 310 (1849); Wilczek l.c 358, fig. 18A. *APD acc*

Vigna pubigera var. **gossweileri** *Bak. f.* (1928).

Vigna tisseranti *A. Chev.* (1944), not of Pellegrin (1944).

Vigna villosa of F.T.A. 2: 206, partly.

Vigna racemosa of F.W.T.A., ed. 1, 1: 409, partly.

A climber; flowers pink; in savannah.

S. L.: Samu country Sc. Elliot 5918! **IV. C.:** Bouakro to Alangouassou Chev. 22219. **G. C.:** Ejura (fl. & fr. Dec.) Morton GC 9514! Gambaga (Apr.) Morton GC 9044! **N. Nig.:** T. Vogel 14! **S. Nig.:** Lagos (Oct.) Punch 37! Usonigbe F.R., Benin (fl. & fr. Oct.) Keay & Onochie FHI 19693!

Also in **Ubangi-Shari**, **Belgian Congo** and **Angola**.

10. **Vigna macrorrhyncha** (*Harms*) *Milne-Redhead* in Kew Bull. 1936: 473.

APD: *Synonym of Vigna kirkii* (*Baker*) *J. B. Gillett*

APD: *Synonym of Wajira grahamiana* (*Wight & Arn.*) *Thulin & Lavin*

Phaseolus macrorhynchus *Harms* (1900); *Bak. f.* l.c 390.

P. schimperi *Taub.* (1892) — *Bak. f.* l.c.; Wilczek l.c. 335, t. 27; not *Vigna schimperi* *Bak.* (1871).

Stem slender, sparsely appressed-pubescent, older leaflets glabrous and with translucent venation; flowers purplish.

N. Nig.: Naraguta (Aug.) Lely 552!

Also in **A.-E. Sudan**, **Uganda**, **Kenya**, **Tanganyika**, **Rhodesia** and **Belgian Congo**.

[*V. macrorrhyncha* has the truncate stipules of *Phaseolus*, but septate fruits of *Vigna*. These two genera are not satisfactorily separable.]

11. **Vigna lancifolia** *A. Rich.* — F.T.A. 2: 196; *Bak. f.* l.c. 398.

APD: *Synonym of Vigna oblongifolia* *A. Rich. var. oblongifolia*

Suberect with striate stems, eventually twining, and reddish flowers.

N. Nig.: Sokoto (Nov., Dec.) Moiser 206! 211!

Also in **Abyssinia** and **A.-E. Sudan**.

12. **Vigna pubigera** *Bak.* in F.T.A. 2: 201 (1871); *Bak. f.* l.c. 400. *APD acc*

Stems rather densely yellowish-pubescent, prostrate or widely climbing, flowers yellow, sometimes blue or reddish; in fallow fields or bush not far from cultivation.

Fr. Sud.: Macina (Sept.) Chev. 24915! **G. C.:** Achimota (Aug., Nov.) Milne-Redhead 5125! Irvine 5161! Accra (fl. & fr. Aug.) Deighton 3401! **Togo:** Paliba (fr. Dec.) Adams & Akpabla 4110! 4111! Ho (fl. & fr. Nov.) A. S. Thomas K. 7! **N. Nig.:** Lokoja Parsons 95! Nupe Barter 983! Katagum Dalz. 39! Abinsi (Dec.) Dalz. 621! Sokoto (fl. & fr. Oct.) Dalz. 315! 316! Bauchi to Gombe (fl. & fr. Oct., Nov.) Lely 633! **S. Nig.:** Awba Hills (Oct.) Jones FHI 5982!

Widely spread in tropical Africa

13. **Vigna ambacensis** *Welw. ex Bak.* in F.T.A. 2: 201 (1871); *Bak. f.* l.c 400; Wilczek l.c 355.

APD: *Synonym of Vigna heterophylla* *A. Rich.*

A twiner with grey-pubescent stems and bright yellow flowers, only the upper few flowers of the raceme develop.

N. Nig.: Abinsi (Dec.) Dalz. 617! Muri (fl. & fr. Nov.) Lamb 75! **S. Nig.:** Bansara, Ogoja Prov. (fl. & fr. Dec.) Keay FHI 28145! **Br. Cam.:** Bamenda, 5,500 ft. (Jan.) Migeod 444!

Also in **A.-E. Sudan**, **Belgian Congo**, **Uganda** and **Angola**.

14. **Vigna violacea** *Hutch.* in Kew Bull. 1921: 247; Bak. f. l.c. 405.

APD: Synonym of Vigna frutescens A. Rich. var. frutescens

A fairly strong twiner with slightly pubescent grey-green stems up to 12 ft. long from a woody tuberous root; flowers fragrant, beautiful lavender-violet appearing when leafless.

G. C.: Banda, Wenchi (fl. & fr. Dec.) Morton GC 25162! Ejura (Dec.) Morton GC 9520! **N. Nig.:** Bauchi Plateau (Jan.) Lely P. 52! Naraguta (fl. Mar., May, fr. May) Lely 6! Kennedy 45! Jos (fl. & fr. Mar.) Hill 6! Tof, 4,000 ft. (Feb.) Hepburn 135!

15. **Vigna micrantha** *Harms* in Engl. Bot. Jahrb. 26: 311 (1899); Bak. f. l.c. 406; Wilczek l.c. 353.

APD: Synonym of Vigna comosa Baker subsp. comosa

APD: Synonym of Vigna heterophylla A. Rich.

Stems slender, pubescent, **twining amongst grass, etc.**, with pale yellow flowers and 2–3-seeded fruits.

S. L.: Sefadu, 1,400 ft (fl. & fr. Dec.) Deighton 3568! **Lib.:** Mt. Mpaka Fossa, 1,960 ft. Kolahun (fl. & fr. Jan.) Bequaert 37! **S. Nig.:** Ikoyi Plains, Lagos (fl. & fr. Nov.) Dalz. 1216! Benin (Mar.) Jones FHI 7391!

Also in **Uganda**, **Kenya**, and **French Congo** and **Belgian Congo**.

16. **Vigna sp. nr oblongifolia** *A. Rich.* — F.T.A. 2: 196; Bak. f. l.c. 410. *APD acc*

A rambling plant **amongst tall grasses**.

Br. Cam.: Basenako, Bamenda, 6,000 ft. (fl. & fr. June) Maitland 1505!

[Differs from *V. oblongifolia* in the larger flowers, pilose calyx and almost glabrous peduncle; differs from *V. fischeri* Harms especially in the pilose calyx, more material is required.]

17. **Vigna marina** (*Burm.*) *Merill* Interpr. Rumph. Herb. Amboin. 285 (1917); Exell Cat. S. Tomé 163. *APD acc*

Phaseolus marinus *Burm.* (1755).

Vigna oblonga *Benth.* (1844) — F.T.A. 2: 206; Bak. f. l.c. 402; F.W.T.A., ed. 1, 1: 409.

Stem glabrous, prostrate or twining **amongst grass on the sea-shore**; flowers yellow.

Lib.: Grand Cess (fr. Mar.) Baldwin 11623! Rocktown (Mar.) Baldwin 11634! **S. Nig.:** Nun R. (Aug.) T. Vogel 18! Mann 495! Brass R. Barter 1827! Lagos (June) Dalz. 1211! Moloney! **Br. Cam.:** Victoria Preuss 1126! **F. Po:** T. Vogel 221!

A sea-shore plant throughout the tropics.

18. **Vigna luteola** (*Jacq.*) *Benth.* in Mart. Fl. Bras. 15: 194, t. 50, fig. 2 (1859), not of F.T.A. 2: 205; Bak. f. l.c. 401; Wilczek l.c. 363. *APD acc*

Dolichos luteolus *Jacq.* (1770).

D. niloticus *Del.* (1813).

Vigna nilotica (*Del.*) *Hook. f.* (1849) — F.T.A. 2: 204; Bak. f. l.c. 404; not of F.W.T.A., ed. 1, 1: 409.

Vigna nigerica *A. Chev.* (1944).

A twiner with yellow flowers; **in waste places**.

Sen.: Marsosoun, Casamance (fl. & fr. Feb.) Chev. 3407! **S. L.:** Yakban, Mambolo (fl. & fr. Nov.) Jordan 954! Kiragba, Samu (Sept.) Jordan 922! Bonthe (fl. & fr. Nov.) Deighton 2322! Mahera (fl. & fr. Nov.) Deighton 5687! **Lib.:** Roberts Field (fl. & fr. Jan.) Baldwin 14042! **Dah.:** Karimana (fl. & fr. Nov.) Arnaud.

Widespread in tropical Africa and America.

19. **Vigna gracilis** (*Guill. & Perr.*) *Hook. f.* — F.T.A. 2: 205; Chev. Bot. 200; Bak. f. l.c. 403; Wilczek l.c. 368. *APD acc*

Dolichos gracilis *Guill. & Perr.* (1832).

Vigna afzelii *Bak.* in F.T.A. 2: 202 (1871); Bak. f. l.c. 403.

Vigna parvifolia *Planch. ex Bak.* in F.T.A. 2: 206 (1871); Bak. f. l.c. 399.

Vigna racemosa var. **glabrescens** *Bak. f.* l.c. 409 (1929); Wilczek l.c. 371.

Vigna occidentalis *Bak. f.* (1934).

A slender extensively twining herb amongst grass with pink or bluish flowers turning yellow, very variable in foliage.

Sen.: Casamance R. Heudelot 589! **Gam.:** Albreda (Mar., Apr.) Perrottet! **Fr. Sud.:** Koulikoro Chev. 25027. **Port. G.:** Bissau (Oct., Nov.) Esp. Santo 1361! 2592! **S. L.:** Regent (fl. & fr. Dec.) Sc. Elliot 3859! Rokupr (Oct.) Jordan 369! 696! Yoni Mamila (fl. & fr. Dec.) King 7 B! Kono (Nov.) Deighton 69! Wellington (fl. & fr. Feb.) Deighton 4988! **Lib.:** Kakatown Whyte! Monrovia (fl. & fr. Nov.) Linder 1521! Baldwin 10494! Gbau, Sanokwele Dist. (Sept.) Baldwin 9427! **S. Nig.:** Degema Div. Talbot! Eket Talbot 3014!

Also in **French Camerouns**, **Belgian Congo** and **Principe**.

20. **Vigna multiflora** *Hook. f.* — F.T.A. 2: 205; Bak. f. l.c. 403; Wilczek l.c. 367.

APD: *Synonym of Vigna gracilis* var. *multiflora* (*Hook. f.*) *Maréchal & al.*

A slender twiner with pink or bluish purple flowers quickly turning yellow.

S. L.: Bintumane (Aug.) T. S. Jones 143! Kumrabai (Dec.) Thomas 6859! 7062! **Lib.:** Bushrod Isl. (fl. & fr. Dec.) Barker 1104! Duport (fl. & fr. Oct.) Barker 1434! Boporo Dist. (fl. & fr. Nov.) Baldwin 10264a! 10346! **IV. C.:** Baoulé Nord (July) Chev. 22219! **S. Nig.:** Idanre Hills (Oct.) Keay FHI 25510! Sapoba Kennedy FHI 2905! Oban Talbot 445! **Br. Cam.:** Buea (Nov.) Migeod 11! Maitland 112! Dunlap 139! Bansa (fl. & fr. Oct.) Tamajong FHI 23485! **F. Po.:** T. Vogel 245! Moka (Dec.) Boughey 1! 57!

Also in **Belgian Congo**.

21. **Vigna racemosa** (*G. Don*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 409 (1928); Kew Bull. 1929: 18; Bak. f. l.c. 409; Wilczek l.c. 370. *APD acc*

Clitoria racemosa *G. Don* (1832).

Vigna donii *Bak.* in F.T.A. 2: 202 (1871).

Vigna luteola of F.T.A. 2: 205, excl. syn.

Vigna villosa *Savi; Chev.* Bot. 201; Bak. f. l.c. 401.

(?) **V. glabra** *Savi; Chev.* Bot. 201; Bak. f. l.c. 401.

A fairly strong twiner amongst grass or on trees, with flowers either bright blue or pink or purple-tinged, turning yellow.

Sen.: Berhaut 1321. **Gam.:** Ingram! Mungo Park! **Fr. Sud.:** Bamako (fl. & fr. Nov.) Waterlot 1432! **Port. G.:** Bissau (fl. & fr. Oct., Nov.) Esp. Santo 2560! 2587! Bafata (Nov.) Esp. Santo 3117! **S. L.:** Njala (fl. & fr. Jan., Nov.) Deighton 1801! 4971! 5019! Baoma (fl. & fr. Dec.) Deighton 3477! Musaia (fl. & fr. Nov.) Glanville 373! Magbile (Dec.) Thomas 6203! **G. C.:** Bompata (Dec.) Dalz. 88! N. Agogo (fl. & fr. Dec.) Chipp 619! Abetifi and Afram Plains (fl. & fr. Dec.) Scholes 111! **Togo:** Ho (fr. Nov.) A. S. Thomas K. 9! Yendi (fr. Nov.) Williams 414! **N. Nig.:** Nupe Barter 1009! Lokoja Barter 1599! Onitsha Barter 1748! Dalz. 25! Parsons L. 65! L. 94! Sokoto (fr. Oct.) Dalz. 317! Kadaura (Sept.) Lely 59! **S. Nig.:** Abeokuta Irving! Lagos (Oct.) Punch 37! MacGregor 294!

Also in **Uganda**, **Ubangi-Shari**, **Belgian Congo** and **Angola**.

22. **Vigna desmodioides** *Wilczek* in Bull. Jard. Bot. Brux. 24: 438 (1954); Fl. Congo Belge 6: 366, fig. 18D. *APD acc*

Stems climbing and more or less pilose; flowers pink or mauve.

S. L.: Taiama (fl. & fr. Dec.) Deighton 3480! **S. Nig.:** Idumuje Thomal 2160!

Also in **Ubangi-Shari** and **Belgian Congo**.

23. **Vigna campestris** (*Mart. ex Benth.*) *Wilczek* in Fl. Congo Belge 6: 391, t. 31 (1954).

APD: *Synonym of Vigna juruana* (*Harms*) *Verdc.*

Phaseolus campestris *Mart. ex Benth.* (1838).

Vigna luteola of F.T.A. 2: 205, partly (Mann 2319).

A twiner 4–8 ft. high; flowers greenish.

S. L.: Gbinti (fl. & fr. Sept., fr. Jan.) Deighton 4849! 5991! **S. Nig.:** Old Calabar Mann 2319!

Also in **Belgian Congo** and tropical America.

24. *Vigna paludosa* Milne-Redhead in Kew Bull. 1947: 27.

APD: Synonym of Vigna longifolia (Benth.) Verdc.

Stem pilose, climbing up grasses in swamps and wet places flowers yellow.

S. L.: Mange, Bure (Jan.) Deighton 1043! Rokupr (fl. & fr. Jan.) Deighton 2953! 4050! 4189! Jordan 146! Adames 162! Port Loko (fl. & fr. Dec.) Thomas 5845! 6520! 6523! 6634!

25. *Vigna unguiculata* (Linn.) Walp. Rep. 1: 779 (1842); Wilczek l.c. 387, t. 30. *APD acc*

Dolichos unguiculatus Linn. (1753).

D. biflorus Linn. (1753) — Brenan in Mem N.Y. Bot. Gard. 8: 415 (1954); not of F.W.T.A., ed. 1, 1: 410.

D. sinensis Linn. (1756).

Vigna sinensis (Linn.) Savi ex Hassk. (1844) — F.T.A. 2: 204; Bak. f. l.c. 407; Merrill Interpr. Rumph. Herb. Amboin. 284; A. Chev. in Rev. Bot. Appliq. 24: 128 (1944); Chev. Bot. 201.

Vigna baoulensis A. Chev. (1912). There are numerous other synonyms.

Stems annual but often stout, subglabrous, twining on trees, etc.; flowers white and mauve-tinged or pink or yellow.

Port. G.: Pussube, Bissau (fr. Nov.) Esp. Santo 998! Antula, Bissau (Oct.) Esp. Santo 2537! **Fr. G.:** Macenta (Oct.) Baldwin 9846! **S. L.:** Bumbuna (fl. & fr. Oct.) Thomas 3452! Gegbwema (fl. & fr. Dec.) Deighton 3820! Musaia (fr. Nov., Dec.) Glanville 375! **Lib.:** Gbanga (Sept.) Linder 539! **IV. C.:** Marabadiassa Chev. 22032! Kodiokoffi Chev. 22356! **G. C.:** Cape Coast (fr. July) T. Vogel 47! Techiman, Ejura (fl. & fr. Dec.) Morton GC 9556! Kumasi (fr. Oct.) Baldwin 13463! **Fr. Nig.:** Niamey (fr. Oct.) Hagerup 534! **N. Nig.:** Sokoto (fr. Oct.) Dalz. 318! Katagum Dalz. 36! **S. Nig.:** Ibadan (fl. & fr. Nov.) Meikle 662!

Widespread in the tropics.

[The specimens cited here are of the wild, short-and narrow-fruited form (syn. *V. baoulensis* A. Chev.); the commonly cultivated forms which have long and broad fruits, if regarded as a distinct species, should bear the name *V. sinensis* (Linn.) Savi ex Hassk., vide Merrill l.c. and Chev. in Rev. Bot. Appliq. 24: 139–145 (1944).]

***Vigna mungo* (Linn.) Hepper**

This species with large stipules is occasionally cultivated in our area.

***Vigna marchali* A. Chev.** in Rev. Bot. Appliq. 30: 268 (1950). *APD acc*

Described as having no stipules.

Fr. Nig.: flooded grassland beside the Niger, Niamey to Gaya. Type not designated.

Imperfectly known species.

54. DOLICHOS

Linn. — F.T.A. 2: 209.

- | | | |
|----------|--|----------------------------------|
| 1 | Flowers in axillary racemes or fascicles, or subsolitary: | 2 |
| | Flowers in terminal or subterminal racemes; stems erect; leaflets rounded, broadly emarginate to acute at apex: | 10 |
| 2 | Leaflets lanceolate to suborbicular, with pinnate nerves; trailing or climbing (except No. 5) herbs: | 3 |
| | Leaflets linear or linear-lanceolate, with 3 prominent parallel nerves, glabrous to densely pubescent; stems erect, sometimes succulent; flowers fascicled in leaf-axils on long pedicels; fruits woody, 6–8 cm. long, 1–1.5 cm. broad | 10. <i>schweinfurthii</i> |
| 3 | Fruits 2–5.5 mm. broad, 3–8 cm. long; leaflets oblong-lanceolate to suborbicular: | 4 |
| | Fruits (5–) 6–8.5 mm. broad, 3–4 cm. long; leaflets more or less lanceolate: | 6 |
| | Fruits 8–11 mm. broad, 2.5–10 cm. long, shortly pubescent or very long-pilose; leaflets very broadly lanceolate to almost rhombic or irregularly 3-lobed: | 8 |
| 4 | Fruits 2–3.5 mm. broad, 4–8 cm. long, very sparsely appressed-pilose; leaflets ovate-oblong to narrowly oblong | |

- or lanceolate, appressed-pubescent on both surfaces; flowers 6–11 mm. long; calyx-teeth subulate-lanceolate, lower tooth about 6 mm. long; pedicels about 5 mm. long [1. stenophyllus](#)
- Fruits 3.5–5 mm. broad: **5**
- 5** Calyx-teeth all 1–2 mm. long; flowers 9–11 mm. long; pedicels very short; leaflets ovate-lanceolate, 2–3 cm. long, sparsely pilose on margins and nerves beneath [2. africanus](#)
- Calyx-teeth 5–9 mm. long; flowers 12–15 mm. long; pedicels about 3 mm. long; leaflets oblong to ovate-lanceolate, variable, 2–4 cm. long, from sparsely to densely pilose on both surfaces [3. chrysanthus](#)
- 6** Lower and lateral sepals abruptly attenuated into long filiform points two to several times longer than the expanded basal part of the teeth: **7**
- Lower and lateral sepals acuminate, hardly filiform-pointed, acumen up to 1½ times as long as expanded basal part of the teeth; flowers 12–15 mm. long, almost sessile; fruits pubescent; leaflets 3–4 cm. long, 1.5 cm. broad, cuneate at base, pubescent especially on margins and nerves of both sides [6. axillaris](#)
- 7** Flowers 10–13 mm. long, almost sessile; fruits with both long and short hairs, sometimes with short tubercles on sutures; leaflets 4–5 cm. long and about 2 cm. broad, lateral leaflets broadly rounded and unequal at base, pubescent [4. daltoni](#)
- Flowers 13–18 mm. long; fruits more or less pubescent with short hairs all of about the same length; leaflets 4–6 cm. long and about 2 cm. broad, lateral leaflets cuneate to slightly rounded and less markedly unequal at base, densely pubescent [5. brevicaulis](#)
- 8** Leaflets entire; fruits minutely pubescent, 6–10-seeded; flowers not in clusters: **9**
- Leaflets irregularly 3-lobed, densely silky-pubescent beneath; fruits very long-pilose, 3-seeded; flowers in pedunculate clusters; peduncles about 3 cm. long, densely long-pilose [9. argenteus](#)
- 9** Bracteoles at base of calyx prominently 1-nerved and sometimes with 2 obscure lateral nerves, lanceolate, 1 mm. long; calyx-lobes triangular, about 1 mm. long; stems glabrous to sparsely pilose; leaves variable, in W. Africa usually broadest below the middle, broadly cuneate to rounded at base, subacuminate, about 5–5 cm. long and broad [7. falcatus](#)
- Bracteoles at base of calyx prominently 3–5-nerved, linear, 3–5 mm. long; calyx-lobes acuminate, 2–3 mm. long, lowest lobe about 5 mm. long; stems appressed-pubescent; leaves more or less rhombic, cuneate at base, subacute at apex, 4–8 cm. long, 2–6 cm. broad [8. formosus](#)
- 10** Stipules 3–4 mm. long, 5–7 mm. broad at base, acuminate, reflexed; leaves subsessile, leaflets obovate or obovate-oblong, rounded or emarginate at apex, lateral leaflets unequal-sided at base, terminal leaflets cuneate at base, 3–6 cm. long, subglabrous to pubescent, young stems pubescent becoming glabrous [11. dinklagei](#)
- Stipules 8–40 mm. long: **11**
- 11** Stipules 30–40 mm. long, lanceolate, not amplexicaul; leaflets lanceolate to elliptic-lanceolate, rounded at base, acute at apex, 6–9 cm. long, about 3 cm. broad, pilose on nerves beneath, lateral leaflets subequal on each side
12. grandistipulatus [11. grandistipulatus](#)
- Stipules 8–23 mm. long, amplexicaul, very broad at base: **12**
- 12** Leaflets orbicular, truncate at base, broadly emarginate or rounded at apex, about 7 cm. long and broad; stipules broadly lanceolate, prominently many-nerved, subcordate, 18–23 mm. long, about 13 mm. broad [13. tonkouiensis](#)
- Leaflets ovate-lanceolate, cuneate at base, subacute at apex, 3–11 cm. long, 1–4 cm. broad, lateral leaflets very unequal-sided at base; stipules ovate-lanceolate, obscurely many-nerved, subfalcate, (8–) 12–19 mm. long, about 8 mm. broad [14. nimbaensis](#)

- 1. Dolichos stenophyllus** Harms in Engl. Bot. Jahrb. 26: 314 (1899); Bak. f. Leg. Trop. Afr. 2: 450; Brenan in Mem. N.Y. Bot. Gard. 8: 420(1954); Wilczek in Fl. Congo Belge 6: 325. Berhaut Fl. Sen .20.

APD: Synonym of Macrotyloma stenophyllum (Harms) Verdc.

Stems twining or trailing, 1–3 ft. long, from a woody base, slender, pubescent; flowers yellow; in savannah.

Sen.: fide Berhaut l.c. **Togo:** Sokode-Basari Schröder 90! 116! **N. Nig.:** Naraguta & Jos (Sept.) Lely 562! P. 697! Batten-Poole 154! Onitsha (fl. & fr. Oct.) Jones FHI 5892!

Also in the **Belgian Congo** and **Angola**.

- 2. Dolichos africanus** Wilczek in Bull. Jard. Bot. Brux. 24: 430 (1954); Fl. Congo Belge 6: 323. D. sp. A. of Brenan l.c. 417.

APD: Synonym of Macrotyloma africanum (R. Wilczek) Verdc.

Slender annual herb, climbing to 6 ft. high; green and glabrescent; flowers small, greenish-yellow.

N. Nig.: Bauchi Plateau (Oct.) Lely P. 800!

Also in **Belgian Congo**, **Tanganyika** and **N. Rhodesia** and **S. Rhodesia**.

3. **Dolichos chrysanthus** A. Chev. in Bull. Soc. Bot. Fr. 58, Mém. 8: 164 (1912); Chev. Bot. 204; Bak. f. l.c. 449; Brenan l.c. 419; Wilczek l.c., fig. 16, incl. var. *occidentalis* (Harms) Wilczek.

APD: Synonym of Macrotyloma biflorum (Schumach. & Thonn.) Hepper var. biflorum

Dolichos biflorus of F.W.T.A., ed. 1, 1: 410.

Dolichos biflorus var. *occidentalis* Harms (1899); Bak. f. l.c. 449.

Dolichos stenophyllus of F.W.T.A. ed. 1, 1: 410, partly (Chev. 22427).

Dolichos brevipaulis of F.W.T.A., ed. 1, 1: 410, partly (Lely 562).

Stems trailing, 3–4 ft. long; flowers pale yellow; in **savannah**.

Port. G.: Bissau (fr. Dec.) Esp. Santo 1439! **S. L.:** Falaba (Sept.) Small 306! Waterloo Hill, Rokupr (Oct.) Jordan 370! **IV. C.:** Baoulé (Aug.) Chev. 22427! Dabou (fl. & fr. Nov.) Roberty 12512! **G. C.:** Tamale (Nov.) Williams 390! Ajena (Oct.) Morton A. 140! Anum (Nov.) Morton GC 7962! **N. Nig.:** Nupe Barter 967! 1591! Lokoja (Sept.) Parsons 19! 68! Anara F.R., Zaria (fl. & fr. Sept.) Olorunfemi FHI 24360! Naraguta (July) Lely 470! Vom Dent Young 74! Abinsi (Aug.) Dalz. 593! **Br. Cam.:** N. Cameroons (Oct.) Talbot!

Also in **French Cameroons**, **Ubangi Shari**, **Belgian Congo**, **Angola** and **A.-E. Sudan**. Dalz. 45!

Also in **Cape Verde Islands**, **A.-E. Sudan**, **Eritrea**, **Abyssinia**, **Tanganyika**, **Nyasaland**, **N. Rhodesia** and **Angola**.

5. **Dolichos brevipaulis** Bak in F.T.A. 2: 211 (1871); Bak. f. l.c. 444; Brenan l.c. 419.

APD: Synonym of Macrotyloma brevipaula (Baker) Verdc.

An erect or trailing herb, 1–2 ft. high, leaves greyish when dry, flowers greenish, in **savannah**.

N. Nig.: Jebba Barter! Yola (Sept) Dalz. 306! Alkalire, Bauchi Plateau (Sept.) Lely 639!

6. **Dolichos axillaris** E. Mey. — F.T.A. 2: 211; Brenan l.c. 414; Wilczek l.c. 321. *APD acc*

Dolichos biflorus of Bak. f. l.c. 448, partly (in syn.).

Perennial climbing herb, 3–4 ft. high, pubescent, flowers pale green.

N. Nig.: Naraguta & Jos (Sept.) Lely 578!

Widespread in tropical Africa reaching Natal in the south, also in **Madagascar** and **Ceylon**.

[The specimen cited here (Lely 578) is the true var. *axillaris* Another specimen from the Bauchi Plateau (Lely P. 97) is intermediate between the typical variety and var. *glaber* E. Mey. (1835).]

7. **Dolichos falcatus** Klein ex Willd. Sp. Pl. 3: 1047 (1802); Meikle in Kew Bull. 1950: 350 (1951); Wilczek l.c. 313.

APD: Synonym of Dolichos trilobus L. var. trilobus

Dolichos debilis Hochst. ex A. Rich. (1847) — F.T.A. 2: 213; Bak. f. l.c. 449.

A trailer or climber up to 6 ft. high; flowers cream tinged pink or bright blue and quickly fading, amongst shrubs in **secondary forest**.

G. C.: Mampong Scarp (fl. & fr. Dec.) Morton GC 9648! Sekodumase (fr. Jan.) Kitson! **Togo:** Bame Pass (Oct.) Morton GC 9300! **S. Nig.:** Ibadan (fl. & fr. Jan.) Meikle 661! 961! Isijere, Ibadan (Nov.) Keay FHI 28141! Lagos (Oct.) Punch!

Also in **Abyssinia**, **Uganda**, **Kenya**, **Tanganyika**, **Mozambique**, **Natal**, **India**, **Burma** and **Ceylon**.

8. **Dolichos formosus** A. Rich. — F.T.A. 2: 213; Bak. f. l.c. 448; Meikle l.c. 351; Wilczek l.c. 314.

APD: Synonym of Dolichos sericeus E. Mey. subsp. sericeus

APD: Synonym of Dolichos sericeus subsp. formosus (A. Rich.) Verdc.

A robust climber chiefly in **grasslands**; flowers blue or purple.

Br. Cam.: Nchan, Bamenda, 5,000 ft. (May) Maitland 1524!

Also in **Abyssinia**, **A.-E. Sudan**, **Uganda**, **Kenya**, **Tanganyika**, **Nyasaland** and **Rhodesia**.

9. **Dolichos argenteus Willd.** Sp. Pl. 3: 1047 (1803); Bak. f. l.c. 452.

APD: Synonym of Pseudovigna argentea (Willd.) Verdc.

Stems creeping along the ground, clothed with long brown hairs; flowers white or pink.

Togo: fide Bak. f. l.c. **Dah.:** Cotonou (June) Debeaux 193!

Also in **Kenya**, **Tanganyika** and **Zanzibar**.

[The type specimen was collected in "Guinea."]

10. **Dolichos schweinfurthii Taub ex Harms** in Engl. Bot. Jahrb. 26: 315 (1899); Taub. in E. & P. Pflanzenfam. 3, 3: 383, name only; Bak. f. l.c.; 436. *APD acc*

Dolichos bongensis Taub. ex Harms. l.c. (1899); Bak. f. l.c.

Dolichos lelyi Hutch. (1921) — Bak. f. l.c.; F.W.T.A., ed. 1, 1: 410.

Dolichos carnosus A. Chev. Bot. 204, name only.

A variable perennial herb 2–3 ft. high with a tuberous rootstock; flowers purplish; gregarious in **savannah**.

Fr. Sud.: between upper R. Senegal and R. Niger Bellamy! **Port. G.:** Dara & Ôco, Gabú (June) Esp. Santo 2911! **Fr. G.:** Kouroussa Pobéguin 261! Diankoro to Balandougou (fl. & fr. May) Chev. 25881! Kana valley Chev. 13248. Timbo to Farana Chev. 13347; 13356. **Togo:** Yendi (Apr.) Dalz. 49! **N. Nig.:** Anara F.R., Zaria (fr. May) Keay FHI 22900! Naraguta Lely 44! Hill 27! Nabardo, 2,300 ft. (May) Lely 208! 215! **Br. Cam.:** Bansa to Jakiri (Jan.) Keay FHI 28459!

Also in **French Cameroons** and **A.-E. Sudan**.

11. **Dolichos dinklagei Harms** in Engl. Bot. Jahrb. 45: 315 (1910); Bak. f. l.c. 446. *APD acc*

Tephrosia subalpina A. Chev. (1912), partly; Chev. Bot. 181, partly; Bak. f. l.c. 1: 186.

Adenodolichos dinklagei (Harms) G. Roberty (1954).

A half-shrubby perennial, 2–5 ft. high, stems slightly angular; flowers blue; **on rocky outcrops**.

Fr. G.: Kindia to Conakry Chev. 20201. Grandes Chutes Chev. 20221. Macenta, 2,000–2,500 ft. (Oct.) Baldwin 9778! **S. L.:** Benikoro (Oct.) Thomas 2901! 2907! Yonibana (Oct.) Thomas 4329! Kasawe F.R. Bequaert 41! **Iv. C.:** Mt. Goula, Dyolas country (Apr.) Chev. 21225!

12. **Dolichos grandistipulatus Harms** in Engl. Bot. Jahrb. 49: 452 (1913); Bak. f. l.c. 443. *APD acc*

An erect herb with an angular stem clothed with long white hairs.

N. Nig.: Bauchi Plateau Lely!

Also in **French Cameroons**.

13. **Dolichos tonkouiensis Portères** in Rev. Bot. Appliq. 19: 786 (1939). *APD acc*

Tephrosia subalpina A. Chev. (1912), partly **Dolichos nimbaensis Schnell** (1950), partly (Chev. 21724).

Erect undershrub, 4–5 ft. high, stems sharply angular, flowers yellow.

Fr. G.: Nzérékoré (Oct.) Baldwin 9690! **Lib.:** Sanokwele (Sept.) Baldwin 9519! **IV. C.:** Mt. Niénokué, 1,600 ft. Chev. 19474. Mt. Dou, 4,300 ft. Chev. 21486! Mt. Dourou, 3,200 ft. Chev. 21724! Mt. Tonkoui, Man Portères 2478.

14. **Dolichos nimbaensis Schnell** in Rev. Gen. Bot. 57: 278, fig. 1 (1950). *APD acc*

Erect or ascending herb 1–5 ft. high, stems angular, softly pubescent; flowers red or purple.

Fr. G.: Nimba Mts. Schnell 1550; 1846; 3366; 3715. **S. L.:** Magbile (fl. & fr. Dec.) Thomas 6481! Gendembu (Oct.) Glanville 4! Bubuya (Sept.) Adames 188!

Dolichos baumannii *Harms* in Engl. Bot. Jahrb. 26: 313 (1899); Bak. f. l.c. 448; Brenan l.c. 419, q.v. for discussion.

Togo: Misahöhe Baumann 341. Bismarckburg Büttner 225.

Imperfectly known species.

55. LABLAB

Adans. Fam. Pl. 2: 325 (1763).

- 1 Stems climbing; leaves long petiolate; leaflets acuminate, very broadly ovate, mostly abruptly cuneate at base, 6–12 cm. long, up to 10 cm. broad, glabrous or nearly so beneath; stipels lanceolate, 5 mm. long, ribbed; flowers on long stiff racemes, fasciculate on peduncle; fruit broadly and slightly falcate, about 6 cm. long and 2 cm. broad, beaked by the persistent style, glabrous *niger*

Lablab niger *Medic.* in Vorles. Churpf. Phys. Ges. 2: 354 (1787); Wilczek in Fl. Congo Belge 6: 279, fig. 9.

APD: *Synonym of Lablab purpureus (L.) Sweet subsp. purpureus*

Lablab vulgaris *Savi* (1821).

Dolichos lablab *Linn.* (1753) — F.T.A. 2: 210; Chev. Bot. 204; F.W.T.A., ed. 1, 1: 410; Bak. f. Leg. Trop. Afr. 2: 452.

A climbing perennial herb up to 15 ft. high, stems glabrous or pubescent; flowers white or red-tinged.

Sen.: Rufisque Chev. 3135. **S. L.:** Glanville in Hb. Deighton 1800! **IV. C.:** Morénou (fl. & fr. Dec.) Chev. 22490! **G. C.:** Kumasi Cummins 92! Tamale (fr. Dec.) Williams 811! **N. Nig.:** Sokoto Dalz. 323! Katagum Dalz. 43! Bui, Bornu (Sept.) Noble 23! **S. Nig.:** Lagos MacGregor 262! Ibadan (fl. & fr. Oct.) Newberry & Etim 148! Mt. Koloishe, Obudu (fl. & fr. Dec.) Savory & Keay FHI 25101! **Br. Cam.:** Victoria (fr. Nov.) Maitland 778! Buea (fr. Jan.) Montana 259! Bamenda Migeod 429!

Commonly cultivated, also occasionally wild; widespread in the tropics.

56. ADENODOLICHOS

Harms in Engl. Bot. Jahrb. 33: 179 (1902). *APD acc*

- 1 Shrub; young parts viscid reddish-tomentose; leaves opposite, 3-foliate, occasionally 5-foliate, stipellate; leaflets subequal, broadly ovate, rounded at base, rounded and mucronate at apex, 7–18 cm. long, 5–15 cm. broad, strongly nerved, rusty-pubescent on the nerves and gland-dotted beneath; flowers in lax terminal panicles with elongated branches; calyx tomentose, about 1 cm. long, lobes oblong-lanceolate, subacute; fruits oblong, sharply beaked, 4–5 cm. long, 1–3-seeded, loosely tomentose *paniculatus*

Adenodolichos paniculatus (*Hua*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 411 (1928); Kew Bull. 1929: 18; Bak. f. Leg. Trop. Afr. 2: 458; Wilczek in Fl. Congo Belge 6: 396. *APD acc*

Dolichos paniculatus *Hua* (1897).

D. macrothyrsus *Harms* (1899).

Adenodolichos macrothyrsus (*Harms*) *Harms* (1902).

An erect half-woody plant of shrubby habit, up to 15 ft. high; flowers with pinkish keel and yellowish standard; *in savannah country*.

Fr. G.: Timbo Miguel 72. **G. C.:** Gambaga Scarp (Dec.) Adams & Akpabla GC 4246! **N. Nig.:** Kontagora (fr. Dec.) Dalz. 37! Minna (fr. Dec.) Meikle 694! Mongu, 4,300 ft. (July) Lely 398! Vom, 3,000–4,500 ft. Dent Young 77! Ropp (fl. & fr. Dec.) Savory UCI 130!

Also in **French Cameroons** and **A.-E. Sudan**. *DC.* — F.T.A. 2: 207; *Harms* in Notizbl. Bot. Gart. Berl. 5:

253; Chev. Bot. 203; Bak. f. Leg. Trop. Afr. 2: 424; Jac.-Fél. in Bull. Soc. Bot. Fr. 93: 360 (1946).

APD: Synonym of Vigna subterranea (L.) Verdc. var. subterranea

Glycine subterranea Linn. (1763).

Flowers usually in pairs on a peduncle, stigma lateral.

Sen.: Roger! **Fr. Sud.:** Ségou (Sept.) Chev. 24974! Djenné (Sept.) Chev. 3133! San Chev. 3131. **IV. C.:** Mossi Chev. 24697. **G. C.:** Atwabo Fishlock 76! Tamale (Oct.) Baldwin 13582! **Togo:** Kersting! **Dah.:** Agouagon Chev. 23669. **N. Nig.:** Munshi country (fr. Dec.) Sampson 36! Kilba country (Aug.) Dalz. 9! Bida Lamb! Bauchi Plateau (July) Lely P. 536! **S. Nig.:** Lagos Millen 10! Aguku Thomas 996!

Cultivated throughout tropical Africa, S. Africa and Madagascar and also in Java and the Philippines and, apparently indigenous in N. Nigeria, French Cameroons and Ubangi-Shari.

58. KERSTINGIELLA

Harms in Ber. Deutsch. Bot. Ges. 26a: 230, t. 3 (1908).

- 1 A herb with prostrate rooting branches fruiting below the soil; leaves 3-foliolate, long-petiolate, stipellate; leaflets elliptic-obovate, broadly narrowed at base, mucronate, 5–8 cm. long, 4–5.5 cm. broad, 3 nerved at base, glabrous; flowers axillary, subsessile, about 1 cm. long; calyx thinly pilose, deeply divided with narrow segments; fruits on a carpophore up to 2 cm. long, 1–3-seeded, in the latter case constricted between the seeds, up to 2 cm. long, reticulate; seeds somewhat kidney-shaped, 1 cm. long, rich brown, with the scar near the middle [geocarpa](#)

Kerstingiella geocarpa *Harms* l.c. (1908); Stapf in Kew Bull. 1912: 209, with fig.; Chev. Bot. 203; Bak. f. Leg. Trop. Afr. 2: 425.

APD: Synonym of Macrotyloma geocarpum (Harms) Maréchal & Baudet var. geocarpum

Voandzeia poissoni A. Chev. (1910).

V. geocarpa (*Harms*) A. Chev. (1919).

Flowers subsessile in leaf-axils, style with a terminal ciliate stigma.

Sen.: Berhaut 284. **IV. C.:** Mossi Chev. 24682. **G. C.:** Williams 553! **Togo:** Kersting A. 476–478! **Dah.:** Agouagon Chev. 23525; 23848. **N. Nig.:** Andrew! Nupe (fr. June) Elliott 200! Bida Lamb 8!

59. PSOPHOCARPUS

Neck. — F.T.A. 2: 208.

- 1 Leaves 3-foliolate; leaflets entire or sometimes 3 lobed, broadly ovate, terminal leaflet rhomboidal, 5–9 (–12) cm. long, 4–6 (–9) cm. broad, more or less pubescent beneath; racemes 15 cm. long; calyx shortly pubescent outside; fruits 4-winged, 5–6 cm. long, 1.5 cm. broad, 4–6-seeded, glabrous [1. palustris](#)
- Leaves 1-foliolate; leaflet shortly petiolulate, ovate, rounded at both ends, mucronate, 5–7.5 cm. long, 4–4.5 cm. broad, pubescent on the strong nerves beneath; stipules broadly lanceolate, 8 mm. long; racemes 15 cm. long; calyx glabrous outside; young fruits villous [2. monophyllus](#)

1. **Psophocarpus palustris** *Desv.* in Ann. Sci. Nat., sér. 1, 9: 420 (1826); Bak. f. Leg. Trop. Afr. 2: 426; Wilczek in Fl. Congo Belge 6: 283, fig. 10. *APD acc*

APD: Synonym of Psophocarpus scandens (Endl.) Verdc.

Psophocarpus palmettorum *Guill. & Perr.* (1832) — F.W.T.A., ed. 1, 1: 411.

Psophocarpus longepedunculatus of F.T.A. 2: 208.

A twiner with blue flowers and half-woody stem; [climbing on trees in swampy places.](#)

Sen.: Farmar 39! **Gam.:** Kudang (Jan.) Dalz. 8016! **Fr. Sud.:** Bafaga Chev. 712. **Port. G.:** Bissau (Oct.) Esp. Santo 1423! 1664! **S. L.:** Segbwema (Dec.) Deighton 3466! Mange (fr. Feb.) Deighton 3611! **Lib.:** Peahtah (Oct.) Linder 1019! Kolahun

(fr. Nov.) Baldwin 10150! **G. C.:** Accra Plains (fr. Jan.) Irvine 1942! **Dah.:** Porto Novo Chev. 22719! **N. Nig.:** Nupe Barter 960! Kontagora (fl. & fr. Oct.) Dalz. 17! **S. Nig.:** Lagos Millen 69! Old Calabar Thomson 116! Oban Talbot 1318! **Br. Cam.:** Victoria (Mar.) Maitland 515!

Extends to **A.-E. Sudan**, **Zanzibar**, **Mozambique** and **Angola**.

2. **Psophocarpus monophyllus** *Harms* in Engl. Bot. Jahrb. 40: 43 (1907); Chev. Bot. 203; Bak. f. l.c. 427. *APD acc*

A rather woody plant up to 3 ft. high; flowers blue in axillary racemes.

Fr. Sud.: Samorokiri Chev. 888. **IV. C.:** Mankono (July) Chev. 21972!

The Asiatic species *P. tetragonolobus* (Linn.) DC. has been introduced into our area.

60. **TERAMNUS**

Browne — F.T.A. 2: 180.

- 1 Pedicels (of flowers) 2–3 mm. long; leaflets with 4–6 secondary nerves, ovate to ovate-lanceolate, subacute, 3–5 cm. long, 1.5–2.5 cm. broad, closely appressed-pilose beneath; stipules lanceolate, pubescent; racemes few-flowered, axillary, about as long as the leaves; calyx appressed-pilose, 3 mm. long; fruits linear, flat, 4–6 cm. long, sparsely appressed-pilose, with an upturned beak 3 mm. long [1. labialis](#)
- Pedicels (of flowers) up to 1 mm. long, or flowers sessile; leaflets with 7–13 secondary nerves: **2**
- 2 Calyx 6–7 mm. long, deeply lobed, lobes subulate, densely long-pilose; corolla a little longer than calyx; racemes 20–35 cm. long, long-pedunculate; fruits densely spreading-setose, about 4 cm. long and 4 mm. broad, with the beak slightly reflexed; leaflets lanceolate, 8–10 cm. long, 3–4 cm. broad, with about 12 lateral nerves, terminal leaflet shortly petiolate; peduncle 1–3 cm. long [2. buettneri](#)
- Calyx 3–4 mm. long, lobed to about half-way down its length; leaflets with about 8 lateral nerves; fruits with a reflexed beak 3–4 mm. long; **3**
- 3 Leaflets lanceolate to linear-lanceolate, 5–6 cm. long, 1–2.5 cm. broad, pubescent beneath; stems angular, more or less appressed-pilose; racemes 10–40 cm. long, shortly pedunculate; fruits 4–5 cm. long, about 2 mm. broad, sparsely appressed-pilose [3. andongensis](#)
- Leaflets elliptic or ovate, 6–9 cm. long, 3–6.5 cm. broad, silky-pubescent beneath; stems angular, pilose with reflexed spreading hairs; racemes up to 40 cm. long; fruits about 3.5 cm. long, 3 mm. broad, densely appressed-pilose [4. micans](#)

1. **Teramnus labialis** (*Linn. f.*) *Spreng.* — F.T.A. 2: 180, partly; Chev. Bot. 194; Bak. f. Leg. Trop. Afr. 2: 363. *APD acc*

Glycine labialis *Linn. f.* (1781).

A slender-stemmed twiner with small reddish flowers.

Sen.: Senegal R. (Jan.) Roger 89! Galam Heudelot 114! Walo Perrottet 222! **S. L.:** Thomas! Hangha (fr. Jan.) Thomas 7796! **Lib.:** Vonjama Dist. (Oct.) Baldwin 9994! **IV. C.:** Mid. Comoé Chev. 22616. **G. C.:** Accra Plains (July) Irvine 3028! Anum (fr. Nov.) Morton GC 7993! Kumasi (fl. & fr. Dec.) Morton GC 9682! **Dah.:** Zagnanado Chev. 22981. **S. Nig.:** Thomas 1810! Lagos Millen 61! 114! Ibadan (fl. & fr. Nov.) Jones & Keay FHI 14228!

Also throughout the tropics.

2. **Teramnus buettneri** (*Harms*) *Bak. f.* l.c. 365 (1929). *APD acc*

Glycine buettneri *Harms* (1899).

G. andongensis of F.W.T.A., ed. 1, 1: 407, partly (Büttner 163).

Stem more or less erect, woody, up to 5 ft. high.

IV. C.: Mankono (fr. July) Chev. 21990! **G. C.:** Vigne! Wankye (July) Chipp 482! Ejura (fr. Aug.) Andoh FH 5041! **Togo:** Bismarckburg Büttner 163. Kpandu Robertson 135! Kete Krachi (fl. & fr. May) Morton GC 7160!

3. **Teramnus andongensis** (*Welw. ex Bak.*) *Bak. f.* in J. Bot. 66, suppl. 1: 115 (1928); Leg. Trop. Afr. 2: 364.

APD: Synonym of Teramnus uncinatus subsp. ringoetii (De Wild.) Verdc.

Glycine andongensis Welw. ex Bak. in F.T.A. 2: 179 (1871); F.W.T.A., ed. 1, 1: 407, partly (Dalz. 589).

A twiner in grass with small white flowers.

Sen.: Niokolo-Koba (fr. Jan.) Berhaut 4462! **S. L.:** Musaia (fr. Dec.) Deighton 4872! 5704! Jigaya (Nov.) Thomas 2689! **G. C.:** Wenchi (fl. & fr. Dec.) Morton GC 25302! **N. Nig.:** Abinsi (Nov.) Dalz. 589! Bauchi Plateau (Sept.) Lely P. 721! R. Benue (Sept.) Talbot! Lassa, L. Chad (Sept.) Royer 101!

Also in **Uganda, Kenya, Tanganyika, Belgian Congo** and **Angola**.

[The numbers cited here are by no means uniform amongst themselves and several taxa may be recognized when more material becomes available.]

4. **Teramnus micans** (Welw. ex Bak.) Bak. f. in J. Bot. 66, suppl. 1: 115 (1928); Leg. Trop. Afr. 2: 366.

APD acc

Glycine micans Welw. ex Bak. in F.T.A. 2: 179 (1871).

A fairly strong climber with white or pink flowers.

Port. G.: Bafatá (fl. & tr. Nov.) Esp. Santo 2971! **S. L.:** Yonibana (Nov.) Thomas 4698! 5101! Sefadu (Dec.) Deighton 3577! Musaia (fr. Dec.) Deighton 4543! **Br. Cam.:** Belo, Bamenda (fr. Apr.) Maitland 1688!

Also in **French Cameroons, Belgian Congo** and **Angola**.

61. PUERARIA

DC. in Ann. Sci. Nat., ser. 1, 4: 97 (1825).

- 1 Climbing herb; stems densely pilose with brownish spreading hairs; leaves 3-foliolate; leaflets broadly rhomboid-ovate, broadly cuneate at base, subacute at apex, 6–9 cm. long, 5–8 cm. broad, softly appressed-pilose beneath, pubescent above with hairs of two lengths; stipules lanceolate, not appendaged; racemes axillary, pedunculate, 10–20 cm. long, many-flowered, with glandular swollen nodes; flowers about 1.5 cm. long; fruits linear, about 8 cm. long and 6 mm. broad, beaked, appressed-pilose with brownish hairs

..... *phaseoloides*

Pueraria phaseoloides (Roxb.) Benth. in J. Linn. Soc. 9: 125(1865). *APD acc*

Dolichos phaseoloides Roxb. (1832).

A climbing or trailing herb with pale bluish flowers.

S. L.: Njala (fl. & fr. Jan.) Deighton 2455! **Lib.:** Roberts Field, Montserrado (fl. & fr. Jan.) Baldwin 14040! **G. C.:** Butre, Dixcove (fl. & fr. Mar.) Morton A. 438! **S. Nig.:** Asaba (fl. & fr. Mar.) Irvine 3616!

A native of tropical Asia, introduced into parts of tropical Africa as a cover-crop.

Pueraria thunbergiana (Sieb. & Zucc.) Benth.

Has also been introduced into Sierra Leone.

62. CANAVALIA

DC. — F.T.A. 2: 189.

- 1 Stems creeping; leaflets broadly obovate or suborbicular, widely emarginate and mucronate, up to 10 cm. in diam., thin, glabrous, with about 5 pairs of prominent lateral nerves, laxly reticulate between the nerves; stipels very small; flowers few on a stout axis, shortly pedicellate; calyx about 1 cm. long, shortly pubescent outside, the uppermost lobe broadly ovate; corolla about 2.5 cm. long; fruits broadly linear, 15 cm. or more long, with 2 very close ribs near the upper suture *L. rosea*

Stems climbing; leaflets ovate or ovate-elliptic, acute or acutely acuminate, broadly cuneate at base, up to 20 cm. long and 10 cm. broad, glabrous, with 6–7 pairs of lateral nerves; flowers more or less as above; fruits variable, sword-shaped, elongate, 30 cm. long or more, with 2 longitudinal ribs near the upper suture; seeds narrowly ellipsoid, smooth *2. ensiformis*

1. **Canavalia rosea** (Sw.) DC. Prod. 2: 404 (1825); Dunn in Kew Bull. 1922: 138; Exell Cat. 8. Tomé 160 (q.v. for full synonymy). *APD acc*

Dolichos roseus Sw. (1788).

Canavalia obtusifolia DC. (1825), partly, excl. syn.

Dolichos obtusifolia — F.T.A. 2: 190; Chev. Bot. 197; F.W.T.A., ed. 1, 1: 412; Bak. f. Leg. Trop. Afr. 2: 385.

A nearly glabrous trailing plant, with rose or purple flowers.

Sen.: Casamance Chev. 3411; 3417. **Gam.:** Kuntaur Ruxton 12! **S. L.:** Deighton 2040! River Beach Colony (July) Small 162! **Lib.:** Kakatown Whyte! Monrovia Barker 1456! Greenville (fr. Mar.) Baldwin 11567! **IV. C.:** Sassandra Port Chev. 17928. Tabou Chev. 19933. **G. C.:** Axim (Jan.) Chipp 57! Atwabo Fishlock 23! **Dah.:** Cotonou (fr. Mar.) Debeaux 149! **S. Nig.:** Lagos (June) Dalz. 1212! Brass Barter 53! Kwa Ibo R. Talbot 3089! **Br. Cam.:** Preuss 1281!

Common on maritime shores and estuaries in the tropics of both hemispheres; sometimes cultivated.

2. **Canavalia ensiformis** (Linn.) DC. — F.T.A. 2: 190; Chev. Bot. 196; Bak. f. l.e. 384. *APD acc*

Dolichos ensiformis Linn. (1753).

Canavalia gladiata (Jacq.) DC. (1825) — Dunn l.c. 134.

Canavalia regalis Dunn (1922).

Canavalia africana Dunn (1922); Berhaut Fl. Sen. 18.

Climbing on fences and trees; flowers rose, mauve or white with a red base.

Sen.: Berhaut 1623. **Fr. Sud.:** Ségou Chev. 24975. **Port. G.:** Bissau Esp. Santo 1582! **Fr. G.:** Longuery Chev. 14641; 14763. Fouta Djallon Chev. 18719; 18721. **S. L.:** Deighton 1988! Musaia (fr. Dec.) Deighton 4532! **IV. C.:** Keéta Chev. 19335. **Togo:** Howes 1042! **Dah.:** Abomey Chev. 23162. **N. Nig.:** Jebba Barter! Nupe Barter 1607! Mongu (July) Lely 387! **S. Nig.:** Lagos MacGregor 177! Olokemeji Foster! Oban Talbot 233!

A common plant in the tropics of both hemispheres, usually found in cultivation.

Several taxa are undoubtedly included here, but a thorough taxonomic revision is needed to clarify this group.

63. DIOCLEA

H. B. & K. — P.T.A. 2: 189.

- 1 Woody climber; branches pilose; leaves 3-foliolate; leaflets ovate-elliptic, rounded at base, abruptly acuminate and mucronate, up to about 15 cm. long and 10 cm. broad, thinly pilose; lateral nerves 7–8 pairs; stipules peltate, acute; stipels filiform; inflorescence stiff and woody, racemose, longer than the leaves; bracts narrowly lanceolate, about 1.5 cm. long; calyx rusty-pubescent; standard renexed; fruits elliptic-orbicular to oblong, 10 cm. or more long, about 4–5 cm. broad, rather woody, pilose, 1–3-seeded; seeds semi-orbicular, about 3.5 cm. long, with a conspicuous hilum encircling it for 3/4 its circumference*reflexa*

Dioclea reflexa Hook. f. — F.T.A. 2: 189; Chev. Bot. 196; Bak. f. Leg. Trop. Afr. 2: 383. *APD acc*

A hairy, woody, climbing shrub, with conspicuous erect racemes of scented red flowers.

Port. G.: Buba (fr. Nov.) Esp. Santo 1286! Fulacunda (Oct.) Esp. Santo 2217! **S. L.:** Freetown (fr. Dec.) Dalz. 998! Njala (fr. Oct.) Deighton 4899! Magbile (Dec.) Thomas 5974! Bumbuna (fr. Oct.) Victoria (Mar.) Maitland 468! **F. Po:** T. Vogel 3!

In the tropics of both hemispheres.

64. ABRUS

Adans. — F.T.A. 2: 174. *APD acc*

- 1 Seeds bright red with black base; ripe fruits becoming warted, about twice as long as broad; flowers pink in short, pedunculate racemes; bracteoles very small at base of calyx, caducous; leaflets oblong, 6–15 mm. long,

4–8 mm. broad, rounded to subacute at apex, thinly pubescent [1. *precatorius*](#)

Seeds all black or brown; ripe fruits smooth, about three times as long as broad: **2**

- 2** Bracteoles very small at base of calyx, caducous; corolla pink, drying yellow, thin; racemes slender, with sessile flowers in small clusters; leaflets 7–9 pairs, oblong, 2–3 (–4) cm. long, about 1 cm. broad, truncate or rounded at apex, pubescent [2. *pulchellus*](#)

Bracteoles about as long as calyx, more or less persistent; corolla deep purple, rather thick; racemes with rather distant dense clusters of sessile flowers; leaflets 10–13 pairs, narrowly oblong, 1–2 cm. long, about 6 mm. broad, truncate and mucronate at apex, usually densely pubescent [3. *canescens*](#)

1. ***Abrus precatorius* Linn.** — F.T.A. 2: 175; Chev. Bot. 193; Bak. f. Leg. Trop. Afr. **2; 351. APD acc**

A woody twining shrub, with rather stout racemes of pinkish-yellow flowers and clustered fruits which burst, exposing the brilliant red and black seeds.

Sen.: Roger! **Fr. Sud.:** Bamako Chev. 253. Yatenga Chev. 24777. **Fr. G.:** Fouta Djallon Chev. 12900. Kouria Chev. 14975. **S. L.:** Regent (fr. Dec.) Sc. Elliot 4122! Njala (fr. Nov.) Deighton 2401! Pendemba (fr. July) Thomas 829! Gola (fr. Apr.) Small 572! **Lib.:** Gbanga (Oct.) Linder 1167! Cess R. (fr. Mar.) Baldwin 11282! Browntown (fr. Aug.) Baldwin 7080! **G. C.:** Achimota (Feb.) Irvine 1993! **Togo:** Lome Warnecke 202! **Dah.:** Cotonou Chev. 23358. **S. Nig.:** Lagos MacGregor 19! Umuikem, Onitsha (fr. Apr.) Onochie FHI 7194! Oban Talbot 184! **F. Po:** Mann 30!

Found all over the tropics and subtropics.

- 2. *Abrus pulchellus* Wall. ex Thw.** — F.T.A. 2: 175; Chev. Bot. 193; Bak. f. l.c. 351.

APD: *Synonym of Abrus melanospermus subsp. tenuiflorus (Benth.) D. K. Harder*

APD: *Synonym of Abrus melanospermus subsp. suffruticosus (Boutique) D. K. Harder*

APD: *Synonym of Abrus melanospermus Hassk.*

Abrus canescens of F.W.T.A., ed. 1, 1: 412, partly (Sc. Elliot 4312; Dalz. 14).

***Abrus strictosperma* Berhaut** (1954).

A climbing shrub like the preceding; flowers pink.

Sen.: Ziguinchor Chev. 3396. **Gam.:** Perrottet 212! **Fr. Sud.:** Tabacco (Oct.) Chev. 3397! **Port. G.:** Pelubá, Bissau (fr. Dec.) Esp. Santo 1583! **Fr. G.:** Fouta Djallon Heudelot 685! Also in **Belgian Congo**, **A.-E. Sudan**, **E. Africa** and **Angola**.

65. STYLOSANTHES

Sw. — F.T.A. 2: 155.

- 1 Older stems with a ridge of hairs down one side; one or both segments of fruit reticulate and glabrous, occasionally both segments pubescent, beak circulate, ciliate beneath; spike 1–5 cm. long; bracts bristly or glabrescent; leaflets oblanceolate or narrowly elliptic, acute or obtuse at each end, 10–15 mm. long, 5 mm. broad, glabrous, or midrib sometimes ciliate [1. erecta](#)
- Older stems densely pubescent with short ascending hairs; both segments of fruits pilose, beak circulate; spike about 2 cm. long; bracts pubescent or bristly; leaflets elliptic or narrowly elliptic, very acute at apex, 10–18 mm. long and about 6 mm. broad, shortly pubescent beneath [2. mucronata](#)

1. **Stylosanthes erecta** *P. Beauv.* — F.T.A. 2: 156; Chev. Bot. 187; Bak. f. Leg. Trop. Afr. 2: 319; Léonard in Fl. Congo Beige 5: 347, fig. 24. *APD acc*

Stylosanthes guineensis *Schum. & Thonn.* (1827) — F.W.T.A., ed. 1, 1: 413.

Stylosanthes erecta var. **guineensis** (*Schum. & Thonn.*) *T. Vogel* (1838) — Bak. f. l.c. 320.

Erect or rather prostrate undershrub about 2 ft. high; flowers yellow; [near the sea](#).

Sen.: Sieber! Cayor Heudelot 406! **Fr. Sud.:** Ouassana Chev. 617. Ségou Chev. 3259. **S. L.:** Yele, Turtle Isl. (fl. & fr. Nov.) Deighton 2314! Kent (May) Deighton 2659! King Tom (Oct.) Bauchi Plateau (May) Lely 178! P. 274! Meifoni, Bornu Parsons!

Throughout tropical Africa, Madagascar, [Arabia](#) and India.

Stylosanthes viscosa *Sw. APD acc*

A widespread tropical American species, was collected by Don and was recorded in Fl. Nigrit. 301 and F.T.A. 2: 156 as having come from Sierra Leone. This single specimen is in the British Museum. Considering the time that has elapsed since Don made his collections, it is strange that no further gatherings of *S. viscosa* are to be found; perhaps there has been confusion and this specimen really came from America. In the first edition the name *viscosa* was misapplied to all the pubescent specimens (i.e. *S. mucronata* Willd.) in W. Africa. Doubtfully recorded species.

66. ZORNIA

J. F. Gmel. — F.T.A. 2: 158.

- 1 Flowers much shorter than the bracts; bracts ovate-elliptic, acute, more than 4 mm. broad, without, or with a few inconspicuous, pellucid glands; fruits up to 4-segmented, bristles up to 2 mm. long, barbed (glochidiate) and retrorsely hispid; leaflets lanceolate, acute, up to 4 cm. long; normally annual [1. glochidiata](#)
- Flowers about as long as or longer than the bracts; perennials: **2**
- 2 Bracts lanceolate, acute, up to 2 mm. broad, conspicuously pellucid-punctate; fruits up to 7-segmented, bristles up to 1 mm. long, barbed (glochidiate) and retrorsely hispid; upper leaflets lanceolate, acute, up to 3.5 cm. long, lower leaflets shorter, broadly ovate [2. latifolia](#)
- Bracts ovate-elliptic, subacute, 2.5–5 mm. broad, not conspicuously punctate; fruits up to 5-segmented, bristles 3–4 mm. long, with ascending hairs (not glochidiate) [3. durumensis](#)

1. *Zornia glochidiata* *Reichb. ex DC.* Prod. 2: 316 (1825); Milne-Redhead in Bol. Soc. Brot., sér. 2, 28: 87 (1954); Léonard in Fl. Congo Beige 5: 356. *APD acc*

Zornia biarticulata *G. Don* (1832); Chev. Bot. 188.

Zornia diphylla of F.W.T.A., ed. 1, 1: 413, partly; of Chev. Bot. 188, partly, not of Pers.

An annual herb, becoming much-branched and straggling, not usually surviving the dry season; flowers very inconspicuous, yellow with reddish-purple tinge.

Sen.: Sieber 40! Heudelot 240! Perrottet 242! **Gam.:** Mungo Park! Kuntaur Ruxton! **Port. G.:** Bissau (fl. & fr. Oct.) Esp. Santo 2548! Bissagos (Oct.) Dinklage 3220! **Fr. G.:** Kouroussa (fr. Keay FHI 28063! Port Harcourt (fr. June) Maitland!

Native of tropical S. America, introduced as a weed in W. Africa and **Belgian Congo**.

3. *Zornia durumensis* *De Wild.* in Bev. Zool. Afr. 13: B 26 (1925); Milne-Redhead l.c. 79; Léonard l.c. 357, fig. 25 A. *APD acc*

Zornia lelyi *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 413 (1928).

A precocious perennial with woody rootstock; flowers yellow with reddish veins on standard.

N. Nig.: Kargi Hill, Birnin Gwari (June) Keay FHI 25880! Kaduna (fr. Dec.) Meikle 774! Kontagora-Zungeru road (Jan.) Meikle 1098! Bauchi Plateau (fl. & fr. Feb.) Lely P. 151! Nabardo (fr. May) Lely 205!

Also in **Belgian Congo** and **A.-E. Sudan**.

67. ARACHIS

Linn. — F.T.A. 2: 157. *APD acc*

- 1 Stems herbaceous, pilose; leaves paripinnate; leaflets 2 pairs, obovate, mucronate and sometimes emarginate, 3–4 cm. long, 1.5–2.5 cm. broad, with numerous parallel lateral nerves; rhachis flat above, pilose on the margin; stipules adnate to the petiole for about 1 cm., free part linear-lanceolate, very acute, 1.5–2 cm. long, nervose, ciliate; flowers axillary, solitary, the lower fertile ones subsessile and burying their fruits in the soil [hypogaea](#)

Arachis hypogaea *Linn.* — F.T.A. 2: 158.

Generally cultivated throughout the tropics.

The Groundnut.

68. ORMOCARPUM

P. Beauv. — F.T.A. 2: 142.

- 1 Leaves imparipinnate;2
 Leaves 1 (–3)-foliolate; leaflet lanceolate to ovate-lanceolate, acutely acuminate, 8–14 cm. long, up to 5 cm. broad, glabrous; petiole articulated below the apex; flowers few, in short axillary racemes; pedicels about 5 mm. long with a pair of ovate-lanceolate bracteoles near the apex; calyx about 5 mm. long, glabrous; corolla nearly 1.5 cm. long; fruits up to 5-seeded segments narrowly elliptic, warted and longitudinally nerved[5. verrucosum](#)
- 2 Leaflets rounded or mucronate at apex, up to 4 cm. long, glabrous or pubescent:3
 Leaflets acute or acutely acuminate, 4–13 cm. long, glabrous:4
- 3 Indumentum softly pubescent and greyish on branchlets, leaflets, calyx and fruits; leaflets 6–8 pairs, elliptic, mucronate, 5–10 mm. long; flowers few in short racemes on short arrested branchlets; pedicels about 1.5 cm. long, with a pair of ovate leafy bracteoles near the apex; calyx 8–10 mm. long; corolla about 2 cm. long; fruits 5–6-seeded, segments 9–12 mm. long, coarsely reticulate when mature[1. bibracteatum](#)
 Indumentum (where present) setulose on branchlets, calyx and fruits; leaflets glabrous and whole plant frequently so; leaflets 5–10 pairs, elliptic-obovate, mucronate and sometimes emarginate, 1–2 cm. long; flowers few on the young shoots; pedicels 1–1.5 cm. long, with a pair of lanceolate-acuminate bracteoles near the apex; calyx about 8 mm. long; corolla about 1.5 cm. long; fruits usually hispid, 1–6-seeded, segments about 1 cm. long, obliquely elliptic, longitudinally striate[2. sennoides subsp. hispidum](#)
- 4 Upper leaflets 7–13 cm. long, 3–4.5 cm. broad, 5–7 (–9) to each leaf, stipules lanceolate, 5–10 mm. long, 4 mm. broad at base; branchlets scabrid-hispid; flowers in scabrid-hispid racemes; pedicels 5–6 mm. long; fruits 5–7-seeded, shortly bristly, about 8–10 cm. long, ripe segments about 1 cm. long[3. megalophyllum](#)
 Upper leaflets 4–6 cm. long, about 1.5 cm. broad, 8–15 to each leaf, acute, hardly acuminate, oblong or slightly oblanceolate; stipules linear, 6 mm. long, 2 mm. broad at base; branchlets shortly scabrid-hispid; flowers in axillary densely scabrid-hispid racemes; pedicels filiform, 7–10 mm. long; fruits imperfectly known, apparently 2- or 3-seeded with a few bristles, ripe segments about 1.5 cm. long[4. sp. A](#)

1. **Ormocarpum bibracteatum** (*Hochst. ex A. Rich.*) *Bak.* in F.T.A. 2: 143 (1871); *Bak. f. Leg. Trop. Afr.* 2: 279.

APD: *Synonym of Ormocarpum pubescens* (*Hochst.*) *Cufod.*

APD: *Synonym of Ormocarpum kirkii* *S. Moore*

Acro-taphros bibracteata *Hochst. ex A. Bich.* (1847).

A shrub or small tree with short stout branches, grey-pubescent all over; corolla reddish, lurid purple-veined and mottled, becoming dry and papery and persistent; [in savannah](#).

Sen.: Ferlo Heudelot 157! **G. C.:** Tamale Kitson 952! Morton GC 9087! **N. Nig.:** Lely! Kontagora (Jan.) Dalz. 42! Sokoto (Dec.) Dalz. 313! Katagum Dalz. 424!

Also in [N.E. tropical Africa](#).

2. **Ormocarpum sennoides subsp. hispidum** (*Willd.*) *Brenan & J. Léonard* in Bull. Jard. Bot. Brux. 24: 103, fig. 14, 2 (1954); Léonard in Fl. Congo Beige 5: 244. *APD acc*

Hedysarum sennoides *Willd.* (1802).

Cytisus hispidus *Willd.* (1802).

Robinia guineensis *Willd.* (1809).

Ormocarpum guineense (*Willd.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 414(1928); Kew Bull. 1929: 18.

A much-branched shrub, 4–12 ft. high; flowers yellow with reddish streaks; [in forest](#).

Sen.: Berhaut 1765! **Port. G.:** Bula (fr. Nov.) Esp. Santo 2404! **Fr. G.:** Kouria to Ymbo Chev. 14730. **S. L.:** Afzelius! Freetown (fr. Dec.) Deighton, 3317! Masakoi Chiefdom (Sept.) Also in [French Cameroons](#), [Congo](#), [Angola](#), [Principe](#) and [S. Tomé](#).

69. ANTOPETITIA

A. Rich. in Ann. Sci. Nat., sér. 2, 14: 261 (1840). **APD acc**

- 1 A slender herb, up to 75 cm. high; branchlets pubescent; leaves imparipinnate, leaflets 3–4 pairs, narrowly oblanceolate, about 1 cm. long, appressed-pilose; rhachis with 2 small stipular glands at base; umbels 2–4-flowered; fruits torulose, segments 3–5, subglobose, glabrous, about 2–3 mm. diam. [abyssinica](#)

Antopetitia abyssinica **A. Rich.** l.c. 262 (1840); Bak. f. Leg. Trop. Afr. 2: 274; Léonard in Fl. Congo Beige 5: 179, fig. 10. **APD acc**

Ornithopus coriandrinus **Hochst. ex Bak.** in F.T.A, 2: 140 (1871); F.W.T.A., ed. 1, 1: 414,

Br. Cam.: Cam. Mt., 6,000–8,500 ft. (fl. Nov., fr. Dec.) Migeod 202! Mildbr. 10834! Maitland 831! Bafut-Ngamba F.R., Bamenda (Oct.) Ujor FHI 30217!

Also in [Belgian Congo](#) and eastern Africa from Abyssinia and Eritrea to N. Rhodesia.

70. AESCHYNOMENE

Linn. — F.T.A. 2: 145. **APD acc**

- 1 Stems armed with sharp prickles just below the ovate-lanceolate stipules, densely hispid; fruits spirally coiled, about 1 cm. broad, pilose; flowers 3–4 cm. long; pedicels about 1 cm. long, densely setose; leaves 6–10 cm. long; leaflets oblong truncate at both ends, 1.5–2 cm. long, entire [l. elaphroxylon](#)
- Stems without prickles; fruits straight: **2**
- 2 Stipules not produced into an appendage beyond base: **3**
- Stipules produced beyond base into a long auricle or appendage: **9**
- 3 Flowers about 1.5 cm. long; leaves 3–4 cm. long; leaflets 6–8 pairs, oblanceolate, rounded at apex, about 1 cm. long and 3 mm. broad, glabrous; fruits 1-seeded, about 2 cm. long and 1 cm. broad, with a stipe 5 mm. long [baumii](#)
- Flowers less than 1 cm. long: **4**
- 4 Flowers 8–10 mm. long: **5**

- Flowers up to 6 mm. long: **6**
- 5** Fruit-segments about 2 mm. broad, fruits 2-seeded with filiform stipe 8 mm. long; racemes axillary, 2–3-flowered; flowers 8–9 mm. long; pedicels 4 mm. long with a few hyaline bristles; leaves 1·5–3 cm. long; leaflets oblong, obtuse at apex, 5–10 mm. long. [3. sp. A](#)
- Fruit-segments about 5 mm. broad, fruits 1–2-seeded, hardly stipitate; racemes axillary, 10–15-flowered; flowers 8 mm. long; pedicels 4–5 mm. long, glabrous; leaves 1–2 cm. long; leaflets oblong, 4–5 mm. long [4. abyssinica](#)
- 6** Anthers and filaments uniform in size; fruits with 2 flat segments 7 mm. long; bracts entire; stipules narrowly lanceolate; leaflets 4 mm. long [5. kerstingii](#)
- Anthers of two sizes, filaments alternately long and short; fruit-segments 1–3 mm. long, spheroid; **7**
- 7** Flowers about 5 mm. long; standard obovate; fruits with 1–2-segments 2–3 mm. broad, markedly tuberculate, exserted from calyx; rhachis of inflorescence almost straight, setulose [6. pulchella](#)
- Flowers about 3 mm. long, rhachis of inflorescence zigzag; fruits 1–2 mm. broad, minutely papillose: **8**
- 8** Whole plant pilose with long yellow hairs, especially on young parts; pedicels 5–8 mm. long; fruits 1 (–2)-segmented, included in calyx [7. lateritia](#)
- Whole plant almost glabrous or slightly setose; pedicels 8–12 mm. long; fruits (1–) 2-segmented, exserted from calyx [8. neglecta](#)
- 9** Leaflets distinctly toothed, 2–3 cm. long: **10**
- Leaflets entire or nearly so, rarely up to 2·5 cm. long: **11**
- 10** Stems densely hispid, woody; leaves 8–15 cm. long; leaflets pilose on the margins and midrib beneath; stipules about 1·5 cm. long, pilose outside, caducous; flowers 2–3 cm. long; fruits 5–7-segmented, about 5 cm. long and 1·5 cm. broad, pilose, tapered to a beak [9. pfundii](#)
- Stems glabrous or with a very few long hairs, thick and pithy; leaves 7–12 cm. long; leaflets glabrous; stipules about 2·5 cm. long, glabrous except for the ciliate margins, more or less persistent; flowers about 1 cm. long; fruits about 5-segmented, 4 cm. long, 8 mm. broad, glabrous, coarsely reticulate [10. crassicaulis](#)
- 11** Flowers about 3 cm. long, the keel with a large crest on the margin; stipules lanceolate, very acute, 2 cm. long, closely nerved, much produced at base; leaflets about 20 pairs, oblong-oblancheolate, about 1·5 cm. long, venose; fruits about 8 cm. long, glabrous [11. cristata](#)
- Flowers much smaller than above, up to 1·5 cm. long, the keel less obviously crested: **12**
- 12** Leaflets 1-nerved: **13**
- Leaflets distinctly 3-nerved, acute, about 5 mm. long; fruits deeply indented on one side, 5-segmented, segments convex on the faces, smooth, sometimes setose, hardly stipitate; racemes 4–5-flowered, about 8 mm. long; pedicels about 1 cm. long; stems smooth and glabrous, the younger parts long-setose [20. americana](#)
- 13** Stems quite smooth, herbaceous: **14**
- Stems more or less muricate or setose, rather woody: **17**
- 14** Stems thick and soft; leaflets very numerous, 1–2 cm. long: **15**
- Stems slender; leaflets 10–20 pairs, up to 1 cm. long; flowers few in slender leafy racemes, about 5–7 mm. long; fruits undulate on one side, up to 9-seeded, nearly smooth [15. indica](#)
- 15** Flowers 4 mm. long; fruits about 2 cm. long, 2–4-segmented, deeply constricted on the lower side, surface smooth or slightly muricate and convex; leaflets numerous, 4–8 mm. long [12. tambacoundensis](#)
- Flowers 10–15 mm. long; fruits 7–8 cm. long, undulate on lower side: **16**
- 16** Keel pubescent; flowers about 1 cm. long; fruits closely warted when mature, 8 cm. long, 8 mm. broad, 6–10-segmented; leaflets usually drying brown, 1·4–2 cm. long [13. afraspera](#)
- Keel glabrous; flowers about 1·4 cm. long; fruits smooth when mature, 7 cm. long, 6 mm. broad, 6–7-segmented; leaflets usually drying glaucous-green, about 1·3 cm. long [14. nilotica](#)
- 17** Calyx-lobes glabrous outside; branches flexuose; leaflets up to 20 pairs, about 1 cm. long; flowers very few, about 8 mm. long; fruits rather deeply indented on one side, about 4 cm. long, up to 9-segmented, very sparsely pubescent [16. sensitiva](#)
- Calyx-lobes bristly-pubescent outside: **18**
- 18** Fruits deeply indented on one side; segments raised and papillose on the faces, stipe 1 cm. long; flowers solitary or 2–3 together, axillary, about 1 cm. long; pedicels 1–2 cm. long; stem hispid-scabrid; leaflets 1-nerved, obtuse, about 1 cm. long [17. uniflora](#)
- Fruits straight on both margins; pedicels about 2 cm. long: **19**
- 19** Pedicel jointed with 2 small bracts halfway up its length; flowers 1 cm. long; fruits straight on both sides, 5 mm. broad, with 8–12 segments 3 mm. long, at first yellow and pubescent soon becoming black and glabrous; stems shortly hispid-scabrid [18. schimperi](#)
- Pedicel with one bract not more than 2 mm. from the base; flowers 1–1·2 cm. long; fruits straight or slightly indented on one side, 4 mm. broad, with 3–7 segments 4 mm. long, yellow at length becoming brown, usually

persistently pilose; stems pilose with long yellow hairs [19. deightonii](#)

1. **Aeschynomene elaphroxylon** (*Guill. & Perr.*) *Taub.* in E. & P. Pflanzenfam. 3, 3: 319 (1894); Bak. f. Leg. Trop. Afr. 2: 289; Léonard in Fl. Congo Belge 5: 261. *APD acc*

Herminiera elaphroxylon *Guill. & Perr.* (1832) — F.T.A. 2: 144; F.W.T.A., ed. 1, 1: 415.

Aeschynomene tchadica *A. Chev.* (1913), name only.

A shrub, 8–20 ft. high, **of rivers and swamps**; flowers large, orange-yellow.

Sen.: Lelièvre! L. Panié-Foul Heudelot! **G. C.:** Dalaba, Lower Volta Collector unknown! **N. Nig.:** Nupe Barter 757! L. Chad Talbot 1231!

Widespread in tropical Africa.

2. **Aeschynomene baumii** *Harms* in Warb. Kunene-Sambesi Exped. 261 (1903); Bak. f. l.c. 291; Léonard l.c. 271. *APD acc*

A shrub, with yellow flowers and more or less glabrous stems; **in rocky mountain grassland**.

Br. Cam.: Bamenda, 5,000 ft. (fl. Feb., fl. & fr. May) Migeod 464! Maitland 1436! 1607! Jakiri, Bamenda (Jan.) Keay FHI 28428!

Also in **French Cameroons**, **Belgian Congo**, **Tanganyika**, **N. Rhodesia** and **Angola**.

3. **Aeschynomene sp. A.** *APD acc*

Erect herb, 2 ft. high, with small leaves which close diurnally; **in grassland and edges of woodland**.

Br. Cam.: Bafut-Ngemba F.R., 5,000–6,000 ft. (Oct.) Lightbody FHI 26261!

Possibly new, but better material required.

4. **Aeschynomene abyssinica** (*A. Rich.*) *Vatke* in Oest. Bot. Zeit. 29: 224 (1879); Bak. f. l.c. 299; Léonard l.c. 286, fig. 19 G. *APD acc*

Rueppellia abyssinica *A. Rich.* (1847).

Aeschynomene ruppellii *Bak.* in F.T.A. 2: 149 (1871).

An undershrub, 2–10 ft. high, with dark brown rather viscid branches and yellow, purple-veined flowers; **beside streams**.

N. Nig.: Alkalire (fr. Sept.) Lely 641! Bauchi Plateau Batten-Poole FHI 13160! Lely P. 694! Vom, 3,000–4,500 ft. Dent Young 60!

Extends to **Belgian Congo**, Abyssinia, E. Africa, S. Rhodesia and Mozambique.

5. **Aeschynomene kerstingii** *Harms* in Engl. Bot. Jahrb. 54: 385 (1917); Bak. f. l.c. 292. *APD acc*

Herbaceous or half-woody plant with slender stems; flowers golden-yellow.

G. C.: Banda ravine, Wenchi (fr. Dec.) Morton GC 25139! **Togo:** Dadaure, Basari (July) Kersting 176!

6. **Aeschynomene pulchella** *Planch. ex Bak.* in F.T.A. 2: 149 (1871); Chev. Bot. 186; Bak. f. l.c. 292.

APD: *Synonym of Bakerophyton pulchellum (Planch. ex Baker) Maheshw.*

Aeschynomene saxicola *Taub.* (1896).

Branches red-brown, slightly viscid, 1 ft. or more long, from a woody base; flowers orange-yellow.

Sen.: Tambacounda Berhaut 1466. **Port. G.:** Farim (fr. Apr.) Esp. Santo 2457! Gabu (Sept.) Esp. Santo 2790! **Fr. G.:** Balato (Feb.) Chev. 332! Kaoulendougou (Mar.) Chev. 21056! Toumania (fl. & fr. June) Pobéguin 947! Fouta Djallon Heudelot 739! **S. L.:** Buyabuya, Scarcies R. (fl. & fr. Feb.) Sc. Elliot 4131! Makunde (fl. & fr. Apr.) Sc. Elliot 5713! **Togo:** Agome (fl. & fr. Mar.) Schlechter 12958!

7. **Aeschynomene lateritia** *Harms* in Engl. Bot. Jahrb. 26: 292 (1899); Bak. f. l.c. 294; Léonard l.c. 299, t. 23.

APD: Synonym of Bakerophyton lateritium (Harms) Hutch. ex Maheshw.

A slender much-branched annual herb, with wiry stems and very small yellow flowers; **in rock crevices**.

Port. G.: Suzana (fl. & fr. Nov.) Esp. Santo 3139! **Fr. Sud.:** Kita massif (fr. Nov.) Jaeger 6! **G. C.:** Weija, Accra (May) Adams GC 1767! **N. Nig.:** Patti Lokoja Barter 534! Yola (Sept.) Dalz. 305! Keana, Nassarawa Prov. (Oct.) Hepburn 42! Anara F.R. (fl. & fr. Sept.) Olorunfemi FHI 24375!

Also in **French Camerouns**, **Belgian Congo** and **Angola**.

8. *Aeschynomene neglecta* Hepper in Kew Bull. 1956: 122, fig. 3 A.

APD: Synonym of Bakerophyton neglectum (Hepper) Maheshw.

Aeschynomene lateritia of F.W.T.A., ed. 1, 1: 415, partly (Dalz. 599, Lely 570).

A very slender annual herb, similar to the last, but almost glabrous.

N. Nig.: Abinsi (fr. Feb.) Dalz. 599! Naraguta & Jos (fl. & fr. Sept.) Lely 570! Bauchi Plateau (Sept.) Lely P. 691!

9. *Aeschynomene pfundii* Taub. in Engl. Pflanzenw. Ost-Afr. C. 215 (1895); Bak. f. l.c. 289. *APD acc*

A shrub **forming thickets over permanent water**; flowers large, yellow.

Fr. Sud.: Koubita to Tiouki (Feb.) Davey 20! **N. Nig.:** Kalkala, L. Chad (Sept.) Gwynn 91! Gajibo, Bornu (Nov.) Johnston N. 94!

Also in eastern Africa from A.-E. **Sudan** to the Zambezi.

10. *Aeschynomene crassicaulis* Harms in Engl. Bot. Jahrb. 40: 38 (1907); Chev. Bot. 186; Bak. f. l.c. 288; Léonard l.c. 269, photo 1, fig. 18 H. *APD acc*

Stem procumbent and rooting in mud, often half submerged; flowers yellow; fruits shortly stipitate.

Fr. Sud.: Ségou Chev. 2940. **Fr. Nig.:** Fada N'Gourma (July) Chev. 24508! **N. Nig.:** Katagum (July) Dalz. 10!

Also in **Ubangi-Shari** and **Belgian Congo**.

11. *Aeschynomene cristata* Vatke in Oest. Bot. Zeit. 28: 215 (1878); Bak. f. l.c. 288; Léonard l.c. 266, t. 20, fig. 18 G. *APD acc*

A soft-stemmed undershrub; branches and peduncles at first setose, becoming glabrous; flower conspicuous.

Dah.: Avrankou Lagoon (Jan.) Chev. 22763! **S. Nig.:** Lagos (Nov.) Millen 96! Yewa R., Lagos Colony (Sept.) Punch 19! Okomu F.R. Lomax!

Extends to A.-E. **Sudan**, **Belgian Congo**, E. Africa, Mozambique and Madagascar.

12. *Aeschynomene tambacoundensis* Berhaut in Bull. Soc. Bot. Fr. Mém. 1953–4: 7 (1954); Fl. Sen. 32. *APD acc*

A slender plant about 3 ft. high **on the edge of swamps**, withering after the rainy season; flowers yellow, usually in pairs on slender pedicels.

Sen.: Tambacounda (fr. Aug.) Berhaut 1241! 2919; 2920; 2958; 2959. **S. L.:** near Kambia (fl. & fr. Oct.) Jordan 942!

13. *Aeschynomene afraspera* J. Léonard in Bull. Jard. Bot. Brux. 24: 64 (1954); Fl. Congo Belge 5: 264, fig. 18 E. *APD acc*

Aeschynomene aspera of F.T.A. 2: 147; Chev. Bot. 186; Bak. f. l.c. 288; F.W.T.A., ed. 1, 1: 416.

Sesbania leptocarpa of F.W.T.A., ed. 1, 1: 387, partly (Iv. C. spec.).

An undershrub, with soft pithy stems, 3–6 ft. high; **in swampy places**.

Sen.: Berhaut 1725. **Gam.:** Wallikunda (Aug.) Macluskie 4! 5! **IV. C.:** Baoulé-Nord (July) Chev. 22030! **G. C.:** Tamale (fl. & fr. Dec.) Morton GC 9895! **N. Nig.:** Katsina Ala, L. Turu (fr. Aug.) Dalz. 616! **S. Nig.:** Ogun R. Millen 184! Idah (Sept.) T. Vogel 65!

Also in **A.-E. Sudan**, **Belgian Congo**, **N. Rhodesia**, **Angola**, **Nyasaland** and **Transvaal**.

14. **Aeschynomene nilotica** *Taub.* in Engl. Bot. Jahrb. 23: 189 (1896); Bak. f. l.c. 287; Léonard in Fl. Congo Belge 5: 265. *APD acc*

Stem thick and pithy up to 5 ft., flowers yellow; in swamps.

Fr. Sud.: Macina (Sept.) Chev. 24940! Diafarabé (fl. & fr. Sept.) Lean 100! Gao Ryff! **Fr. Nig.:** Niamey (Oct.) Hagerup 525!

Also in **A.-E. Sudan**, **Tanganyika**, **N. Rhodesia** and **Belgian Congo**.

15. **Aeschynomene indica** *Linn.* — F.T.A. 2: 147; Chev. Bot. 186; Bak. f. l.c. 286; Léonard l.c. 259, fig. 18 C. *APD acc*

An undershrub 2–4 ft. high, with pale yellow, faintly striate flowers; in muddy places near rivers and swamps.

Sen.: Heudelot! **Gam.:** Kudang (fr. Jan.) Dalz. 8021! **Fr. Sud.:** fide Chev. l.c. **Port. G.:** Bafatá (fl. & fr. July) Esp. Santo 2718! **G. C.:** Cape Coast (fr. July) T. Vogel 68! Achimota Irvine 571! 717! **N. Nig.:** Katagum (fr. Oct.) Dalz. 11! Sherifuri Thornehill 177! Bauchi Plateau Lely P. 506!

Extends through the Old World tropics.

16. **Aeschynomene sensitiva** *Sw.* — F.T.A. 2: 147; Chev. Bot. 186; Bak. f. l.c. 286; Léonard l.c. 258, fig. 18 B. *APD acc*

An undershrub with slightly viscid branches and small bright yellow flowers; in swamps.

Sen.: Casamance Chev. 3266. **Gam.:** Wallikunda Macluskie 21! **Fr. G.:** Rio Nunez Heudelot 689! Kouroussa (Oct.) Pobéguin 563! Mamou Chev. 20392! Nzérékoré Baldwin 9712! **S. L.:** Kambia (fl. & fr. Dec.) Sc. Elliot 4366! Yonibana (Nov.) Thomas 5224! Port Loko Thomas 6676! Zimi (Nov.) Deighton 368! **Lib.:** Genna Tanyehun (fr. Dec.) Baldwin 10765! **G. C.:** Accra (fl. & fr. Nov.) Morton A. 56! **S. Nig.:** Lagos Lagoon (fr. Feb.) Onochie FHI 34146! Okomu F.R. (fr. Dec.) Brenan 8590! 9193!

Widespread in tropical Africa, the **Mascarenes** and in **tropical America**.

17. **Aeschynomene uniflora** *E. Mey.* — F.T.A. 2: 146; Chev. Bot. 187; Bak. f. l.c. 286; Léonard l.c. 256, fig. 18 A. *APD acc*

An undershrub with half-woody bristly branches and small bright yellow flowers.

Sen.: Niayes Chev. 3267. Kaolak Chev. **N. Nig.:** Bauchi Plateau Lely P. 505! Lokoja Barter 516!

Widespread in tropical Africa, in **Natal**, and in **Madagascar** and **Comoro Islands**.

18. **Aeschynomene schimperi** *Hochst. ex A. Rich.* — F.T.A. 2: 146; Bak. f. l.c. 287; Léonard l.c. 262, fig. 18 D. *APD acc*

An erect undershrub with half-woody branches, rough with short almost spicular hairs; flowers yellow; in moist places.

Sen.: Berhaut 666. **Gam.:** Brown-Lester 13! Kudang (fr. Jan.) Dalz. 8022! **Port. G.:** Bissau (fl. & fr. Nov.) Esp. Santo 2618! **Fr. G.:** Tristao Isl. Paroisse 50! **S. L.:** Batbai (fr. June) Deighton 3547!

Also in **Eritrea**, **Abyssinia**, **Uganda**, **Kenya** and **N. Rhodesia**.

19. **Aeschynomene deightonii** *Hepper* in Kew Bull. 1956: 124, fig. 4. *APD acc*

Aeschynomene djalensis *A. Chev.* Bot. 186, name only.

Aeschynomene schimperi of F.W.T.A., ed. 1, 1: 416, partly; Bak. f. l.c. 287, partly.

A herb, with rather weak straggling branches about 2 ft. high; leaves rather glaucous and sensitive to touch; flowers yellow turning cream.

Fr. G.: Kouria Chev. 14977! Dalaba Chev. 20170! **S. L.:** Magboloko (fr. Nov.) Glanville 121! Yonibana (fl. & fr. Nov.) Thomas 4695! 4749! Jokibu (Nov.) Deighton 3774! Mahera (fl. & fr. Nov.) Deighton 5685!

20. *Aeschynomene americana* Linn. Sp. Pl. 2: 713 (1753). *APD acc*

A half-woody shrub about 3 ft. high with pink flowers; leaves sensitive to touch.

S. L.: Freetown (fl. & fr. Oct.) Deighton 254! Waterloo (fl. & fr. Dec.) Deighton 3299!

Introduced from tropical America.

71. CYCLOCARPA

Afzel. ex Bak. — F.T.A. 2: 151; Urb. in Jahrb. Bot. Gart. Berl. 3: 247 (1884).

- 1** A tiny shrublet; leaves subsessile, paripinnate; leaflets 3–4 pairs obovate-oblongate, mucronate, about 5 mm. long, minutely serrulate, glabrous; stipules ovate, acuminate, striate, with a long lanceolate basal appendage; flowers axillary; fruits coiled in a ring, forming 1–1½ spirals, with 9–10 segments, glabrous, about 6 mm. diam. [stellaris](#)

Cyclocarpa stellaris *Afzel. ex Bak.* in F.T.A. 2: 151 (1871); Urb. l.c. 248; Chev. Bot. 189, partly; Bak. f. Leg. Trop. Afr. 2: 302; Léonard in Fl. Congo Belge 5: 241. *APD acc*

Aeschynomene stellaris (*Afzel. ex Bak.*) G. Roberty (1954).

Prostrate or diffuse woody herb, with slender glabrous branchlets up to 20 in. long, sensitive leaves which cover the small yellow flowers when touched; **uncommon in moist sandy places.**

Port. G.: Antula, Bissau (fr. Nov.) Esp. Santo 1410! Sucujaque, Suzana (Nov.) Esp. Santo 3142! **Fr. G.:** Kouroussa Pobéguin 462! Kouria (Oct.) Chev. 15030. Fouta Djallon (Sept.) Chev. 18562; 18575. **Fr. Sud.:** Kita massif (fl. & fr. Oct.) Jaeger 14! **S. L.:** Rokupr (fr. Oct.) Jordan 159! 368! Magbile (fr. Dec.) Thomas 6193! Near Jokibu (fl. & fr. Nov.) Deighton 3775! Tombo (fr. Jan.) Deighton 986! **Lib.:** Dupont (Nov.) Linder 1508! **N. Nig.:** Kontagora (Nov.) Dalz.!

Also in **Ubangi-Shari, French Cameroons, Gabon, Belgian Congo, Tanganyika, Nyasaland**; has been found also in Borneo and N. Australia.

72. KOTSCHYA

Endl. Nov. Stirp. 4 (1839); Dewit & Duvigneaud in Bull. Soc. Roy. Bot. Belg. 86: 208 (1954).

- 1** Flowers in clusters on filiform peduncles, 1–2 cm. long; calyx about 4 mm. long, glabrous; leaflets linear-oblong, 4 mm. long, minutely pilose; stem glabrous, herbaceous, less than 15 cm. long [1. micrantha](#)
- Flowers in subsessile clusters or spikes, or in shortly pedunculate racemes; **2**
- 2** Calyx very broad, obovate, entire, about 1 cm. long; leaflets 9–13 pairs, subcordate on one side, 8 mm. long, sparsely pilose on upper nerve which is set along one edge; stipules scarious, linear, with parallel nerves bristly, [2. schweinfurthii](#)
- Calyx not broad and conspicuous: **3**
- 3** Stipules about 1 cm. or more long: **4**
- Stipules 3–9 mm. long: **5**
- 4** Corolla only slightly longer than calyx, 4–5 mm. long; flowers in long caterpillar-like secund spikes about 2–3 cm. long; mature leaves 4–6 cm. long; rachis and leaflet-margins long-pilose; leaflets (13–) 18–22 pairs, 6–13 mm. long [3. ochreate var. ochreate](#)
- Corolla much longer than calyx, 7–9 mm. long; flowers in short few-flowered clusters 1–1.5 cm. long; mature leaves 1–2 cm. long; rachis and leaflet-margins ciliate; leaflets 6–8 (–10) pairs, 4–5 mm. long ... [3a. ochreate var. longipetala](#)
- 5** Flowers blue in sessile short dense axillary racemes, like caterpillars; leaves up to 1.5 cm. long; stipules 7 mm. long: **6**
- Flowers yellow or orange about 1.5 cm. long; calyx 1 cm. or more long; racemes few-flowered: **7**
- 6** Corolla about 14 mm. long; calyx 2-lipped, upper lip 10 mm. long, 2-lobed almost to middle, lower lip 13 mm. long, narrowly and deeply 3-lobed; bracts 8 mm. long, with a prominent dorsal nerve, long-acuminate, pilose;

- leaflets 4–5 mm. long, ciliate [4. *speciosa*](#)
- Corolla about 8 mm. long; calyx 2-lipped, upper lip 6 mm. long, 2-lobed for about 1/3, lower lip 7 mm. long, less deeply 3-lobed; bracts about 5 mm. long, acuminate, pilose; leaves up to 1.5 cm. long; leaflets 3–5 mm. long, sparsely ciliate [5. *strigosa*](#)
- 7 Stems glabrous, scaly with strips of bark, youngest shoots densely yellow-pubescent; stipules scarious, lanceolate-subulate, glabrous or minutely ciliate, 7–9 mm. long; leaves 1–2.5 cm. long; leaflets 8–14 pairs, pubescent at first, glabrescent, 6–10 mm. long; corolla 1.4–1.6 cm. long; calyx 1 cm. long, upper lip deeply bifid; fruit with 2 segments [6. *uniflora*](#)
- Stems pubescent; stipules 2–4 mm. long: **8**
- 8 Stems pubescent with short dense upward-curved hairs, scabrid; leaves 2–3 cm. long; leaflets 8–14 pairs, margins ciliate, 5–6 mm. long; racemes 5–8-flowered, lower flowers caducous leaving 2 or 3 above; pedicels about 6 mm. long; bracts lanceolate, ciliate, caducous; corolla about 1.5 cm. long, exserted 2–3 mm. beyond calyx, standard emarginate; calyx about 1.2 cm. long, upper lip 1/4 bifid [7. *lutea*](#)
- Stems hispid with long straight and small curved hairs, scabrid; leaves 3–4 cm. long; leaflets 10–14 pairs, margins ciliate, 6–8 mm. long; racemes 6–10-flowered, lower flowers frequently caducous; pedicels about 8 mm. long; bracts ovate-lanceolate, long-setose, more or less persistent; corolla about 1.8 cm. long, exserted 1–2 mm. beyond calyx, standard slightly emarginate; calyx about 1.7 cm. long, upper lip deeply bifid [8. *carsonii*](#)

1. ***Kotschya micrantha* (Harms) Hepper** in Kew Bull. 1956: 124. *APD acc*

Smithia micrantha Harms in Journ. de Bot. 22: 113 (1909); Chev. Bot. 187; Bak. f. Leg. Trop. Afr. 2: 305; F.W.T.A., ed. 1, 1: 416.

A slender herb with few-flowered heads and small flowers.

Fr. G.: Bouria (Nov.) Chev. 14960!

2. ***Kotschya schweinfurthii* (Taub.) Dewit & Duvign.** in Bull. Soc. Roy. Bot. Belg. 86: 209 (1954). *APD acc*

Smithia schweinfurthii Taub. in Engl. Bot. Jahrb. 23: 191 (1896); Bak. f. l.c. 309.

A low-growing shrub of [open savannah woodland](#), stems pubescent; flowers blue in a close spike; distinguished by the much-enlarged calyx.

Togo: fide Bak. f. l.c. **N. Nig.:** Bauchi Plateau Lely P. 817! Batten-Poole FHI 13176! Dogon Kurmi, Jemaa (Nov.) Keay & Onochie FHI 21733! Anara F.R. (Sept.) Olorunfemi FHI 24380!

Also in [French Cameroons](#), [A.-E. Sudan](#), [Ubangi-Shari](#) and [Belgian Congo](#).

3. ***Kotschya ochreatea* (Taub.) Dewit & Duvign. var. *ochreatea*** — l.c. 214 (1954). *APD acc*

Smithia ochreatea Taub. l.c. 191 (1896); Chev. Bot. 187; Bak. f. l.c. 307; F.W.T.A., ed. 1, 1: 416.

An erect shrub to 6 ft. or more high, younger parts pilose with soft hairs from a swollen base; flowers pink. A variable species.

Fr. Sud.: Koulikoro (Oct.) Chev. 3264! **Port. G.:** Bissau (Dec.) Esp. Santo 1092! **Fr. G.:** Kindia Jac.-Fél 224! **S. L.:** Afzelius! Kassa (fr. Mar.) Sc. Elliot 5069! Dombudu (Feb.) Macdonald 8! Bintumane (Jan.) Glanville 454! Sefadu (Dec.) Deighton 3474! **Lib.:** Maa, Makona R. (fr. Feb.) Bequaert 57! **Iv. C.:** Mt. Gbon, Gouékangouiné Chev. 21416. **Togo:** Togo Plateau F.R. (Nov.) St. C. Thompson 1615!

Also in [Gabon](#) and the [Belgian Congo](#).

3a. ***Kotschya ochreatea* var. *longipetala* Hepper** l.c. 126, fig. 5 (1956). *APD acc*

A more slender shrub than the type, with small clusters of larger flowers.

Fr. G.: Kindia Jac.-Fél. 245! Dalaba (Nov.) Jac.-Fél. 579! Pita (Dec.) Jac.-Fél. 665! **S. L.:** Bullum Smythe 106! Kumrabai (Dec.) Thomas 6872! 6974!

4. ***Kotschya speciosa* (Hutch.) Hepper** l.c. 124 (1956). *APD acc*

Smithia speciosa Hutch. in Kew Bull. 1921: 365; Bak. f. l.c. 306. F.W.T.A., ed. 1, 1: 416.

An erect shrub 4–5 ft. high, branching from numerous stems, softly pilose; flowers large, bright blue.

N. Nig.: Bauchi Plateau (Aug.) Lely P. 638! Dent Young 61! Naraguta (Aug.) Lely 478!

Also in [Tanganyika](#) and [N. Rhodesia](#) and [S. Rhodesia](#).

5. *Kotschya strigosa* (Benth.) Dewit & Duvign. l.c. 212 (1954); Fl. Congo Belge 5: 335. *APD acc*

Smithia strigosa Benth. in Miq. Pl. Junghun. 211 (1852); Bak. f. l.c. 306.

A shrub similar to *S. speciosa* with smaller blue flowers.

S. Nig.: Ikwette Plateau, 5,200 ft., Obudu (fr. Dec.) Savory & Keay FHI 25218! **Br. Cam.:** Bamenda, 5,000 ft. (fr. Jan.) Migeod 299! Baldwin 13848! Bambui, 4,000 ft. (fr. Mar.) Maitland 1646! Bafut-Ngemba F.R. (fr. Apr.) Ujor FHI 30016! Babanki (Jan.) Johnstone FHI 8741!

Also in **French Cameroons**, **Belgian Congo**, **Tanganyika**, **Nyasaland**, **N. Rhodesia** and **S. Rhodesia** and **Angola**.

6. *Kotschya uniflora* (A. Chev.) Hepper l.c. 126 (1956). *APD acc*

Smithia uniflora A. Chev. in Bull. Mus. Hist. Nat. 5: 479 (1933).

A prostrate or ascending shrub about 1 ft. high and branches about 2 ft. long; with yellow flowers; on sandstone cliffs.

Fr. G.: Benna Mts. (Dec.) Jac.-Fél. 2163! Kindia Jac.-Fél. 246. Pita Jac.-Fél. 685. Téli-méla Jac.-Fél. 1779. Pobéguin 2208.

7. *Kotschya lutea* (Porteres) Hepper l.c. 126 (1956). *APD acc*

Smithia lutea Portères in Rev. Bot. Appliq. 19: 788, fig. 7A (1939).

A shrub 4–6 ft. high with rough branches and deep yellow flowers and red calyx.

Fr. G.: Mt. Nimba, about 4,000 ft., Portères 3157! **S. L.:** Glanville 390! Bintumane, 4,000–5,500 ft. (Jan.) Glanville 455! 466! T. S. Jones 95! Jaeger 988!

8. *Kotschya carsonii* (Bak.) Dewit & Duvign. in Bull. Soc. Roy. Bot. Belg. 86: 213 (1954); Fl. Congo Belge 5: 340. *APD acc*

Smithia carsonii Bak. (1893).

S. harmsiana De Wild. (1902).

S. reflexa Portères l.c. 789, fig. 7B (1939).

A shrub like the last with almost bristly stems and yellow flowers.

Fr. G.: Labé (Dec.) Jac.-Fél. 641! Pita Jac.-Fél. 693. Portères 2045; 2194. Dalaba-Diaguissa Plateau Jac.-Fél. 756; 2057. Beyla Jac.-Fél. 1545. **IV. C.:** Bié-Sama, Man (Jan.) Portères!

Also in **Belgian Congo** and **Tanganyika**.

***Kotschya aeschynomoides* (Welw. ex Bak.) Dewit & Duvign.**

From east, central and south tropical Africa has been introduced into French Guinea.

***Smithia? trochainii* Berhaut in Bull. Soc. Bot. Fr. 101: 375 (1955).**

A slender procumbent herb described with neither flowers nor fruits.

Sen.: Bakel Trochain.

Imperfectly known species.

73. SMITHIA

Ait. Hort. Kew. ed. 1, 3: 496, t. 13 (1789); Dewit & Duvigneaud in Bull. Soc. Roy. Bot. Belg. 86: 71 (1954).

- 1** A herb; stem glabrescent, hispid above, 20–70 cm. long; leaflets 6–8 pairs, opposite, linear-oblong, about 1 cm. long, subsymmetrical with the principal nerve central and long-pilose; stipules 1.7 cm. long, membranous, persistent, prolonged beneath the point of insertion into a biauriculate appendage with one auricle short (4 mm.) and round and the other much longer (7 mm.), linear and acute; inflorescence an umbel, peduncle 1.5–4 cm. long, hispid; flowers erect; bracteoles 4 mm. long at base of calyx; calyx 2-lipped, lips subentire, accrescent [elliotii](#)

***Smithia elliotii* Bak. f. Leg. Trop. Afr. 2: 304 (1929); Dewit & Duvign. in Fl. Congo Belge 5: 346, fig.**

23. *APD acc*

An ascending herb of **moist upland places** with pink or blue flowers.

Br. Cam.: Basenako, Bamenda (June) Maitland 1504! Mt. Mba Kokeka, 7,500 ft., Bamenda (Jan.) Keay FHI 28404!

Also in **French Cameroons**, **Uganda**, **Tanganyika** and **Belgian Congo**.

74. BRYASPIS

Duvigneaud in Bull. Soc. Roy. Bot. Belg. 86: 151 (1954).

- 1 Stems glabrous, straw-coloured; leaves very few, imparipinnate; leaflets about 3 pairs, oblong-ob lanceolate, unequal-sided at base, 1–1.3 cm. long, glabrous; stipules persistent, broadly ovate, several-nerved, 1 cm. long, glabrous; flowers in dense oblong pedunculate racemes and hidden by large imbricate reticulate orbicular-reniform bracts about 1.5 cm. broad; corolla about 5 mm. long; fruits very small, with 2 reticulate segments *lupulina*

Bryaspis lupulina (*Planch. ex Benth.*) *Duvign.* l.c. 150–153, figs. 1B, 2C, 3B (1954). *APD acc*

Geissaspis lupulina *Planch. ex Benth.* (1865) — F.T.A. 2: 155; Tisserant in Bull. Mus. Hist. Nat., sér. 2, 3: 333 (1931).

G. psitta-corhyncha of F.W.T.A., ed. 1, 1: 416; Chev. Bot. 187.

A slightly woody herb, erect or straggling; flowers small, bright yellow within the bracts; **in moist places**.

Sen.: Casamance Heudelot 555; 664! **Port. G.:** Bissau (fl. & fr. Dec.) Esp. Santo 1214! **Fr. G.:** Farman 211! Kouroussa (fl. & fr. Oct.) Pobéguin 568! Maneak to Frigniagbé Pobéguin 11! Ymbo (Sept.) Chev. 14485. Fouta Djallon (Sept.) Chev. 18459. **S. L.:** Afzelius! Waterloo (fl. & fr. Dec.) Dawe 424! Kitchom (Jan.) Deighton 932! Tongbai (fl. & fr. Nov.) T. S. Jones 45! Mayamba (Jan.) King 213! Bunting 2!

Doubtfully recorded species.

Geissaspis psittacorhyncha (*Webb*) *Taub.* in E. & P. Pflanzenfam. 3, 3: 321 (1894), excl. distrib. W. Afr.; Tisserant l.c.; Pellegr. l.c. 183.

Soemmeringa psittacorhyncha *Webb* (1849).

This species, previously regarded as identical with the above, is based on a specimen collected by St. Hilaire, probably from the Cape Verde Islands, but, according to Tisserant (l.c.), possibly from the mainland at Cape Verde. A specimen from a rock outcrop at Genne Loffa, Kolahun Dist., Liberia (Baldwin 10097) is possibly a new sp. of *Bryaspis* but it possesses filiform bracteoles at the base of the calyx which are not characteristic of the genus (vide *Duvigneaud* l.c.). The plant is similar to *B. lupulina* but is setose-pilose in all parts and the flowers exceed the enlarged bracts. Further material of this plant is needed and possibly the limits of this genus may have to be re-defined.

Imperfectly known species.

75. DESMODIUM

Desv. — F.T.A. 2: 159.

- 1 Calyx with 5 narrow equal teeth; bracts ovate-lanceolate, subsistent; inflorescence a short bracteate congested very hairy raceme, scarcely as long as the leaves; pedicels as long as the flowers, the latter nodding; leaflets 3 or sometimes 1, oblong-elliptic, emarginate, 2–3 cm. long, densely appressed-pubescent beneath; stipules long-subulate-lanceolate *l. barbatum* var. *dimorphum*
Calyx-teeth 5, the upper 2 connate; bracts linear or lanceolate, if broader then early caducous and inflorescence lax: 2
- 2 Leaves 1-foliolate: 3
Leaves 3-foliolate, rarely with a few 1-foliolate leaves (see No. 9): 5
- 3 Inflorescence a slender lax-flowered raceme: 4
Inflorescence a dense leafy subpyramidal panicle; leaflet ovate or rhomboid, rounded at apex, up to 15 cm. long and 8 cm. broad, softly pilose beneath; petiole 1–2 cm. long; pedicels very short; fruits deeply indented on one side, 1.5–2 cm. long, pubescent *3. velutinum*

- 4 Leaflet lanceolate, acute or acuminate, up to 12 cm. long; stem up to 1 m. high; pedicels about as long as flower; calyx pilose; fruits nearly straight on one side, deeply indented on the other, about 2 cm. long, thinly pubescent [2. gangeticum var. gangeticum](#)
- Leaflet ovate-orbicular or ovate-lanceolate, obtuse or subacute, variable in size; stem less than 20 cm. high; other characters as above [2a. gangeticum var. maculatum](#)
- 5 Fruits straight on the upper side, indented only on the lower side, or straight on both sides: 6
- Fruits equally indented on each side: 16
- 6 Flowers 1–3 in leaf axils; stems prostrate, more or less pilose, terminal leaflet 1 cm. long or less, finely appressed-pilose beneath; pedicels up to 1 cm. long; fruits about 1/3 indented on one side, about 5-seeded, pubescent [4. triflorum](#)
- Flowers in racemes: 7
- 7 Terminal leaflet lanceolate, at least 3 times as long as broad, acute, 5–15 cm. long and 1–4 cm. broad, thinly pubescent beneath or on nerves only; lateral nerves numerous; flowers very shortly pedicellate; fruits only slightly indented, 3–5-seeded, at length reticulate [5. salicifolium](#)
- Terminal leaflet oblong, elliptic or rhombic, up to twice as long as broad: 8
- 8 Flowers 8–10 mm. long; inflorescence terminal, lax, normally paniculate, few-flowered, leafless, 15–40 cm. long; stipules 1–1.5 cm. long, brown, persistent; flowers paired, pedicels 2–3 cm. long; leaves more or less rhombic, acute or apiculate, up to 9 cm. long and 6 cm. broad, thinly pilose on both sides; fruits very deeply indented, 3–5-seeded, tomentellous [6. repandum](#)
- Flowers 1–5 mm. long; racemes simple or leafy; leaflets obtuse or rounded at the apex: 9
- 9 Pedicels up to 6 mm. long in flower, up to 10 mm. in fruit; flowers in narrow leafless terminal racemes; fruits pubescent; stems stiffly erect and sparingly branched: 10
- Pedicels exceeding 6 mm. long; flowers in spreading terminal or axillary racemes; stems more or less prostrate or ascending, usually branched, or with a prostrate main stem and erect lateral shoots: 11
- 10 Terminal leaflet 4–6 cm. long, 1–3 cm. broad, more or less acute, glaucous and shortly pubescent beneath; flowers about 4 mm. long, rather shorter than pedicels; fruits deeply indented on one side, 3–5-seeded, shortly setulose-pubescent [7. canum](#)
- Terminal leaflet 1–2 (–3.5) cm. long, 5–10 mm. broad, obovate, obtuse, pilose beneath; flowers about 3 mm. long; fruits deeply indented, 3–5-seeded, pubescent [8. ramosissimum](#)
- 11 Stems more or less prostrate, rooting at nodes with erect lateral shoots on which the flowers are borne in a lax terminal raceme above the leaves; fruits rather deeply indented on one side, segments about twice as long as broad, tomentose; terminal leaflet broadly obovate to obovate-elliptic, 2–4.5 cm. long, 2–3 cm. broad, cuneate at base, rounded at apex: 12
- Stems not rooting at the nodes; segments of fruits more or less square: 13
- 12 Leaflets appressed-pubescent above, not reticulate above when dry, thin; bracts finely puberulous to glabrescent [9. adscendens var. adscendens](#)
- Leaflets glabrous above, sometimes with a few hairs on the midrib, reticulate above when dry, rather thick; bracts densely appressed-pilose [9a. adscendens var. robustum](#)
- 13 Fruits indehiscent, segments breaking off transversely, rather deeply indented on the lower side and slightly indented on the upper side; segments about 2 mm. broad and 2–3 mm. long, tomentose; racemes axillary; stems densely pilose; terminal leaflet obovate-elliptic, 3–5 cm. long, about 2 cm. broad, rounded to subacute at apex [10. setigerum](#)
- Fruits dehiscent, opening along lower suture and then breaking up transversely, slightly indented along the lower side, upper edge entire; racemes mostly terminal: 14
- 14 Fruits 2.5–3 mm. broad, 1–2 cm. long, tomentose; terminal leaflet broadly obovate, cuneate to rounded at base, rounded and slightly emarginate at apex, 10–20 mm. long, 8–15 mm. broad, appressed-pilose beneath; racemes lax and spreading [11. hirtum](#)
- Fruits 2 mm. broad, about 1 cm. long; terminal leaflet obovate-oblong to oblong: 15
- 15 Leaflets appressed-pilose above and beneath, obovate-oblong, 12–20 mm. long, 7–9 mm. broad; racemes short and few-flowered; fruits finely pubescent [12. schweinfurthii](#)
- Leaflets glabrous above or with a few hairs on the midrib, pilose beneath; terminal leaflet linear-oblong, 11–26 mm. long, 3–7 mm. broad; racemes rather lax and spreading; fruits glabrous or rarely minutely setulose [13. linearifolium](#)
- 16 Fruits very deeply indented on both sides, often twisted or contorted, segments 4–6, almost orbicular, flat, finely pubescent, about 3 mm. broad; leaflets thin, more or less rhomboid, cuneate at base, subacute at apex, almost glabrous, margins ciliated; racemes up to 15 cm. long, flowers very small; pedicels about 1 cm. long [14. tortuosum](#)
- Fruits not deeply indented, segments twice as long as broad: 17
- 17 Terminal leaflet 7–12 cm. long, about 6 cm. broad, elliptic, equally tapered at each end, pubescent beneath with

appressed silky hairs; racemes up to 40 cm. long; flowers about 5 mm. long; pedicels about 7 mm. long; fruits up to 9-seeded; segments compressed, 4 mm. long, 1.5 mm. broad [15. laxiflorum](#)

Terminal leaflet about 2 cm. long and 1 cm. broad, oblong or elliptic, rounded at each end, thinly pubescent; racemes up to 10 cm. long, few-flowered; flowers 4 mm. long; pedicels about 5 mm. long; fruits 5–8-seeded; segments subterete, 4 mm. long and 2 mm. broad [16. scorpiurus](#)

1. **Desmodium barbatum var. dimorphum** (*Welw. ex Bak.*) *Schubert* in Bull. Jard. Bot. Brux. 22: 298 (1952); Fl. Congo Belge 5: 205. *APD acc*

Desmodium dimorphum *Welw. ex Bak.* in F.T.A. 2: 161 (1871); F.W.T.A., ed. 1, 1: 418; Bak. f. Leg. Trop. Afr. 2: 332.

A more or less woody undershrub, 1–2 ft. or more high, grey silky pubescent; with pink or purplish flowers.

Fr. G.: Kouroussa (Sept.) Pobéguin 434! **N. Nig.:** Bauchi Plateau (Aug.) Lely P. 580! Naraguta (Aug.) Lely 513! Vom, 3,000–4,500 ft., Dent Young 64! Anara F.R. (fr. Oct.) Olorunfemi FHI 24405!

Extends through tropical Africa from Abyssinia to Rhodesia and in **Madagascar**.

2. **Desmodium gangeticum** (*Linn.*) *DC. var. gangeticum* — Prod. 2: 327 (1825); F.T.A. 2: 161, partly; Chev. Bot. 190; F.W.T.A., ed. 1, 1: 418, partly; Schubert Fl. Congo Belge 196. *APD acc*

Hedysarum gangeticum *Linn.* (1753).

Erect, half-woody, undershrub, up to 5 ft. high; with small white and pink or bluish flowers.

Port. G.: Bissau (fr. Jan.) Esp. Santo 1632! **Fr. G.:** Nzerékoré (fr. Oct.) Baldwin 9684! **S. L.:** Mamboma (fr. Nov.) Deighton 3773! Sangasanga, Benna country (Jan.) Sc. Elliot 4420! **Lib.:** Dubo, Sanokwele (Sept.) Baldwin 9473! **G. C.:** Sampa (fr. Dec.) Vigne FH 3484! Krobo Plains (Dec.) Johnson 511! **N. Nig.:** Ilorin (fr. Dec.) Ajayi FHI 19293! **S. Nig.:** Abeokuta Irving! Oyo (fl. & fr. Feb.) Keay FHI 23431! FHI 23432! Oban Talbot 1304!

Widely distributed in the tropics of the Old World.

2a. **Desmodium gangeticum var. maculatum** (*Linn.*) *Bak.* Fl. Brit. Ind. 2: 168 (1876).

Hedysarum maculatum *Linn.* (1753).

Desmodium gangeticum of F.T.A. 2: 161 and of F.W.T.A., ed. 1, 1: 418, partly.

A dwarf variety with small leaves found in **drier situations**.

G. C.: Achimota (fr. Feb.) Irvine 1996! Prang (Jan.) Vigne FH 1581! Dawa R. (fr. Feb.) Morton GC 6463! Salaga (Apr.) Dalz. 20! Krause! **N. Nig.:** Zaria (fl. & fr. May) Keay FHI 25747! Milne-Redhead 5029! Kontagora Meikle 1078!

A distribution similar to the typical variety.

[Chevalier (Bot. 190) records this species from Senegal, French Guinea and Ivory Coast; I have not seen the specimens and cannot say to which variety they belong.]

Imperfectly known species.

3. **Desmodium velutinum** (*Willd.*) *DC.* l.c. 328 (1825); Schubert l.c. 194. *APD acc*

Hedysarum velutinum *Willd.* (1803).

H. lasiocarpum *P. Beauv.* (1805).

Desmodium lasiocarpum (*P. Beauv.*) *DC.* (1825) — F.T.A. 2: 162; Chev. Bot. 190; F.W.T.A., ed. 1, 1: 418; Bak. f. l.c. 326.

A half-woody, erect, rather hairy undershrub, 3–6 ft. high, with small pink or purplish flowers and fruit-segments which adhere like burrs.

Sen.: Bondou Heudelot 208! Perrottet 244! Ziguinchor, Casamance Chev. 3379! **Gam.:** Mungo Park! **Fr. Sud.:** Tabacco Chev. 3265. **Fr. G.:** Kouria Chev. 14903. Fouta Djallon (June) Maclaud 26! Extends throughout tropical Africa.

12. **Desmodium schweinfurthii** *Schindl.* in Engl. Bot. Jahrb. 54: 57 (1916), excl. Afzelius s.n. & Chev. 15028; Schubert l.c. 184. fig. 11, A. *APD acc*

Desmodium linearifolium of F.W.T.A., ed. 1, 1: 417, partly.

A small annual about 6 in. high, with pink flowers.

N. Nig.: Bauchi Plateau (fr. Sept.) Lely P. 684!

Also in **Ubangi-Shari** and **N.E. tropical Africa**.

13. **Desmodium linearifolium** *G. Don* Gen. Syst. 2: 294 (1832); Bak. f. l.c. 329. *APD acc*

Desmodium schweinfurthii *Schindl.* (1916), partly.

Desmodium djalonense *A. Chev.* Bot. 189, name only.

A branched herb about 1 ft. high, woody at the base, with erect or spreading lax branches and small pink-mauve flowers.

Fr. G.: Kouria Chev. 15028! Fouta Djallon Chev. 18309. Mamou Chev. 18624. **S. L.:** Afzelius! Smeathmann! Kissy (fr. Nov.) Deighton 4387! Bumbuna (fr. Oct.) Thomas 3276! 3429! 3832! Rokupr (fr. Nov.) Jordan 158!

14. **Desmodium tortuosum** (*Sw.*) *DC.* Prod. 2: 332 (1825); Webb in Hook. Nig. Fl. 122; Schubert l.c. 202. *APD acc*

APD: *Synonym of Desmodium ospriostreblum Chiov.*

Hedysarum tortuosum *Sw.* (1788).

Desmodium spirale (*Sw.*) *DC.* (1825) — F.T.A. 2: 160; Bak. f. l.c. 331.

Desmodium ospriostreblum *Steud. ex Chiov.* (1908); Bak. f. l.c.; Exell Cat. S. Tomé 158.

Anarthrosyne abyssinica *Hochst. ex A. Rich.* (1847).

Desmodium abyssinicum (*Hochst. ex A. Rich.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 418 (1928), not of *DC.* (1825).

Desmodium terminale of Guill. & Perr. Fl. Seneg. 307, not of *DC.*

Erect herb or undershrub, with pubescent branches and very thin flaccid leaves and twisted fruits; introduced in our area.

Sen.: Heudelot 221! Richard Tol Perrottet. **S. L.:** Afzelius! Smeathmann! Njala (fl. & fr. Nov.) Deighton 1507! **G. C.:** Sandema (fr. Sept.) Hughes FH 5347! Koforidua (fl. & fr. Jan.) Morton GC 8306! Senchi Ferry (fl. & fr. Oct.) Morton GC 9292! **Br. Cam.:** Victoria (Feb.) Maitland FHI 12111! Dalz. 8198!

Widespread in the tropics.

15. **Desmodium laxiflorum** *DC.* in Ann. Sci. Nat., sér. 1, 4: 100 (1825). *APD acc*

Desmodium incanum of Chev. Bot. 190 (Chev. 18638).

An undershrub, up to 5 ft. high, with pink or purple flowers; leaves turn red when the plant is in fruit.

Sen.: Berhaut 1851. **Gam.:** Frith 138! **Fr. G.:** Toumbalako to Boulivel (Sept.) Chev. 18638! **S. L.:** Musaia (Sept.) Deighton 4506! 4857! Kamabai to Kabala (fr. Dec.) Deighton 5691! Bafodea to Kamba (Sept.) Deighton 5161! **S. Nig.:** Afo R., Oyo (Sept.) Latilo FHI 23533!

Introduced from tropical Asia.

16. **Desmodium scorpiurus** (*Sw.*) *Desv.* in Journ. de Bot. 1: 122 (1813). *APD acc*

Hedysarum scorpiurus *Desv.* (1788).

A straggling, climbing or procumbent herb with small blue flowers.

S. L.: Freetown (Jan.) Deighton 241! 485! Bonthe (fr. Mar.) Deighton 2484! **G. C.:** Morton!

Introduced from tropical America.

Wight & Arn. — F.T.A. 2: 167.

- 1 Flowers arranged in short dense spike-like racemes about 2·5 cm. long; leaflets elliptic-obovate, rounded at apex, the terminal one about 10 cm. long and 6 cm. broad, rather densely pubescent beneath, strongly nerved; stipules linear, about 8 mm. long; stipels subulate; calyx-lobes long-subulate, pilose; ovary densely villous; fruits several-seeded, about 2 cm. long, densely pilose [1. confertiflora](#)

Flowers arranged in lax much-branched panicles:..... **2**

- 2 Fruits 6–10-seeded, thinly pubescent; leaflets obovate, very undulate on the margin, the terminal one 9–10 cm. long and about 6 cm. broad, densely white-tomentose beneath, strongly nerved; stipules lanceolate, striate inside; calyx-lobes shortly subulate; ovary loosely pubescent [2. hookeri](#)

Fruits 1–5-seeded, shortly pubescent; leaflets loosely pubescent beneath, the terminal one rhomboid, mucronate, up to 13 cm. long and 8 cm. broad, undulate and strongly nerved; stipules, etc. as in No. 2 [3. fagifolia](#)

1. ***Pseudarthria confertiflora* (A. Rich.) Bak.** in F.T.A. 2: 167 (1871); Bak. f. Leg. Trop. Afr. 2: 339; Léonard in Fl. Congo Belge 5: 236, fig. 15, C–D. *APD acc*

***Rhynchosia confertiflora* A. Rich.** (1847).

An undershrub, 3 ft. high, with grooved yellowish-pubescent branches; flowers small, purple.

G. C.: Jema (July) Chipp 529! Yeji (Aug.) Pomeroy 1345! **Togo:** Krachi Krause! **S. Nig.:** Lagos MacGregor 151! Foster 115! Old Oyo F.R. (Sept.) Latilo FHI 23539!

Extends to A.-E. **Sudan** and eastern Africa.

2. ***Pseudarthria hookeri* Wight & Arn.** — F.T.A. 2: 168; Chev. Bot. 192; Bak. f. l.c. 339; Léonard l.c. 235, fig. 15, A–B. *APD acc*

APD: *Synonym of Pseudarthria hookeri var. argyrophylla Verdc.*

***Pseudarthria alba* A. Chev.** (1912).

An erect, stiffly branched shrub, 6–10 ft. high, grey-downy all over; flowers small in copious panicles, white, yellow or pink; sometimes gregarious in grass **savannah**; easily confused with *Desmodium salicifolium*.

Sen.: Niokolo-Koba Berhaut 1333. **Fr. Sud.:** Upper Volta Chev. 3383. **Fr. G.:** Fouébouédougou, 1,850 ft. (July) Collenette 71! Mt. Kamoueniboka Chev. 22014. Toumodi Chev. 22407. **S. 77. DROOGMANSIA

De Wild. in Ann. Mus. Congo, sér. 4: 53 (1902).

- 1 Petiole with obovate-oblongate foliaceous wing over 6 mm. broad; leaves pilose beneath; stipe of fruit about 4 mm. long: **2**

Petiole about 1·5 cm. long with oblongate wing decurrent towards the base, up to 3 mm. broad; lamina of leaf ovate-lanceolate, subcordate at base, obtuse at apex, about 4·5 cm. long and 2 cm. broad, appressed-pubescent

beneath, glabrescent above; bracts narrowly lanceolate, long-acuminate, 5 mm. long, shortly pubescent; pedicels 10–12 mm. long, appressed-pubescent; flowers about 11 mm. long; fruit with a stipe 18 mm. long. [3. montana](#)

- 2 Inflorescence dense, bracts caducous; lamina of leaf oblong-lanceolate, rounded at each end, about 12 cm. long, 2.5–2.8 cm. broad; petiole 3 cm. long, the wing about 1.5 cm. broad; pedicels about 8 mm. long, pilose; flowers about 13 mm. long, standard obovate, striated [1. chevalieri](#)

Inflorescence rather lax, bracts persistent; lamina of leaf lanceolate, rounded at each end, or subcordate at the base, about 8 cm. long, up to 2 cm. broad, usually about 1 cm.; petiole about 2 cm. long, the wing 6–12 mm. broad; pedicels 6–11 mm. long, pilose or shortly pubescent; flowers about 12 mm. long, standard ovate or suborbicular, striated [2. scaettaiana](#)

1. ***Droogmansia chevalieri* (Harms) Hutch. & Dalz.** F.W.T.A., ed. 1, 1: 418 (1928); Kew Bull. 1929: 18; Chev. & Sillans in REV.Bot. Appliq. 32: 46, t. 3 (1952). *APD acc*

Dolichos chevalieri Harms in Journ. de Bot. 22: 114 (1909).

Erect, woody herb; stem strongly ribbed, pilose on ribs; racemes in the axils of the upper leaves and forming a panicle.

Fr. G.: Bilima (Sept.) Caille in Hb. Chev. 15040!

2. ***Droogmansia scaettaiana* Chev. & Sillans** l.c. 46, t. 4 A (1952). *APD acc*

Similar to the preceding but with denser inflorescence and narrower leaves.

Fr. G.: Fouta Djallon (Sept.) Chev. 18629. S. L.: Saka Sakala (Sept.) Deighton 5138! Benekoro (fr. Oct.) Thomas 2904! IV. C.: Scaëtta 3251. Mt. Nimba, above 3,200 ft. Schnell!

3. ***Droogmansia montana* Jac.-Fél.** in Bull. Soc. Bot. Fr. 92: 245 (1946). *APD acc*

A shrub, 4–5 ft. high, stems slender, branched.

Fr. G.: Labé Jac.-Fél. 654. Pita Jac.-Fél. 1959! Benna Plateau Jac.-Fél. 2116.

78. ALYSICARPUS

Neck. — F.T.A. 2: 169. *APD acc*

- 1 Fruit not or hardly constricted between segments, 12–25 mm. long; calyx-teeth not imbricate, about equal in length to the first segment: [2](#)
- Fruit markedly constricted between segments, 5–15 mm. long; calyx-teeth imbricate, at least at the base, longer than the first segment: [3](#)
- 2 Racemes dense, internodes between the flowers shorter than the flowers; plants perennial; petioles 4–12 mm. long; leaves oblong to suborbicular, more or less cordate at base, acute or rounded at apex, 1–2.5 cm. long and 5–10 mm. broad; flowers in 4–13 pairs [1. vaginalis](#)
- Racemes very lax, internodes between the flowers much longer than the flowers; plants annual; petioles 2–7 mm. long; leaves lanceolate or elliptic, cordate or subcordate at base, acute or rounded at apex, 1–7 cm. long and 1–3 cm. broad; flowers in 3–7 pairs [2. ovalifolius](#)
- 3 Fruit smooth, transverse ridges hardly visible; bracts and calyx softly pubescent; leaves subcoriaceous, reticulation obvious on both surfaces; perennial [3. zeyheri](#)
- Fruit with numerous prominent transverse ridges; bracts and calyx more or less glabrous, margins ciliate; leaves membranous, reticulation less prominent on both surfaces: [4](#)
- 4 Calyx-teeth distinctly rounded at base, imbricated around the fruit, 1.5–2.5 mm. broad; fruit-segments included within the calyx (occasionally 1–2 exserted), usually the upper ones pubescent and lower glabrous; plant annual or perennial, spreading or erect, often robust; petiole 2–11 (–17) mm. long; racemes usually dense, sometimes lax [4. rugosus](#)
- Calyx-teeth not rounded at base, free or hardly imbricated at base around fruit, 1–1.5 mm. broad; fruit with 1–4 segments exserted, usually all pubescent; plant annual, usually erect; petiole 2–6 mm. long; racemes lax [5. glumaceus](#)

1. ***Alysicarpus vaginalis* (Linn.) DC.** — F.T.A. 2: 170, partly; Léonard in Fl. Congo Belge 5: 224, fig. 13 A. *APD acc*

Hedysarum vaginale Linn. (1753).

Herb about 6 in. high, ascending, with small reddish flowers and cylindrical wrinkled fruits.

S. L.: Freetown (fl. & fr. Aug.) Deighton SLH 2060! **N. Nig.:** Zaria Hill 36!

Throughout tropical Africa and in tropical Asia.

2. *Alysicarpus ovalifolius* (Schum. & Thonn.) J. Léonard in Bull. Jard. Bot. Brux. 24: 88, t. 11 (1954);

Fl. Congo Belge 5: 226, t. 18. *APD acc*

Hedysarum ovalifolium Schum. & Thonn. (1827).

Alysicarpus vaginalis of F.W.T.A., ed. 1, 1: 419, partly.

Herb 1–2 ft. high, sometimes more, with red flowers like the last; on waste ground.

Sen.: Heudelot 506! Sieber! **Gam.:** Genieri (fr. Feb.) Fox 22! **Port. G.:** Bissau (fl. & fr. Oct.) Esp. Santo 2532! **G. C.:** Achimota (fr. Mar.) Irvine 326! Zuarungu Lyon FH 1072! Tamale (fr. Widespread in tropical Africa, also in the eastern tropics and in [Australia](#).

BUXACEAE

Trees or shrubs, rarely herbs. Leaves evergreen, alternate or opposite, simple; stipules absent. Flowers unisexual, monoecious or dioecious, spicate or fasciculate. Sepals imbricate or absent, usually 4. Petals absent. Stamens 4 or 6, rarely more; anthers large, sessile or stalked, cells 2-valved or opening lengthwise. Rudimentary ovary sometimes present. Female flowers often larger than the males and fewer or solitary. Sepals as in the males. Ovary superior, 3-celled; styles undivided. Ovules 1–2, pendulous, anatropous. Fruit a capsule or drupe. Seeds black, shining, with fleshy endosperm and straight embryo.

NOTOBUXUS

APD: *Synonym of Buxus L.*

Oliv. — F.T.A. 6, 1: 610.

Stamens 6, two single opposite the outer sepals, four in pairs opposite the inner sepals.

- 1 A shrub or small tree, glabrous; leaves elliptic-lanceolate or slightly obovate-elliptic, cuneate at base, long- and gradually-acuminate to a subacute apex, 7–10 cm. long, 2.5–4 cm. broad, entire, bright green; lateral nerves 5–7 pairs; petiole 2–4 mm. long; flowers axillary; male pedicels up to 1 cm. long; capsule ovoid, about 1 cm. long; seeds black, shining [acuminata](#)

Notobuxus acuminata (Gilg) Hutch. in F.T.A. 6, 1: 610 (1912); Chev. Fl. Viv. 1: 355, fig. 51.

APD: *Synonym of Buxus acutata Friis*

Macrapodandra acuminata Gilg (1899).

Evergreen, 2–12 ft. high, in forest; flowers white.

S. L.: Njala (fl. & fr. Sept.) Deighton 2917! G. C.: Atuna, N.W. Ashanti (fr. Dec.) Vigne FH 3506! Pamu-Berekum F.R. (fr. Sept.) Vigne FH 2517! Akatin (fr. Oct.) Vigne FH 4041! Dah.: Kétou to L. Azri, Zagnanado (fl. & fr. Feb.) Chev. 23029!

Also in Belgian Congo.

SALICACEAE

Trees or shrubs. Leaves alternate, simple, deciduous; stipules small or foliaceous. Flowers unisexual, dioecious, densely arranged in erect or pendulous catkins often appearing before the leaves; bracts membranous, each subtending a flower. Calyx absent or represented by a cupular disk or 2 glandular scales. Male flowers: stamens 2 or more, free or united; anthers 2-celled, opening lengthwise. Female flowers: ovary sessile or shortly stipitate, 1-celled, with 2–4 parietal placentas; style 2–4-fid. Ovules numerous, ascending. Fruit a 2–4-valved capsule. Seeds small, with numerous fine hairs arising from the funicle and enveloping the seed; endosperm none; embryo straight.

Widely distributed, but absent from Australasia and the Malay Archipelago.

Recognized by the minute much-reduced flowers in catkins.

SALIX

Linn. — F.T.A. 6, 2: 317.

Shrubs or small trees with narrow leaves; flowers often precocious; ovary 2-merous seeds covered with hairs.

- 1 Leaves acuminate, lanceolate or narrowly ovate, 4–8 cm. long, irregularly serrulate:2
Leaves obtuse, oblong or oblanceolate, entire or undulate, 2–5 cm. long, obscurely veined; male catkins few-flowered, about 2–2.5 cm. long; young leaves and shoots glabrous [4. coluteoides](#)
- 2 Young leaves and shoots glabrous or very thinly hairy; filaments of male flowers 5–6 mm. long ... [1. subserrata](#)
Young leaves and shoots silky-pubescent or tomentose; filaments of male flowers 3–4 mm. long:3
- 3 Mature leaves obscurely veined; male catkins about 4 cm. long; capsules broadly ovoid, 4–5 mm. long [2. ledermannii](#)
Mature leaves distinctly reticulate-veined; male catkins 1.5–2.5 cm. long; capsules narrow, about 7 mm. long [3. chevalieri](#)

1. **Salix subserrata** Willd. Sp. Pl. 4: 671 (1806).

APD: *Synonym of Salix mucronata subsp. subserrata* (Willd.) R. H. Archer & Jordaan

Salix salsaf Forsk. ex Trautv. Salic. 6, t. 2 (1836); F.T.A. 6, 2: 318.

A riverside bush or small tree, 8–30 ft. high.

Gam.: Dawe 56!

Throughout tropical Africa; also in Egypt, Libya and Palestine.

2. **Salix ledermannii** Seemen in Engl. Bot. Jahrb. 45: 204 (1910); Chev. Fl. Viv. 1: 26. APD acc

Salix nigerica Skan in F.T.A. 6, 2: 321 (1917).

A riparian shrub.

Fr. Sud.: 10 miles E. of Macina on S. bank of R. Niger Lean 21! **N. Nig.:** R. Benue, Yola (Dec.) Dalz. 199! Katagum (fl. & fr. Nov.) Dalz. 220! L. Chad Talbot 1493! **Br. Cam.:** Bamenda: Lakom 6,000 ft Maitland 1495! Fondong (fl. & fr. Nov.) Johnstone 9! 224! 225! Bango, 5,400 ft., by stream with *Osmunda regalis* (fr. June) Keay FHI 28453!

Also in **French Cameroons**. (See Appendix p 271)

3. **Salix chevalieri** *Seemen* in Fedde Rep. 5: 133 (1908); F.T.A. 6, 2: 320; Chev. Fl. Viv. 1: 25, t. 6A; Aubrév. Fl. For. Soud.-Guin. 326, t. 68, 5–7. *APD acc*

Salix sudanica A. Chev. Bot. 611, name only.

A bush or shrub attaining 30 ft., with a trunk as thick as the thigh.

Fr. Sud.: Upper R. Niger, Badumbé (Dec.) Chev. 60. Dialiba to Langana (fl. & fr. Jan.) Chev. 262! Keniégué (fl. & fr. Jan.) Chev. 271! Nyamina to Ségou (fl. & fr. Jan.) Chev. 2666! **Fr. G.:** Soarella, Fouta Djallon Pobéguin 181. R. Tinkisso, Dabola Jac.-Fél. 1506.

4. **Salix coluteoides** *Mirb.* in Mém. Mus. Par. 14: 462 (1827); F.T.A. 6, 2: 323; Chev. Fl. Viv. 1: 25, t. 6B. *APD acc*

A tree or shrub, up to 12 ft. high, with reddish-brown, glabrous twigs.

Sen.: riverbank, Dagana (fl. Oct.) Roger! M'bohoul (Dec.) Chev. 2667! R. Senegal, Kaédi to Podor (Nov.) Chev. 2668! **Fr. Sud.:** Kénégué, R. Niger (Jan.) Chev. 270.

For accurate determination it is essential that *Salix* specimens should consist of both catkins and mature leaves. The West African material at present available for examination is totally inadequate, and it is quite possible that many or all the above species may ultimately prove to be forms of the variable *Salix subserrata* Willd.

MYRICACEAE

Trees or shrubs, often aromatic. Leaves alternate, simple, sometimes pinnately lobed, scaly-glandular beneath, exstipulate. Flowers unisexual, monoecious or dioecious, in axillary spikes. Sepals and petals absent, or the female with a few sepal-like whorled bracteoles. Male flower subtended by a solitary bract: stamens 2 or more; anthers 2-celled. Female flower: ovary sessile, 1-celled; style short, 2-branched. Ovule 1, erect, basal. Fruit a drupe, often warted, the warts waxy. Seed erect, without endosperm; embryo straight.

A widely distributed family, often partial to damp places; numerous and variable in S. Africa.

Recognized by the glandular leaves, spicate unisexual apetalous flowers and drupaceous fruit.

MYRICA

Linn. — F.T.A. 6, 2: 307.

A tree; branchlets puberulous and glandular; leaves oblong or oblong-lanceolate, mostly truncate and unequal-sided at base, rounded to a mucronate apex, 5–9 cm. long, 1–3 cm. broad, mostly toothed, glandular on both surfaces; lateral nerves 12–16 pairs; flowers monoecious, male spikes axillary or sometimes racemously arranged on long leafless shoots, about twice as long as the petiole; stamens about 6, anthers sparingly pubescent; ovary pubescent and glandular; fruits ellipsoid, 5 mm. long, closely warted[arborea](#)

Myrica arborea *Hutch.* in Kew Bull. 1917; 234; F.T.A. 6, 2: 309.

APD: *Synonym of Morella salicifolia* (Hochst. ex A. Rich.) Verdc. & Polhill subsp. *salicifolia*

A tree reaching 20–30 ft. in height, with rough bark; **frequent in ravines in the grassland** of Cameroon Mt.

Br. Cam.: Cam. Mt., 5,000–8,000 ft. (fl. Dec., Jan., fr. Mar.) Mann 1203! 2185! Dunlap 185! Dalz. 8329! Mildbr. 10932! Maitland 457! **F. Po:** Tessmann 2894.

[The following specimens have the branchlets, petioles and midrib beneath densely pilose; they may prove to represent a distinct species but better material is required: — Br. Cam.: Cam. Mt., 7,600 ft. Maitland 1028! Nchan, Bamenda (fr. June) Maitland 1598!]

\$/eflora

ULMACEAE

Trees or shrubs. Leaves alternate, simple, often unequal-sided; stipules paired, caducous. Flowers fasciculate, hermaphrodite or unisexual. Calyx herbaceous, lobes imbricate, persistent. Petals absent. Stamens inserted at the bottom of the calyx, erect in bud, opposite the calyx-lobes; anthers 2-celled, opening lengthwise. Ovary of 2 connate carpels, 1–2-celled; styles 2, divergent. Ovules solitary, pendulous from near the top. Fruit usually compressed, membranous, dry or thinly fleshy, often winged or appendiculate. Seed without endosperm; embryo straight or curved.

Mainly in the Northern Hemisphere.

Flowers very small and reduced; leaves unequal-sided; ovary 1–2-celled, with solitary ovule.

- 1 Fruit a drupe; flowers axillary on the current year's shoots:2
Fruit a rounded flat stipitate samara with broad membranous wings; flowers in the axils of fallen leaves on previous season's growth [4. Holoptelea](#)
- 2 Branchlets unarmed:3
Branchlets armed with axillary spines; leaves entire; stipules enclosing the terminal bud, caducous [3. Chaetacme](#)
- 3 Cotyledons very broad; male calyx-lobes imbricate; leaves entire or toothed [1. Celtis](#)
Cotyledons very narrow; male calyx-lobes induplicate-valvate; leaves toothed [2. Trema](#)

1. CELTIS

Linn. — F.T.A. 6, 2: 2.

- 1 Styles not divided; leaves gradually very long-acuminate:2
Styles divided, bifid or bilobed:3
- 2 Leaves serrate except towards the base, pubescent beneath at least on the nerves, elliptic-ovate or ovate to ovate-lanceolate, 1.5–8 cm. long, 1–4 cm. broad, basal lateral nerves ascending well into the upper half of the lamina, upper lateral nerves 1–2 on each side of the midrib; female (or hermaphrodite) flowers usually solitary; ovary densely pubescent; fruits subglobose, about 5 mm. diam., on pedicels 1–1.5 cm. long [1. africana](#)
Leaves entire, soon glabrous, ovate-lanceolate or oblong-lanceolate to lanceolate 8–14 (–18) cm. long, 2.5–4.5 (–7.5) cm. broad, basal lateral nerves not extending into the upper half of the lamina, upper lateral nerves 3–6 on each side of the midrib; female (or hermaphrodite) flowers 2–3 or more together; ovary glabrous; fruits ovoid, pointed at the apex, 5–6 mm. long, on pedicels up to 8 mm. long [2. durandii](#)
- 3 Leaves scabrid on both surfaces, ovate, often broadly so, obliquely and broadly rounded or almost subcordate at base, acutely acuminate, entire, 4–9 cm. long, 3–5 cm. broad, prominently 3–5-nerved from the base, hairy in the axils of the nerves beneath; young shoots thinly pubescent; fruits ovoid-ellipsoid, puberulous when young, 8–10 mm. long, on pedicels about 5 mm. long; tree in [savannah](#) regions [3. integrifolia](#)
Leaves never scabrid above, and only rarely (No. 7) slightly scabrid beneath, more or less elliptic or obovate, usually cuneate at base, often toothed; forest trees:4
- 4 Leaves softly pubescent beneath, normally entire (sometimes serrate on epicormic shoots), venation markedly parallel, lateral nerves 3–5 on each side of midrib; lamina elliptic or subovate, acutely acuminate, 6–15 cm. long, 3–7.5 cm. broad; young branchlets densely pubescent; stipules ovate-lanceolate, nearly 1 cm. long; ovary densely pubescent; fruits very shortly pedicellate, warted when old, about 6 mm. long [4. zenkeri](#)
Leaves glabrous or sparingly pubescent beneath, serrate in the upper half, or if entire then glabrous; venation not markedly parallel:5
- 5 Basal lateral nerves not, or only slightly, extending into the upper half of the lamina, upper lateral nerves 3–5 on each side of midrib; branchlets and leaves pubescent at least when young; leaves obovate to oblong-obovate, obtusely acuminate, mostly coarsely toothed towards the apex, 3.5–14 cm. long, 1.5–7 cm. broad (juvenile leaves sometimes larger), closely reticulate beneath; ovary glabrous, style arms linear; fruits sharply 3–4-angled, 1–1.3 cm. long, on slender pedicels up to 2 cm. long [5. mildbraedii](#)
Basal lateral nerves ascending nearly to the apex of the lamina, upper lateral nerves 1–3 on each side of the midrib; branchlets puberulous to glabrous; leaves glabrous; fruiting pedicels stout:6
- 6 Leaves usually coarsely toothed in the upper half, obovate-elliptic or elliptic, obtusely acuminate, 5.5–15 cm. long, 2–6.5 cm. broad, loosely reticulate beneath; ovary glabrous; fruits ovoid, 7–8 mm. long [6. brownii](#)
Leaves entire, broadly elliptic, obtusely acuminate, 8–16 (–18) cm. long, 5.5–8 (–10) cm. broad, 3-nerved almost

to the apex, slightly scabrid beneath at least when young; ovary pubescent; fruits ellipsoid, 15–20 mm. long [Z. adolfi-friderici](#)

1. ***Celtis africana* Burm. f.** Prod. Fl. Cap. 31 (1768); Brenan in Mem. N.Y. Bot. Gard. 9, 1: 75 (1954). *APD acc*

***Celtis kraussiana* Bernh.** (1845) — F.T.A. 6, 2: 3; Hauman in Fl. Congo Belge 1: 43.

Celtis rhamnifolia of Presl, partly (Drege 8261); of Fl. Cap. 5, 2: 528; of Sillans in Mém. Soc. Bot. Fr. 1952: 102; not *C. rhamnifolia* Presl (1845), illegitimate name for *Rhamnus prinoides* L'Hérit. (see p. 670).

An understorey forest tree, to 50 ft. or more high; slash mottled dark brown and grey.

G. C.: Moerewe, Ashanti (fr. May) Irvine 2526!

Extends from French Cameroons eastwards to A.-E. **Sudan** and southwards to **Angola** and S. Africa; also in **Arabia**.

2. ***Celtis durandii* Engl.** — F.T.A. 6, 2: 4 (incl. var. *ugandensis*); Aubrév. Fl. For. C. Iv. 1: 28, t. 1, 1–2; Hauman l.c. 42.

APD: Synonym of Celtis gomphophylla Baker

A forest tree to 70 ft. or more high; slash pale grey, thickly speckled with chocolate-brown.

Iv. C.: Man (Mar.) Aubrév. 1051! **Br. Cam.:** Kumba (fr. June) Olorunfemi FHI 30631!

Also in **French Cameroons**, **Ubangi-Shari**, **Belgian Congo**, **Uganda**, **Kenya**, **Tanganyika**, **Angola** and **S. Tomé**.

3. ***Celtis integrifolia* Lam.** — F.T.A. 6, 2: 7; Chev. Bot. 589, partly; Aubrév. l.c. 1: 26, t. 1, 3–4; Fl. For. Soud.-Guin. 328, t. 68, 1–2.

APD: Synonym of Celtis toka (Forssk.) Hepper & J.R.I. Wood

A large spreading tree, to 80 ft. high and 15 ft. girth; mainly in the drier savannah regions.

Sen.: Roger! Perrottet 298! Walo Leprieur! Djebelor Aubrév. **Gam.:** Bathurst Don! Kombo Heudelot 104! Genieri (Feb.) Fox 32! **Fr. Sud.:** Djenné (fr. June) Chev. 1136! Kita Dubois 204! **Iv. Widespread throughout tropical Africa, **Natal, Madagascar** and **Arabia**.

Leroy in Fl. Madag. 54: 10–11 (1952) treats this species as a synonym of the Asiatic *T. orientalis* (Linn.) Blume. This may well be correct, but as a number of distinguishable taxa may be involved within this aggregate species, it seems preferable not to replace in our Flora the well-known name *T. guineensis* until the whole group has been more thoroughly and critically revised.

3. CHAETACME

Planch. — F.T.A. 6, 2: 13.

- 1 Branchlets zigzag, scabrid, armed with axillary spines 1.5–2 cm. long; leaves elliptic, mucronate, rounded at the base, about 7 cm. long and 4 cm. broad, entire (serrate in sucker shoots), glabrous and often shining above, with about 8–10 pairs of lateral nerves; flowers monoecious or dioecious, in short axillary cymes; fruits ellipsoid, about 8 mm. long, tipped by the 2 long hairy style-arms about 2 cm. long *aristata*

Chaetacme aristata *Planch.* in Ann. Sci. Nat., sér. 3, Bot. 10: 341 (1848); Chev. Bot. 590 (incl. var. *crenata*); G. Tayl. in Exell Cat. S. Tomé 301. *APD acc*

Chaetacme serrata *Engl.* (1900).

Chaetacme microcarpa *Rendle* in F.T.A. 6, 2: 13 (1916); F.W.T.A., ed. 1, 1: 423 (incl. var. *crenata* Hutch. & Dalz.); Aubrév. Fl. For. C. Iv. 1: 32, t. 3, 7–9; Hauman in Fl. Congo Belge 1: 51.

A shrub or small tree, to 25 ft. high; leaves dark glossy green above, leathery; flowers yellow-green; ripe fruits cream or pale orange; **in savannah, forest margins and regrowth.**

Also in **French Cameroons** and extending to A.-E. **Sudan**, east and central tropical Africa, S. Africa and Annobon.

4. HOLOPTELEA

Planch. — F.T.A. 6, 2: 1.

- 1 Branchlets glabrous; leaves elliptic or ovate, shortly acuminate, rounded or subcordate at base, 6–12 cm. long, 2.5–6 cm. broad, entire, glabrous; lateral nerves 5–8 pairs; petiole 1 cm. long; stipules minute; sepals and anthers puberulous; fruits broadly obovate or orbicular, rather deeply emarginate, shortly cuneate to the stipitate base, about 4 cm. diam., wings membranous, puberulous, striately marked with numerous radiating lines from the oblique fruit body *grandis*

Holoptelea grandis (*Hutch.*) *Mildbr.* in Notizbl. Bot. Gart. Berl. 8: 53 (1921); Aubrév. Fl. For. C. Iv. 1: 30, t. 3, 1–3; Hauman in Fl. Congo Belge 1: 40. *APD acc*

Hymenocardia grandis *Hutch.* (1911) — F.T.A. 6, 1: 649.

Holoptelea integrifolia of F.T.A. 6, 2: 2, not of (Roxb.) *Planch.* (1848).

A large, deciduous, **forest** tree, 80–160 ft. high; bark rough, more or less orange-coloured; flowers green; **in the drier parts of the forest region**.

Also in **French Cameroons, A.-E. Sudan, Uganda, Belgian Congo** and **Cabinda**

MORACEAE

Trees or shrubs or rarely herbs, often with milky juice. Leaves alternate, rarely opposite, simple; stipules paired, often caducous and leaving a scar. Flowers much reduced, often in heads, disks or hollow receptacles, unisexual. Calyx-lobes usually 4, sometimes reduced, imbricate or valvate. Stamens usually equal in number and opposite to the sepals; filaments inflexed or erect in bud; anthers 2-celled. Female flower with superior or inferior ovary, of 2 carpels, one often abortive, usually 1-celled; styles mostly 2, filiform; ovule solitary, pendulous, rarely basal and erect. Fruit a small achene, nut or drupe. Seed with or without endosperm, often with curved embryo.

Mainly in the tropics.

Recognized by the milky juice, the prominent stipules, which leave a scar on falling, and the minute unisexual flowers often arranged on variously shaped receptacles.

- 1 Leaves not digitately 5–15-foliolate:2
 Leaves digitately 5–15-foliolate, except on seedlings; dioecious; male flowers in panicles; stamens erect in bud; female flowers in pedunculate heads; ovule erect from the base of the ovary cell; style 1: 12
- 2 Male and female flowers on separate inflorescences; dioecious or rarely monoecious:3
 Male and female flowers in the same inflorescence, on an open, flattened or concave receptacle, or in a closed bag-like receptacle; ovule pendulous:8
- 3 Inflorescences of male flowers not paniculate; ovule pendulous:4
 Inflorescence of male flowers paniculate; female flowers in pedunculate heads; ovule erect; leaves coarsely serrate; see below [11. Myrianthus](#)
- 4 Male flowers in catkin-like spikes; stamens reflexed in bud:5
 Male flowers capitate on a flattened receptacle or in globose, ellipsoid or obovoid heads; stamens erect in bud: 7
- 5 Spikes of male flowers very distinctly pedunculate; forest trees with leaves more than 4 cm. broad:6
 Spikes of male flowers sessile, up to 5 cm. long; shrub up to 3 m. high, with leaves less than 4 cm. broad3.
[Neosloetiopsis](#)
- 6 Leaves strongly 3-nerved from the base; spikes of male flowers up to 2 cm. long [1. Morus](#)
 Leaves pinnately nerved; spikes of male flowers up to 20 cm. long [2. Chlorophora](#)
- 7 Male flowers on a flattened receptacle [9. Antiaris](#)
 Male flowers in globose, ellipsoid or obovoid heads [10. Treculia](#)
- 8 Receptacles bag-like, mostly fleshy, hollow, globose or obovoid, closed at the top except for a small ostiole (mouth); flowers numerous, hidden in the receptacle; stamens erect [6. Ficus](#)
 Receptacles not bag-like, wide open at the top:9
- 9 Stamens reflexed in bud: 10
 Stamens erect in bud; female flower solitary in each receptacle; styles with 2 arms: 11
- 10 Receptacles mostly with 2 or more radiating linear bract-arms, or if without arms then female flowers several and scattered over much of the receptacle; female flowers 1-several; styles simple or with 2 arms; endocarp crustaceous, ejected elastically from the exocarp which remains in the receptacle; herbs or shrubs [4. Dorstenia](#)
 Receptacles without bract-arms; female flower solitary in the centre of the receptacle; styles with 2 arms; fruit remaining within the enlarged receptacle; shrubs [5. Craterogyne](#)
- 11 Low woody plants of herbaceous habit; fruits not adnate to the receptacle [8. Scyphosyce](#)
 Tall tree; fruits sunk in the receptacle and adnate to it [7. Bosqueia](#)
- 12 Leaflets 5–7; sepals free; stamens 2–4; style short, with a broad lanceolate stigma [11. Myrianthus](#)

Leaflets 12–15; sepals united; stamen solitary; style long, with a brush-like stigma [12. Musanga](#)

Artocarpus communis J. R. & G. Forst.

A. incisa (Thunb.) Linn. f.

The Bread-fruit.

It has been introduced into West Africa.

A. heterophyllus Lam.

The Jack-fruit.

It has been introduced into West Africa.

Decorsella A. Chev. in Bull Soc. Bot. Fr. 61, Mém. 8: 297 (1917); F.T.A. 6, 2: 357.

This genus was omitted from the first edition of the F.W.T.A. It is *Gymnorinorea* Keay (Violaceae), F.W.T.A., ed. 2, 1: 104; see Keay in Kew Bull. 1955: 137. Excluded genus.

1. MORUS

Linn. — F.T.A. 6, 2: 19.

- 1** A tree; leaves broadly elliptic, cordate, very abruptly acuminate, crenate, 7–11 cm. long, 5–7.5 cm. broad, thin; pilose in the axils of the nerves beneath; nerves 3 from the base, ascending and subparallel; petiole 1.5 cm. long; male catkins about 2 cm. long; females on slender peduncles about 2 cm. long; syncarp about 1.3 cm. diam., dry; calyx-lobes very broad [mesozygia](#)

Morus mesozygia Stapf — F.T.A. 6, 2: 21; Aubrév. Fl. For. C. Iv. 1: 38, t. 5; Hauman in Fl. Congo Belge 1: 55; Chev. in Rev. Bot. Appliq. 29: 69–74 (incl. var. *sanda* A. Chev.). *APD acc*

A small or sometimes large tree, with reddish brown glabrous branches; **usually in the drier types of forest.**

Morus alba Linn.

White Mulberry.

A native of temperate Asia, it is occasionally cultivated in our area.

Morus nigra Linn.

Mulberry.

A native of temperate Asia, it is occasionally cultivated in our area.

2. CHLOROPHORA

APD: *Synonym of Broussonetia L'Hér. ex Vent.*

Gaud. — F.T.A. 6, 2: 21; Aubrév. in Rev. Bot. Appliq. 19: 245–250 (1934).

- 1** Lower surface of leaves densely and minutely puberulous (good lens needed) between the close prominulous network of rather broad veins; lateral nerves 14–18 on each side of the midrib; lamina oblong-elliptic, 6–16 cm. long and 6–8 cm. broad; petiole 3–6 cm. long; leaves of seedlings and saplings larger, with serrate

margins, densely hirsute; male catkins up to 20 cm. long, 6–8 mm. broad; female catkins 3–4 cm. long, 14–18 mm. diam.; female calyx surrounded at the base by a dense collar of long hairs, ovary substipitate; infructescence subcylindrical, 4–5 cm. long, about 2 cm. diam., pulpy [1. excelsa](#)

Lower surface of leaves glabrous, the sparse hairs confined to the nerves, venation of fine nerves not prominulous; lateral nerves 6–10 on each side of the midrib; lamina broadly ovate to suborbicular, 8–17 cm. long, 7–12 cm. broad; female calyx with few or no hairs at the base, ovary sessile; otherwise similar to the above [2. regia](#)

1. ***Chlorophora excelsa* (Welw.) Benth.** Gen. Pl. 3: 363 (1880); F.T.A. 6, 2: 22 (excl. Dalz. 966); Aubrév. in Rev. Bot. Appliq. 19: 245–250, t. 3, 8–15; Fl. For. C. ***Chlorophora tinctoria* (Linn.) Gaud.**

A native of tropical America, it is cultivated in Sierra Leone.

3. NEOSLOETIOPSIS

Engl. — F.T.A. 6, 2: 78.

- 1 A dioecious shrub; branchlets spreading-pubescent; stipules lanceolate, stiff, 3–8 mm. long; leaves narrowly elliptic-oblong or oblong-elliptic, obtuse or cuneate at base, caudate-acuminate, 4–11 cm. long, 1–3.8 cm. broad, subcoriaceous, glabrous, with 6–8 looped lateral nerves prominent beneath, petiole 2–3 mm. long, spreading-pubescent; male flowers in sessile axillary catkins up to 5 cm. long; female flowers solitary, axillary, on a short bracteate peduncle, ovary about 5 mm. long, surrounded by 4 ovate sepals, style with 2 arms about 1 cm. long [kamerunensis](#)

***Neosloetiopsis kamerunensis* Engl.** Bot. Jahrb. 51: 426, fig. 1 (1914); F.T.A. 6, 2: 78; Hauman in Fl. Congo Belge 1: 82.

APD: Synonym of Streblus usambarensis (Engl.) C.C. Berg

A much-branched shrub, 4–10 ft. high; in riverain forest and in forest regrowth.

Fr. G.: Heudelot 870! **S. L.:** Lopa, Dama (Nov.) Deighton 5881! **Lib.:** Peahtah (Oct.) Linder 1037! **Iv. C.:** Manganot S. **Nig.:** Ikom Catterall IK/16/1934! Kwa Falls, Calabar (Mar.) Brenan 9246a! 9246b!

Also in **French Cameroons**, **French Congo** and **Belgian Congo** and **Tanganyika**.

4. DORSTENIA

Linn. — F.T.A. 6, 2: 25; Engl. Monogr. Afr. Morac. 5 (1898).

- Receptacles with (5–) 6–7 primary arms up to 1.2 cm. long and 0–7 subsidiary shorter arms, floriferous part about 1 cm. diam.; leaves oblong-elliptic to oblong-obovate, obtuse or cuneate at base, rather abruptly long-acuminate, sometimes lobulate-dentate towards apex, 6–17 cm. long, 2–7.3 cm. broad [18. buesgenii](#)
- 1** Styles 2-armed; stems woody or herbaceous, perennial: **2**
 Styles simple; stems annual, erect, simple, perennating by means of a small tuber: **19**
- 2** Receptacles with small scattered bracts on the sides, turbinate, 1–2 cm. diam., margin with numerous very small teeth, not extended into linear lobes; leaves obovate-elliptic, attenuate at base, long-acuminate at apex, 17–27 cm. long, 5.2–10 cm. broad, lateral nerves 10–14 on each side of midrib: **3**
 Receptacles without bracts on the sides; margin usually with 2 or more linear arms (but see No. 3): **4**
- 3** Stipules subulate, about 1 cm. long and only 1.5 mm. broad at base; young stems densely pubescent; lamina narrowed into a long pseudopetiole [1. elliptica](#)
 Stipules triangular-lanceolate, 1.2–1.5 cm. long, 3–4 mm. broad at base, brown, imbricate on the young almost glabrous stems; lamina not narrowed into a pseudopetiole [2. sp. A](#)
- 4** Stems generally herbaceous, procumbent or rhizomatous and sometimes woody below, up to 80 cm. high; female flowers distributed over much of the receptacle: **5**
 Stems strongly woody; erect shrubs 1–4 m. high; female flowers solitary in the centre of the receptacle: **15**
- 5** Receptacles without linear arms, margin sharply toothed; receptacles boat-shaped, about 1.5 cm. long, shortly pedunculate, often paired; leaves obovate to oblong-lanceolate, sometimes irregularly lobulate or deeply lobed towards the obtuse or acuminate apex, 4–11 cm. long, 1.5–5 cm. broad [3. prorepens](#)
 Receptacles with 1 or more linear arms: **6**
- 6** The receptacles orbicular, or 3- to multi-angular, or stellate, or boat-shaped: **7**
 The receptacles much elongated, narrowly linear-lanceolate, about 2.5 cm. long, held vertically, with a long (up to about 6 cm.) apical arm and a short (about 1 cm.) basal arm, without lateral arms: **14**
- 7** Receptacles boat-shaped, about 2.5 cm. long and 1 cm. broad, with a broad irregularly toothed or crenate margin extended at each end into a linear arm 2–5 cm. long; stems and petioles densely hirsute; leaves elliptic, narrowed to an obscurely cordate base, apex more or less acuminate, 10–15 cm. long, 7–8 cm. broad [4. poinsettifolia](#)
 Receptacles orbicular or 3- to multi-angular, or stellate: **8**
- 8** Flowers extending to within 1.5 mm. or less of the edge of the receptacle: **9**
 Flowers not extending to the edge of the receptacle, thus leaving a distinct margin 3–10 mm. wide; arms varying greatly in length, generally a few long with the intervening ones ranging from inconspicuous teeth to moderately long arms; **12**
- 9** Receptacles 1–1.7 cm. diam., with 10–18 subequal arms 2.5–4.5 cm. long; leaves elliptic or obovate, 11–20 cm. long, 5–11 cm. broad; stems erect above, to 80 cm. high: **10**
 Receptacles 0.6–1 cm. diam., with 6–10 linear arms and sometimes a varying number of intermediate shorter arms; stems procumbent or rhizomatous, with the erect portion up to about 35 cm. high: **11**
- 10** Stems and petioles rather densely hirsute; stipules subulate-lanceolate, up to 8 mm. long [5. mannii](#)
 Stems and petioles puberulous; stipules triangular, short [6. ophiocoma](#)
- 11** Margin of receptacle not distinct, without or occasionally with a few very short arms between the 6–10 primary arms which are 1.2–2.7 cm. long; stems densely pubescent when young; leaves elliptic-obovate, narrowed to a rounded or subcordate base, often lobulate towards the acuminate apex, 4.5–11 cm. long, 2–5 cm. broad [7. mungensis](#)
 Margin of receptacle usually distinct, up to 1.5 mm. wide, with numerous short arms or teeth between the 6–10 primary arms which are 0.5–1.2 cm. long; stems densely pubescent; leaves elliptic, or obovate-elliptic, rarely ovate-elliptic, narrowed to a rounded or subcordate base, acuminate, 9–19 cm. long, 3.5–8 cm. broad [8. ciliata](#)

- 12 Receptacles with (1–) 3–4 primary arms (up to 5 cm. long), margin 0.5–1 cm. wide, floriferous part about 0.6–1 cm. diam.; leaves elliptic or obovate-elliptic, attenuate at base, acuminate, 5.5–19 cm. long, 3.5–7.5 cm. broad [9. subtriangularis](#)
- Receptacles with 15–30 arms of unequal length, 5 or more of which are distinctly longer than the rest; margin 0.3–1.4 cm. wide, floriferous part about 1.3–2.5 cm. diam.: 13
- 13 Stipules 6–21 mm. long, filiform, persistent; stems sparingly pubescent; receptacle with up to 30 long arms, the longest of which are up to 4 cm. long; leaves elongate-elliptic to oblanceolate-elliptic narrowed to the base, gradually acuminate, 14–21 cm. long, 5–8.2 cm. broad [10. multiradiata](#)
- Stipules up to 5 mm. long; stems usually rather densely pubescent; receptacle with about 15 arms, the longest of which are up to 2.5 cm. long; leaves obovate, narrowed to the base, shortly acuminate, 12–19 cm. long, 4.5–8.6 cm. broad [11. barteri](#)
- 14 Leaves oblong-elliptic, narrowed to a rounded or obtuse base, shortly acuminate, sometimes lobulate-toothed in the upper part, up to about 16 cm. long and 6.5 cm. broad [12. scabra](#)
- Leaves oblanceolate, narrowed to the cuneate base, gradually acuminate, up to about 16 cm. long and 3 (–4) cm. broad [13. tenuifolia](#)
- 15 The receptacles with 2 (–3) subequal arms: 16
- The receptacles with 4 or more arms, more or less star-shaped and turbinate in outline: 17
- 16 Receptacles linear, with the female flower between the two linear limbs (1–1.4 cm. long and about 3 mm. broad) each of which bears male flowers and tapers off into a linear arm (about 1 cm. long); leaves oblanceolate-oblong or broadly elliptic, obtuse or cuneate at base, rather abruptly acuminate and sometimes lobulate at apex, 9–19 cm. long, 4–6.2 cm. broad [14. angusticornis](#)
- Receptacles boat-shaped, 0.9–1.5 cm. long and about 5 mm. broad, with an arm 1–2.7 cm. long at each end, and sometimes with a third arm on one of the sides; leaves rather variable in shape and size, often narrowly oblong-elliptic, oblanceolate or oblong-oblanceolate, acuminate, sometimes slightly lobulate-dentate, 5–15.5 cm. long, 1.5–6.5 cm. broad [15. smythei](#)
- 17 Receptacles with 4 arms, rarely with 1–3 subsidiary shorter arms; floriferous part 5 mm. or less in diam.: 18
- 18 Leaves oblanceolate, long-cuneate at base, long-acuminate, 8.5–15 cm. long, 2.5–4 cm. broad, main lateral nerves 6–7 on each side of midrib; arms of receptacle 1.3–2 cm. long [16. turbinata](#)
- Leaves oblong-oblanceolate, obtuse or rounded at base, long-acuminate, 12.5–20 cm. long, 3.8–6 cm. broad, main lateral nerves 10–13 on each side of midrib; arms of receptacle about 1.5 cm. long [17. ledermannii](#)
- 19 Receptacles usually in the form of an isosceles triangle with a long arm at each corner and a fourth arm in the centre of the short upper side, more rarely with 3 or 5–8 arms; side of receptacle with small teeth between the arms, the long sides 1–1.5 cm. long, arms 1–3 cm. long; stems, leaves and receptacles rather densely and softly puberulous; leaves usually more or less elongate-elliptic, subacute at apex, rather irregularly toothed on the margin, 3.5–9 (–10) cm. long, 1–3.2 (–4) cm. broad [19. walleri](#)
- Receptacles deeply 3– (or 4–) lobed, the lobes about 4–8 mm. long, each ending in a slender arm 10–13 mm. long, lobes with small teeth between the arms; stems puberulous; receptacles and leaves nearly glabrous except on the nerves; leaves more or less elliptic, obtuse at apex, undulate on margin, 2.5–6.5 cm. long, 1.2–2.5 cm. broad [20. preussii](#)

1. *Dorstenia elliptica* Bureau — F.T.A. 6, 2: 31. *APD acc*

Dorstenia frutescens Engl. Monogr. Afr. Morac. 12, t. 2 B (1898); F.T.A. 6, 2: 30.

A shrublet with erect pubescent stem to 3 ft. high and horizontal rhizome; receptacles brown; in rain forest.

Br. Cam.: Barombi (fl. June, fr. Aug.) Preuss 384! Johann-Albrechtshöhe (Nov.) Staudt 461! S. Bakundu F.R. (fl. & fr. Mar.) Brenan 9266! 9266a! 9266b! Onochie FHI 30861! **F. Po:** Mann 64!

Also in **French Cameroons**, **Gabon** and **French Congo**.

[In the F.T.A. this species is erroneously recorded from French Guinea; the specimen referred to is from French Congo.]

2. *Dorstenia* sp. A. *APD acc*

A shrublet, to 3 ft. high, in damp places in forest.

G. C.: Ankasa F.R. (Dec.) Vigne FH 3186!

Probably new, but further material required.

3. *Dorstenia prorepens* Engl. — F.T.A. 6, 2: 45 (incl. var. *robustior* Rendle); Engl. l.c. 18, t. 3 A. *APD acc*

Stem half woody, procumbent and rooting, covered, like the petioles and peduncles with brown hairs.

S. Nig.: Okomu F.R., Benin (Dec.) Brenan 8460! Oban Talbot 2316! s.n.! **Br. Cam.:** Cam. Mt., 3,000–5,000 ft. (Feb., Dec.) Mann 1956! Preuss 832. **F. Po:** Mildbr. 6355.

4. *Dorstenia poinsettifolia* Engl. — F.T.A. 6, 2: 45; Engl. l.c. 18, t. 2 A (incl. vars.). *APD acc*

A perennial herb, with stems to 12 in. long; in forest.

Br. Cam.: Buea Deistel 435!

Also in French Cameroons.

5. *Dorstenia mannii* Hook. f. — F.T.A. 6, 2: 31; Engl. l.c. 18. *APD acc*

An erect perennial herb, to 21/2 ft. high; in rain forest.

S. Nig.: Calabar (Feb.) Mann 2316! Thomson 10! Oban (Mar.) Onochie FHI 7738! Talbot 673! Obom Itiah (Jan.) Jones FHI 508! **Br. Cam.:** Mamfe (Dec.) Baldwin 13826!

6. *Dorstenia ophiocoma* K. Schum. & Engl. — F.T.A. 6, 2: 32 (excl. var. minor); Engl. l.c. 17, t. 4 C (incl. var. longipes Engl.).

APD: *Synonym of Dorstenia mannii* Hook. f. var. *mannii*

Dorstenia mannii of F.W.T.A., ed. 1, 1: 427, partly.

A forest herb, like the preceding.

Br. Cam.: Jongo to Bakingele (Mar.) Preuss 1381! Bibundi (Nov.) Mildbr. 10637!

Also in French Cameroons.

7. *Dorstenia mungensis* Engl. — F.T.A. 6, 2: 34.

APD: *Synonym of Dorstenia mannii* var. *mungensis* (Engl.) Hijman

Dorstenia intermedia Engl. (1898).

Dorstenia mundamensis Engl. (1902).

Dorstenia ophiocoma var. *minor* Rendle in F.T.A. 6, 2: 32.

Dorstenia mannii of F.W.T.A., ed. 1, 1: 427, partly.

S. Nig.: Uquo, Eket (May) Onochie FHI 33185! **Br. Cam.:** Victoria (Apr.) Preuss 1107! Schlechter 12368! Bonakanda, Cam. Mt., 3,800 ft. (Jan.) Maitland 925! Tiko (Feb.) Dunlap 255! Mundame to Otam Schlechter 12883! Mungo (Apr.) Buchholz!

Also in French Cameroons.

8. *Dorstenia ciliata* Engl. — F.T.A. 6, 2: 31. *APD acc*

Dorstenia talbotii Rendle (1915) — F.T.A. 6, 2: 56.

A rhizomatous perennial herb with ascending stems; in rain forest.

S. Nig.: Oban Talbot 2314! **Br. Cam.:** S. Bakundu F.R., Kumba Div. (Mar.) Brenan 9261! 9261a! Mundame to Otam Schlechter 12888! Eko Keyake Schlechter 12891!

Also in French Cameroons.

9. *Dorstenia subtriangularis* Engl. — F.T.A. 6, 2: 55; Engl. l.c. 15, t. 5 A.

APD: *Synonym of Dorstenia barteri* var. *subtriangularis* (Engl.) Hijman & C.C. Berg

Dorstenia piscaria Hutch. & Dalz. F.W.T.A., ed. 1, 1: 427 (1928); Kew Bull. 1929; 19.

An erect perennial herb, subwoody below, to 2 ft. high; in forest.

S. Nig.: Oban Talbot 2315! s.n.! **Br. Cam.:** Amba Bay (Feb.) Mann 14! Bibundi (Nov.) Mildbr. 10636! Victoria (Feb., Apr.) Maitland 390! Schlechter 12375! Tiko (Jan.) Dunlap 184! S. Bakundu F.R. (Mar., Apr.) Brenan 9265! Ejiofor FHI 29354! Onochie FHI 30882!

Also in **French Cameroons**.

10. **Dorstenia multiradiata** *Engl.* — F.T.A. 6, 2: 54; Engl. l.c. 15, tt. 1 D, 3 C.

APD: Synonym of Dorstenia barteri var. multiradiata (Engl.) Hijman & C.C. Berg

An erect perennial herb, subwoody below, to 21/2 ft. high; **in forest**.

S. Nig.: R. Ata, below Mt. Koloishe, Obudu (Dec.) Keay & Savory FHI 25050! **Br. Cam.:** Barombi (May) Preuss 204! S. Bakundu F.R., Kumba Div. (Mar.) Brenan 9436! 9436a!

11. **Dorstenia barteri** *Bureau* — F.T.A. 6, 2: 53; Engl. l.c. 14. *APD acc*

An erect perennial herb, subwoody below, to 21/2 ft. high; **in forest**.

S. Nig.: Calabar Robb! Ifunkpa to Atakom (Dec.) Holland 215! Oban Talbot 674! s.n.! Aboabam, Ikom (Dec.) Keay FHI 28193! **Br. Cam.:** Bulifambo (Mar.) Maitland 543! Mimbria (Mar.) Brenan 9349! Kembong F.R., Mamfe (Mar.) Onochie FHI 31187! **F. Po:** Barter! Mann 152! Moka (Dec.) Boughey 70!

12. **Dorstenia scabra** (*Bureau*) *Engl.* — F.T.A. 6, 2: 51; Engl. l.c. 20 (incl. var. denticulata Engl.).

APD: Synonym of Dorstenia psilurus var. scabra Bureau

Dorstenia psilurus var. scabra Bureau (1873).

An erect herb; **in forest**.

S. Nig.: Akassa, Nun R. Barter 2089! **Br. Cam.:** Kumba Dist. (May) Olorunfemi FHI 30573!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

13. **Dorstenia tenuifolia** *Engl.* — F.T.A. 6, 2: 52.

APD: Synonym of Dorstenia psilurus var. scabra Bureau

A perennial herb, stems trailing and rooting, leafy parts erect, to 11/2 ft. high; **in forest**.

S. Nig.: Etemi, Ijebu-Ode (May, Dec.) Tamajong FHI 16944! 20275! Idanre F.R., (July) Ejiofor FHI 33399! Nikrowa (Dec.) Brenan 8465! **Br. Cam.:** Mafura to Mundame (fr. Jan.) Schlechter 12920!

14. **Dorstenia angusticornis** *Engl.* — F.T.A. 6, 2: 60. *APD acc*

A low shrub, about 2 ft. high; with papery leaves; **in rain forest**.

Br. Cam.: Johann-Albrechtshöhe Büsgen 185. S. Bakundu F.R., Kumba Div. (fl. & fr. Mar.) Brenan 9489!

Also in **French Cameroons**.

15. **Dorstenia smythei** *Sprague* — F.T.A. 6, 2: 60.

APD: Synonym of Dorstenia turbinata Engl.

Dorstenia aspera A. Chev. (1912) — F.T.A. 6, 2: 58.

Dorstenia dinklagei *Engl.* (1911), not of Engl. (1898).

Dorstenia spathulibracteata *Engl.* (1913).

An evergreen shrub or small tree, to 12 ft. high; **in forest**.

S. L.: hills near Freetown (Nov.–Jan.) Deighton 5612! Milne-Redhead 5182! Jepihun (Jan.) Smythe 237! Gegbwema (Jan.) Deighton 3862! Mamunta (Nov.) Deighton 4929! **Lib.:** Peahtah (Oct.) Linder 961! Gbanga (Oct.) Linder 1199! 1201! 1203! Vahon, Kolahun (Nov.) Baldwin 10250! Bangee, Boporo (Nov.) Baldwin 10356! 10357! **Iv. C.:** Danané (Apr.) Chev. 21197! 21288! 21288 bis! Gonhoué to Bampleu (Apr.) Chev. 21162! **G. C.:** Abiabo, Axim (Nov.) Vigne FH 1428!

The leaves are very variable in shape and size; a form with the leaves truncate and very abruptly acuminate at the apex has been named *D. smythei* var. *deltoidea* (A. Chev.) Hutch. & Dalz. (type Chev. 21288 bis, from Danané, Iv. C.); another specimen (Linder 1202, from Gbanga, Lib.) has remarkable obovate-rhomboid leaves up to 11 cm. long and 9 cm. broad.

16. **Dorstenia turbinata** *Engl.* — F.T.A. 6, 2: 57. *APD acc*

A small shrub with short branchlets; [in rain forest](#).

Br. Cam.: Njoke to Malende Schlechter 12871!

17. *Dorstenia ledermannii* Engl. — F.T.A. 6, 2: 57.

*APD: Synonym of *Dorstenia turbinata* Engl.*

*APD: Synonym of *Dorstenia turbinata* Engl.*

A shrub more than 6 ft. high with branchlets spreading at an acute angle; [in rain forest](#).

G. C.: Benso (Sept.) Vigne FH 4745! **S. Nig.:** Oban Talbot 675!

Also in [French Cameroons](#).

18. *Dorstenia buesgenii* Engl. — F.T.A. 6, 2: 59.

*APD: Synonym of *Dorstenia turbinata* Engl.*

Dorstenia obanensis Hutch. & Dalz. F.W.T.A., ed. 1, 1: 427 (1928); Kew Bull. 1929: 18.

An erect, sparsely branched shrub, to 10 ft. high; [in rain forest](#).

S. Nig.: Oban Talbot 626! 628! s.n.! Aboabam, Ikom (Dec.) Keay FHI 28209! 28213! 28214!

Also in [French Cameroons](#).

19. *Dorstenia walleri* Hemsl. — F.T.A. 6, 2: 68 (incl. var. minor Rendle).

*APD: Synonym of *Dorstenia cuspidata* Hochst. ex A. Rich. var. cuspidata*

Dorstenia caulescens Schweinf. ex Engl. (1894) — Engl. l.c. 22, t. 5 C.

Dorstenia gourmaensis A. Chev. (1912), incl. var. floribunda A. Chev.; Bot. 592; F.W.T.A., ed. 1, 1: 427.

Annual stems erect, fleshy, to 15 in. high, produced from a hard tuberous stock; stems, midribs and arms of receptacle often tinged pink; [in savannah regions, often among rocks, or as epiphyte](#).

Dah.: Konkobiri (July) Chev. 24335! **Fr. Nig.:** Piéga, between Diapaga and Fada (July) Chev. 24468; 24528! Kompongou (July) Chev. 24390! **N. Nig.:** Kwaga, Birnin Gwari (July) Keay FHI 25985! Giwa Dist., Zaria (July) Keay FHI 25931! Anara F.R., Zaria (May) Keay & Mutch FHI 22928! Bauchi Plateau (May) Lely P. 317!

Also in [French Cameroons](#), [Ubangi-Shari](#), [A.-E. Sudan](#), [Tanganyika](#), [N. Rhodesia](#), [Nyasaland](#) and [Mozambique](#); perhaps also in [Belgian Congo](#) (see Hauman in Fl. Congo Belge 1: 72).

20. *Dorstenia preussii* Schweinf. ex Engl. — F.T.A. 6, 2: 70 (excl. var. latedentata Engl.); Engl. l.c. 21, t. 8 D.

*APD: Synonym of *Dorstenia cuspidata* var. preussii (Schweinf. ex Engl.) Hijman*

Erect rather slender, fleshy stems, to 10 in. high, produced from a small tuberous stock; on rocks under shade.

Fr. G.: Gangan, Kindia (Aug.) Jac.-Fél. 7050! Kinsan, Kindia (July) Jac.-Fél. 1807! Kouroussa (Sept.) Pobéguin 1036! **S. L.:** Sugar Loaf Mt. (June) Preuss. Hills behind Freetown (Sept.) Milne-Redhead 5149! Roboli, Rokupr (July) Jordan 285! Kambia, Magbema (June) Jordan 446! Kukuna, Bramaia (July) Adames 235!

[D. preussii var. latedentata Engl., from French Cameroons is scarcely distinguishable from D. cuspidata Hochst., from Abyssinia; our plant is also closely related to D. cuspidata Hochst. in his Fl. Sen. 173, Berhaut records D. cuspidata from Senegal; I have not been able to see his specimens but they may well be D. preussii.]

5. CRATEROGYNE

Lanjouw in Rec. Trav. Bot. Neerland. 32: 272 (1935).

- 1 Peduncles 9–25 mm. long; connective narrow; leaves not toothed, obovate-elliptic, generally obtuse and unequal at base, caudate-acuminate, 10–25 cm. long, 3–9 cm. broad, with numerous looped lateral nerves; flowers monoecious, in axillary pedunculate heads, the males numerous, surrounding a solitary female; fruiting receptacle ellipsoid, about 13 mm. long [1. africana](#)

Peduncles 2–6 mm. long; connective broad; leaves usually more or less toothed and sometimes truncate towards the apex, more or less oblong-elliptic, cuneate to obtuse at base, caudate-acuminate, 7–22 cm. long, 2.5–8 cm. broad, with 5–7 main lateral nerves on each side of the midrib; flowers and fruits similar to above [2. kameruniana](#)

1. **Craterogyne africana** (Baill.) Lanjouw in Rec. Trav. Bot. Neerland. 32: 273, fig. 6 (1935).

APD: *Synonym of Dorstenia africana* (Baill.) C.C. Berg

Trymatococcus africanus Baill. (1876); Engl. Monogr. Afr. Morac. 28, t. 11 A; F.T.A. 6, 2: 75; F.W.T.A., ed. 1, 1: 427.

T. conrauanus Engl. (1902) — F.T.A. 6, 2: 77.

An erect sparingly branched shrub, 3–10 ft. high; receptacles bright yellow; in rain forest.

Also in **French Cameroons**, **Spanish Guinea** and **Gabon**.

2. **Craterogyne kameruniana** (Engl.) Lanjouw l.c. 274, fig. 7–8 (1935).

APD: *Synonym of Dorstenia kameruniana* Engl.

Dorstenia kameruniana Engl. (1895).

Trymatococcus kamerunianus (Engl.) Engl. Monogr. Afr. Morac. 29, t. 11 B (incl. var. *welwitschii* Engl.); F.T.A. 6, 2: 76; F.W.T.A., ed. 1, 1: 427.

Dorstenia amoena A. Chev. (1912) — F.T.A. 6, 2: 59; Chev. Bot. 591 (incl. var. *truncata* A. Chev.).

A forest shrub, 3–10 ft. high.

Iv. C.: Dioandougou to Niangouépleu (May) Chev. 21528. Niangouépleu to Man (May) Chev. 21531! **G. C.:** Banka,

Ashanti (Mar.) Vigne FH 1864! Nkenkaso (Oct.) Vigne FH 2550! Offuasi (Mar.) Vigne FH 1899!

Also in **French Cameroons**, **Spanish Guinea**, **Uganda**, **Kenya**, **Tanganyika** and **Angola**.

6. FICUS

Linn. — F.T.A. 6, 2: 78

KEY TO THE SUBGENERA.

- 1 Ostiole (mouth) of the receptacle with several bracts visible from the outside and spreading transversely across the orifice; [2](#)
- Ostiole (mouth) of the receptacle pore-like and more or less 2-lipped, with all the bracts descending abruptly into the receptacle and not visible from outside; receptacles solitary, paired or in fascicles [4. BIBRACTEATAE](#)
- 2 Bracts scattered on the peduncle and over the surface of the receptacle as well as by the ostiole, sometimes very small; leaves scabrid; receptacles axillary, solitary or paired [1. SYCIDIUM](#)
- Bracts arranged in a single whorl at the base of the receptacle as well as by the ostiole, none on the sides of the receptacle: [3](#)
- 3 Male flowers usually with 2 stamens; receptacles either borne in panicles on the main stem and older branches, or axillary and solitary; leaves often toothed and scabrid or hairy [2. SYCOMORUS](#)
- Male flowers with a single stamen; receptacles all axillary, solitary or paired; leaves usually entire and not scabrid (but see Nos. 11 & 12) [3. UROSTIGMA](#)

Subgenus 1 — SYCIDIUM

- 1 Leaves mostly opposite, often with 3-dentate tips, lanceolate, oblong-lanceolate or ovate, 3–10 cm. long, 1.3–4 cm. broad, scabrid on both surfaces, with 5–8 main lateral nerves on each side of midrib; stipules persistent, lanceolate, about 5 mm. long, ciliate; receptacles solitary, subglobose, 1.3–2 cm. diam., scabrid; peduncles 0.6–1.2 cm. long [1. capreifolia](#)
- Leaves always alternate; stipules caducous: [2](#)

- 2 Leaves linear-lanceolate, entire, 9–12 cm. long, 2–3 cm. broad, somewhat scabrid, with 9–10 main lateral nerves on each side of midrib; receptacles solitary, subglobose, about 1.3 cm. diam., shortly setulose; peduncles about 0.8 cm. long [2. *acutifolia*](#)
- Leaves ovate or elliptic to obovate-elliptic, sometimes toothed or lobed, never more than 3 times as long as broad, with 3–8 main lateral nerves on each side of midrib; receptacles paired or solitary; peduncles 0.3–1.2 cm. long:..... **3**
- 3 A tree, up to 22 m. high; main lateral nerves 3–5 (–6) on each side of midrib, ascending at an angle of about 45–50°; leaves ovate to obovate-elliptic, often toothed, 3.5–17 cm. long, 2.5–11 cm. broad, thick and very scabrid on both surfaces; leaves on young plants and regrowth shoots often rather deeply 3-lobed; receptacles obovoid or subglobose, 1–1.3 cm. diam., roughly scabrid [3. *exasperata*](#)
- A shrub, usually scrambling; main lateral nerves 6–8 on each side of midrib, spreading at an angle of about 50–80°; leaves often lobed, variable, nearly entire and then more or less oblong-elliptic, or pinnately 3–5-lobed, 5–17 cm. long, 2–8 cm. broad, scabrid on both surfaces; receptacles subglobose or pyriform, up to 3 cm. long and 2.2 cm. diam., scabrid [4. *asperifolia*](#)

Subgenus 2 — SYCOMORUS

- 1 Receptacles borne in panicles on the main stem or older branches: **2**
- Receptacles axillary and solitary, on or towards the base of the young shoots; leaves cordate at base: **5**
- 2 Young receptacles setose-pilose; stipules persistent for some time; panicles mostly long and slender, with short lateral branches racemously arranged, borne near the base of the main stem, often with many panicles prostrate on the ground; receptacles depressed-globose up to 2.5 cm. diam.; basal bracts 2–5; leaves obovate to obovate-elliptic, shortly and subacutely acuminate, 10–37 cm. long, 4.5–18 cm. broad, coarsely undulate-dentate, long-pilose on the nerves beneath [5. *vogeliana*](#)
- Young receptacles tomentose or scaly-puberulous or glabrous; stipules early caducous; panicles thyrsoid, not prostrate on the ground:..... **3**
- 3 Mature receptacles softly tomentose, globose, 2–2.5 cm. diam.; basal bracts 3, small, soon glabrous; leaves ovate or oblong-ovate, obtuse or shortly acuminate, 6–25 cm. long, 4–12 cm. broad, coarsely and irregularly repand-dentate, 3-nerved at the base, rather densely pubescent beneath [6. *mallotocarpa*](#)
- Mature receptacles glabrous or puberulous, 2–3 cm. diam.:..... **4**
- 4 Leaves ovate or ovate-elliptic, up to 25 cm. long and 12 cm. broad, mostly repand-dentate, smooth or rarely slightly scabrid above, pubescent or glabrous beneath; atipular scars without a fringe of hairs [7. *capensis*](#)
- Leaves obovate-suborbicular, cordate at base, shortly acuminate, 7–17 cm. long and broad, entire, scabrid above, scattered-pilose on the midrib and nerves beneath and sometimes softly puberulous; stipular scars with a fringe of hairs [8. *mucoso*](#)
- 5 Leaves smooth above, glabrous or sparsely pubescent beneath, very broadly ovate, up to 20 cm. long and 17 cm. broad, mostly coarsely repand-dentate; receptacles puberulous, 3.5–6 cm. diam., marked with 12–15 longitudinal lines [9. *vallis-choudae*](#)
- Leaves scabrid above, pilose on the nerves beneath, orbicular or ovate, 5–15 cm. long, 4–10 cm. broad, mostly subentire or obtusely serrate; receptacles densely tomentose, about 4 cm. diam., not marked with longitudinal lines [10. *gnaphalocarpa*](#)

Subgenus 3 — UROSTIGMA

- 1 Receptacles glabrous or very slightly and finely puberulous when mature: **2**
- Receptacles densely and softly tomentose when mature; otherwise as above [15a. *ingens* var. *tomentosa*](#)
- 2 Leaves lanceolate or lanceolate-elliptic, obtuse at both ends, 6–15 cm. long, 2.5–6 cm. broad, entire, glabrous; lateral nerves 10–16 on each side of midrib; receptacles pedunculate, globose, nearly 1 cm. diam.; basal bracts ciliate [13. *verruculosa*](#)
- Leaves ovate or rhomboid-ovate, or when elliptic then acuminate: **3**
- 3 Receptacles 12–17 mm. diam., on distinct peduncles 4–8 mm. long; leaves hairy, at least, when young, often slightly scabrid, acuminate at apex:..... **4**
- Receptacles 8–10 mm. diam., sessile or with peduncles up to 6 mm. long; leaves glabrous or nearly so, never scabrid, glossy, at least above: **5**
- 4 Young leaves with long white spreading hairs on both sides of the midrib and main nerves and on the upper side of the petiole, glabrescent; leaves oblong to ovate, more or less cordate at base, 8–19 cm. long, 4.5–10.5 cm. broad, with 7–17 lateral nerves on each side of midrib; saplings and coppice growth with dissected lobed leaves; a tall forest tree [11. *variifolia*](#)
- Young leaves more or less densely puberulous, glabrescent, without long white spreading hairs; leaves elongate-ovate or elliptic, cuneate to subcordate at base, 8–13 cm. long, 3.5–6.5 cm. broad, with 5–8 lateral nerves on each side of midrib; a savannah tree [12. *dicranostyla*](#)
- 5 Leaves acutely acuminate, strongly and closely reticulate and shining on both surfaces, ovate-rhomboid, cuneate to subcordate at base, 6–11 cm. long, 3–6 cm. broad, with 9–12 main lateral nerves on each side of midrib; receptacles 6–8 mm. diam., sessile or subsessile [14. *lecardii*](#)

Leaves obtuse or slightly acuminate, not strongly reticulate, shining on upper surface only, ovate-oblong to oblong-lanceolate, rounded-truncate to deeply cordate at base, 6–18 cm. long, 3–10 cm. broad, with 5–8 main lateral nerves on each side of midrib; receptacles 8–10 mm. diam., subsessile or with peduncle up to 6 mm. long [15. *ingens* var. *ingens*](#)

Subgenus 4 — BIBRACTEATAE

Section Axillares.

Receptacles in the axils of the leaves of the young shoots (rarely some extending to the two-year-old wood), solitary or paired.

- 1 Stipules mostly large and conspicuous, persistent during the flowering and fruiting periods: **2**
 Stipules falling on the unfolding of the young leaves: **14**
- 2 Leaves pandurate, cordate-auriculate and obscurely toothed at the base; receptacles sessile, globose: **3**
 Leaves not pandurate, neither cordate nor toothed: **4**
- 3 Leaves 13–26 cm. broad, 20–45 cm. long, with 5–6 main lateral nerves on each side of midrib; receptacles about 4 cm. diam.; basal bracts 3, appressed to receptacle [16. *lyrata*](#)
 Leaves 6–9.5 cm. broad, 18–52 cm. long, with 15–20 main lateral nerves on each side of midrib; receptacles about 2 cm. diam.; basal bracts 2, ovate, keeled, coriaceous [17. *sagittifolia*](#)
- 4 Receptacles covered with large prominent warts; leaves oblong-elliptic or obovate, oblong, long-acuminate, 15–22 cm. long, 4–8.5 cm. broad; receptacles sessile, slightly depressed-globose, 1–2.2 cm. diam. .. [22. *praticola*](#)
 Receptacles not warted or only very slightly so: **5**
- 5 Receptacles sessile or subsessile, not stipitate above the basal bracts: **6**
 Receptacles with a peduncle 6–16 mm. long and with a stipe above the basal bracts up to 8 mm. long, ellipsoid-obovoid to subglobose, glabrous, 2.5–3.5 cm. diam.; leaves obovate or obovate-elliptic, cuneate at base, acuminate at apex, 9–16.5 cm. long, 4–6.5 cm. broad, with about 5 main lateral nerves on each side of midrib [28. *rederi*](#)
- 6 Leaves more than 4 cm. long and 2 cm. broad; **7**
 Leaves 1.2–4 (–4.5) cm. long, 0.4–1.5 cm. broad, oblanceolate, narrowed at base, rounded at apex; main lateral nerves 5–6 on each side of midrib, ascending from it at an acute angle; receptacles globose, glabrous, 4–5 mm. diam. [27. *lingua*](#)
- 7 Receptacles 1–5 cm. diam.; leaves mostly more than 8 cm. long and 3 cm. broad, main lateral nerves 4–10 on each side of midrib: **8**
 Receptacles 5–8 mm. diam., globose, glabrous; leaves narrowly rhombic-elliptic, cuneate at base, gradually obtuse acuminate, 4–8.5 (–12.5) cm. long, 2–3 (–5) cm. broad; main lateral nerves about 12 on each side of midrib with numerous subsidiary more or less parallel nerves [26. *kamerunensis*](#)
- 8 Leaves acuminate, 9–45 cm. long, 4–14 cm. broad; mature receptacles 1.3 cm. diam. or more: **9**
 Leaves not acuminate, rounded or very obtusely pointed at apex, rounded to cuneate at base, oblong or oblong-oblanceolate, 5–12 cm. long, 2.3–3.6 (–4.7) cm. broad; main lateral nerves 6–7 on each side of midrib; mature receptacles 1–1.2 cm. diam., ovoid-globose, glabrous or finely pubescent [25. *anomani*](#)
- 9 Base of leaves cuneate; receptacles 1.3–2.5 cm. diam.: **10**
 Base of leaves rounded or sometimes obtuse, apex shortly acuminate; main lateral nerves 5–8 on each side of midrib; receptacles 2.5–5 cm. diam., densely hispid: **13**
- 10 Main lateral nerves 4–5 on each side of midrib: **11**
 Main lateral nerves 7–10 on each side of midrib: **12**
- 11 Receptacles glabrous, globose, about 1.3 cm. diam.; leaves elliptic to oblanceolate, 11–24 cm. long, (3–) 5–10.5 cm. broad [18. *camptoneura*](#)
 Receptacles densely and shortly pubescent, subglobose, about 2 cm. diam.; leaves elliptic or oblong-elliptic, 10–18 cm. long, 4–7 cm. broad [19. *camptoneuroides*](#)
- 12 Leaves elongate-oblong-elliptic, long-caudate-acuminate, 15–22 cm. long, 4–7 cm. broad; main lateral nerves 8–10 on each side of midrib, diverging from it at an angle of 60–90°; receptacles subglobose, 1.3–2.5 cm. diam., glabrous or pubescent [20. *conraui*](#)
 Leaves obovate or obovate-oblong, long-acuminate, 9.5–18 cm. long, 4–8 cm. broad; main lateral nerves 7–8 on each side of midrib, diverging from it at an angle of about 45°; receptacles depressed-globose, about 1.5 cm. diam., strigillose [21. *winkleri*](#)
- 13 Leaves 10–22 cm. long, 4–9.5 cm. broad, oblong-elliptic; receptacles 2.5–3 cm. diam. when fresh, beaked when dry [23. *tessellata*](#)
 Leaves 20–45 cm. long, 6–14 cm. broad, oblong or obovate-oblong or oblong-oblanceolate; receptacles up to

- about 5 cm. diam., not beaked [24. preussii](#)
- 14** Leaves obtriangular, broadly truncate at the apex or refuse, with the midrib divided some distance below and not directly continued to the apex of the blade, the latter 4–8 cm. long, up to 7 cm. broad across the top; receptacles axillary, paired, pedunculate, globose, up to 8 mm. diam. [29. lepieuri](#)
- Leaves neither obtriangular nor truncate at the apex: **15**
- 15** Receptacles more or less invested at least when young by large persistent basal bracts, or the axillary pairs of receptacles completely covered when young by a calyptra; receptacles sessile or nearly so: **16**
- Receptacles not invested by the basal bracts, the latter usually small and often caducous: **20**
- 16** Basal bracts free, not calyptriform; leaves with long spreading hairs, at least when young: **17**
- Basal bracts united to form a pointed calyptra which completely covers an axillary pair of young receptacles, later caducous or opening; leaves glabrous or minutely puberulous, broadest below the middle: **19**
- 17** Leaves broadest above the middle, elongated oblanceolate-obovate, narrowed to a cuneate, obtuse, rounded or subcordate base, acuminate at apex, up to 48 cm. long and 17 cm. broad; petioles at first shaggy-villous; basal bracts much shorter than the mature receptacles; receptacles at first densely villous with orange-coloured hairs becoming much more sparsely hairy, subglobose, flattened at the apex, about 3 cm. diam.: **18**
- Leaves broadest about the middle, oblong-elliptic, rounded to cordate at base, shortly acuminate, 12–33 cm. long, 3–15 cm. broad, with long hairs on midrib and main lateral nerves beneath, more or less glabrescent, venation closely reticulate beneath; petioles not shaggy-villous; basal bracts as long as or longer than the mature receptacles; receptacles pubescent or glabrous, subglobose, about 3 cm. diam. [31. chlamydocarpa](#)
- 18** Undersurface of leaves long-pilose at first, then more or less glabrescent [30. eriobotryoides var. eriobotryoides](#)
- Undersurface of leaves loosely tomentose with curly hairs [30a. eriobotryoides var. caillei](#)
- 19** Leaves ovate, or oblong-ovate, usually much longer than broad, obtuse, rounded or cordate at base, distinctly acuminate, 9–36 cm. long, 2.5–15 cm. broad; receptacles subglobose or ellipsoid, up to 5 cm. long and broad, puberulous [32. ovata](#)
- Leaves ovate to ovate-orbicular, cordate at base, obtuse or rounded at apex, 13–20 cm. long, 6–13 cm. broad; receptacles subglobose, about 2 cm. diam., pubescent, then glabrescent. [33. djalensis](#)
- 20** The receptacles sessile, or with peduncles not more than 3 mm. long: **21**
- The receptacles distinctly pedunculate, peduncles 3 mm. long or more! **27**
- 21** Leaves cordate at base, 5–15 cm. long, 2–7 cm. broad; receptacles 6–8 mm. diam.: **22**
- Leaves not cordate at base, or if sometimes cordate (No. 36) then leaves and receptacles larger than above; leaves glabrous, or nearly so: **24**
- 22** Stipules less than 0.5 cm. long; lateral nerves 9–12 on each side of midrib; leaves broadly rhomboid-elliptic to suborbicular, obtusely acuminate, 5–12 cm. long, 3–6 cm. broad, glabrous as the branchlets; receptacles glabrous, sessile [34. leonensis](#)
- Stipules 1–3.5 cm. long, conspicuous although caducous; lateral nerves 4–7 on each side of midrib; leaves oblong-ovate to oblong or obovate-oblong, very obtusely acuminate, 5–15 cm. long, 2–7 cm. broad; receptacles more or less densely pubescent, or glabrescent, sessile or with peduncles up to 5 mm. long: **23**
- 23** Leaves persistently densely pubescent beneath [35. glumosa var. glumosa](#)
- Leaves soon glabrous beneath [35a. glumosa var. glaberrima](#)
- 24** Main lateral nerves 5–6 (–8) on each side of midrib, ascending, looped, prominent beneath; leaves coriaceous, 9–35 cm. long, 4–16 cm. broad, obovate-oblong, oblanceolate or oblong-elliptic, cuneate to shallowly cordate at base, obtusely acuminate; petiole 2–10 (–16) cm. long, stout; receptacles subglobose, sessile, 1–1.7 (–2.5) cm. diam., nearly glabrous to densely pubescent [36. vogelii](#)
- Main lateral nerves 8–12 on each side of midrib, more or less parallel, with intermediate secondary nerves, slightly prominent beneath; leaves 5–18 (–22.5) cm. long, 2.5–9 (–10) cm. broad: **25**
- 25** Leaves coriaceous, distinctly and sometimes acutely acuminate; receptacles borne 3–4 together on small bracteate cushions in the axils of the leaves, glabrous, about 6 mm. diam. and beaked when dry; branchlets stout, purplish-brown when dry; leaves elliptic or oblong-elliptic, obtuse to rounded or subtruncate at base, 9–18 cm. long, 4.5–9 cm. broad; petioles 1.2–3 cm. long [37. aganophila](#)
- Leaves thin, rounded or obtuse, or shortly and obtusely acuminate at apex; receptacles solitary or 2 together, borne directly in the axils of the leaves on the branchlets which are usually yellow-brown when dry; receptacles glabrous, puberulous or tomentellous, 6–15 mm. diam.; leaves obovate to elliptic or oblong-elliptic, narrowed, obtuse or rounded at base, 5–14 (–22.5) cm. long, 2.5–7 (–10) cm. broad; petioles 1.2–7.5 cm. long: **26**
- 26** Receptacles glabrous or puberulous, 6–11 mm. diam. [47. thonningii](#)
- Receptacles tomentellous, 10–15 mm. diam. [48. basarensis](#)
- 27** Leaves more or less cordate at base, or some rounded, often broadly ovate or suborbicular: **28**
- Leaves neither cordate, nor ovate, nor suborbicular, mostly much longer than broad and narrowed to the cuneate,

- obtuse or rounded base: **34**
- 28** Apex of leaves acutely acuminate; leaves broadly ovate, deeply to widely cordate or subtruncate at base, 6–16 cm. long, up to 14 cm. broad, glabrous; receptacles 2–4 together, globose up to 1 cm. diam., glabrous or puberulous; peduncles 4–12 mm. long [38. *populifolia*](#)
- Apex of leaves rounded or very shortly and obtusely pointed: **29**
- 29** Leaves 2–7 cm. broad, 5–15 cm. long, oblong-ovate to oblong or obovate-oblong; receptacles 6–8 mm. diam., pubescent or glabrescent, with peduncles up to 5 mm. long; see also above: **30**
- Leaves (5–) 7–28 cm. broad, up to 40 cm. long; receptacles 1–4 cm. diam.; peduncles 0.5–3 cm. long: **31**
- 30** Leaves persistently densely pubescent beneath [36. *glumosa* var. *glumosa*](#)
- Leaves soon glabrous beneath [35a. *glumosa* var. *glaberrima*](#)
- 31** Receptacles 1–2 cm. diam.: **32**
- Receptacles about 4 cm. diam., glabrous; peduncles about 2.5 cm. long; leaves obovate or obovate-elliptic, cordate or rounded at base, 10–25 cm. long, 7–15 cm. broad, pilose and then glabrescent beneath, with 12–14 main lateral nerves on each side of midrib; petioles 5–8 cm. long, stout, persistently long-pilose [42. *goliath*](#)
- 32** Peduncles 1–3 cm. long; receptacles about 1 cm. diam., pubescent or glabrous; leaves broadly elliptic obovate, or ovate, deeply cordate at base, 12–40 cm. long, 7–28 cm. broad, pubescent or glabrescent beneath, with 2–3 basal nerves and 8–13 other lateral nerves on each side of midrib, prominent beneath; petiole stout, 3–12 cm. long [39. *platyphylla*](#)
- Peduncles 0.5–1 cm. long; leaves ovate to suborbicular: **33**
- 33** Leaves deeply cordate at base, glabrous or puberulous and glabrescent beneath, (5–) 9–22 cm. long and broad, with 2–3 basal nerves and 4–6 other lateral nerves on each side of midrib; petiole 3–12 cm. long; receptacles 1.3–2 cm. diam., glabrous [40. *abutifolia*](#)
- Leaves shallowly cordate or rounded at base, pubescent or pilose beneath, more or less glabrescent, 7–27 cm. long, 6–22 cm. broad, with 2 basal nerves and 6–13 other lateral nerves on each side of midrib; petiole 1–9 cm. long; receptacles 1–1.6 cm. diam., pubescent or glabrous [41. *congensis*](#)
- 34** Lateral nerves 15–25 on each side of midrib, close and parallel, looped to form a conspicuous intramarginal nerve: **35**
- Lateral nerves up to 14 on each side of midrib: **37**
- 35** Leaves obovate or obovate-elliptic, cuneate at base, shortly and subacutely acuminate, 12–26 cm. long, 4–10 cm. broad, glabrous; petiole 3–8 cm. long; receptacles paired, about 1.5 cm. diam., glabrous; peduncles 5–8 mm. long [43. *elasticoides*](#)
- Leaves oblong-lanceolate to linear-lanceolate; receptacles 0.7–1.2 cm. diam.: **36**
- 36** Peduncles densely pubescent, 3–5 mm. long, stout; receptacles pubescent; leaves oblong lanceolate, rounded at base, subacute or shortly acuminate, 7–20 cm. long, 2.5–5 cm. broad; petioles 1–2.5 cm. long [44. *pseudomangifera*](#)
- Peduncles glabrous, 6–14 mm. long; receptacles glabrous; leaves elongate-oblong-lanceolate to linear-lanceolate, cuneate at base, long-acuminate, 10–40 cm. long, 1.5–6 cm. broad; petioles 1.2–5.5 cm. long [45. *barteri*](#)
- 37** The receptacles without a stipe above the base bracts: **38**
- The receptacles with a stipe about 4 mm. long above the basal bracts; peduncle about 6 mm. long; receptacles about 4 cm. diam., glabrous; leaves oblong-oblancheolate, cuneate to rounded at base, obtusely acuminate, up to 18 cm. long and 6 cm. broad, with 10–12 main lateral nerves on each side of midrib [52. *sp. nr. cyathistipuloides*](#)
- 38** Receptacles glabrous or sparingly pubescent; peduncles 4–10 mm. long: **39**
- Receptacles tomentose or densely pubescent when mature, 0.6–1.2 mm. diam.; peduncles 4–5 mm. long; petioles (1–) 1.5–4.5 cm. long; leaves oblanceolate or oblong-elliptic, attenuated to the obtuse or rounded base, shortly acuminate, 4–10 cm. long, 1.5–4 cm. broad, with 6–13 main lateral nerves on each side of midrib [51. *iteophylla*](#)
- 39** Receptacles 2.5–3.2 cm. diam.; leaves very coriaceous, oblong-elliptic to obovate-oblong, rounded or obtuse at base, very shortly and obtusely acuminate, 9–16 cm. long, 3.3–7 cm. broad, with 5–6 main lateral nerves on each side of midrib; petioles 0.5–3.5 cm. long, stout, channelled above [46. *scott-elliotii*](#)
- Receptacles 0.6–1 cm. diam.: **40**
- 40** Petioles 0.5–1.2 (–2.5) cm. long; leaves obovate, oblanceolate or sometimes elliptic, rounded or very shortly acuminate, 2.5–8 cm. long, 1.2–5 cm. broad, with 5–10 main lateral nerves on each side of midrib [49. *natalensis*](#)
- Petioles 2–6 cm. long; leaves oblanceolate or narrowly elliptic, rarely obovate, obscurely acuminate, 5–17 cm. long, 1–5 cm. broad, with 8–14 main lateral nerves on each side of midrib [50. *dekdena*](#)

Section Fasciculatae.

Receptacles borne on short leafless arrested branchlets, or in fascicles, on the main trunk or branches remote from the leaves; receptacles 2-several together, mostly pubescent and then glabrescent; stipules mostly caducous:

- 1 Leaves mostly distinctly cordate at base; receptacles 2·2–4 cm. diam.:2
 Leaves not cordate at base:5
- 2 The leaves 7–25 cm. long, 3·5–20 cm. broad:3
 The leaves 3·5–6·5 cm. long, 2–4·2 cm. broad, broadly elliptic, deeply cordate at base, abruptly long-acuminate; petioles 1·4–4·2 cm. long; receptacles subglobose or ellipsoid-subglobose, 2·7–3·4 cm. diam., densely puberulous; peduncles 1·6–3 cm. long[55. kimuenzensis](#)
- 3 Leaves ovate or suborbicular:4
 Leaves elliptic to ovate-elliptic or obovate-elliptic, subcordate (or cuneate to rounded) at base, long-acuminate, 11–16 cm. long, 3·5–7·5 cm. broad, margin undulate, with a basal pair of ascending lateral nerves and 5–6 other main lateral nerves on each side of the midrib from which they spread at nearly right angles, branch well before the margin and become prominently looped; petioles 1–3·5 cm. long; peduncles 0·8–1·5 cm. long; receptacles 3–4 cm. diam., pubescent; see also below[56. dryepontiana](#)
- 4 Peduncles 0·3–0·9 cm. long and 3–5·5 mm. thick; leaves ovate to suborbicular, shortly and obtusely acuminate, 13–25 cm. long, 12–20 cm. broad; branchlets stout[53. umbellata](#)
 Peduncles (1–) 1·2–1·8 (–2·5) cm. long and up to 2·5 mm. thick; leaves ovate to oblong-ovate, distinctly caudate and often rather acutely acuminate, 7–15 cm. long, 5–10 (–12) cm. broad; branchlets slender[54. polita](#)
- 5 Receptacles 3–5 cm. diam., subglobose; main lateral nerves 6–12 on each side of midrib:6
 Receptacles 1·3–2·5 (–3) cm. diam.; main lateral nerves 8–22 on each side of midrib:7
- 6 Peduncles 0·8–1·5 cm. long; leaves elliptic to ovate-elliptic or obovate-elliptic, cuneate to rounded or subcordate at base; for other characters see above[56. dryepontiana](#)
 Peduncles 2–3 cm. long; leaves oblong-oblancheolate to narrowly oblong, cuneate to rounded at base, gradually acuminate, 6–16 cm. long, 2–4 cm. broad, main lateral nerves 6–12 on each side of midrib; petioles 0·7–2 cm. long; peduncles 2–3 cm. long, 2–5 mm. thick; receptacles subglobose, 3–5 cm. diam., densely hispid to glabrescent, with very thick walls, woody at least when dry[57. macrosperma](#)
- 7 Leaves obovate, narrowed to an obtuse or rounded base, shortly and obtusely acuminate, 7–16 cm. long, 2·7–7·5 cm. broad, with 8–16 main lateral nerves on each side of midrib; petiole 1·5–3·5 cm. long; receptacles subglobose 2–3 cm. diam., puberulous; peduncles 1·5–2 cm. long[58. elegans](#)
 Leaves oblong to oblong-elliptic, obtuse at base, acuminate, 10–20 cm. long, 4–8·5 cm. broad, with 12–22 main lateral nerves on each side of midrib, the basal pair conspicuous and ascending to become the looped intramarginal nerves; petiole 1·7–9·7 cm. long; receptacles ellipsoid or ellipsoid-subglobose, 1·7–2·5 cm. long, 1·3–2·3 cm. diam., puberulous to glabrous, sometimes stipitate when dry; peduncles 1·5–2·6 cm. long.[59. ottoniifolia](#)

1. **Ficus capreifolia Del.** — F.T.A. 6, 2: 107 (incl. var. *ovatifolia* Hutch.); Engl. Pflanzenw. Afr. 3, 1: 41, fig. 24; Lebrun & Boutique in Fl. Congo Belge 1: 126.? *F. niokoloensis* Berhaut Fl. Sen. 104, 129 (1954), French descr. only. **APD acc**

A shrub with scabrid leaves; branchlets villous when young; **by river banks in the savannah regions.**

Sen.: Berhaut 1581; 4550. **Gam.:** MacCarthy Isl. Heudelot 350! **Togo:** Atakpame Doering 321. Kara R., Kadedjande Kersting A. 622. **N. Nig.:** Nupe Barter 879! Anara F.R., Zaria Prov. (Oct.) Keay FHI 20136! Katagum (Nov.) Dalz. 215!

Extends east to Somaliland and south to Rhodesia and Mozambique.

2. **Ficus acutifolia Hutch.** — F.T.A. 6, 2: 108.

APD: *Synonym of Ficus asperifolia Miq.*

Ficus asperifolia of Chev. Bot. 595, partly.

A shrub with branchlets drying brown-purple.

Fr. G.: Kollangui Chev. 12228!

Also in **French Cameroons.**

3. **Ficus exasperata Vahl** — F.T.A. 6, 2: 110; Engl. l.c. fig. 22 C; Aubrév. Fl. For. C. Iv. 1: 58, t. 12, 2; Fl. For. Soud.-Guin. 346; Lebrun & Boutique l.c. 126. **APD acc**

A deciduous tree, up to 70 ft. high, with smooth grey bark and very rough leaves; sap viscid, not milky; coppice shoots with lobed leaves; **in the drier types of forest.**

Sen.: Niayes, Sedhiou & Sinedone fide Chev. l.c. **Gam.:** Dawe 81! **Fr. Sud.:** Koullou Dubois 52. **Port. G.:** Safim, Bissau (Jan.) Esp. Santo 1671! Sao Domingos (Nov.) Esp. Santo 1295! **Fr. Nig.:** Foster 327! Aboh (June) T. Vogel 47!

Also in **French Cameroons, Belgian Congo** and **N. Rhodesia.**

5. ***Ficus vogeliana* (Miq.) Miq.** — F.T.A. 6, 2: 94 (incl. var. *latifolia* Hutch.); Chev. Bot. 593, 601 (incl. var. *textilis* A. Chev.), partly; Aubrév. Fl. For. C. Iv. 1: 60, t. 13, 1–2. **APD acc**

Sycomorus vogeliana Miq. (1849).

Ficus fleuryi A. Chev. in Rev. Bot. Appliq. 15: 458 (1935).

A **forest** tree, 15–60 ft. high, coarsely brown-hairy on the young branchlets; figs borne on long panicles on the main stem near the base, often with many panicles prostrate on the ground and sometimes rooting; ripe figs russet brown; **usually in moist situations.**

Fr. G.: Kissidougou Chev. 20720. **S. L.:** Mano, Dase (Oct.) Deighton 3362! Mano, Luawa (Apr.) Deighton 3150! Kambul Hills South (Nov.) Small 826! Musaia (Apr.) Deighton 5485! **Lib.:** Sarbo, Webo (July) Baldwin 6410! **Iv. C.:** Bouaké (July) Chev. 22125! Kaasigué to Atéou (Jan.) Chev. 17087! Rasso Aubrév. 586! **S. Nig.:** Lagos Rowland 18! Buea to Mayuku (Feb.) Dalz. 8245! Barombi Preuss 550! **F. Po.:** (Nov.) T. Vogel 179!

Also in **French Cameroons, Spanish Guinea, Cabinda** and (?) **Uganda.**

6. ***Ficus mallotocarpa* Warb.** — F.T.A. 6, 2: 97; Lebrun & Boutique l.c. 113.

APD: *Synonym of Ficus sur* Forssk.

A tree up to 30 ft. high or more with the habit of an alder, with viscid, not milky, sap and shortly tomentose young branchlets.

F. Po.: Musola, above San Carlos Mildbr. 6992.

Extends to E. Africa, Rhodesia and **Angola.**

7. ***Ficus capensis* Thunb.** — F.T.A. 6, 2: 101; Chev. Bot. 595; Aubrév. l.c. 1: 62, t. 13, 5–6; Lebrun & Boutique l.c. 116; M. F. Barrett in Am. Midl. Nat. 39: 194.

APD: *Synonym of Ficus sur* Forssk.

Usually a small tree with the figs borne in sometimes abundant clusters on the trunk; branchlets glabrous or softly pubescent, with pointed more or less villous buds; a variable species within which several infraspecific taxa can probably be recognized; **common, especially in the more open country.**

Sen.: Cayor Leprieur. Cape Verde Brunner. Tambana, Sedhiou Chev. **Gam.:** Rosevear 25! **Fr. Sud.:** Tabacco (Jan.) Chev. 131. **Port. G.:** Bissalanca, Bissau (Jan.) Esp. Santo 1639! **Fr. 18. **Ficus camptoneura** *Mildbr.* — F.T.A. 6, 2: 147.

APD: Synonym of Ficus ardisioides subsp. camptoneura (Mildbr.) C.C. Berg

A tree to 25 ft. high, or epiphytic shrub, with nearly glabrous angular branchlets; **in rain forest**.

S. Nig.: Omo F.R., Ijebu Ode (Mar.) Jones FHI 17025! 17273! Sapoba Kennedy 1581! Okomu F.R., Benin (Feb.) Brenan 9075! 9115! 9195! Afi River F.R. (June) Jones & Onochie FHI 18950! **Br. Cam.:** Buea Deistel; Reder. **F. Po:** Mann 307!

Also in **French Cameroons** and **Gabon**.

19. **Ficus camptoneuroides** *Hutch.* — F.T.A. 6, 2: 148.

APD: Synonym of Ficus tessellata Warb.

APD: Synonym of Ficus pachyneura C.C. Berg

A large epiphytic shrub or tree up to 25 ft. high, with slender glabrous branchlets sharply ribbed when dry.

Br. Cam.: Bangwe Conrau 208. **F. Po:** north side of St. Isabel Peak Mildbr. 6411!

Also in **French Cameroons**.

20. **Ficus conraui** *Warb.* — F.T.A. 6, 2: 150; Lebrun & Boutique l.c. 155. *APD acc*

An epiphytic shrub or tree, with obtusely angular smooth branchlets nearly covered with large persistent stipules; leaves prominently reticulate with whitish veins below.

S. L.: Njala (Jan., Feb.) Dalz. 8107! Deighton 1072! **Lib.:** Gbanga (Sept.) Linder 780! **S. Nig.:** Lagos Rowland! Agege (Nov.) Kitson! **Br. Cam.:** Buea Reder 395 (partly). Bangwe Conrau 280.

Also in **French Cameroons**, **Ubangi-Shari** and **Belgian Congo**.

21. **Ficus winkleri** *Mildbr. & Burret* — F.T.A. 6, 2: 152.

APD: Synonym of Ficus tessellata Warb.

A tree with glabrous branchlets.

Br. Cam.: forest near the Botanic Garden, Victoria (Apr.) Winkler 1204! On 1922 lava flow, Bibundi (June) Rosevear Cam. 75/37!

22. Ficus praticola Mildbr. & Hutch. — F.T.A. 6, 2: 145; Aubrév. Fl. For. C. Iv. 1: 64, t. 14 D.

APD: Synonym of Ficus conraui Warb.

An epiphytic shrub with rather sharply angular branchlets, glabrous.

Iv. C.: Abidjan Aubrév. 1634. **S. Nig.:** R. Osse, Iguoriakhi, Benin (Feb.) E. W. Jones in Hb. Brenan. 9131! **F. Po:** Moka grassland, 4,000–6,000 ft. Mildbr. 7106!

23. Ficus tessellata Warb. — F.T.A. 6, 2: 146; Chev. Bot. 600; Aubrév. l.c. 1: 66, t. 16 A. *APD acc*

Ficus winkleri Mildbr. & Burret (1911), partly (Chev. 12989) — Chev. Bot. 600.

A bushy tree with puberulous branchlets sharply angular when dry.

Fr. G.: Ditinn (Apr.) Chev. 12989! **S. L.:** Mowoleke bridge, Kamabai to Kabala road (Mar.) Deighton 5467! Buyabuya, Scarcies (Feb.) Sc. Elliot 4565! Sugar Loaf Mt. (Dec.) Sc. Elliot 4030! **Iv. C.:** Anoumaba to Sahoua Chev. 22456. **Togo:** Bismarckburg, in avenue (Aug.) Büttner 711.

24. Ficus preussii Warb. — F.T.A. 6, 2: 152; Lebrun & Boutique in Fl. Congo Beige 1: 162. *APD acc*

An epiphytic shrub or tree; branchlets sulcate when dry, covered with greyish glabrous bark; **in forest.**

Br. Cam.: Barombi, by Elephant Lake Preuss 454! Johann-Albrechtshöhe (Mar.) Staudt 894!

Also in **French Cameroons**, **Belgian Congo** and (?) **Spanish Guinea**.

25. Ficus anomani Hutch. — F.T.A. 6, 2: 157; Aubrév. l.c. 1: 66, t. 14 E.

APD: Synonym of Ficus craterostoma Warb. ex Mildbr. & Burret

An epiphytic shrub, or straggling tree to 30 ft. high; stems glossy chocolate-brown, leaves dark green; ripe figs orange; **in forest.**"

S. L.: Kukuna, Scarcies (Jan.) Sc. Elliot 4693! Njala (May) Deighton 4787! Sumbuya (Nov.) Deighton 2258! **Lib.:** Dukwia R., (Nov.) Cooper 144! Bolahun (Feb.) Bequaert 59! Jaurazon (Mar.) Also in **French Cameroons**, **French Congo** and **Belgian Congo**.

30a. **Ficus eriobotryoides** var. **caillei** A. Chev. ex Mildbr. & Burret — F.T.A. 6, 2: 161, partly; F.W.T.A., ed. 1, 1: 433 (as var. *baillei* by error), partly (Chev. 12989).

APD: Synonym of Ficus saussureana DC.

Ficus afzelii var. **caillei** (A. Chev. ex Mildbr. & Burret) M. F. Barrett l.c. 189 (1948).

Ficus eriobotryoides var. **monbuttensis** (Warb.) Lebrun (1934) — Fl. Congo Beige 1: 167.

Similar to the preceding, but leaves loosely tomentose beneath.

Fr. G.: bed of R. Ditinn Chev. 12989!

Also in **Belgian Congo**.

31. **Ficus chlamydocarpa** *Mildbr. & Burret* in Engl. Bot. Jahrb. 46: 244, fig. 5 (1911); F.T.A. 6, 2: 163. *APD acc*

Ficus clarencensis *Mildbr. & Hutch.* (1915) — F.T.A. 6, 2: 162; Mildbr. Wiss. Ergebn. 1910–11, 181 t. 86; G. Taylor in Exell Cat. S. Tomé 306 (? excl. syn. *F. eriotryoides* var. *latifolia* Hutch.).

A large tree, to 100 ft. high with very wide crown and huge aerial roots; **in montane forest**.

Br. Cam.: Cam. Mt., 4,000–7,000 ft. (Feb.) Maitland 843! 1337! Mildbr. 10802! **F. Po:** north side of St. Isabel Peak, 3,600–4,600 ft. Mildbr. 6408!

Also in **French Cameroons, Principe, S. Tomé** and **Annobon**.

[G. Taylor in Exell Cat. S. Tomé 307 includes *F. eriotryoides* var. *latifolia* Hutch, in *F. clarencensis* Mildbr. & Hutch. There is a single leaf and a single receptacle of Mildbr. 6517, one of the syntypes, at Kew; although the leaf could well be this species, the receptacle appears to me much more like those of *F. eriotryoides*.]

32. **Ficus ovata** *Vahl* — F.T.A. 6, 2: 164; Chev. Bot. 602; Aubrév. Fl. For. C. Iv. 1: 68, t. 17 B; Lebrun & Boutique in Fl. Congo Belge 1: 160. *APD acc*

Ficus baoulensis *A. Chev.* Bot. 604, name only.

A tree to 40 ft. high, with large crown, often epiphytic at first; figs green with white spots, each pair covered when young by a brown calyptra; **in fringing forest in the savannah regions, and often planted**.

Sen.: M'bidjem to Dakar Chev. **Port. G.:** Bissalanca, Bissau Esp. Santo 1644! 1651! **Fr. G.:** Sareya Chev. 454. Los Isl. Pobéguin 1234. Kindia Pobéguin 1269. Conakry Maclaud. **S. Widespread in tropical Africa.

48. **Ficus basarensis** *Warb. ex Mildbr. & Burret* — F.T.A. 6, 2: 181; Chev. Bot. 603.

APD: *Synonym of Ficus thonningii Blume*

An epiphyte or tree up to 45 ft., with rather slender pubescent branchlets.

Sen.: Marsasoum, Casamance Chev. **Togo:** Basari, growing on an old baobab (June, Nov.) Kersting A. 21; 221; 533! **Dah.:** Poisson!

Also in **Ubangi-Shari**.

[Probably only a variety of *F. thonningii* Blume.]

49. **Ficus natalensis** *Hochst.* — F.T.A. 6, 2: 208; M. F. Barrett l.c. 204; Aubrév. Fl. For. Soud.-Guin. 347. *APD acc*

A shrub or tree up to 40 ft. high, sometimes epiphytic at first; figs becoming reddish.

G. C.: Cape Coast Brass! Kwahu (Mar.) Johnson 639! Prampram (May) Irvine 1432! Aburi (Sept.) Johnson 178! **N. Nig.:** Katabu, Kaduna (May, Oct.) Keay FHI 21116! 229131 **S. Nig.:** Agulu Thomas 350! **F. Po:** on the beach Mann 252!

Also in **French Cameroons**, extending to East and Central Africa, **Angola** and S. Africa.

50. **Ficus dekdekena** (Miq.) A. Rich. — F.T.A. 6, 2: 211; Aubrév. Fl. For. C. Iv. 1: 76, t. 17 C; M. F. Barrett l.c. 207; Aubrév. Fl. For. Soud.-Guin. 341, 347.

APD: Synonym of Ficus thonningii Blume

Urostigma dekdekena Miq. (1847).

A tree or epiphyte, with nearly glabrous branchlets; figs pale in colour, generally in pairs, and numerous on the young shoots.

Iv. C.: fide Aubrév. l.c. **G. C.:** Evans 4! Pong (Mar.) Kitson 617! **N. Nig.:** Zaria (Oct.) Keay FHI 21423! Maigana, Zaria (Dec.) Lamb 62! Musgu (May) E. Vogel 54!

Widespread in tropical Africa.

51. **Ficus iteophylla** Miq. — F.T.A. 6, 2: 203; Chev. Bot. 605; Aubrév. Fl. For. Soud.-Guin. 347, t. 72, 1.

APD: Synonym of Ficus thonningii Blume

Ficus spragueana Mildbr. & Burret (1911) — F.T.A. 6, 2: 202; F.W.T.A., ed. 1, 1: 434.

(?) **F. sassandrensis** A. Chev. Bot. 606, name only.

A tree up to 40 ft. high with a girth of 15 ft. and smooth pale bark, often epiphytic at first; figs crowded on the branchlets.

Sen.: Cayor (June) Leprieur! Fadiout Ezanno 56. **Gam.:** Georgetown, MacCarthy Isl. (Jan.) Dalz. 8434! **Fr. Sud.:** Bandiagara Ganay. **Fr. G.:** Diaguissa to Boulivel Chev. 12922. **N. Nig.:** Sokoto (Dec.) Dalz. 398! Katagum (Dec.) Dalz. 216! Geidam (Dec.) Elliott 133!

Extends through Ubangi-Shari and Chad to A.–E. **Sudan**.

[Perhaps only a variety of *F. dekdekena* (Miq.) Miq., the earlier name.]

52. **Ficus** sp. nr. **cyathistipuloides** De Wild. in Fedde Rep. 12: 194 (1913); Aubrév. Fl. For. C. Iv. 1: 74, t. 20 B. *APD acc*

A large epiphyte, in rain forest.

Iv. C.: Banco (Oct.) Aubrév. 1646! Port Bouët Aubrév. 1645!

[This appears to differ from *F. cyathistipuloides* De Wild., still known only from the type specimen collected in the Belgian Congo, by its large stipules (3–3.5 cm. long) and rather more numerous lateral nerves. In the original description the stipules are said to be short. More material from the Belgian Congo is needed to decide whether or not Aubréville's plant is conspecific.]

53. **Ficus umbellata** Vahl — F.T.A. 6, 2: 124; Chev. Bot. 598; Aubrév. l.c. 1: 76, t. 21 B; Fl. For. Soud.-Guin. 344; Lebrun & Boutique l.c. 134. *APD acc*

A tree 20–40 ft. high, with stout glabrous branchlets; leaves with prominent bifurcating lateral nerves; figs green with pale spots, borne in clusters on the branches away from the leaves.

Sen.: Niokolo-Koba Berhaut 119. **Port. G.:** Bissalanca, Bissau (Jan.) Esp. Santo 1645! **Fr. G.:** LOSIsl. Pobéguin 1229. Conakry Dybowski 7. **S. L.:** Tower Hill, Freetown (May) Deighton 2902! Extends to A.–E. **Sudan**, E. Africa and **Angola**.

55. *Ficus kimuenzensis* Warb. — F.T.A. 6, 2; 138; Lebrun & Boutique l.c. 1: 132.

APD: Synonym of Ficus tremula subsp. kimuenzensis (Warb.) C.C. Berg

Ficus rudens Hutch. (1915) — F.T.A. 6, 2: 136.

A scandent epiphyte; receptacles greenish-yellow, tinged purple, with many prominent small pale spots.

S. Nig.: Calabar (Mar., Apr.) Brenan 9256! 9595!

Also in **Belgian Congo** and **Angola**.

56. *Ficus dryepondtiana* Gentil — F.T.A. 6, 2: 127; Lebrun & Boutique l.c. 134. An epiphytic shrub or tree. *APD acc*

Br. Cam.: on 1922 lava flow, Bibundi (June) Rosevear Cam. 64/37!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

[The description of the leaves given in the key is based only on specimens collected in Africa; specimens cultivated in hot-houses at Brussels and Kew have larger leaves distinctly cordate at the base.]

57. *Ficus macrosperma* Warb. ex Mildbr. & Burret in Engl. Bot. Jahrb. 46: 223 (1911); F.T.A. 6, 2: 130; Aubrév. Fl. For. C. Iv. 1: 78 (as *F. sp. aff. macrosperma*), t. 22 B.

APD: Synonym of Ficus sansibarica subsp. macrosperma (Mildbr. & Burret) C.C. Berg

Ficus buntingii Hutch. (1915) — F.T.A. 6, 2: 128; F.W.T.A., ed. 1, 1: 435.

Ficus mangenotii A. Chev. in Rev. Bot. Appliq. 29: 246, t. 11 (1949).

Epiphytic at first, becoming a forest tree up to 130 ft. high; figs borne on short stout slow-growing branchlets borne on the older branches and bole, mottled pink.

S. L.: Lane-Poole 428! Kangahun, Kaiyamba (Nov.) Deighton 6149! **Lib.:** Mano R., Gola Forest (Apr.) Bunting! Ganta (May) Harley 1177! **Iv. C.:** Banco Aubrév. 1587! 1907! Tabou Aubrév. 1743! Cotonou Chev. 4453. **S. Nig.:** Ebute Metta (Sept.) Dalz. 1342! Ibadan (Sept.) Onochie FHI 20963! Near Ajebandele (Mar.)

Jones & Onochie FHI 17208! **Br. Cam.:** Johann-Albrechtshöhe Staudt 896! **F. Po:** Mann 431! T. Vogel 176!

Also in **French Camerouns** and **Belgian Congo**, (See Appendix p. 281.)

Ficus pumila Linn.

A native of China and Japan, which is commonly grown as an ornamental creeper on houses.

Ficus carica Linn.

The edible fig.

Ficus bubu Warb. F.T.A. 6, 2: 166; F.W.T.A., ed. 1, 1: 434

Is recorded as an avenue tree at Bismarckburg, Togo, it is indigenous in Spanish Guinea and Belgian Congo.

1. **Ficus spirocaulis** Mildbr. Wiss. Ergebn. 1910-11: 181 (1922), name only.

Fragments of the two specimens cited by Mildbraed are at Kew, both are named *F. urceolaris* Welw. ex Hiern and are cited as such in F.T.A. 6, 2: 110 and F.W.T.A., ed. 1, 1: 432; one of them (Mildbr. 7010) is cited a second time under this species by Mildbraed (l.c.). More material is required.

F. Po: Bokoko Mildbr. 6900! Musola Mildbr. 7010!

Imperfectly known species.

2. **Ficus warburgii** Winkl. in Engl. Bot. Jahrb. 41: 276 (1908).

Br. Cam.: Victoria to Bota (Sept.) Winkler 449!

This species is included in F.T.A. 6, 2: 109 under *F. pendula* Welw. ex Hiern (1900), not of Link. (1822); the type number (Winkler 449) is, however, cited a second time in F.T.A. 6, 2: 110 under *F. urceolaris* Welw. ex Hiern. The specimen is too poor for accurate determination. More material is required. Imperfectly known species.

3. **Ficus** (subgen. **Sycomorus**) sp.

Possibly new; more material required. Tree with habit of an alder, straggling over rocks in stream bed; leaves similar to those of *F. vallis-choudae*, receptacles similar to those of *F. mucoso*.

S. Nig.: R. Ata, below Mt. Koloishe, Obudu Div. 4,000 ft. (Dec.) Keay & Savory FHI 25061!

Imperfectly known species.

4. **Ficus** (? subgen. **Sycomorus**) sp.

It is a tall forest tree with low but very widely spreading plank-buttresses; the figs are borne in long lax panicles on these buttresses.

Photograph No. B. 73, taken by R. Ross in the Shasha (now Omo) F.R., S. Nigeria, shows a species which does not seem to be represented by any herbarium specimen that I have seen. Imperfectly known species.

5. **Ficus** (subgen. **Bibracteatae**) sp.

Near to *F. camptoneura* and *F. cyathistipula*; more material required.

Lib.: Jaurazon (Mar.) Baldwin 11479! Mecca, Boporo (Nov.) Baldwin 10404!

Imperfectly known species.

1. **Ficus mangiferoides** *Hutch.* — F.T.A. 6, 2: 205.

A sterile specimen from our area (Kalbreyer 80 from Bonny, S. Nigeria) has been named this by Hutchinson; it is perhaps *F. barteri* Sprague; better material is needed. Doubtfully recorded species.

2. **Ficus pendula** *Welw. ex Hiern* in Cat. Welw. 1: 1008 (1900), not of Link. (1822); F.T.A. 6, 2: 108.

Recorded from our area in the first edition on account of Winkler 449, the type number of *F. warburgii* Winkl., see above. Doubtfully recorded species.

3. **Ficus urceolaris** *Welw. ex Hiern* — F.T.A. 6, 2: 109.

APD: *Synonym of Ficus asperifolia* *Miq.*

Recorded from our area in the first edition on account of Winkler 449 and Mildbr. 6900 & 7010; see above notes under *F. warburgii*, *P. pendula* and *F. spirocaulis*.

Doubtfully recorded species.

7. BOSQUEIA

APD: *Synonym of Trilepisium Thouars*

Thouars ex Baill. — F.T.A. 6, 2: 217. *Pontya* A. Chev. (1912).

- 1 Branchlets glabrous; leaves elliptic or obovate-elliptic, shortly cuneate at base, obtusely acuminate, 5–16 cm. long, 2.5–7.5 cm. broad, entire, shining above, pale beneath, glabrous; lateral nerves about 7 pairs; petiole 1 cm. long; receptacles axillary, pedunculate; bract at base of peduncle cupular, enclosing head of flowers when young, at length bursting on one side; peduncle 5 mm. long; female calyx short and tubular, acutely 5-cleft at the apex; style stout, bifurcate; fruit 2 cm. long; obliquely ellipsoid, striate, glabrous[angolensis](#)

Bosqueia angolensis *Ficalho* — F.T.A. 6, 2: 218; Aubrév. Fl. For. C. Iv. 1: 50, t. 11; Hauman in Fl. Congo Belge 1: 95.

APD: *Synonym of Trilepisium madagascariense* *DC.*

Bosqueia welwitschii *Engl.* Monogr. Afr. Morac. 36; Bot. Jahrb. 51: 439, fig. 5, A–E.

Pontya excelsa A. Chev. (1912).

Bosqueia phoberos of Aubrév. Fl. For. Soud.-Guin. 331, not of Baill.

A forest tree, up to 100 ft. high, with narrow buttresses and smooth pale bark, exuding a white latex which rapidly changes to orange and finally red; branchlets with circular leaf-scars.

Fr. G.: Lola to Nzo (fr. Mar.) Chev. 20990! Kissi Circle (Feb.) Chev. 20765. **Iv. C.:** Aubrév. 984! Findimanou (Dec.) Chev. 22480! Zaranou (young fr. Mar.) Chev. 16278! Bangouanou Chev. 22463! **G. C.:** Adeambra (fr. May) Vigne FH 858! Saraha, Wassaw F.R. (Feb.) Vigne FH 209! 985! Mampong Scarp (fr. Mar.) Vigne FH 10581 **Dah.:** Djougou (fr. June) Chev. 23885! Catterall 54! **Br. Cam.:** Victoria (fl. & fr. Jan.) Maitland 186! Tiko (Jan.) Dunlap 247! Likomba Mildbr. 10592!

Also in **Gabon**, **Belgian Congo**, **Cabinda**, **Angola** and **Annobon**.

8. SCYPHOSYCE

Baill. — F.T.A. 6, 2: 220.

- 1 Branchlets shortly hispid; leaves obovate or oblanceolate, not pandurate, gradually narrowed to the

asymmetrically auriculate base, obtusely caudate-acuminate, denticulate or dentate-undulate or subentire towards the apex, margin not thickened, 6–16 cm. long, 2.3–6 cm. broad; receptacles axillary, on peduncles about 1 cm. long, campanulate-obconic; fruit ovoid, glabrous, about 4 mm. long, exserted from the receptacle [1. manniana](#)

Branchlets glabrous, or nearly so; leaves pandurate, broadly ovate in the upper half, abruptly narrowed to the symmetrical subauriculate base, gradually and obtusely pointed at apex, margin strongly thickened, 10–12 cm. long, 4–5 cm. broad; receptacles axillary, on peduncles about 1 cm. long, ellipsoid-obconic [2. pandurata](#)

1. *Scyphosyce manniana* Baill. — F.T.A. 6, 2: 220; Brenan in Kew Bull. 1952: 449. *APD acc*

Scyphosyce zenkeri (Engl.) Engl. Monogr. Afr. Morac. 31, t. 10 (1898).

A woody plant of herbaceous habit, to 1 ft. high; [in rain forest](#).

S. Nig.: Okomu F.R., Benin Richards & Brenan 8865!

Also in [French Cameroons](#) and [Gabon](#).

2. *Scyphosyce pandurata* Hutch. in F.T.A. 6, 2: 221 (1917); Kew Bull. 1919: 263.

A woody undershrub of herbaceous habit; branchlets grooved with transversely peeling bark; [in rain forest](#).

S. Nig.: Oban Talbot 687! 1315! 2317.

[The fruit on a sheet of Talbot 1315 appears to be developing within the receptacle, that is below the remains of the male flowers; further material with ripe fruit is needed to elucidate the generic position of this plant.).

***Scyphosyce* sp.**

Possibly new; more material required.

S. Nig.: Oban Talbot 680!

Imperfectly known species.

9. ANTIARIS

Lesch. — P.T.A. 6, 2: 223. *APD acc*

- 1** Venation of mature leaves very prominently reticulate beneath; leaves scabrid on both surfaces; branchlets rusty-tomentose; mature crown leaves broadly oblong-obovate or oblong, unequally cordate, subcordate or rounded at base, obtuse or rounded or sometimes subacute at apex, 5.5–16 cm. long, 3.5–11 cm. broad, shortly scabrid-pubescent beneath; flowers dioecious or monoecious; male flowers on flattened receptacles, 1–1.5 cm. diam., axillary on peduncles 0.7–1.7 cm. long; female flowers solitary; fruits drupaceous, ellipsoid, 1–1.5 cm. long, tomentellous [1. africana](#)

Venation of mature leaves obscure and lax beneath; leaves not scabrid, shining above; branchlets pubescent or puberulous; mature crown leaves broadly oblong-obovate or oblong or suborbicular, unequally cordate or rounded at base, rounded or obtuse at apex, 5–14 cm. long, 3–9 cm. broad, soon glabrous or nearly so beneath; flowers and fruits similar to the above [2. welwitschii](#)

1. *Antiaris africana* Engl. — F.T.A. 6, 2: 223; Engl. Pflanzenw. Afr. 3, 1: 33, fig. 20 B; Chev. Bot. 606; Aubrév. Fl. For. C. Iv. 40–41, t. 6, 1; Hauman in Fl. Congo Beige 1: 94.

APD: *Synonym of Antiaris toxicaria* var. *africana* Scott-Elliot ex A. Chev.

Antiaris kerstingii Engl. l.c. fig. 20 A (1915); Chev. Bot. 606, partly.

Antiaris toxicaria var. *africana* Sc. Elliot — Chev. Bot. 606.

A large deciduous tree, to 130 ft. high; with grey bark, slash exuding a watery latex which soon darkens to the colour of milky tea; ripe fruits red or orange; [in the drier types of forest](#).

Sen.: Kaolak Kaichinger. Sedhiou Chev. **Gam.:** Dave 82! **Fr. Sud.:** Sansanding Chev. 2551. **Port. G.:** Bissau (young fr. Feb.) Esp. Santo 1741! **Fr. G.:** Farana (Jan.) Chev. 20457! **S. 7331! **Dah.:** Quidat Poisson. Atacora Mts. Chev. 24101. **N. Nig.:** Zaria Shaw 102! Agate (fl. & young fr. Dec.) Yates 19! 19a! Yola (Mar.) Dalz. 177! **S. Nig.:** Dodd 399! Ibadan F.R. (Feb.) Punch 111!

Also in **Ubangi-Shari**, **A.-E. Sudan**, **Uganda** and (?) **Belgian Congo**.

2. **Antiaris welwitschii** Engl. — F.T.A. 6, 2: 224; Engl. l.c. fig. 20 D; Aubrév. l.c. t. 6, 2–7; Hauman l.c. 93, photo 6.

APD: Synonym of Antiaris toxicaria var. welwitschii

A large tree, to 130 ft. high, similar to the above but readily distinguished by the smooth mature leaves; in the wetter parts of the forest regions.

S. L.: Colonial Reserve, Freetown (Jan.) King-Church 1/1922! **Iv. C.:** Banco, Abidjan Aubrév. 48! 205! **G. C.:** Owabi (Dec.) Lyon FH 2650! Bobiri (fr. Mar.) Andoh FH 4974! Dunkwa Vigne FH 922! **S. Nig.:** Degema (young fr. Jan.) Cons. of For. OC 44! Sapoba Ainslie 2! Keay FHI 24679! Mamu River F.R. Keay! Calabar Smith 26! **Br. Cam.:** Likomba Mildbr. 10556!

Also in **Uganda**, **Tanganyika**, **Belgian Congo** and **Angola**.

Some botanists have referred all African specimens of this genus to the Asiatic species *A. toxicaria* (Rumph. ex Pers.) Lesch. There appear, however, to be at least two easily recognizable taxa in West Africa, and, pending a thorough revision of the whole genus, it seems best to continue treating these as species. The foliage of seedlings, saplings and sucker shoots is rather different from that of the crown. Specimens of such foliage cannot at present be determined with any confidence; the only record of the genus from Fernando Po (Barter 1674) is one such specimen.

10. TRECULIA

Decne. — F.T.A. 6, 2: 225.

Acanthotreculia Engl. (1908).

- 1 Floral bracts with a flat peltate apical appendage; flower-heads globose; infructescences not prickly:2
 Floral bracts of the male ovoid or subclavate at apex, of the female lanceolate; flower-heads ellipsoid or obovoid; infructescences prickly on account of the numerous elongate floral bracts, 3–5.5 (–8) cm. long, 3.5–4 cm. or more broad (including the prickles); leaves oblong-elliptic to obovate, asymmetrical at base with one side more or less cuneate and the other rounded or obtuse, abruptly caudate-acuminate, 10–24 cm. long, 4.5–9 cm. broad, main lateral nerves 7–15 on each side of midrib, looped and prominent beneath, glabrous; branchlets soon glabrous; a tree, to 25 m. high [3. obovoidea](#)
- 2 Male flower-heads 4–7 cm. diam. at anthesis; anthers 2–3 mm. long; infructescences globose, very large, often 17–35 cm. diam. and weighing up to 12 kilograms; seeds very numerous, ellipsoid, about 1 cm. long; leaves elliptic or ovate-elliptic, asymmetrical at base with one side cuneate to subcordate and the other obtuse to broadly auriculate, more or less acuminate, 8–45 cm. long, 3–20 cm. broad, main lateral nerves 9–15 on each side of midrib; forest trees, up to 35 m. high:3
 Male flower-heads about 6 mm. diam. at anthesis, borne on short axillary bracteate peduncles; anthers about 1 mm. long; infructescences not known; leaves oblong-elliptic to obovate, cuneate to rounded at base, caudate-acuminate, 7–20 cm. long, 2.5–8 cm. broad, main lateral nerves 6–12 on each side of midrib, looped and prominent beneath, glabrous; branchlets puberulous; a slender shrub, 2–3 m. high [2. zenkeri](#)
- 3 Branchlets, petioles and undersurface of leaves soon glabrous [1. africana var. africana](#)
 Branchlets, petioles and undersurface of leaves softly and shortly pilose [1a. africana var. mollis](#)

1. **Treculia africana** Decne. **var. africana** — F.T.A. 6, 2: 226; Engl. Monogr. Afr. Morac. 32, tt. 12, 13, 14 B; Chev. Bot. 607; Aubrév. Fl. For. C. Iv. 1: 42, t. 7; Hauman in Fl. Congo Belge 1: 90. *APD acc*

A forest tree, to 120 ft. high, with fluted bole up to 9 ft. in girth, bark smooth, slash exuding abundant latex; the large green infructescences are often abundant on the trunk and larger branches; Aubréville states that some cultivated trees produce infructescences up to 50 cm. diam. and weighing up to 15 kilograms.

11. MYRIANTHUS

P. Beauv. — F.T.A. 6, 2: 230.

- 1 Leaves digitately 5–7-foliate, rarely some very deeply digitately lobed:2
 Leaves simple, not lobed or shortly 3-lobed; female flowers up to about 15 in each of the paired pedunculate heads, ovoid, pointed at the top; infructescences rather irregularly lobulate, up to 3.5 cm. diam., consisting of 5–15 fruits united below and rounded or pointed above; leaves coriaceous, coarsely serrate:3
- 2 Terminal leaflet with 25–34 lateral nerves on each side of midrib, up to 50 cm. long and 22 cm. broad; female flowers numerous, obovoid, thickened and flattened at the top, densely aggregated into paired subglobose pedunculate heads; infructescence subglobose, up to 10 cm. diam.; male flowers more or less completely covering the short ultimate branchlets of the panicles; leaflets subcoriaceous, usually shortly petiolulate, or sessile, or shortly joined at the base, obovate, closely and coarsely serrate with numerous teeth, closely and prominently reticulate and cottony-tomentellous beneath*1. arboreus*
 Terminal leaflet with 10–22 lateral nerves on each side of midrib, up to 25 cm. long and 8 cm. broad; female flowers up to about 24 in each of the paired pedunculate heads, ovoid, pointed at the top; infructescences up to 6 cm. diam., consisting of 4–14 fruits united below and beaked with the narrow mouth of the persistent perianth; male flowers in oblong or roundish clusters sometimes more or less confluent on the short ultimate branchlets of the panicles; leaflets thin, distinctly petiolulate with petiolules up to 3 cm. long, oblong-obovate or oblong-elliptic, margin varying from subentire to undulate-dentate or serrate, rather laxly reticulate and cottony-tomentellous beneath*2. preussii*
- 3 Branchlets and petioles puberulous when young, glabrescent; male flowers more or less completely covering the short ultimate branchlets of the panicles; leaves apparently never lobed, obovate-elliptic to ovate-elliptic, rarely suborbicular, rounded to cuneate at base, acute or rounded at apex, 16–36 cm. long, 8–15 cm. broad; 8–11 main

lateral nerves on each side of midrib; petioles up to 7 cm. long; peduncle of infructescence up to 1.2 cm. long [3. serratus](#)

Branchlets and petioles densely pubescent when young and remaining distinctly pubescent; male flowers in oblong or roundish clusters; leaves often (2–) 3-lobed, strongly 3-nerved at base, unlobed leaves more or less elliptic, cuneate at base, acutely acuminate, 8–35 cm. long, 4–14 cm. broad, lobed leaves up to 37 cm. long and 34 cm. broad; 10–20 main lateral nerves on each side of midrib; petioles 1–21 cm. long; peduncle of infructescence up to 3.6 cm. long [4. libericus](#)

1. **Myrianthus arboreus** *P. Beauv.* — F.T.A. 6, 2: 231; Engl. Monogr. Afr. Morac. 37, t. 16; Aubrév. Fl. For. C. Iv. 1: 46, t. 8; Hauman in Fl. Congo Belge 1: 83. *APD acc*

Myrianthus talbotii *Rendle* (1916), partly.

A tree to 65 ft. high, with spreading branches from a short stem, male flowers yellow; fruits yellow when ripe; [in forest regrowth and damp places in forest.](#)

URTICACEAE

Herbs, undershrubs, or rarely soft-wooded trees, rarely climbing, often armed with stinging hairs; epidermal cells mostly with prominent cystoliths; stems often fibrous. Leaves alternate or opposite, simple; stipules present or absent. Flowers very small, unisexual, usually cymose, sometimes crowded on a common enlarged receptacle. Male flowers with a 4–5-lobed calyx, lobes imbricate or valvate. Petals absent. Stamens as many as and opposite the calyx-lobes; filaments inflexed in bud; anthers 2-celled. Rudimentary ovary usually present. Female calyx like that of the male, often enlarged in fruit. Staminodes scale-like or absent. Ovary free or adnate to the calyx, 1-celled; style simple; ovule solitary, erect. Fruit a dry achene or fleshy drupe. Seed mostly with endosperm and a straight embryo.

A cosmopolitan family, often troublesome weeds.

Stems often fibrous; many have conspicuous rod-like or dotted cystoliths in the leaves and frequently stinging hairs; flowers minute, apetalous.

- 1** Leaves alternate: **2**
 Leaves opposite, sometimes somewhat unequal-sized in each pair: **9**
2 Stipules present, mtrapetolar: **3**
 Stipules absent; plants with dot-like cystoliths; without stinging hairs [11. Parietaria](#)
3 Cystoliths linear: **4**
 Cystoliths dot-like: **8**
4 Plants usually with stinging hairs (but see *Fleurya aestuans*); leaves distinctly petiolate, usually more or less equal-sided: **5**
 Plants without stinging hairs; leaves sessile, subsessile, or shortly petiolate, often oblique and very unequal-sided at base, not lobed: **7**
5 Female calyx 4-lobed, becoming fleshy in fruit; leaves not lobed [1. Urera](#)
 Female calyx not becoming fleshy in fruit: **6**
6 Leaves lobed usually to below the middle; female calyx 2-lobed, lobes very unequal, the larger one spathe-like [2.](#)

Girardinia

- Leaves not lobed; female calyx 4-lobed [3. *Fleurya*](#)
- 7 Flowers surrounded by an involucre of bracts [5. *Elatostema*](#)
- Flowers on a globose or subglobose receptacle, without an involucre of bracts [6. *Procris*](#)
- 8 Plants with stinging hairs; leaves coarsely toothed [4. *Laportea*](#)
- Plants without stinging hairs; leaves entire [9. *Pouzolzia*](#)
- 9 Cystoliths linear; stipules connate into one: 10
- Cystoliths dot-like; stipules free or connate only at base: 11
- 10 Flowers in paniculate clusters or heads [7. *Pilea*](#)
- Flowers sessile on a disk-like receptacle [8. *Lecanthus*](#)
- 11 Flowers in clusters spaced along a usually long rhachis [10. *Boehmeria*](#)
- Flowers in involucre in short axillary clusters [12. *Droguetia*](#)

1. URERA

Gaud. — F.T.A. 6. 2: 253.

- 1 Stems slender, creeping, rooting between or near the nodes, glabrous, not armed with prickly-like protuberances; leaves thinly membranous (at least when dry), ovate or suborbicular, mostly deeply cordate at base, acuminate at apex, margin undulate to repand-dentate, up to about 13 cm. long and 10 cm. broad; petioles up to 16 cm. long, smooth; inflorescences lax, with scattered stinging hairs [1. *repens*](#)
- Stems not slender and creeping: 2
- 2 Leaves distinctly toothed: 3
- Leaves entire or only minutely serrulate: 9
- 3 Young stems and petioles armed with prickly-like protuberances: 4
- Young stems and petioles not armed with prickly-like protuberances: 7
- 4 Leaves ovate, suborbicular or broadly elliptic, with short sparse indumentum beneath: 5
- Leaves obovate, narrowed from above the middle, abruptly acuminate, not scabrid above, sparsely puberulous beneath; prickly-like protuberances rather small: 6
- 5 Leaves cordate or widely emarginate at base, suborbicular or ovate, not scabrid above, up to 18 cm. long and 15 cm. broad; petioles up to 10 cm. long [2. *cordifolia*](#)
- Leaves rounded at base, broadly elliptic to suborbicular, more or less scabrid above, up to 24 cm. long and 16 cm. broad; petioles up to 13 cm. long [3. *rigida*](#)
- 6 Leaves 8–11 cm. long, 3.5–6 cm. broad, margin crenate; petioles slender [4. *obovata*](#)
- Leaves 18–20 cm. long, 10–12 cm. broad, margin denticulate; petioles stout [5. *cuneata*](#)
- 7 Leaves ovate, cordate or widely emarginate at base, not scabrid on the upper surface: 8
- Leaves more or less obovate, narrowed from above the middle to the rounded or obtuse base, shortly acuminate, scabrid on the upper surface rather densely and shortly pubescent beneath, margin rather coarsely and sharply dentate, 7–14 cm. long; petioles up to 5 cm. long [8. *robusta*](#)
- 8 Undersurface of leaves rather densely setose-pubescent on midrib, nerves and veins; leaves 10–29 cm. long, 6–18 cm. broad; petioles up to 13 cm. long [6. *mannii*](#)
- Undersurface of leaves sparsely pubescent; leaves 9–15 cm. long, 6–9.5 cm. broad; petioles up to 5.5 cm. long [7. *gravenreuthii*](#)
- 9 Lateral nerves 4–5 on each side of the midrib: 10
- Lateral nerves 2–3 on each side of the midrib, the basal pair ascending beyond the middle of the lamina; leaves elliptic to elliptic-lanceolate, obtuse to rounded or subcordate at base, long acuminate, 6–18 cm long, 3–8.5 cm. broad, subcoriaceous; petioles up to 6 cm. long [12. *cameroonensis*](#)
- 10 Leaves cordate or widely emarginate at base, ovate-elliptic or broadly elliptic: 11
- Leaves rounded or obtuse at base, oblong-elliptic, rather obliquely acuminate, minutely serrulate, 6.5–14 cm. long, 3–7 cm. broad, membranous; petioles up to 10 cm. long; stems with few prickly-like protuberances .. [11. *oblongifolia*](#)
- 11 Young stems not armed with prickly-like protuberances; male panicles up to 7.5 cm. long; leaves 10–14 cm. long, 6–8 cm. broad; petioles up to 7.5 cm. long [9. *batesii*](#)
- Young stems profusely armed with prickly-like protuberances; male panicles large and lax, about 20 cm. long

and 27 cm. broad; leaves 10–15 cm. long, 5–10 cm. broad; petioles up to 6 cm. long [10. talbotii](#)

1. *Urera repens* (Wedd.) Rendle in F.T.A 6, 2: 264 (1917.) *APD acc*

APD: Synonym of Urera keayi Letouzey

Laportea? repens Wedd. (1869).

A low glabrous creeping herb with thinly woody stem; leaves sometimes red-veined; flowers pale greenish pink; in forest vegetation.

Lib.: Yratoke, Webo (July) Baldwin 6255! **G. C.:** Mampong Scarp (Nov.) Irvine 1858! Cape Coast road, 28 miles from Accra (Oct.) Morton GC 7811! **S. Nig.:** Owo F.R. (July) Jones FHI 4369! Onochie FHI 33244! Nikrowa, Okomu F.R.. Brenan 9101! Richards 3318! **F. Po.:** Barter! Mann 1424!

[The specimens from Liberia and the Gold Coast may represent a taxon distinct from the type; a better range of material is, however, needed from each locality to show the degree to which leaf shape may vary.]

Urera obovata of F.W.T.A., ed. 1, 1: 440, partly.

A forest liane.

IV. C.: Man (May) Chev. 21539! Goureni Chev. 21641. **G. C.:** Owabi (May) Andoh FH 4205! Manso, Akim (fr. Dec.) Irvine 2096! Oboman, Kwahu Plateau (fl. & fr. May) Kitson 1186! Benso (fl. & fr. Aug.) Andoh FH 5398!

9. *Urera batesii* Rendle — F.T.A. 6, 2: 259. *APD acc*

A trailing or climbing forest liane.

F. Po.: 1,300 ft. Mann 305!

Also in French Cameroons and (?) Belgian Congo.

10. *Urera talbotii* Rendle — F.T.A. 6, 2: 259. *APD acc*

A forest liane; ripe fruits scarlet.

S. Nig.: Oban Talbot 618! 1502!

11. *Urera oblongifolia* Benth. — F.T.A. 6, 2: 255. *APD acc*

Urera sarmentosa A. Chev. (1917) — F.T.A. 6, 2: 358; Chev. Bot. 610.

A glabrous forest liane, climbing by adventitious roots on the slender almost unarmed reddish stems; fruits succulent, orange-red.

Port. G.: Granja, Catió (June) Esp. Santo 2089! 2090! **S. L.:** Barter T. Vogel 73! 74! 114! Freetown (May) Deighton 2986! 2987! Njala (May–July) Deighton 710! 740! 1757! Makump (fr. 12. *Urera cameroonensis* Wedd. — F.T.A. 6, 1: 261. *U. thonneri* of F.T.A. 6, 2: 256, partly (spec. Mann ex F.Po).

A forest liane with glabrous halt-succulent stems having adventitious roots.

G. C.: Owabi (Dec.) Lyon FH 2882! **S. Nig.:** Shasha F.R. (May) Richards 3435! Sapoba Kennedy 1545! Oban Talbot 1501! Eket Talbot **Br. Cam.:** Cam Mt., 5,000 ft. (Dec.) Mann 2173! Victoria (Mar.) Maitland 520! Buea (Dec., Jan.) Maitland 312! Ndife, Kumba (Apr.) Olorunfemi FHI 30523! **F. Po.:** (Jan.) Mann 240! s.n.!

Also extending from French Cameroons to Uganda, Tanganyika and Angola, and on S. Tomé.

Urera liberica Engl. ex Mildbr. in Fedde Rep. 41: 247 (1937), name only.

Lib.: Dinklage 2569.

Imperfectly known species

2. GIRARDINIA

Gaud. — F.T.A. 6, 2: 265.

- 1 Stems and petioles bristly with reflexed setose hairs; leaves alternate, usually pinnately or subdigitately lobed to below the middle, up to 20 cm. long and broad, spreadingly pilose beneath and setose on the nerves, lobes very coarsely serrate, acuminate; stipules connate, about 2 cm. long, soon falling off; male inflorescence axillary,

often branched, small, branches spike-like; calyx sparingly setose; female inflorescence short, dense, densely setose all over; fruits warted[condensata](#)

Girardinia condensata (*Hochst. ex Steud.*) Wedd. in Ann. Sci. Nat. sér. 4, 1: 181 (1854); F.T.A. 6, 2: 266.

APD: Synonym of Girardinia diversifolia (Link) Friis

Urtica condensata Hochst. ex Steud. (1850).

Girardinia heterophylla subsp. adoeneis (*Hochst. ex Steud.*) Cuf. (1953).

Urera cannabina A. Chev. Bot. 609, name only.

Fleurya cannabina A. Chev., ms. name only.

An erect half-succulent stemmed herb, 1 1/2–6 ft. high, with stiff stinging hairs on stem, leaves and inflorescence.

Fr. G.: Fouta Djallon: Dalaba to Diaguissa (Sept.) Chev. 18569! Diaguissa to Boulivel (Sept.) Chev. 18598. **iv. C.:** Gouékouma, Toura country (May) Chev. 21654 **S. Nig.:** Thompson 514! **Br. Cam.:** Bamenda: Lakom (May) Maitland 1774! Bambui (Dec.) Adams GC 11227!

Widespread in tropical Africa.

3. FLEURYA

Gaud. — F.T.A. 6, 2: 245.

- 1 Male inflorescence spike-like or catkin-like, unbranched, the flowers in dense clusters, peduncles long, axillary on leafy shoots or arising directly from the underground stem; female inflorescence much smaller than the male, loosely few-flowered; leaves ovate, more or less rounded at base, up to about 10 cm. long and 8 cm. broad, coarsely dentate, with short linear cystoliths on the lower surface; fruits compressed, ovate, about 3–5 mm. long, slightly rugose, sometimes subterranean[1. ovalifolia](#)

Male and female flowers in panicles; fruits about 1 mm. long, never subterranean:**2**

- 2 Plant pilose, at least on the young parts; leaves coarsely serrate with numerous teeth, very broadly ovate, rounded or subcordate at base, up to about 15 cm. long and broad; inflorescences broadly paniculate[2. aestuans](#)

Plant puberulous or glabrous, except for the large, jointed, violently stinging hairs; leaves grossly toothed with rather few teeth and a long acumen, more or less deltoid in outline, but closely cordate at the point of attachment of the petiole, up to about 15 cm. long and 12 cm. broad; inflorescences narrow, subsecund[3. mooreana](#)

1. **Fleurya ovalifolia** (*Schum. & Thonn.*) Dandy in F.W. Andr. Fl. Pl. A.-E. Sud. 2: 277 (1952); Kew Bull. 1953: 103.

APD: Synonym of Laportea ovalifolia (Schumach. & Thonn.) Chew

Haynea ovalifolia Schum. & Thonn. (1827).

Fleurya podocarpa Wedd. (1869) — F.T.A. 6, 2: 251 (incl. var. mannii Wedd.); Chev. Bot. 609; Hauman in Fl. Congo Belge 1: 191, t. 20 (incl. var. & subsp.).

Urera spicata A. Chev. Bot. 610, name only.

A creeping herb, sometimes half-shrubby, with nettle-like leaves, usually beset with stinging hairs; male inflorescence greenish-white on long naked peduncles, often directly from the underground stem.

Widespread in the tropics.

3. *Fleurya mooreana* (Hiern) Rendle in F.T.A. 6, 2: 250 (1917).

APD: Synonym of Laportea mooreana (Hiern) Chew

Adicea mooreana Hiern (1900).

Fleurya urophylla Mildbr. (1923) — Hauman l.c. 189.

An annual herb with violently stinging hairs.

N. Nig.: Bauchi Plateau (Sept.) Lely P. 739!

Also in **Belgian Congo**, **Uganda**, **Tanganyika** and **Angola**.

4. LAPORTEA

Gaud. — F.T.A. 6, 2: 252.

- 1 Stems covered with sharp reflexed stinging bristles; leaves ovate-elliptic, acuminate, rounded at the base, 10–15 cm. long, 5–7 cm. broad, setose and pubescent on the nerves beneath and with dot-like cystoliths on the surface, coarsely dentate-serrate; petiole 1/3 as long as the blade, setose; male inflorescences axillary, about as long as the petiole, female much longer than the leaves and subsecund; calyx glabrous; fruits flat, obliquely ovate, with a thick margin and slightly rugose surface [alatipes](#)

Laportea alatipes Hook. f. — F.T.A. 6, 2: 252; Hauman in Fl. Congo Belge 1: 194. *APD acc*

Fleurya alatipes (Hook. f.) N.E. Br. (1925).

F. urticoides Engl. (1902) — F.T.A. 6, 2: 247; F.W.T.A., ed. 1, 1: 441.

Girardinia marginata Engl. (1902).

A robust perennial herb, to 3 ft. high; in montane forest.

Br. Cam.: Cam. Mt., 4,000–7,600 ft. (fl. Nov.–Feb., Apr.–June, fr. Nov., Feb.) Mann 1973! Maitland 989! Preuss 916! Lakom, Bamenda, 6,000 ft. (May, June) Maitland 1368! 1740a! Banga, Bamenda (fr. Aug.) Ujor FHI 29958!

Also on mountains in **Belgian Congo**, **Uganda**, **Kenya**, **Tanganyika**, S. Rhodesia, Nyasaland and Natal.

5. ELATOSTEMA

J. R. & G. Forst. — F.T.A. 6, 2: 277.

- 1 Male inflorescence on a slender peduncle 1.5–2.5 cm. long; leaves obliquely oblanceolate, cuneate on both sides at base, acuminate at apex, 4–10 cm. long, 2–3 cm. broad, coarsely crenate-serrate, with about 8–10 teeth on each margin, with conspicuous cystoliths on each side; stipules lanceolate, tailed-acuminate; bracts broadly ovate, acute, about 3 mm. long [l. mannii](#)
- Male inflorescence sessile or nearly so; leaves cuneate at base only on the distal side: 2

- 2 Leaves long-acuminate, 6–24 cm. long, 2–8.5 cm. broad; herbs with erect fleshy stems up to 60 cm. high:**3**
 Leaves not acuminate, 1.5–3.5 cm. long, 0.8–2 cm. broad, obliquely obovate, rounded on the proximal side at base, laxly and coarsely dentate, with about 5–10 teeth on each margin; bracts rather small, shortly acuminate; a weak herb with trailing stems**4. *monticola***
- 3 Leaves closely serrate, with about 20 or more teeth on each margin, the teeth extending on to the acumen, obtuse or rounded on the proximal side at base, obliquely elongate-elliptic, 6–24 cm. long, 2–8.5 cm. broad, with very numerous and conspicuous cystoliths on upper surface; leaves drying bright green; male inflorescence flat and subtriangular or lobed, pubescent**2. *welwitschii***
 Leaves laxly and coarsely dentate, with about 12–16 teeth on each margin, the teeth not or scarcely extending on to the acumen, broadly auriculate on the proximal side at base, obliquely obovate, 6–15 cm. long, 2–5.5 cm. broad, with very conspicuous cystoliths on upper surface; leaves drying dark green; bracts broadly ovate, acuminate**3. *paivaeaeum***

1. ***Elatostema mannii* Wedd.** — F.T.A. 6, 2: 282; Engl. Pflanzenw. Afr. 3, 1: 60. **APD acc**

A herb with stems erect from a decumbent base, half-succulent, 6–12 in. high; leaves crowded on the upper part of the stem.

S. Nig.: Kwa Falls, Calabar (Mar.) Richards in Hb. Brenan 9235! **Br. Cam.:** Johann-Albrechtshöhe Staudt 647! Mombo to Ebonji, Kumba (May) Olorunfemi FHI 30582! **F. Po:** Mann 1431!

Also in **French Cameroons**.

2. ***Elatostema welwitschii* Engl.** — F.T.A. 6, 2: 278 (incl. var. *cameroonense* Rendle); Engl. l.c. fig. 37, A–B; Hauman in Fl. Congo Belge 1: 206. **APD acc**

A perennial herb with an erect fleshy stem, to 2 ft. high, from a creeping rooting rhizome; **in montane forest**.

S. Nig.: Mt. Koloishe, 4,000 ft. (Dec.) Keay & Savory FHI 25054! **Br. Cam.:** Mimbria, 3,800 ft. (Mar.) Brenan 9344! Johann-Albrechtshöhe Staudt 839! **F. Po:** Clarence Peak, 4,000 ft. (Dec.) Boughey 116! Mann 632! Musola (Jan.) Guinea 1058!

Also in **French Cameroons, Belgian Congo, Uganda, Tanganyika, Nyasaland, Angola** and on **S. Tomé**.

3. ***Elatostema paivaeaeum* Wedd.** — F.T.A. 6, 2: 279; Engl. l.c. (incl. var. *conrauanum* Engl.); Hauman l.c. 207. **APD acc**

A perennial herb with an erect fleshy stem, to 2 ft. high; **in forest**.

Fr. G.: R. Kakrima, Tchibofi (Dec.) Pobéguin 2054! Ditiinn (Sept.) Chev. 18525! Dalaba-Diaguissa Plateau (Oct.) Chev. 18744! **Lib.:** Karmadhun, Kolahun (Nov.) Baldwin 10169! Bali-Ngemba F.R., Bamenda (May) Ujor FHI 30328! **F. Po:** Clarence Peak, 4,000 ft. (Dec.) Mann 290! 631!

Also in **French Cameroons**.

4. ***Elatostema monticola* Hook. f.** — F.T.A. 6, 2: 281; Engl. l.c.; Hauman l.c. **APD acc**

A weak herb with trailing stems; **in montane forest**.

Br. Cam.: Cam. Mt., 6,000–7,000 ft. (Dec.–Apr.) Adams GC 11737! Brenan 9576! Mann 2014! Preuss 607! Bafut-Ngemba F.R., Bamenda (Jan.) Tiku FHI 22240! **F. Po:** El Pico, 6,600 ft. (Dec.) Boughey 127!

[Some at least of the material named *E. orientale* Engl. from E. Africa and the Belgian Congo is probably conspecific with *E. monticola* Hook. f.]

6. PROCRIS

Comm. — F.T.A. 6, 2: 283.

- 1 Epiphytic or on rocks; stems erect, the lower parts underground and bearing flower-heads; leaves alternate, sessile, obliquely oblanceolate, broadly acuminate, gradually narrowed to the base, up to 15 cm. long and 3

cm. broad, very remotely serrate, without obvious cystoliths; flower-heads numerous and scattered on the stem from the base upwards, very shortly pedunculate; fruits fusiform, 1·25 mm. long[crenata](#)

Procris crenata *C. B. Robinson* in Philipp. Journ. Sci. 5, C: 507 (1911); G. Taylor in Exell Cat. S. Tomé 312 (q.v. for full synonymy). *APD acc*

Procris wightiana *Wall. ex Wedd.* (1856), illegitimate name, partly; F.T.A. 6, 2: 283; Schröter in Fedde Rep. 45: 191 & 257; Hauman in Fl. Congo Belge 1: 208.

Procris laevigata of F.W.T.A., ed. 1, 1: 442, not of Blume.

An epiphyte with glabrous succulent stems up to 18 in. high and 1/2–1 in. thick in the lower part.

Br. Cam.: Buea (Sept.) Preuss 963. **F. Po:** 1,000–2,000 ft. (Nov.) Mann 566! El Pico (Dec.) Boughey 169!

Also on **Principe**, **S. Tomé**, **Annobon** and widespread in tropical Africa, as well as in the Mascarene Islands and tropical Asia.

7. PILEA

Lindl. — F.T.A. 6, 1: 267.

1 Leaves toothed, 0·7–7 cm. long, 0·5–5·8 cm. broad:[2](#)

Leaves entire, 1–8 (–10) mm. long, 1–5 (–6) mm. broad, obovate, elliptic or suborbicular, with numerous transversely arranged cystoliths on the upper surface, often strongly anisophyllous; flowers in very small axillary clusters[5. microphylla](#)

2 Flowers in axillary, small, pedunculate, lax cymes, or stalked or sessile clusters; stipules very small and early caducous; leaves with numerous cystoliths on both surfaces:[3](#)

Flowers forming a whorl-like sessile cluster at the nodes or in a terminal dense cyme; stipules broadly oblong, membranous, brownish, up to 1 cm. long, more or less persistent; leaves broadly ovate, rather coarsely dentate, 1–7 cm. long, 1–5·8 cm. broad, with scattered cystoliths on both surfaces; petioles up to 6 cm. long[3. ceratomera](#)

Flowers a flat terminal sessile corymb involucre by the 4 uppermost leaves; stipules suborbicular, membranous, about 2 mm. long; leaves broadly ovate, crenate-serrate, 2–4 cm. long, 1·5–3 cm. broad, laxly clothed with cystoliths; petioles up to 2 cm. long[4. tetraphylla](#)

3 Leaf-margin crenate-serrate, secondary lateral nerves running close to the margin and finishing in the mucro of each tooth; lamina ovate, 1–8 cm. long, 0·5–3·5 cm. broad, 3-nerved at base; petiole up to 3 cm. long[1. sublucens](#)

Leaf-margin coarsely serrate, secondary lateral nerves running up the middle of each tooth; lamina more or less ovate in outline, 0·7–4 cm. long, 0·5–3·2 cm. broad, 3-nerved at base; petiole up to 4 cm. long ..[2. angolensis](#)

1. **Pilea sublucens** *Wedd.* — F.T.A. 6, 2: 273; F.W.T.A., ed. 1, 1: 443, partly. P. chevalieri Schnell in Rev. Gén. Bot. 57; 280, fig. 2 (1950). *APD acc*

A glabrous herb with slender stems, erect, 6–18 in. high from a creeping base; leaves of each opposite pair more or less unequal in size or in length of petiole; **in montane forest**.

Fr. G.: Kimba Mts. (Apr.) Chev. 21117. Schnell 952; 4387! **Br. Cam.:** Buea, 3,500–4,450 ft. (Aug., Nov., Dec.) Adams GC 11296! Preuss 573! 953! Rosevear 102/37! **F. Po:** Clarence Peak, 6,000 ft. (Dec.) Mann 630! Boughey 130!

2. **Pilea angolensis** (*Hiern*) *Rendle* in F.T.A. 6, 2: 271 (1917); Hauman in Fl. Congo Belge 1: 200. *APD acc*

APD: *Synonym of Pilea sublucens Wedd.*

Adicea tetraphylla var. **angolensis** *Hiern* (1900).

Pilea sublucens of F.W.T.A., ed. 1, 1: 443, partly (spec. ex Fr.G. & S.L.), not of Wedd.

Urera begonioides *A. Chev.* Bot. 609, name only.

A delicate annual herb with transparent stem, **growing on wet rocks in shady places**.

Fr. G.: Haut Konkouré (Nov.) Pobéguin! Dalaba-Diaguissa Plateau (Sept.–Oct.) Chev. 18815! **S. L.:** Bikongo Falls, Suva R. (July–Aug.) Dawe 535! Bumbuna (Oct.) Thomas 3430! Yakala (Sept.) Thomas 2366! Makeni Hill (Aug.) Jordan 498! **Lib.:** Vahun, Kolahun (Nov.) Baldwin 10214! **G. C.:** Begoro Falls (Jan.) Morton 8369b! **N. Nig.:** Bauchi Plateau (Sept.)

Lely P. 781! Jos (Aug.) Keay FHI 20179! **Br. Cam.:** Metschum Falls, Bamenda (Jan., Aug.) Keay & Russell FHI 28525! Savory UCI 300!

Also in **Uganda**, **Belgian Congo** and **Angola**.

3. ***Pilea ceratomer*** Wedd. — F.T.A. 6, 2: 269; Hauman l.c. 203.

APD: *Synonym of Pilea rivularis Wedd.*

Pilea stipulata Hutch. & Dalz., F.W.T.A., ed. 1, 1: 443 (1928); Kew Bull. 1929: 19.

Stems lax, creeping and rooting, with erect smooth branches to 2 ft. high; terrestrial or epiphytic; **in montane forest**.

S. Nig.: Ikwette Plateau, Obudu, 5,200 ft. (Dec.) Keay & Savory FHI 25187! **Br. Cam.:** Buea Preuss 957! Cam. Mt., 7,000–8,000 ft. (Dec.) Johnston 66! Mann 2011! Above L. Oku, Bamenda, 7,500 ft. (Jan.) Keay FHI 28506! **F. Po:** Clarence Peak, 4,000–7,000 ft. (Dec.) Boughey 182! 184! Mann 626!

Also on the mountains of **Belgian Congo**, A.-E. **Sudan**, E. Africa, S. Tomé and the **Mascarene Islands**.

4. ***Pilea tetraphylla*** (Steud.) Blume — F.T.A. 6, 2: 270 (incl. var. major Rendle); Hauman l.c. 199. *APD acc*

Urtica tetraphylla Steud. (1860).

A herb, erect, slender, simple or branched, up to 16 in. high, sometimes from a creeping base, glabrous; **in montane vegetation**.

Br. Cam.: Cam. Mt., 7,000 ft. (Dec.) Mann 2012! Preuss 1001! **F. Po:** 6,000 ft. (Dec.) Boughey 10736! s.n.! Monod 10400!

Also in **A.-E. Sudan**, **Abyssinia**, **Eritrea**, **E. Africa**, **Belgian Congo** and **Madagascar**.

5. ***Pilea microphylla*** (Linn.) Liebm. in Vidensk. Selsk. Skr. 5, 2: 302 (1851). *APD acc*

Parietaria microphylla Linn. (1759).

A stout, large-leaved form is cultivated as the “Artillery Plant”; a slender, small-leaved form **occurs on walls and as a garden weed**.

Port. G.: Catió (July) Esp. Santo 2139! **S. L.:** Freetown (Oct.) Deighton 2052! Port Loko (Oct.) Jordan 363! Njala (May) Deighton 5057! **Lib.:** Monrovia (Nov.) Linder 1574! **N. Nig.:** Sokoto (Nov.) Moiser 27! **S. Nig.:** & **Br. Cam.:** fide Keay. **F. Po:** St. Isabel Boughey!

A native of tropical America, now widespread in the tropics.

8. LECANTHUS

Wedd. — F.T.A. 6, 2: 276.

- 1 Small herb with a densely rooting creeping underground stem; leaves ovate-lanceolate, cuneate at base, broadly acute, 2–3.5 cm. long, 0.8–1.5 cm. broad, coarsely dentate, with numerous linear cystoliths prominent on the upper surface; petiole 0.5 cm. long; inflorescence orbicular, up to 1 cm. diam.; peduncle slender, 2–2.5 cm. long *peduncularis*

Lecanthus peduncularis (Boyle) Wedd. — F.T.A. 6, 2: 276. *APD acc*

Procris peduncularis Royle (1836).

A weak herb, simple or branched, half-succulent, glabrous 1–10 in. high.

Br. Cam.: Cam. Mt., 6,000–7,000 ft. (Dec., Jan.) Adams GC 11766! Dunlap 237! Preuss 1034! **F. Po:** Clarence Peak, 6,000–7,600 ft. (Mar., Dec.) Boughey GC 131! Mann 1461!

Also in **Abyssinia** and widespread in the eastern tropics.

9. POUZOLZIA

Gaud. — F.T.A. 6, 2: 286.

- 1 Stems erect, leafy; leaves ovate-elliptic, rather broadly acuminate, cuneate at base, 5–10 cm. long, 1.5–4.5 cm. broad, entire, sometimes thinly woolly beneath, at length with conspicuous dotted cystoliths above; petiole slender, up to 2 cm. long; flowers clustered, sessile or subsessile, pubescent; fruits subtended by a bract
..... [guineensis](#)

Pouzolzia guineensis *Benth.* — F.T.A. 6, 2: 287; Chev. Bot. 611; Hauman in Fl. Congo Belge 1: 214.
APD acc

APD: Synonym of Pouzolzia denudata De Wild. & T. Durand

An erect or spreading herb, to 4 ft. high, slightly long-pubescent, more or less woody below; **in open places, mainly in the forest regions.**

Sen.: Berhaut 1174. **Fr. G.:** Rio Nunez Heudelot. **S. L.:** Kambia (Dec.) Sc. Elliot 4354! Kanya (Oct.) Thomas 2941! Njala (Sept.) Deighton 2106! Rogberi, Binle (Oct.) Extending to **Belgian Congo** and **Angola** and on **S. Tomé**.

10. BOEHMERIA

Jacq. — F.T.A. 6, 2: 284.

- 1 Leaves opposite, variable in shape, from very broadly ovate to elliptic-lanceolate, margin coarsely triangular-dentate or serrate, up to 20 cm. long and 18 cm. broad, with inconspicuous dot-like cystoliths; inflorescences axillary, spike-like, or slightly branched, up to 30 cm. long, with the flowers in separated clusters along the rachis [platyphylla](#)

Boehmeria platyphylla *D. Don* — F.T.A. 6, 2: 285; Hauman in Fl. Congo Belge 1: 210.

APD: Synonym of Boehmeria macrophylla Hornem.

A shrub 3–15 ft. or more high, with soft-wooded branches. The specimens from our area seem to fall into three groups: — (A) specimens from S.L. with densely and shortly pubescent young shoots and petioles, and usually broadly ovate leaves; (B) specimens from Cam. Mt. and F.Po, with rather sparingly and more or less appressed-puberulous young shoots and petioles, and usually slender stems, petioles and leaves; of these specimens, Mann 209 is cited by Weddell as var. *macrostachya* Wedd.; (C) specimens from Nig. and Br. Cam. (excluding Cam. Mt.), with densely spreadingly hirsute young shoots and petioles, and usually narrow leaves; this is var. *nigeriana* Wedd. (type Barter 114). The infraspecific variants require thorough and extensive revision throughout the vast range of the species.

Lakom, Bamenda (May) Maitland 1362! Ndop, Bamenda (fr. Dec.) Adams GC 11061! Cam. Mt., 3,700–5,500 ft. (Dec.–June) Dundas FHI 20380! Hutch. & Metcalfe 72! Maitland 41! 647! 1096! **F. Po.:** Mann 209!

The species is widespread in tropical Africa and Asia and has many varieties.

Boehmeria nivea (*Linn.*) *Gaud.*

It has alternate leaves, densely white tomentellous beneath.

A native species of eastern Asia, it is occasionally cultivated in our area.

11. PARIETARIA

Linn. — F.T.A. 6, 2: 296.

- 1 Tall slender herb up to 3 m. high; stems angular, soon becoming glabrous; leaves alternate or subopposite (or rarely quite opposite), ovate, long- and acutely acuminate, rounded or subcordate at base, 3–8 cm. long, 1.5–4 cm. broad, glabrous but with prominent dot-like cystoliths on both surfaces; petioles 1/3–1/2 as long as the blade; flowers in very small axillary clustered cymes; fruit ovate, apiculate [1. laxiflora](#)

Weak more or less decumbent herb with very thin stems; leaves broadly ovate, at most obtusely pointed, rounded at base, 1–2 cm. long and broad, very thin and flaccid, covered with conspicuous dot-like cystoliths; flowers few in sessile axillary clusters or subsolitary; fruit not apiculate [2. debilis](#)

1. **Parietaria laxiflora** Engl. — F.T.A. 6, 2: 298; Hauman in Fl. Congo Belge 1: 209. *APD acc*

A herb, often scandent and half-woody, with slender leafy branchlets; [in montane forest](#).

Br. Cam.: Cam. Mt., 4,200–7,800 ft. (Dec.–Mar., June) Brenan 9509! Mann 1230! 2013! Maitland 841! 990! **F. Po:** Clarence Peak, 8,000 ft. (Dec.) Mann 613!

Also on mountains in [Belgian Congo](#) and [Uganda](#).

2. **Parietaria debilis** Forst. f. — F.T.A. 6, 2: 298. *APD acc*

APD: *Synonym of Parietaria ruwenzoriensis Cortesi subsp. ruwenzoriensis*

APD: *Synonym of Parietaria laxiflora* Engl.

APD: *Synonym of Parietaria ruwenzoriensis subsp. keniensis Gebauer*

A slender more or less branched herb from a few inches to 1 ft. high.

Br. Cam.: Cam. Mt. (Jan.) Mann! Cam. Mt., in cave in grassland, 12,000 ft. (June) Morton GC 6902!

Widely spread in temperate regions and in tropical highlands.

12. DROGUETIA

Gaud. — F.T.A. 6, 2: 303.

- 1 A perennial herb or undershrub, stems trailing and ascending, pubescent when young; leaves opposite, ovate, acuminate, 3–5 (–8) cm. long, 1.8–2.5 (–4.5) cm. broad, 3-nerved, margins crenate-dentate, sparsely pubescent and with dot-like cystoliths above, pubescent on the nerves beneath; petioles 1–2 (–3) cm. long; stipules ovate-lanceolate, 3–4 mm. long; flowers in axillary, androgynous, bowl-shaped or campanulate involucre, or female involucre ventricose-tubular [iners](#)

Droguetia iners (Forsk.) Schweinf. — F.T.A. 6, 2: 303; Hauman in Fl. Congo Belge 1: 217. *APD acc*

Urtica iners Forsk. (1775).

To 5 ft. high; [in montane forest](#).

Br. Cam.: Cam. Mt., 3,000–6,000 ft. (Dec.–Feb.) Adams GC 11728! Maitland 219! 824! 1525! Morton GC 7110! Bambui, Bamenda 6,300 ft. (Dec.) Adams GC 11218!

Also in [Belgian Congo](#), [Uganda](#), [Abyssinia](#), [Kenya](#), [Tanganyika](#) and [Nyasaland](#); and in [Arabia](#), [India](#) and [Java](#).

CANNABINACEAE

Erect or scandent herbs. Leaves alternate or opposite, simple, undivided or more or less palmately lobed; stipules present. Flowers dioecious, axillary, male paniculate, female sessile, crowded or strobilate, with large persistent bracts. Male flower: calyx 5-partite, segments imbricate; petals absent; stamens 5, erect in bud; anthers 2-celled. Female flower: calyx closely enveloping the ovary, entire; ovary sessile, 1-celled; style 2-partite. Ovule solitary, pendulous. Fruit an achene, covered by the persistent calyx. Seed with fleshy endosperm and curved or spiral embryo.

CANNABIS

Linn. — F.T.A. 6, 2: 16.

Stem erect; leaves alternate or opposite, palmately divided; achene covered by the persistent calyx; embryo curved.

- 1 A leafy annual herb; stems minutely puberulous and glandular; leaves gland-dotted, alternate, or the lower opposite, palmately divided mostly to the base into 5 or more linear-lanceolate toothed acuminate segments; stipules subulate; male flowers greenish in lax axillary and terminal clusters; styles long and filiform; fruit about 5 mm. long, finely reticulate [sativa](#)

***Cannabis sativa* Linn.** — F.T.A. 6, 2: 16; Holl. 4: 614; Chev. Bot. 590. *APD acc*

The Common, European or Indian Hemp.

A native of Asia widely cultivated but rarely in the area of this flora.

AQUIFOLIACEAE

Trees or shrubs, mostly evergreen. Leaves alternate, simple; stipules absent, or rarely present. Flowers actinomorphic, hermaphrodite or unisexual, fasciculate or subumbellate or rarely solitary. Calyx-lobes imbricate. Petals 4 or 5, free or connate at the base, hypogynous, imbricate. Stamens hypogynous, 4 or 5, alternate with the petals, rarely more numerous, free; anthers 2-celled, opening lengthwise. Disk absent. Ovary superior, 3- or more-celled; style terminal or absent; ovules 1–2 in each cell, pendulous from the apex. Fruit drupaceous, of 3 or more 1-seeded pyrenes; seed with copious fleshy endosperm and small straight embryo.

Generally distributed throughout the world, but rare in Africa and in Australia.

ILEX

Linn. — F.T.A. 1: 359.

Petals usually connate at base; stamens as many as petals; inflorescence axillary; ovary 4–6-celled.

- 1 Tree up to 13 m. high; branches glabrous; leaves oblong, apiculate, obtuse to subacute at the base, up to 10 cm. long and 4 cm. broad, entire or remotely denticulate, glabrous, with numerous spreading looped lateral nerves; petiole 1 cm. long; flowers subfasciculate on short axillary peduncles; pedicels up to 1 cm. long; sepals minutely ciliate; petals shortly connate; stigma thick and sessile; fruit subglobose, 5 mm. diam., girt by the persistent sepals [mitis](#)

***Ilex mitis* (Linn.) Radlk.** in Rep. Brit. Ass. 1885: 1081 (1886); Engl. Bot. Jahrb. 17: 540. *APD acc*

***Sideroxylon mite* Linn.** (1767).

***Ilex capensis* Sond. & Harv.** (1860) — F.T.A. 1: 359.

A tree, to 40 ft. high, with dark green foliage; flowers cream or white; ripe fruits red; [in montane forest, especially by streams.](#)

Fr. G.: Nimba Mts., 4,500 ft. (fl. & young fr. Apr.) Adam 116! **S. L.:** Loma Mts., 5,000 ft. (Jan.) Jaeger 4162! **Br. Cam.:** Cam. Mt., 4,000–7,500 ft. (Jan.–Feb.) Keay FHI 28644! Mann 1186! Maitland 1660! **F. Po:** L. Riaba, Moka (Jan.) Guinea 2209! Tessmann 2889.

Also on mountains in French Cameroons and from Eritrea, [Uganda](#) and [Belgian Congo](#), southwards to S. Africa.

CELASTRACEAE

Small trees, shrubs or woody climbers without tendrils, sometimes spiny. Leaves simple, alternate or opposite. Stipules inconspicuous or absent. Flowers bisexual or unisexual. Sepals 4–5, usually free.

Petals 4–5, free. Stamens 3–5, alternate with petals. Carpels 3–5 united, free from or half-embedded in the disk. Ovules 2–12 in each carpel. Fruit a loculicidal capsule, an indehiscent fleshy or hard drupe, a berry, a 3-lobed capsule or a capsule with 3 nearly separate mericarps. Seed sometimes arillate, sometimes winged, sometimes neither.

A cosmopolitan family represented in Africa by endemic as well as by widespread and very variable species.

Often divided into two families, Celastraceae and Hippocrateaceae, but the genus *Campylostemon* with 4–5 stamens and a Hippocratea-like fruit connects the two into one family.

- 1 Erect shrubs (if climbing then leaves alternate), leaves opposite or alternate; stamens 4–5, anthers with longitudinal dehiscence: [2](#)
- Spineless usually climbing shrubs or small trees, with opposite (or subopposite) leaves (if some leaves alternate then only 3 stamens); stamens 3 or (in *Campylostemon* only) 4–5, anthers with transverse or longitudinal dehiscence: [3](#)
- 2 Fruit a capsule; aril present and conspicuous; shrub or tree, often with stem-spines [1. Maytenus](#)
- Fruit a drupe; aril absent or minute; shrub, not spiny [2. Cassine](#)
- 3 Inflorescence a fascicle, cyme or subumbellate cyme, on a leafy shoot: [4](#)
- Inflorescence of alternate fascicles on leafless side-shoots about 1 m. long; stamens 3; climbing shrubs, glabrous in all parts; no resinous threads on breaking leaf [6. Salacighia](#)
- 4 Fruit a 3-lobed capsule, the 3 dehiscent mericarps free almost to base; seeds with a basal membranous wing; inflorescence a pedunculate cyme: [5](#)
- Fruit a globose or oblong berry; seeds not winged; stamens 3; inflorescence a fascicle or a pedunculate cyme [5. Salacia](#)
- 5 Stamens 4–5, bent inwards; resinous threads on breaking leaf [3. Campylostemon](#)
- Stamens 3, bent outwards; no resinous threads on breaking leaf (except *H. mucronata*) [4. Hippocratea](#)

H. kennedyi Hoyle (1932).

Campylostemon kennedyi (Hoyle) Hoyle & Brenan (1947).

C. mitophorum Loes (1937).

Hippocratea oliveriana of F.W.T.A., ed. 1, 1: 449, partly (Warnecke 157 & 302).

Stems reddish brown; flowers fragrant; petals white turning yellow; **in forest vegetation.**

S. L.: Smeathmann! **Lib.:** Mt. Bobei, Sanokwele (fr. Sept.) Baldwin 9611! **Iv. C.:** Mt. Kouan, 1,300 ft., Dyolas country (Apr.) Chev. 21242! **G. C.:** Kumasi (July) Vigne FH 4859! Odumase, Krobo (June) Irvine 1645! Bana Hill, Krobo (Apr.) Irvine 2894! Anyaboni (Jan.) A. S. Thomas D. 115! **Togo:** Lome Warnecke 157! 302! **S. Nig.:** Ibadan South F.R. (Apr.) Keay FHI 22820! Owena, Akure F.R. (Oct.) Ujor FHI 23915! Sapoba Kennedy 858! **Br. Cam.:** Moliwe Winkler 1467. **F. Po:** St. Isabel (Aug.) Schultze in Hb. Mildbr. 6478.

Also in **French Cameroons, Belgian Congo, Uganda, Tanganyika** and **Angola**

Only one specimen of the genus has been seen in fruit. Loesener l.c. (1937) recognizes a number of species mainly on leaf characters; as the leaves are very variable in other species of Celastraceae and as the fruit is so poorly known. It seems best to include all the African material in one species for the present, although further study may modify this view.

4. HIPPOCRATEA

Linn. Sp. Pl. 1: 363 (1753); F.T.A. 1: 366; Loes in Engl. Bot. Jahrb. 34: 103 (1904); in E. & P. Pflanzenfam. 20B: 206 (1942).

- 1 Flowers small, up to 2 (–2·5) mm. long: **2**
Flowers 3 mm. or more long: **10**
- 2 Petals, sepals and uppermost inflorescence-branches pubescent to tomentose: **3**
Petals, sepals and uppermost inflorescence-branches glabrous or glabrescent or minutely papillose: **5**
- 3 Young twigs glabrescent or glabrous; indumentum elsewhere tomentose: **4**
Young twigs shortly pubescent-tomentose; indumentum elsewhere pubescent-tomentose; petals 2 mm. long .. **3**.
[guineensis](#)
- 4 Leaves coriaceous or membranous, rounded or sometimes shortly acuminate at apex; petals 1·5–2 mm. long .. **1**.
[myriantha](#)
Leaves membranous, acuminate; petals 2·5 mm. long **2. vignei**
- 5 The petals not clawed: **6**
The petals clawed **7. preussii**
- 6 Resinous threads absent from leaves: **7**
Resinous threads present in leaves; see also below **13. mucronata**
- 7 Petals about 1 mm. long, more or less oblong; leaves up to 12·5 cm. long, reticulations not prominent; brownish or grey when dry: **8**
Petals at least 1·5 mm long, ovate; leaves often larger, reticulations prominent: **9**
- 8 Petals flat, rounded at apex; stigma sessile, above the anthers; mericarps obovate-oblong, up to 2·8 cm. long and 1·3 cm. broad **4. pallens**
Petals involute (rarely flat), so that apex appears acute; style present, stigma below or more or less on level with anthers; mericarps generally oblong, up to 5·2 cm. long, 0·7–1·4 cm. broad **5. indica**
- 9 Leaves greenish or blackish when dry; flowers 4–6 mm. diam.; disk produced into a stipe (androgynophore) in “female” flower, stipe inconspicuous or absent in “male” flower; mericarps oblong-ovate, 1·2–2·2 cm. broad **12. welwitschii**
Leaves greenish yellow, rarely brownish, when dry; flowers 2–4 mm. diam.; no stipe; mericarps ovate-oblong or obovate-oblong, 2·4–3·8 cm. broad **6. paniculata**

- 10 Flower buds shortly conic or ellipsoid and pointed: 11
 Flower-buds globose and rounded or pointed, or ellipsoid and rounded: 14
- 11 Petals triangular; disk simple (not produced into a stipe): 12
 Petals linear-triangular; disk double, lower and outer part cup-shaped, upper and inner part forming a stipe (androgynophore): 13
- 12 Outside of petals very minutely puberulous; calyx and inflorescence-branches shortly pubescent or glabrescent, greyish when dry; twigs and leaves glabrous or glabrescent; petals 3–5 mm. long; mericarps ovate-oblong or obovate-oblong, 4.4–7.5 cm. long, 1.6–4.4 cm. broad [8. africana](#)
 Outside of petals, calyx and inflorescence-branches long and densely tomentose-pubescent, red-brown when dry; petals up to 4 mm. long; mericarps ovate-oblong, about 6 cm. long and 3 cm. broad, tomentose-pubescent .. [9. iotricha](#)
- 13 Petals minutely tomentellous outside, very acute, 6–9 mm. long; mericarps oblong-ovate, 7.8–10 cm. long, 2.4–4.2 cm. broad [10. clematoides](#)
 Petals minutely tuberculate-scabrid outside, acute, 4–6 mm. long [11. rowlandii](#)
- 14 Petals not fimbriate; twigs and lower surface of leaves glabrous: 15
 Petals fimbriate, clawed, 4–5 mm. long; flower-buds globose, rounded or apiculate; outer surface of sepals and petals, inflorescence-branches, twigs and lower surface of leaves red-brown tomentose-pubescent; mericarps subterete [15. velutina](#)
- 15 Upper part of inflorescence tomentose [2. vignei](#)
 Upper part of inflorescence glabrous: 16
- 16 Flowers less than 1 cm. diam.: 17
 Flowers at least 1 cm. diam.; petals shortly clawed, membranous, entire; leaves 6–23 cm. long, reticulate; mericarps flattened, broadly obovate, 7–9.1 cm. long, 6.5–7 cm. broad; seeds bulky, wing shorter than seed; flower-buds globose, rounded; glabrous in all parts [14. macrophylla](#)
- 17 Resinous threads absent from leaves; plant often greenish or blackish when dry; flower-buds globose; petals membranous; disk produced into a stipe (androgynophore) in “female” flower, stipe inconspicuous or absent in “male” flower [12. welwitschii](#)
 Resinous threads present in leaves; plant brownish when dry; flower-buds depressed-globose; petals thick and fleshy; no stipe [13. mucronata](#)

1. **Hippocratea myriantha** Oliv. F.T.A. 1: 369 (1868); Loes. in Engl. Bot. Jahrb. 34: 106, fig. 1, D–F; Chev. Bot. 131. *APD acc*

Climbing shrub with the leaves dark green and shiny above, paler beneath; flowers small, creamy-white, very numerous in much-branched cymes; fruits oblong, flat, very glaucous.

S. L.: Bagroo R. (Apr.) Mann 790! **iv. C.:** Dabou (Feb.) Chev. 17251. Mt. Nienokué, 1,600 ft. Chev. 19456. **G. C.:** Obuom (June) Vigne FH 2975! **S. Nig.:** Sapoba (Jan.) Brenan 8936! Nun R. Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda**, **Belgian Congo**, **Uganda**, **A–E Sudan** and **S. Tomé**. (See Appendix, p 289.)

Hippocratea sp. *APD acc*

A climbing shrub, with obovate fruits 8–9 cm long and about 6 cm. broad; leaves shiny, coriaceous, elliptic to oblong, 7–8 cm long, venation prominently reticulate on both surfaces; older twigs markedly verruculose.

S. Nig.: R. Nwop, Boje, Ikom Div. (fr. May) Latilo FHI 31805!

Imperfectly known species.

1. **Hippocratea thomasii** *Hutch & M. B. Moss* in F.W.T.A., ed. 1, 1: 449 (1928); Kew Bull. 1929: 20, is *Secamone myrtifolia* Benth. (Asclepiadaceae)

APD: *Synonym of Secamone afzelii (Schult.) K. Schum.*

Excluded species.

2. **Hippocratea chevalieri** *Hutch & M. B. Moss* in F.W.T.A., ed. 1, 1: 449 (1928); Kew Bull. 1929: 20, is *Campylostemon angolense* Oliv. (see p. 626).

APD: *Synonym of Campylostemon angolense Welw. ex Oliv.*

Excluded species.

5. SALACIA

Linn. Mant. 2: 159, 293 (1771); F.T.A. 1: 372; Loes. in Engl. Bot. Jahrb. 44: 156 (1910); in E. & P. Pflanzenfam. 20B: 217 (1942).

- 1 Flowers solitary or fasciculate in leaf-axils:2
Flowers in a pedunculate subumbel or cyme (peduncle sometimes only 1 mm. long): 28
- 2 Stem with 4 (–5) sinuate wings 1.5–3 mm. broad; leaves 9.5–26.5 cm. long, 5.5–8 cm. broad; petiole up to 5 mm. long, margins crisped; pedicels about 5–10 mm. long; flowers about 6 mm. diam.; fruit globose, about 3 cm. diam., very squamate-tuberculate [1. alata](#)
Stem not winged or with narrow straight wings up to 0.5 mm. broad:3
- 3 Twigs with violet (black when dried) spreading hairs; leaves 5–25 cm. long, deep green and shiny above, paler beneath, hairy on main nerves beneath; pedicels 3–6 mm. long; flowers about 6 mm. diam. [2. hispida](#)
Twigs glabrous or slightly tomentose:4
- 4 Resinous threads present on breaking leaf:5
No resinous threads on breaking leaf: 11
- 5 Buds just before opening elongate, about twice as long as broad:6
Buds more or less globose just before opening:8
- 6 Petiole-margins straight:7
Petiole-margins crisped; twigs slightly tomentose, 4-angular; leaves subovate-oblong, 7–13 cm. long; petals about 3 mm. long [5. volubilis](#)
- 7 Twigs glabrous, smooth or slightly verruculose lenticular; flowers 2.5–4 (–6) mm. diam., petals ovate; leaves brownish or greenish when dry [3. leptoclada](#)
Twigs verruculose lenticular, 4-lineate or terete; flowers 7–16 mm. diam., petals more or less oblong; leaves

- oblongate oblong to obovate, usually reddish-brownish beneath when dry; fruit more or less globose, somewhat apiculate [4. *senegalensis*](#)
- 8 Twigs verruculose-lenticular; petioles 3–6 mm. long: 9
- Twigs not verruculose-lenticular, or only slightly so: 10
- 9 Leaf-apex rounded; leaves coriaceous, margins shallowly crenate, 3.4–6.5 (–8) cm. long, 1.3–3.5 cm. broad; twigs more or less 4-lineate or 4-angled; pedicels about 6 cm. long; flowers about 7 mm. diam.; fruit globose, 2–3 cm. diam., somewhat tuberculate with 3 raised ridges [6. *lomensis*](#)
- Leaf-apex acuminate; leaves usually larger; twigs usually not 4-lineate (sometimes irregularly longitudinally striate) [4a. *senegalensis* × *pyriformis*](#)
- 10 Flowers 2.5–4 (–6) mm. diam.; petioles 2–7 (–9) mm. long [3. *leptoclada*](#)
- Flowers 7–17 mm. diam.; petioles 7–17 mm. long, margins not crisped; leaves coriaceous, 6–20 cm. long, brownish when dry, apex acuminate or sometimes rounded; pedicels 7–20 mm. long; fruit globose, more or less tuberculate, up to 2 cm. diam. [7. *pyriformis*](#)
- 11 Twigs terete often flattened at nodes, sometimes irregularly longitudinally striate: 12
- Twigs 4-lineate or narrowly 4-winged (wings up to 0.5 mm. broad): 24
- 12 Leaves with about 6 (8–10 in No. 15) pairs of main lateral nerves: 13
- Leaves with 11–19 pairs of main lateral nerves: 22
- 13 Flowers up to 8 mm. diam.; leaves small or large: 14
- Flowers over 10 mm. diam.; leaves 7–18 cm. long, 3–8.5 cm. broad: 19
- 14 Leaves crisped and serrate at margin, narrow-elliptic to elliptic-oblong, greyish green when dry, membranous; pedicels 2–7 mm. long; fruit globose [8. *pallescens*](#)
- Leaves with flat subentire margin, greenish when dry: 15
- 15 Pedicels up to 8 mm. long; petals ovate or obovate: 16
- Pedicels 10–42 mm. long, filamentous in flower; petals obovate or oblong: 18
- 16 Flowers 5–8 mm. diam.: 17
- Flowers about 3 mm. diam.; leaves greenish when dry, much paler beneath, more acuminate, up to 20.5 cm. long; small tree. [11. *mannii*](#)
- 17 Leaves dark greenish when dry, a little paler beneath, up to 11 cm. long; flowers 5–8 mm. diam.; leaves broadly elliptic to oblong; petioles 4–8 mm. long; pedicels 5–8 mm. long; liane [9. *togoica*](#)
- Leaves grey-green when dry, paler beneath, 8–19 cm. long; flowers about 6 mm. diam. [10. *cuspidicoma*](#)
- 18 Petals obovate; leaves broadly elliptic, 11–16 cm. long, 5–9 cm. broad, grey-greenish when dry [12. *pyriformoides*](#)
- Petals oblong; very like *pyriformoides* in twigs, leaves and pedicels [13. *dusenii*](#)
- 19 Twigs verruculose-lenticular: 20
- Twigs not verruculose-lenticular: 21
- 20 Pedicels filamentous, up to 35 mm. long; leaves oblong-elliptic, 10.5–27 cm. long [14. *zenkeri*](#)
- Pedicels 10–15 mm. long, fairly stout; petiole 3–5 mm. long; sepals shortly lacerate [15. *conrauii*](#)
- 21 Pedicels stouter, up to 20 mm. long, often less; petioles 10–17 mm. long; leaves up to 22 cm. long, oblong-elliptic to broadly elliptic, grey-green when dry; sepals shortly lacerate [16. *preussii*](#)
- 22 Leaves up to 24 cm. long, with up to 14 pairs of main lateral nerves: 23
- Leaves 25–40 cm. long, 8–14 cm. broad, with 14–19 pairs of main lateral nerves [19. *sp. A*](#)
- 23 Leaves oblong to slightly obovate, 13.5–24 cm. long, acumen up to 2.5 cm. long, nerves impressed above; pedicels filamentous, up to 17 cm. long; flowers 4–5 mm. diam.; fruit globose, neither tuberculate nor apiculate, about 3 cm. long [17. *loloensis*](#)
- Leaves elliptic to oblong, 12–18 cm. long, shortly and obtusely acuminate, venation not so distinct as in the preceding; pedicels sub-filamentous, 15–20 mm. long; flowers 5–7 mm. diam. [18. *eurypetala*](#)
- 24 Flowers over 10 mm. diam.: 25
- Flowers up to 8 mm. diam.: 26
- 25 Pedicels up to 5 mm. long; leaves serrate-crenate, greenish when dry; petioles 10–12 mm. long, margins crisped; sepals lacerate [20. *fimbrisepala*](#)
- Pedicels 7–10 mm. long; petioles up to 2 mm. long; sepals entire [21. *sp. B*](#)
- 26 Flowers about 3 mm. diam., pedicels filiform, 5–20 mm. long; fruit more or less globose, neither tuberculate nor apiculate; petiole margins crisped; leaves up to 10 cm. long, usually brownish green when dry [22. *debilis*](#)
- Flowers 5–8 mm. diam.; pedicels 4–10 mm. long: 27

- 27 Twigs smooth or finely verruculose; fruit more or less globose, smooth, or verruculose at most, rounded at apex when ripe, up to 3 cm. diam.; leaves narrowly to broadly elliptic [23. erecta](#)
Twigs closely and conspicuously verruculose; fruit ellipsoid, tuberculate, apiculate; leaves ovate to elliptic-oblong [24. tuberculata](#)
- 28 Inflorescence glabrous or glabrescent: 29
Inflorescence-branches pubescent; inflorescence cymosely branched; flowers about 6 mm. diam., petals oblong or oblong-ovate, buds more or less globose; leaves 6.2–15.7 cm. long, without resinous threads; petioles 4–7 mm. long [32. howesii](#)
- 29 No resinous threads on breaking leaf: 30
Resinous threads present on breaking leaf: 36
- 30 Twigs closely verruculose: 31
Twigs not closely verruculose: 33
- 31 Fruit 1-seeded, up to 7 cm. long, 3 cm. broad, not (?) tuberculate [25. lehmbachii](#)
Fruit several-seeded, up to 5.5 cm. long, 2.5 cm. broad, tuberculate, apiculate; petiole-margins crisped: 32
- 32 Petioles 5–10 mm. long; leaves cuneate to obtuse at base, subcoriaceous, ovate to elliptic-oblong, 3.5–19.5 cm. long, 6–9 main lateral nerves on each side of midrib; peduncle up to 1 mm. long [24. tuberculata](#)
Petioles 1–5 mm. long; leaves rounded and subcordate or cuneate to obtuse at base, elliptic-oblong, rarely broadly elliptic, 6–18.5 cm. long; peduncles 3–7 mm. long [26. leonensis](#)
- 33 Petals orbicular or ovate; flowers 5–10 mm. diam.; peduncles (0.5– 1.5–6 cm. long; inflorescence subumbellate or cymose, bracts generally petiolate-spathulate; leaves stiffly papery, up to 19 cm. long; fruits oblong-ellipsoid, verruculose-rugose, apiculate, 4–5 cm. long, 2 cm. broad [27. camerunensis](#)
Petals more or less oblong; flowers 3–5 mm. diam.; peduncles up to 1.4 cm. long; inflorescence subumbellate, often with a series of small sessile bracts (bracteoles?) widest at their base and placed at base of pedicels: .. 34
- 34 Pedicels about 20 mm. long, filamentous; flowers 2–4 mm. diam.; leaves usually greenish-grey when dry [28. staudtiana](#)
Pedicels 1–10 mm. long, filamentous or stouter; flowers 3–5 mm. diam.: 35
- 35 Leaves greyish-green or green when dry, nerves not impressed above, narrowly to broadly elliptic, 3–10 (–14) cm. long, acuminate, acumen rounded at apex; pedicels filamentous, 3–7 mm. long; fruit globose, smooth, up to 2 cm. long, not apiculate, with a neck at base when young; flowers about 3 mm. diam. [29. caillei](#)
Leaves greenish-brown when dry, nerves often impressed above; pedicels filamentous or stouter, 1–10 mm. long; fruit irregularly globose to oblong-ellipsoid, slightly apiculate, without a neck at base; flowers about 5 mm. diam. [30. nitida](#)
- 36 Flowers 2.5–4 (–6) mm. diam., petals ovate; buds more or less globose or somewhat elongated just before flowering; inflorescence a fascicle or subumbel; peduncles up to 3 mm. long; pedicels 2–6 mm. long; leaves 1.5–9 (–13) cm. long; petioles 2–7 (–9) mm. long [3. leptoclada](#)
Flowers 6 mm. or more diam.; petals narrower: 37
- 37 Twigs not verruculose-lenticular: 38
Twigs verruculose-lenticular; flowers 7–16 mm. diam.; petals more or less oblong; buds elongated, about twice as long as broad just before flowering; inflorescence a fascicle or subumbel; peduncle up to 1 (–7) mm. long; pedicels 4–17 mm. long [4. senegalensis](#)
- 38 Flowers 6–8 mm. diam., petals linear-triangular, about 1 mm. broad at base; buds elongated, about thrice as long as broad; inflorescence cymosely branched; leaves 4.2–13 cm. long; petiole 7–9 mm. long, margins straight [31. lucida](#)
Flowers 7–17 mm. diam., petals oblong, obovate-oblong, rarely ovate; buds more or less globose; inflorescence a fascicle or subumbel; leaves 6–20 cm. long; petiole 7–17 mm. long, margins straight [7. pyriformis](#)

1. *Salacia alata* De Wild. Miss E. Laurent. 241 (1906); Loes. in E. & P. Pflanzenfam., 20B: 227 (1942).
APD acc

Garcinia nobilis of F.W.T.A., ed. 1, 1: 236, not of Engl.

A forest climber, with verruculose stems; flowers white or green.

S. Nig.: Nikrowa, Okomu F.R., Benin (Dec.) Brenan 8393! Oban Talbot 1385! 1611! Umon-Ndealichi, Itu Div. (fl. buds & fr. June) Ujor FHI 30182!

Also in Belgian Congo.

2. *Salacia hispida* Blakelock in Kew Bull. 1956: 243. *APD acc*

A forest climber; petals yellow-green, disk grey-brown, filaments yellow-green, anthers orange-vermilion.

S. Nig.: Okomu F.R., Benin (Jan.) Brenan 8916!

Also in **Belgian Congo**.

3. *Salacia leptoclada* Tul. in Ann. Sci. Nat., sér. 4, 8: 96 (1857). *APD acc*

APD: Synonym of *Salacia leptoclada* Tul.

Salacia floribunda Tul. l.c. 97 (1857).

Salacia elegans Welw. ex Oliv. F.T.A. 1: 373 (1868).

Salacia zanzibarensis Vatke ex Loes. in E. & P. Pflanzenfam. 3, 5: 230 (1893).

S. Nig.: Oban Talbot!

Also in **Gabon, Angola, E. Africa, Madagascar** and **the Comores**.

4. *Salacia senegalensis* (Lam.) DC. Prod. 1: 570 (1824); Guill. & Perr. Fl. Seneg. 1: 113, t. 27; F.T.A. 1: 374; Loes. in Engl. Bot. Jahrb 44: 165 (1909); Chev. Bot. 135; Loes. in E. & P. Pflanzenfam. 20B: 223. *APD acc*

APD: Synonym of *Salacia chlorantha* Oliv.

APD: Synonym of *Salacia chlorantha* Oliv.

Hippocratea senegalensis Lam. (1791).

Salacia macrocarpa Welw. ex Oliv. F.T.A., 1: 373 (1868); Loes. in Engl. Bot. Jahrb. 44: 166 (incl. vars.); Chev. Bot. 134; F.W.T. A., ed. 1, 1: 453; Loes. in E. & P. Pflanzenfam. 20B: 223; not of Korth. (1848).

Salacia oblongifolia Oliv. (1868), not of Blume (1825).

Salacia olivriana Loes. (1894) — E. & P. Pflanzenfam. 20B: 223.

Salacia angustifolia Sc. Elliot. (1895) — F.W.T.A., ed. 1, 1: 452.

Degema Talbot!

Extends to **Belgian Congo** and **Angola**.

[Two specimens of this species in the Paris herbarium are both labelled Debeaux 330, 17 Mar. 1902, but one is said to come from Conakry (French Guinea) and the other from Cotonou (Dahomey). We have seen several other specimens of this species from Conakry, but none from Dahomey. The record of Debeaux 330 from Cotonou seems therefore to be suspect.

Salacia rufescens Hook. f. in Fl. Nigrit. 283 (1849); F.W.T.A., ed. 1, 1: 453. *APD acc*

S. L.: Roscher in Hb. T. Vogell Thomas 5197!

Appears to be intermediate between *S. senegalensis* and *S. pyriformis* and may be a hybrid.

Salacia chlorantha Oliv. F.T.A. 1: 375 (1868); Loes. in Engl. Bot. Jahrb. 44: 168; F.W.T.A., ed. 1, 1: 453. *APD acc*

N. Nig.: Nupe Barter 1658!

Appears to be intermediate between *S. senegalensis* and *S. pyriformis* and may be a hybrid.

10. **Salacia cuspidicoma** *Loes.* in Engl. Bot. Jahrb. 44: 175 (1910).

APD: Synonym of Salacia mannii Oliv.

A shrub, apparently erect, to 6 ft. high.

Br. Cam.: Johann Albrechtshöhe (fl. buds Jan., Feb.) Staudt 523; 610.

Also in **French Camerouns**.

11. **Salacia mannii** *Oliv* F.T.A. 1: 376 (1868); *Loes.* in Engl. Bot. Jahrb. 44: 187, Pflanzenfam. 20B: 227, 228. *APD acc*

A small tree, 6–20 ft. high, with twigs green becoming reddish brown; leaves deep green and glossy above, paler beneath; petals cream, ovary and stamens yellow; fruits orange red; **in forest**.

S. Nig.: Okomu F.R., Benin (Dec.) Brenan 8426! Ebuade! Usonigbe F.R., Benin (fl. & fr. Nov.) Keay FHI 25573! **F. Po:** (Jan., June) Barter! Mann 242!

12. **Salacia pyriformoides** *Loes.* in Engl. Bot. Jahrb. 44: 186 (1910). *APD acc*

A **forest** liane with stout green twigs and dense clusters of flowers.

S. Nig.: Oban Talbot 1420!

Also in **French Camerouns**, **Spanish Guinea** and (?) **Belgian Congo**.

13. **Salacia dusenii** *Loes.* in Engl. Bot. Jahrb. 19: 242 (1894); op. cit. 44: 188 (1910); Pflanzenfam. 20B: 229. *APD acc*

A **forest** liane with white flowers very similar to *S. pyriformoides*.

S. Nig.: Aboabam, Ikom Div. (May) Latilo FHI 30973! Oban Talbot 176! **Br. Cam.:** Ndian (Mar.) Dusen 307.

Also in **French Camerouns**.

14. **Salacia zenkeri** *Loes.* in Engl. Bot. Jahrb. 44: 193 (1910); Pflanzenfam. 20B: 230. *APD acc*

APD: Synonym of Salacia regeliana J. Braun & K. Schum.

APD: Synonym of Salacia bangalensis Vermoesen ex R. Wilczek

A **forest** liane or shrub; flowers green.

S. L.: Gboyama, Gardohun-Jimmi (Apr.) Deighton 1652! **Lib.:** Dukwia R. (Apr.) Cooper 387! **Iv. C.:** Yapo (Dec.) Manganot! **S. Nig.:** Oban Talbot 1589! 1589a! **Br. Cam.:** Victoria to Bimbina (May) Preuss 1254!

Also in **French Camerouns**.

15. **Salacia conrauii** *Loes.* in Engl. Bot. Jahrb. 44: 192 (1910). *APD acc*

A shrub.

Br. Cam.: Tale, Banyang, Mamfe Div. (Apr.) Conrau 104.

16. **Salacia preussii** *Loes.* in Engl. Bot. Jahrb. 19: 239 (1894); op. cit. 44: 192; Pflanzenfam. 20B: 229. *APD acc*

A **forest** shrub; petals yellow, green at base.

Br. Cam.: Barombi Preuss 21! Johann-Albrechtshöhe Staudt 935!

Also in **French Camerouns** and **Gabon**.

17. **Salacia loloensis** *Loes.* in Engl. Bot. Jahrb. 44: 172 (1910); Pflanzenfam. 20B: 227. *APD acc*

A small tree, 4–25 ft. high; flowers dirty white or pale yellow; fruits red.

S. Nig.: Omo F.R., Ijebu Ode (Apr.) Tamajong FHI 16918! Oban Talbot 1704! **Br. Cam.:** S. Bakundu F. R. (Apr.) Olorunfemi FHI 30509! N. Korup F.R., (July) Olorunfemi FHI 30674! Victoria (Apr.) Schlechter 12365!

Also in **French Cameroons**.

18. **Salacia eurypetala** *Loes.* in Engl. Bot. Jahrb. 44: 174 (1910); Pflanzenfam 20B: 227. *APD acc*

Br. Cam.: Johann-Albrechtshöhe (Apr.) Staudt 930.

19. **Salacia sp. A.** *APD acc*

“Single main stemmed shrub, about 8 ft. high”; in forest.

Br. Cam.: close to coast, Victoria (fl. buds Apr.) Brenan 9590!

The very large leaves are not matched in West Africa; other characters recall *S. loloensis*, except that the petals (at least in bud) are purple mottled with white.

20. **Salacia fimbriseppala** *Loes.* in Engl. Bot. Jahrb. 44: 190 (1910). *APD acc*

APD: *Synonym of Salacia preussii var. louisii (R. Wilczek) N. Hallé*

APD: *Synonym of Salacia fimbriseppala Loes.*

A scandent or erect shrub, or small tree (fide Johnson); flowers yellow, waxy.

G. C.: Kwahu (Apr.) Johnson 648! **Br. Cam.:** Buea (Apr.) Lehm巴赫 228.

21. **Salacia sp. B.** *APD acc*

Unbranched subshrub, about 1 ft. high; in forest.

Br. Cam.: Banga (Mar.) Brenan 9483!

22. **Salacia debilis** (*G. Don*) *Walp.* Rep. 1: 402 (1842); *Loes.* in Engl. Bot. Jahrb. 44: 184; Chev. Bot. 133; *Loes.* in E. & P. Pflanzenfam. 20B: 228. *APD acc*

Calypso debilis *G. Don* (1881).

A forest climber; flowers green or yellow.

Port. G.: Suzana to S. Domingos (Mar.) Esp. Santo 2244! Catió (young fr. June) Esp. Santo 2104! Fulacunda (fr. May) Esp. Santo 2030! **Fr. G.:** Rio Nunez (Dec.) Heudelot 698! Conakry & Loa Isl. Chev. 12079; 12262. Kabo to Haut-Mamou Chev. 12764. **S. L.:** Don! Mt. Aureole, Freetown (Mar., Dec.) Dalz. 976! Lane-Poole 212! Kora, Scarcies R. (Feb.) Sc. Elliot 4589! Musaia (young fr. Mar.) Sc. Elliot 5123! Kamabai (Feb.) Deighton 4254! Njala (fl. & fr. Feb.) Deighton 2599! **G. C.:** Bobiri F.R., Juaso (Jan.) Andoh FH 5459! Pra R. Station (Feb.) Vigne FH 1047! **F. Po.:** (Mar.) Mann 1445!

Also in **French Cameroons**.

[Sim 23 from Liberia has the small flowers of *S. debilis*, but other characters as in *S. erecta*; further research is required.]

23. **Salacia erecta** (*G. Don*) *Walp.* l.c. 1: 403 (1842); *Loes.* in Engl. Bot. Jahrb. 44: 168 (1910); Pflanzenfam. 20B: 224. *APD acc*

APD: *Synonym of Salacia erecta (G. Don) Walp. var. erecta*

APD: *Synonym of Salacia pyraertii De Wild.*

Calypso erecta *G. Don* (1831).

Salacia cornifolia *Hook. f.* (1849) — F.T.A. 1: 375 (excl. var. *crassiseppala* Oliv.); *Loes.* in Engl. Bot. Jahrb. 44: 185; Chev. Bot. 133; F.W.T.A., ed. 1, 1: 453; *Loes.* in E. & P. Pflanzenfam. 20B: 225.

Salacia baumannii *Loes.* (1910).

Salacia prinoides *DC.* var. *liberica* *Loes.* in Engl. Bot. Jahrb. 44: 179 (1910).

Salacia elliotii *Loes.* (1910) — F.W.T.A., ed. 1, 1: 452.

Salacia alpestris A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 453 (1928); Chev. Bot. 133, name only.

Salacia prinoides of F.T.A. 1: 375.

A shrub, sometimes scandent, or an understorey tree; flowers yellowish; **in forest**; a variable species.

Fr. G.: Ditinn to Diaguissa (fl. & fr. Apr.) Chev. 12859! Dalaba Chev. 18134. **S. L.:** Don! T. Vogel 118! Sugar loaf Mt. Barter! Mt. Kofiu, Scarcies (Jan.) Sc. Elliot 4595! Waterloo (Dec.) Keay & Savory FHI 25178! **Br. Cam.:** Buea Lehm巴赫 91!

Also in **E. Africa** and **Madagascar**.

24. **Salacia tuberculata** *Blakelock* in Kew Bull. 1956: 246. *APD acc*

Salacia cornifolia of F.W.T.A., ed. 1, 1: 453, partly (Sc. Elliot 5575; Thomas 2439).

Salacia talbotii of F.W.T.A., ed. 1, 1: 453, partly (Mann 2265; Talbot 170).

A scandent **forest** shrub; flowers green.

S. L.: Baiima, Jaluahun (Apr.) Deighton 3951! Njala (June) Deighton 714! Boma (Apr.) Deighton 3720! Roruks (May) Deighton 4138! Bafodeya, Limba Sc. Elliot 5575! **S. Nig.:** Oban Talbot 1705 (Kew sheet)! R. Calabar (Feb.) Mann 2265!

25. **Salacia lehmbachii** *Loes.* in Engl. Bot. Jahrb. 44: 173 (1910); Pflanzenfam. 20B: 227. *APD acc*

An erect shrub or small tree, to 6 ft. high; fruits red.

Br. Cam.: Buea (fr. Feb., Apr.) Lehm巴赫 116; 208.

Also in **French Camerouns** and (the var. *usambarensis*) in E. Africa.

26. **Salacia leonensis** *Hutch. & M. B. Moss* in F.W.T.A., ed. 1, 1: 453 (1928); Kew Bull. 1929: 22.

APD: *Synonym of Salacia lehmbachii f. leonensis*

A **forest** shrub.

S. L.: Thomas 7605b! 7944! 9360! Mano (young fr. Dec.) Deighton 2425! Falaba (May) Aylmer 82! **Lib.:** Jabroke, Webo Dist. (fr. July) Baldwin 6606! Zeahtown, Tchien Dist. (fr. July) Baldwin 6993!

[The following specimens appear to differ from typical *S. leonensis* only in the cuneate or obtuse leaf-bases: — **S. L.:** Unwin & Smythe 16! Sugar Loaf Mt. (Nov.) Deighton 5647! **G. C.:** Sefwi Bekwai (fr. Oct.) Akpabla 901!]

27. **Salacia camerunensis** *Loes.* in Engl. Bot. Jahrb. 19: 240 (1894); op. cit. 44: 176, incl. vare.; Pflanzenfam. 20B: 226.

APD: *Synonym of Salacia longipes var. camerunensis (Loes.) N. Hallé*

A **forest** liane, with smooth cable-like stems; flowers greenish-white, yellow or orange; leaves deep green and glossy above, paler beneath; fruits red or orange.

G. C.: Irvine 390! Kame R. (May) Baumann 587! **Togo:** Wiawia, Hohoe Dist. (Oct.) St. C. Thompson FH 3940! **S. Nig.:** Oshogbo Millson! Akure F.R. (Nov.) Keay FHI 26608! Oban Talbot 405! 1512! 1589! **Br. Cam.:** S. Bakundu F.R., Banga (Mar.) Brenan 9403! 9488!

Also in **French Camerouns**.

28. **Salacia staudtiana** *Loes.* in Engl. Bot. Jahrb. 44: 187 (1910), excl. var. *leonensis* Loes.; Fritsch in Bot. Centralbl. Beih. 11: 355 (1902), anatomical descr.; Loes. in E. & P. Pflanzentam. 20B: 227. *APD acc*

A **forest** liane; flowers white or yellow; fruits red.

S. Nig.: British Obobokum, Ikom (June) Latilo FHI 31854! **Br. Cam.:** Johann-Albrechtshöhe (Jan., Feb.) Staudt 563! 631!

Also in **French Camerouns**.

29. *Salacia caillei* A. Chev. ex Hutch. & M. B. Moss in F.W.T.A., ed. 1, 1: 453 (1928); Kew Bull. 1929: 22.

APD: Synonym of Salacia staudtiana var. leonensis Loes.

Salacia staudtiana var. *leonensis* Loes. in Engl. Bot. Jahrb. 44: 188 (1910).

Salacia nitida of Chev. Bot. 135 and of F.W.T.A., ed. 1, 1: 453, partly (Chev. 14902, 14626).

Salacia whytei of F.W.T.A., ed. 1, 1: 453, partly (Johnson 761).

Salacia bipindensis of F.W.T.A., ed. 1, 1: 453, partly (Sc. Elliot 4930, 5638).

A shrub, often scandent; petals green; fruits red, often with a glaucous bloom; in forest and forest regrowth.

Fr. G.: Kouria (Sept., Oct.) Caille in Hb. Chev. 14902! 14928! Kouria to Longuery (fr. Aug.) Caille in Hb. Chev. 14626! **S. L.:** Afzelius! Bumbuna (Oct.) Thomas 3456! 3730! Njala (Mar., Sept.–Nov.) Also in **French Cameroons**.

31. *Salacia lucida* Oliv. F.T.A. 1: 373 (1868); Loes. in Engl. Bot. Jahrb. 44: 165; Chev. Bot. 134; Loes. in E. & P. Pflanzentam. 20B: 223. *APD acc*

APD: Synonym of Salacia lucida Oliv.

A forest liane.

Iv. C.: Atteau (Jan.) Chev. 17090. Bingerville Chev. 17300. Zaranou to Songan (fr. Mar.) Chev. 17791. **S. Nig.:** Calabar Thompson 102!

Also in **French Cameroons**.

32. *Salacia howesii* Hutch. & M. B. Moss in F.W.T.A., ed. 1, 1: 453 (1928); Kew Bull. 1929: 22; Brenan in Kew Bull. 1950: 221. *APD acc*

A low spreading shrub or liane, older twigs black, younger ones somewhat pubescent; flowers greenish yellow; in forest.

G. C.: Anaje, 7 miles N.W. of Sekondi (Oct.) Howes 974! **S. Nig.:** Idanre Hills (Jan., Oct.) Keay in Hb. Brenan 8682! Keay FHI 25514!

1. *Salacia gilgiana* Loes. in Engl. Bot. Jahrb. 44: 168 (1910); Pflanzenfam. 20B: 225.

Near *S. senegalensis* and possibly a hybrid of it.

Br. Cam.: on lake shore, Johann-Albrechtshöhe (Feb.) Staudt 591.

Imperfectly known species.

2. *Salacia* sp. C.

“A vine, in [savannah thickets on sandy soil](#); flowers greenish yellow.”

Lib.: Cinco, Monrovia (Nov.) Linder 1544!

Imperfectly known species.

3. *Salacia* sp. D.

“small understorey shrub, about 4 ft. high; sepals velvety purple.” Resembles *S. tuberculata*, but main nerves impressed above; the specimen is without flowers.

S. Nig.: Oni R., 1 mile N. of Shasha F.R. (Feb.) Jones & Onochie FHI 17524!

Imperfectly known species.

4. *Salacia* sp. E.

“A small shrub, about 4 ft. high; flower buds pale greenish cream; fruits orange.” Probably near *S. gilgiana* (see above).

S. Nig.: Ilaro F.R., Abeokuta Prov. (Dec.) Onochie FHI 31892!

Imperfectly known species.

5. *Salacia* sp. F.

Some resemblance to *S. togoica* but the flowers are smaller.

S. Nig.: Talbot!

Imperfectly known species.

6. *Salacia* sp. G.

Near *S. togoica* but the stem is markedly verruculose. As the specimen is only in bud it is not named more accurately.

S. L.: Afzelius!

Imperfectly known species.

7. *Salacia* sp. H.

“Shrub; flowers greenish yellow.” Possibly near *S. nitida*, but the inflorescence is pubescent the leaves do not match those of *S. howesii*.

G. C.: Cape Coast (Apr.) Scholes 202!

Imperfectly known species.

8. *Salacia* sp. I.

Near *S. staudtiana* but immature.

Br. Cam.: Bimbria Road, Victoria (fl. buds May) Maitland 664!

Imperfectly known species.

9. *Salacia* sp. J.

Allied to *S. leptoclada* TuL., but the leaves are not a good match.

S. Nig.: Oban Talbot!

Imperfectly known species.

6. SALACIGHIA

Loes. in Fedde Rep. 49: 228 (1940); in E. & P. Pflanzenfam. 20B: 217 (1942).

- 1 Calyx covering corolla in late bud stage, apiculate; sepals 2–3; petals lacerate; petioles (6–)10–15 mm. long; twigs verruculose-lenticular; leaves opposite and sub-opposite, oblong, ovate or obovate-elliptic, narrowed or obtuse at base, apex long-acuminate, margin entire, 8–21 cm. long, 3–8 cm. broad; flower-buds peltate to subglobose, apiculate; pedicels 4–20 mm. long; flowers bisexual, 6–10 mm. diam. [1. *letestuana*](#)
- Calyx not covering corolla in late bud stage, not apiculate; sepals 4–5, rounded at apex; petals subentire; petioles 4–7 mm. long; twigs verruculose-lenticular; leaves alternate, papery or chartaceous, oblong, lanceolate-oblong or oblanceolate-oblong, narrowed at base, apex fairly long-acuminate, margin entire, 8–12 cm. long, 3–5 cm. broad; buds subglobose; pedicels 10–15 mm. long; flowers bisexual, about 10 mm. diam. [2. *linderi*](#)

1. *Salacighia letestuana* (Pellegr.) Blakelock in Kew Bull. 1956: 247. *APD acc*

Salacia letestuana Pellegr. in Bull. Mus. Hist. Nat. Paris 28: 312 (1922).

Salacighia malpighioides Loes. in Fedde Rep. 49: 228 (1940); in Wiss. Ergebn. 1910–11: 77 (1922), name only; in E. & P. Pflanzenfam. 20B: 217 (1942); Exell & Mendonca Consp. Fl. Ang. 2: 27 (1954).

(?) *Salacia denudata* A. Chev. Bot. 133 (1920), name only; F.W.T.A., ed. 1, 1: 453.

Forest liane, stems purplish-brown; leaves deep green and glossy above, paler beneath; petals green with pale margin, disk cream, ovary pale green.

IV. C.: Adiopodoumé (Sept., Nov.) Mangenot! **S. Nig.:** Eket Talbot! Oban Talbot 149! Kwa Falls, Calabar (Mar.) Brenan 9249!

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

2. *Salacighia linderi* (Loes. ex Harms) Blakelock l.c. (1956). *APD acc*

Salacia linderi Loes. ex Harms in Notizbl. Bot. Gart. Berl. 15: 673 (1942).

Liane with yellow flowers.

S. L.: Kambui (Mar.) Lane-Poole 449! **Lib.:** Moylakwelli-Totokwelli (Oct.) Linder 1278!

PANDACEAE

Trees. Leaves alternate, simple, serrulate; stipules present. Flowers dioecious. Male flowers racemose, the racemes fasciculate from the old wood. Calyx cupular, open in bud. Petals 5, valvate. Stamens 10, alternately long and short; anthers 2-celled, opening lengthwise. Rudimentary ovary linear-subulate. Female flowers arranged like the male. Calyx cupular, truncate or toothed. Petals 5 [imbricate?]; staminodes absent. Ovary subsessile, 3–4-celled; stigmas 3–4, reflexed; ovule solitary, pendulous. Fruit drupaceous. Seeds with copious oily endosperm; cotyledons cordate.

A small family endemic to West Tropical Africa.

PANDA

Pierre in Bull. Soc. Linn. Paris 2: 1255 (1894).

Porphyranthus Engl. (1899).

- 1 A tree; branchlets slightly angular; leaves elliptic or ovate-elliptic, unequal-sided and more or less cuneate at base, obliquely caudate-acuminate, 10–18 cm. long, 4–9 cm. broad, glabrous, rather closely reticulate beneath; petiole about 1 cm. long; flowers in elongated fasciculate or paniculate racemes; pedicels about 2 mm. long, puberulous; calyx truncate, about 1.25 mm. long; petals puberulous on the margin, 3 mm. long; fruit subglobose, 3–4-seeded, about 6 cm. diam., with a thick exocarp and a hard bony endocarp traversed by cavities giving the outside a deeply pitted appearance; seeds boat-shaped [oleosa](#)

Panda oleosa *Pierre* l.c. (1896); Chev. Bot. 612; Aubrév. Fl. For. C. Iv. 1: 300, t. 120; Kennedy For. Fl. S. Nig. 143. *APD acc*

Porphyranthus zenkeri Engl. (1899).

An understorey forest tree, up to 60 ft. or more high; slashed bark mottled pink and purple; dioecious; flowers red or purplish; inflorescences often in axils of fallen leaves; fruits green.

Lib.: Harley 990! **Iv. C.:** Guidéko (June) Chev. 19043! Bouroukrou Chev. 16122! Rasso Aubrév. 140! **G. C.:** Sa, Bonsa R. (Aug.) Vigne FH 980! Anwhiaso F.R. (Mar.) Vigne FH 224! Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

ICACINACEAE

Trees, shrubs or rarely climbers. Leaves alternate or rarely opposite, simple; stipules absent. Flowers hermaphrodite or rarely unisexual, actinomorphic. Calyx small, 3–5-lobed; lobes imbricate or valvate, rarely enlarging and enveloping the fruit. Petals 3–5, free or united, valvate, rarely absent. Stamens the same number as the petals and alternate with them; anthers 2-celled; filaments often hairy, free. Disk rarely present. Ovary superior, 1-celled, 1-seeded. Seeds mostly with endosperm; embryo usually small, more or less straight.

A small tropical family.

With a tendency to a gamopetalous corolla; petals valvate; petals inside or anthers sometimes hairy.

- 1 Leaves alternate; tendrils absent:.....2
Leaves opposite, or subopposite; flowers dioecious in lax cymes; climbers with extra-axillary tendrils [12. Iodes](#)
- 2 Corolla not accrescent in fruit:3
- 3 Flowers in fascicles, cymes or panicles, bisexual:.....4
Flowers in spikes or slender racemes, or rarely female flowers in heads, bisexual or unisexual:.....9
- 4 Inflorescences on the leafy shoots, cymose or fasciculate:.....5
Inflorescences on the main stem, paniculate; petals free, glabrous inside [7. Lavigeria](#)
- 5 Petals united into a tubular corolla; flowers in extra-axillary, shortly pedunculate clusters [1. Leptaulus](#)
Petals free or nearly so:6
- 6 Inflorescences not leaf-opposed; anthers not densely villous:7
Inflorescences leaf-opposed, pedunculate, consisting of several umbellate heads; anthers densely villous[3. Lasianthera](#)
- 7 Flowers in pedunculate cymes:8
Flowers fasciculate; fruits slightly 2-lobed, reticulate [4. Rhapsiostylis](#)
- 8 Petals glabrous inside; sepals free, linear or lanceolate; fruits pilose, pubescent or glabrous [2. Alsodeiopsis](#)
Petals bearded inside; sepals united into a calyx with short or long lobes; fruits tomentose or tomentellous[6. Icacina](#)
- 9 Perianth consisting of distinct sepals and petals:..... 10
Perianth consisting of a single whorl of (3–) 4 tepals; flowers unisexual[8. Pyrenacantha](#)
- 10 Flowers bisexual; small trees or shrubs, sometimes scandent [5. Desmostachys](#)
Flowers unisexual; slender lianes [11. Neostachyanthus](#)
Corolla of female flowers accrescent and enveloping the fruit: 12
- 12 Corolla 3-lobed, campanulate; style divided into several radiating arms; flowers in heads; leaves often lobed ..[9. Polycephalum](#)
Corolla 4-partite; style simple; flowers in spikes; leaves not lobed[10. Chlamydocarya](#)

Icacinopsis *Roberty* in Bull. I.F.A.N. 15: 1420 (1953)

Is *Dichapetalum barteri* Engl. (Chailletiaceae); see p. 436. Excluded genus.

1. LEPTAULUS

Benth. — F.T.A. 1: 354; Sleumer in E. & P. Pflanzenfam. 20B: 358 (1942).

- 1 Branchlets and petioles glabrous; flowers numerous in each extra-axillary cluster:2
 Branchlets and petioles densely puberulous; flowers solitary or few in extra-axillary clusters; pedicels 1–2 mm. long; calyx 1.5 mm. long; corolla about 1 cm. long; fruits ellipsoid, about 1.5 cm. long; leaves oblong-elliptic, obtuse or cuneate at base, abruptly long-caudate acuminate, the acumen itself subspathulate, 6–12 cm. long, 3.5–5 cm. broad, with 4–5 main lateral nerves on each side of midrib; petioles up to 3 mm. long [3. zenkeri](#)
- 2 Pedicels well-developed, 3–4 mm. long; calyx 1–5 mm. long, lobes not recurved; corolla 1.3–1.4 cm. long; fruits ellipsoid, about 1.3 cm. long and 1 cm. diam.; leaves elliptic, cuneate at base, gradually long-acuminate, acumen itself blunt, 3–14 (–16) cm. long, 1.5–6 (–7.8) cm. broad, with 5–7 main lateral nerves on each side of midrib, venation distinct beneath, nerves not impressed above; petioles 0.5–1 cm. long [1. daphnoides](#)
 Pedicels up to 1 mm. long; calyx 3–4 mm. long, lobes recurved; corolla about 1–5 cm. long; fruits oblong-ovoid, 2.8–3 cm. long and up to 1.5 cm. diam.; leaves coriaceous, oblong-elliptic to oblong-obovate, cuneate at base, abruptly and acutely acuminate, 14–28 cm. long, 6–10 cm. broad, with 5–9 main lateral nerves on each side of midrib, venation obscure beneath, nerves often impressed above; petioles 1.5–2 cm. long [2. grandifolius](#)

1. **Leptaulus daphnoides** *Benth.* — F.T.A. 1: 354, partly (Bagroo River spec. only); Oliv. in Hook. Ic. Pl. t. 2339 (1894), excl. var. *macrophylla* Oliv.; Chev. Bot. 127; Aubrév. Fl. For. C. Iv. 1: 91, t. 27, 7–11; Sleumer in E. & P. Pflanzenfam. 20B: 358, fig. 101, C–E. *APD acc*

A forest shrub or tree, up to 60 ft. high; flowers white, very fragrant.

Fr. G.: Fouta Djallon (May) Heudelot 863! Forécariah (June) Jac.-Fél. 1714! **S. L.:** Bagroo R. (Apr.) Mann 806! Madina, Limba (Apr.) Sc. Elliot 5562! Kessewe Hill (May) Lane-Poole 124! Njala (fl. Also in **French Cameroons**, **Gabon**, **A.–E. Sudan**, **Uganda**, **Tanganyika**, **Belgian Congo** and **Cabinda**.

2. **Leptaulus grandifolius** *Engl.* Bot. Jahrb. 43: 180 (1909). *APD acc*

Leptaulus daphnoides of F.T.A. 1: 354, partly (Kongui River spec.).

Leptaulus daphnoides var. *macrophyllus* *Oliv.* in Hook. Ic. Pl. sub t. 2339 (1894).

A small forest tree, up to 15 ft. high; flowers white.

Br. Cam.: S. Bakundu F.R., Kumba (Mar.) Brenan 9274!

Also in **French Cameroons** and **Spanish Guinea**.

3. **Leptaulus zenkeri** *Engl.* l.c. 179 (1909). *APD acc*

A forest shrub or small tree.

S. Nig.: Oban Talbot 1410! Eket Talbot 3322!

Also in **French Cameroons**, **Gabon**, **Cabinda** and **Belgian Congo**.

2. ALSODEIOPSIS

Oliv. ex Benth. in Benth. & Hook. f. Gen. Pl. 1, 3: 996 (1867); F.T.A. 1: 356; Sleumer in E. & P. Pflanzenfam. 20B: 359 (1942). *APD acc*

- 1 Lower surface of leaves and branchlets pilose with rather long spreading hairs:2
 Lower surface of leaves shortly appressed-pubescent:3
- 2 Upper surface of leaves setose-pilose, without short appressed hairs, undersurface rather loosely pilose; sepals, petals and inflorescence-branches whitish hispid and with a few longer whitish hairs; flowers few; sepals about 1 mm. long; fruits ellipsoid, about 9 mm. long, reticulate, pubescent; leaves oblong-obovate, sub-cordate and

unequal-sided at base, acutely acuminate, 7–10 cm. long, 3–5 cm. broad, with 5–8 main lateral nerves on each side of midrib [1. chippii](#)

Upper surface of leaves appressed-puberulous and with long stiff hairs on the midrib and nerves, undersurface densely pilose; sepals, petals and inflorescence-branches densely villose with long reddish-brown hairs; flowers several in paired cymes; sepals about 2 mm. long; fruits ellipsoid, about 15 mm. long, densely orange-pilose; leaves oblong-oblancheolate to oblong-lanceolate, very unequal-sided at base with one side cordate and the other obtuse to rounded, acutely acuminate, 9–18 cm. long, 3–7 cm. broad, with 4–10 main lateral nerves on each side of midrib [2. villosa](#)

- 3 Main lateral nerves (7–) 10–19 on each side of midrib; leaves oblanceolate to oblong-obovate, rounded or obtuse and subequal at base, gradually long-acuminate, (7–) 10–25 cm. long, (2.5–) 3.5–7 cm. broad, shining beneath; peduncles axillary, perennial, becoming woody and up to 8 cm. long, with the rather dense-flowered cymes clustered towards the ends, pedicels up to 4 mm. long; fruits oblong-ellipsoid, 2.5–3.3 cm. long, 9–13 mm. diam., glabrous [3. mannii](#)

Main lateral nerves 3–9 on each side of midrib; fruits ellipsoid or ovoid-ellipsoid, up to 1.8 cm. long and 6 mm. diam., pubescent; pedicels 3–13 mm. long: [4](#)

- 4 Peduncles 6–8 mm. long, pedicels up to 6 mm. long; fruits ovoid-ellipsoid, about 1.2 cm. long; leaves ovate to obovate, subcordate and very unequal-sided at base, obtuse or broadly acuminate at apex, mucronate, 2.7–8.5 cm. long, 1.2–4 cm. broad, main lateral nerves 3–9 with small pocket-like structures in the axils [4. staudtii](#)

Peduncles 16–28 mm. long, pedicels up to 13 mm. long; fruits ellipsoid, 1.6–1.8 cm. long; leaves elliptic, narrowed to the obtuse, rounded or subcordate rather unequal base, acutely long-acuminate, 5.2–16 cm. long, 1.6–6 cm. broad, main lateral nerves 7–9 [5. rowlandii](#)

1. *Alsodeiopsis chippii* Hutch. in Kew Bull. 1912: 224. *APD acc*

A yellow flowered shrub.

G. C.: Burton & Cameron! Dompem, Atissiabo, Axim Dist. (Dec.) Chipp 46!

2. *Alsodeiopsis villosa* Keay in Bull. Jard. Bot. Brux. 26: 185 (1956). *APD acc*

A shrub, to 4 ft. high; fruit orange.

Lib.: Duo, Sinoe (Mar.) Baldwin 11346! About 15 miles inland from R. Cess, Grand Bassa (fr. Mar.) Baldwin 11241! Jabroke, Webo (fl. & fr. July) Baldwin 6476!

3. *Alsodeiopsis mannii* Oliv. in J. Linn. Soc. 10: 43 (1867), excl. the form with smaller leaves which is *A. weissenborniana* J. Braun & K. Schum.; F.T.A. 1: 356, partly. *APD acc*

A forest shrub, about 4 ft. high, with glossy leaves; flowers pale green in drooping cymes; fruits orange.

Br. Cam.: S. Bakundu F.R., Banga, Kumba Div. (fl. & fr. Mar.) Brenan 9267! 9267a!

Also in **French Cameroons**, **Spanish Guinea** and **Gabon**.

4. *Alsodeiopsis staudtii* Engl. Bot. Jahrb. 24: 479 (1898). *APD acc*

APD: *Synonym of Alsodeiopsis poggei* Engl.

Alsodeiopsis weissenborniana of Chev. Bot. 128, not of J. Braun & K. Schum.

A shrub or small tree, to 8 ft. high; flowers yellow; ripe fruits red; in forest.

IV. C.: Guidéko (May) Chev. 16374! Alépé, Chev. 17410. **G. C.:** near Essuasu (fl. & fr. May) Chipp 215! Vigne 168! Asuansi (Feb.) Williams 23! Prestea (Sept.) Vigne FH 3089! Simpa (May) Vigne FH 1955! **S. Nig.:** on hills, Ibadan (Mar.) Schlechter 13011!

Also in **French Cameroons** and **Belgian Congo**.

5. *Alsodeiopsis rowlandii* Engl. l.c. (1898). *APD acc*

A shrub, to 10 ft. high; flowers yellow; ripe fruits red; in forest by streams.

S. Nig.: Lagos (Aug.) Rowland! Etemi, Omo F.R., Ijebu Ode (fr. Mar.) Jones & Onochie FHI 16824! Akure F.R. (fl. & fr. Aug.) Jones FHI 20208! Okomu F.R., Benin (fl. & fr. Mar.) Akpabla 1107! Degema Talbot!

Also in **Belgian Congo**.

Alsodeiopsis rubra Engl. — Sleumer in E. & P. Pflanzenfam. 20B: 360 (1942), records this species from Liberia.

Perhaps the Liberian specimens were of *A. villosa* Keay, a species which looks rather like *A. rubra* but differs in several important characters.

Doubtfully recorded species.

3. LASIANTHERA

P. Beauv. — F.T.A. 1: 353; Sleumer in E. & P. Pflanzenfam. 20B: 362 (1942).

- 1 Branchlets terete and slightly ridged, glabrous; leaves oblong-elliptic, long-caudate-acuminate, shortly cuneate at the base, 8–15 cm. long, 3–6 cm. broad, glabrous; lateral nerves about 6 pairs, looped; cymes leaf-opposed, small, the flowers in small partial heads; petals 3 mm. long; anthers densely villous; fruits oblong-elliptic, flattened, beaked, about 1 cm. long, longitudinally ribbed [africana](#)

Lasianthera africana *P. Beauv.* Fl. Oware 1: 85, t. 51 (1806); F.T.A. 1: 353; Sleumer l.c., fig. 102, A–O; Chev. & Walker in Rev. Bot. Appliq. 27: 502, t. 24. *APD acc*

A glabrous shrub, 3–12 ft. high, with terete branchlets and small white flowers in umbellate head-like clusters; **in rain forest**.

S. Nig.: R. St. Jacques, Chama Beauvois. Mamu River F.R. (Nov.) Keay FHI 22291! Onwudinjoh FHI 21913! Oban (fl. & fr. May) Talbot 422! Ujor FHI 31797! Okwango, Obudu Div. (fl. & fr. May) Latilo FHI 30967! **Br. Cam.:** Victoria (Nov.) Maitland 93! Kumba Preuss 501! 1175! Staudt 490! Abonando, Mamfe (Apr.) Rudatis 38! **F. Po:** (fl. & fr. Dec.) Mann 73

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

4. RHAPHIOSTYLIS

Planch. ex Benth. in Hook. Fl. Nigrit. 259 (1849); Sleumer in E. & P. Pflanzenfam. 20B: 368 (1942).

- 1 Leaves and branchlets glabrous or tomentellous or puberulous; leaves not cordate at base:2
Leaves and branchlets densely spreading-pilose; leaves cordate at base, ovate-elliptic, obtusely long-acuminate, 5–12 cm. long, 2–6 cm. broad; flowers in axillary clusters; pedicels up to 3 mm. long; ovary villous5.
[cordifolia](#)
- 2 Pedicels, flowers, branchlets and leaves glabrous or nearly so:3
Pedicels and calyces brownish-tomentellous; branchlets and leaves on both surfaces puberulous; leaves oblong or oblong-elliptic, cuneate or obtuse at base, rather long and subacutely acuminate, 9–12 cm. long, 3–4 cm. broad; flowers rather numerous in axillary fascicles; pedicels 7–9 mm. long; ovary densely pilose; fruits 2.5–3 cm. broad, coarsely verrucose4. [ferruginea](#)
- 3 Ovary glabrous; leaves oblong-elliptic or elliptic, obtuse or rounded at base, obtusely acuminate, 7.5–16.5 cm. long, 2.5–6.5 cm. broad, the lower lateral nerves ascending; flowers rather numerous in axillary fascicles; pedicels 7–8 mm. long; fruits subdidymous, quadrate, 1–1.5 cm. broad, reticulate1. [beninensis](#)
Ovary densely pilose except sometimes at base; leaves elliptic:4
- 4 Lateral nerves ascending; pedicels 5–7 mm. long; leaves 6–15 cm. long, 2.5–7.5 cm. broad2. [preussii](#)
Lateral nerves spreading; pedicels about 10 mm. long; leaves about 8 cm. long and 3–4 cm. broad3. [poggei](#)

1. **Rhaphiostylis beninensis** (*Hook. f. ex Planch.*) *Planch. ex Benth.* in Hook. Fl. Nigrit. 259, t. 28 (1849). *APD acc*

Apodytes beninensis *Hook. f. ex Planch.* in Hook. Ic. Pl. t. 778 (1848); F.T.A. 1: 355, partly (excl. var. B); Chev. Bot. 127.

A glabrous scandent shrub, rarely arborescent; flowers white, fragrant; ripe fruits red, shining, fleshy; the whole plant goes black when dried; **in forest vegetation**.

Fr. G.: Heudelot 723! Timbo Pobéguin 76! 128! Kouria (Dec.) Chev. 14890! Labé (fr. Apr.) Chev. 12389! **S. L.:** Bonthe (fl. & fr. Feb.) Dalz. 937! Kukuna road, Scarcies R. (Jan.) Sc. Elliot 4711! Nig.:** Akure F.R. (Oct.) Keay FHI 25485! **Br. Cam.:** Barombi, Kumba (Sept.) Preuss 522!

[Two fruiting species (Esp. Santo 2250; 2253) from Portuguese Guinea may belong either to this species or to the last.]

3. **Rhaphiostylis poggei** *Engl.* Bot. Jahrb. 17: 73 (1893); op. cit. 43: 181. *APD acc*

A glabrous scandent shrub.

Br. Cam.: Barombi (Sept.) Preuss 561.

Also in **French Cameroons**.

4. **Rhaphiostylis ferruginea** *Engl.* op. cit. 43: 181 (1909); Sleumer in E. & P. Pflanzenfam. 20B: 369, fig. 105. *APD acc*

Apodytes beninensis var. **B Oliv.** in F.T.A. 1: 356.

Icacina? **sarmentosa** *A. Chev.* Bot. 127, name only.

A **forest** shrub, often scandent.

Iv. C.: Yapo (Oct.) Chev. 22373! **G. C.:** Abosso (Aug.) Vigne FH 3034! **S. Nig.:** Epe Barter 3286! Ehor F.R., Benin (fl. & fr. Mar.) Chizea FHI 8268! **Br. Cam.:** Victoria (Mar.) Maitland 1062! Moliwe (May) Winkler 1280.

Also in **French Cameroons**, **Spanish Guinea**, **Gabon** and **Belgian Congo**.

5. **Rhaphiostylis cordifolia** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 455 (1928); Kew Bull. 1929: 23. *APD acc*

A scandent shrub; flowers white or cream; in **forest**.

Lib.: Gbanga (Oct.) Linder 1218! **Iv. C.:** Banco (Nov.) Miège 1418! **G. C.:** Opon Mansi F.R. Akpabla 934! Subiri F.R., Benso (Sept.) Andoh FH 5575! Vigne FH 4747!

5. DESMOSTACHYS

Planch. ex Miers — F.T.A. 1: 353; Sleumer in E. & P. Pflanzenfam. 20B: 369 (1942).

- 1 Petals 10–11 mm. long, loosely joined below to form a tube about 6 mm. long which eventually splits from the bottom; style about 14 mm. long, exerted beyond the petals and stamens; flowers 5-merous in markedly supra-axillary spikes, up to 36 cm. long, with a tendency for the flowers to be arranged in 2 ranks; calyx 2.5 mm. long; leaves oblong to oblong-oblancoate, obtuse or cuneate at base, acuminate, 12–30 cm. long, 3.5–11 cm. broad, with 5–8 main lateral nerves on each side of midrib, very minutely puberulous beneath; fruits ellipsoid, about 2 cm. long *1. vogelii*

Petals 3–6 mm. long, free; style as long as or shorter than the petals; flowers 4-merous in solitary or superposed pairs of spikes, axillary, up to 35 cm. long, on leafy shoots, rhachis flattened, flowers more or less in 2 ranks; calyx 1.5 mm. long; leaves more or less elongate-elliptic or oblong, cuneate at base, acuminate, 12–23 cm. long, 5–11 cm. broad, with (5–) 6–9 (–10) main lateral nerves on each side of midrib, very minutely puberulous beneath; fruits ellipsoid, 2.5–2.8 cm. long *2. tenuifolius*

1. **Desmostachys vogelii** (*Miers*) *Stapf* in Johnston Lib. 2: 587 (1906); Chev. Bot. 126. *APD acc*

Sarcostigma vogelii Miers (1852).

A **forest** shrub or small tree, often scandent; flowers white and fragrant, in pendulous spikes; fruits yellow.

S. L.: Kpetema (Apr.) Deighton 3693! Gola Forest, Gorahun (Mar.) Deighton 4097! **Lib.:** Cape Palmas (fr. July) T. Vogel 25! 27! 68! Kakatown Whyte! Bumbuna, Moala (Nov.) Linder 1345! Dukwia R. 2. *Desmostachys tenuifolius* Oliv. in F.T.A. 1: 353 (1868); F.W.T.A., ed. 1, 1: 454, in part only (excl. distrib. S.L. and Dah.). *APD acc*

APD: *Synonym of Stachyanthus occidentalis (Keay & J. Miège) Boutique*

Desmostachys preussii Engl. Bot. Jahrb. 17: 70 (1893).

A **forest** shrub or small tree, to 30 ft. high; flowers cream, in slender pendulous spikes; ripe fruits orange.

S. Nig.: Port Harcourt (Jan.) Joanes FHI 5005! Calabar (July) Holland 63! Robb! Oban (May) Talbot 100! Ujor FHI 31790! **Br. Cam.:** Preuss 1327! Likomba (Dec.) Mildbr. 10746! S. Bakundu F.R. (fl. & fr. Mar.) Brenan 9276! Onochie FHI 30867! S. Bakossi F.R. (May) Olorunfemi FHI 30596! Abonando (June) Rudatis 69! Barombi (June) Preuss 306; 351. **F. Po:** (June) Barter! Mann 421!

Also in **French Cameroons**, **Spanish Guinea** and **Gabon**.

[The record from Sierra Leone in the first edition is based on a Barter specimen which is most probably a second sheet of his Fernando Po specimen, the species does not seem to occur west of E. Nigeria.]

6. ICACINA

A. Juss. — F.T.A. 1: 356; Sleumer in E. & P. Pflanzenfam. 20B: 370 (1942).

- 1 Flowers in lax terminal corymbose cymes; leaves ovate to obovate, obtusely acuminate to rounded and emarginate, 5–15 cm. long, 4–10 cm. broad, conspicuously reticulate and glabrous or nearly so; calyx short; petals shortly hairy outside; fruits obovoid, 3 cm. long, tomentellous, slightly wrinkled when dry *1. senegalensis*
- Flowers in axillary clusters or short dense cymes: **2**
- 2 Flowers rather lax and pedicellate; leaves broadly obovate-elliptic, abruptly acuminate, more or less cuneate at base, up to 20 cm. long and 12 cm. broad, glabrescent beneath; calyx much shorter than the petals; petals appressed-pubescent outside *2. mannii*
- Flowers densely crowded and subsessile; leaves broadly elliptic, abruptly acute, rounded at base, 10–28 cm. long, up to 17 cm. broad, thinly pilose with simple, fascicled hairs beneath; calyx nearly as long as the petals; petals villous outside; fruits ellipsoid-globose, 2.5 cm. long, tomentose *3. trichantha*

1. *ICACINA senegalensis* A. Juss. — F.T.A. 1: 357; Chev. Bot. 128.

APD: *Synonym of Icacina oliviformis (Poir.) J. Raynal var. oliviformis*

A **savannah** suffrutex, sending up glabrous or pubescent leafy shoots 2–3 ft. high from a large fleshy tuber with long roots; flowers cream or yellow; ripe fruits red; locally abundant and troublesome as a weed in some parts, but rare in Nigeria.

Sen.: Perrottet 129! Kaolak Kaichinger. Floup-Fedyan, Sédhiou and Samandiny fide Chev. l.c. **Gam.:** Mungo Part! Karawan and Cape St. Mary (Jan.) Dalz. 8084! Genieri (Feb.) Fox 95! Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

3. *Icacina trichantha* Oliv. in F.T.A. 1: 358 (1808). *APD acc*

A scandent shrub, with a very large tuber; flowers cream; ripe fruits red, velvety; in forest and forest regrowth vegetation.

S. Nig.: Lagos (fl. & fr. Jan., fr. Oct.) Dalz. 1094! 1398! Rowland 58! Ibadan (fl. Jan., Feb., fr. Mar.) Meikle 968! 1166! Shasha F.R. (fl. & fr. Feb., Mar.) Richards 3142! Ross 11! Okomu F.R. (fr. Jan.) Brenan 8887! Sapoba (Nov.) Ajayi FHI 26985! Onitsha Barter 1793! Degema Talbot 3692!

[The specimens from Lagos differ from the others in having the leaves more thickly covered with fascicled hairs beneath.]

7. LAVIGERIA

Pierre Fl. For. Cochinch. fasc. 17, sub t. 267 (1892); Sleumer in E. & P. Pflanzenfam. 20B: 371 (1942).

- 1 Leaves oblong-elliptic, shortly pointed, rounded at base, 15–25 cm. long, 7–11 cm. broad, slightly stellate-pubescent beneath, coarsely reticulate; panicles clustered on the main stem, tomentellous; flowers very small, sessile; petals nearly glabrous outside, not hairy inside; fruit ovoid, about 7 cm. long, corrugated [macrocarpa](#)

Lavigeria macrocarpa (Oliv.) *Pierre* l.c. (1892); Sleumer l.c., fig. 106. *APD acc*

Icacina macrocarpa Oliv. in F.T.A. 1: 357 (1868); Hook. Ic. Pl. t. 2338.

Lavigeria salutaris *Pierre* (1892).

A large forest liane, cauliflorous; branchlets pubescent; flowers pinkish.

S. Nig.: Cross River area (Dec.) Holland 184! **Br. Cam.:** Likomba (Oct.) Mildbr. 10536! L. Barombi, Kumba (Mar.) Brenan 9467! **F. Po:** (fl. & fr. Dec.) Mann 43!

Also in **French Cameroons**, **Belgian Congo** and **Gabon**.

8. PYRENACANTHA

Wight in Hook. Bot. Misc. 2: 107 (1831); Sleumer in E. & P. Pflanzenfam. 20B: 384 (1942).

- 1 Leaves ovate, widely cordate and 3–5-nerved at base, acuminate at apex, 15–25 cm. long, 9.5–15.5 cm. broad, puberulous on the nerves beneath; petioles 3.5–9.5 cm. long; racemes in fascicles on the old wood, well below the leaves; male racemes up to 6 cm. long; tepals and stamens 3; fruits flattened-ellipsoid, about 2.5 cm. long and 1.3 cm. broad, rugose, minutely tomentellous [1. klaineana](#)
- Leaves more or less elliptic or lanceolate or obovate or oblanceolate, rounded to cuneate at base, or narrowed to a narrowly cordate or auriculate base, up to 9 cm. broad; petioles up to 3 cm. long; racemes or spikes amongst the leaves; tepals and stamens 4: [2](#)
- 2 Lower surface of leaves quite glabrous, except for a few scattered hairs on the midrib and nerves; leaves drying black, broadly elliptic or obovate-elliptic, obtuse or cuneate at base, shortly acuminate, 3.2–16 cm. long, 1.8–9 cm. broad; female flower spikes up to 10 cm. long; fruits oblong-ellipsoid, 2.5–35 cm. long, 1.5–1.8 cm. broad, puberulous [2. mangelotiana](#)
- Lower surface of leaves puberulous, pubescent; leaves drying green, gradually long-acuminate and mucronate: [3](#)
- 3 Leaves beneath densely puberulous with curly hairs, not presenting a “combed” appearance and not closely appressed; branchlets rusty-yellowish tomentellous; male flowers in very densely-flowered spikes up to 3 cm. long; female flowers in congested shortly pedunculate globose heads; fruits obovoid-ellipsoid, 1.1–1.4 cm. long, tomentose; leaves oblong-obovate, oblong or oblong-oblanceolate, rounded to slightly cordate at base, 7–19 cm. long, 3–8 cm. broad, margins denticulate or undulate-denticulate [3. staudtii](#)
- Leaves beneath with closely appressed straight hairs; branchlets appressed-puberulous; inflorescences slender racemes or spikes, not densely-flowered: [4](#)
- 4 Male flowers sessile; lower surface of leaves closely appressed-puberulous, the hairs well separated from one another; leaves narrowed to a closely cordate or auriculate base, elliptic, oblong-elliptic or oblong-lanceolate,

5–17 cm. long, 1·6–7 cm. broad, margins undulate; male spikes up to 8 cm. long; female spikes up to 10 cm. long; fruits flattened-ovoid, with a long beak, strongly reticulate, 1·6–2 cm. long, 1·1–1·5 cm. broad, puberulous [4. vogeliana](#)

Male flowers with pedicels about 1 mm. long; lower surface of leaves densely appressed-pubescent, the hairs having a “combed” appearance; leaves cuneate to narrowly cordate at base: **5**

- 5** Bract of each male flower borne on the inflorescence axis below the pedicel; leaves narrowly elliptic to lanceolate, margins subentire or undulate, 5–13 cm. long, 1·8–4·5 cm. broad; fruits flattened-ellipsoid, scarcely beaked, about 1·3 cm. long and 8 mm. broad [5. acuminata](#)

Bract of each male flower borne on the pedicel; leaves more or less elliptic, margins undulate, 6–14 cm. long, 2·5–6 cm. broad; fruits not known [6. sp. A](#)

1. *Pyrenacantha klaineana* Pierre ex Exell & Mendonça in Consp. Fl. Ang. 1: 345 (1951). *APD acc*

A forest liane reaching to the tree tops, with flowers and fruits on the stem in the understorey.

IV. C.: Guiglo to Tai, Cavally Basin (fr. Aug.) Miège Also in Gabon, Belgian Congo and Cabinda.

2. *Pyrenacantha mangelotiana* Miège in Bull. I.F.A.N. 17: 8, tt. 1 & 2 (1955).

APD: Synonym of Pyrenacantha glabrescens (Engl.) Engl.

A forest liane, with stems up to 100 ft. long and 1 in. diam.

Fr. G.: Sérédou Miège 2388. **Lib.:** Baldwin! **IV. C.:** Adiopodoumé (Mar.) Miège 1798! 1809! Abidjan (fr. Dec.) Chev. 17326! Sassandra Port (fr. May) Chev. 17063! 17971!

[Baldwin's specimen from Liberia is associated with a label bearing the following particulars: — “E. Prov., Tchien Dist., Bahtown, on Cess R.; procumbent, with red fruit; 11 Aug. 1947; Baldwin 8032.” As the note about the red fruit is quite inapplicable to the specimen which has only male flowers, I conclude that the label has been wrongly associated with the specimen. This species is close to *P. glabrescens* (Engl.) Engl. from Gabon.]

3. *Pyrenacantha staudtii* (Engl.) Engl. Pflanzenw. Afr. 3, 2: 262, 264 (1921); Sleumer in E. & P. Pflanzenfam. 20B: 385, fig. 115, A–D, excl. syn. *APD acc*

Chlamydocarya tenuis Engl.; Exell & Mendonça l.c.

Chlamydocarya staudtii Engl. (1898).

Pyrenacantha ugandensis Hutch. & Robyns (1924).

A shrub or small tree, with twisted petioles; flowers pale green.

S. Nig.: Thompson 511! Abeokuta Barter 3375! Ibadan (Apr.) Meikle 1435 Sapoba Kennedy 2200! 2217! 2342! Degema Talbot! Eket Talbot 3152! **Br. Cam.:** Banga (fr. Apr.) Ejiofor FHI 29338! Johann-Albrechtshöhe (Jan.) Staudt 787!

Also in **French Cameroons** and extending to **Uganda, Belgian Congo** and **Angola**.

4. *Pyrenacantha vogeliana* Baill. in Adansonia 10: 271 (1872); Chev. Bot. 128, partly. *APD acc*

APD: Synonym of Pyrenacantha acuminata Engl.

Pyrenacantha dinklagei Engl. (1909).

A slender liane with small yellow flowers and orange or red fruits.

S. L.: Yonibana (fl. buds Oct.) Thomas 4099! Mano (fr. Oct.) Deighton 2411! **Lib.:** Grand Bassa (fr. Mar., July) T. Vogell 13! Baldwin 11284! Ganta (fr. Feb.) Baldwin 11009! Nyaake, Webo (fr. June) Baldwin 6150! Kle (fr. Dec.) Baldwin 10637! **IV. C.:** Makougué (fr. Jan.) Chev. 16961! Sampleu to Ganhoué (fr. Apr.) Chev. 21155! Digoulé to Gouané (fr. May) Chev. 21511! Sanrou to Ouodé (fr. May) Chev. 21624! **G. C.:** Kwahu Prasu (Feb.) Vigne VH 1617! Kumasi (fr. Nov.) Andoh FH 2371! **S. Nig.:** Eribovhe waterside, Benin (fr. Nov.) Ujor FHI 23935!

Also in **French Cameroons, Gabon, Belgian Congo** and **Tanganyika**.

5. *Pyrenacantha acuminata* Engl. Bot. Jahrb. 24: 483 (1898). *APD acc*

APD: Synonym of Pyrenacantha sylvestris S. Moore

Chlamydocarya tenuis Engl. (1898).

Pyrenacantha vogeliana of Chev. Bot. 128, partly.

A slender liane with small green flowers and pinkish-orange fruits.

S. L.: Njala (Jan., May, June) Deighton 4622! 4768! 5021! Mabonto (July) Deighton 3267! **Lib.:** Ganta (May) Harley! Javajai (fr. Nov.) Baldwin 10258a! **Iv. C.:** Singrobo Miège! Sampleu to Ganhoué (fr. Apr.) Chev. 21156!

Also in **French Cameroons**, **Belgian Congo** and **Gabon**.

[The specimens from Angola cited as this species in Consp. Fl. Ang. 1: 345 are quite different and should be called *P. sylvestris* S. Moore.]

6. *Pyrenacantha* sp. A. *APD acc*

A slender liane with very small greenish flowers. Fruits not known.

G. C.: Agogo (May) Chipp 448! New Tafo (Oct.) Lovi WACRI 3936! Akumadan (June) Vigne FH 2565! Jimira F.R. Vigne FH 2969! **S. Nig.:** Oban Talbot 1509!

Possibly this is *P. undulata* Engl., see below.

1. *Pyrenacantha undulata* Engl. Pflanzenw. Afr. 3, 2: 262 (1921), without proper description; no specimen cited.

Possibly this is *P. sp. A*, see above.

Togo: Tove.

Imperfectly known species.

2. *Pyrenacantha* sp. B.

Leaves densely puberulous beneath; male flowers pedicellate, with bract on pedicel. Better material needed.

S. L.: riverside, 6 miles N. of Kundita, 3,600 ft. (Mar.) Sc. Elliot 5043!

Imperfectly known species.

3. *Pyrenacantha* sp. C.

Slender liane with bright orange very long-beaked fruits at the end of a peduncle 7 cm. long, leaves elliptic, cuneate at base, long-acuminate, drying blackish. Flowers not known; better material needed.

Br. Cam.: Mbalange to Ndifo, on Kumba — Victoria road (fr. Mar.) Onochie FHI 30856!

Imperfectly known species.

9. POLYCEPHALIUM

Engl. in E. & P. Pflanzenfam. Nachtr. 227 (1897); Sleumer in E. & P. Pflanzenfam. 20B: 385 (1942).

- 1 Stems and petioles long-spreading-pilose; undersurface of leaves at first densely covered with long pilose hairs, which remain on the nerves, but tend to come off the lamina and expose a dense indumentum of shorter hairs; leaves variable in shape, often 3-lobed, strongly 3-nerved at the base, apices of leaves and lobes acutely acuminate, up to 20 cm. long and 10 cm. broad; male and female flowers in pedunculate heads, solitary or a few together; fruits densely clustered, each covered by the enlarged persistent ovoid corolla, up to 2.5 cm. long
..... *capitatum*

Polycephalum capitatum (Baill.) Keay in Bull. Jard. Bot. Brux. 26: 184 (1956). *APD acc*

Chlamydocarya capitata Baill. in Adansonia 10: 277 (1872); Chev. Bot. 128; F.W.T.A., ed. 1, 1: 457; Sleumer l.c. 388.

Phytocrene sp. — F.T.A. 1: 359.

Synclisia scabrida of Chev. Bot. 17, partly (Chev. 20989 & 21157).

S. ferruginea of Chev. Fl. Viv. 1: 100, partly (Chev. 20989 & 21157).

A small liane with brown-pilose indumentum; flowers green; corolla in fruit orange.

Fr. G.: Lola to Nzo (Mar.) Chev. 20989! Foot of Mt. Nzo (Mar.) Chev. 21003 (partly)! Kaoulendougou, Nzo (fr. Mar.) Chev. 21057! **S. L.:** Freetown (fr. Jan., Mar.) Dalz. 986! Kirk 35! Njala (fr. Feb.) Deighton 3115! Rokupr (fl. Sept., fr.

Mar.) Jordan 408! Yungera (Jan.) Thomas 7368! Jepihun Smythe 90! **Lib.:** Dukwia R. (fr. Sept.) Cooper 363! Peatah (Oct.) Linder 1076! Zwedru, Tchien (fr. Aug.) Baldwin 7029! **Iv. C.:** Sampleu to Ganhoué (fr. Apr.) Chev. 21157!

10. CHLAMYDOCARYA

Baill. in Adansonia 10: 276 (1872), partly; Sleumer in E. & P. Pflanzenfam. 20B: 387 (1942), partly.

- 1 Corolla in fruit densely and closely setose-pubescent, elongated beyond the body of the fruit into an inflated cone 2.5–4 cm. long and 1.5–2.2 cm. broad at base; leaves sparingly pubescent beneath, elliptic, rounded or obtuse at base, broadly acuminate, 9.5–22 cm. long, 4–11 cm. broad, reticulate beneath, margins entire *1. macrocarpa*
- Corolla in fruit with spreading bristly hairs, elongated beyond the body of the fruit into a tube 4–8 cm. long and less than 1.5 cm. broad at the conical base; leaves densely to sparingly pilose on the nerves beneath, elliptic, oblong or obovate-elliptic, rounded or obtuse at base, broadly acuminate or acute at apex, 10–28 cm. long, 4–11.5 cm. broad, reticulate beneath, margins denticulate *2. thomsoniana*

1. *Chlamydocarya macrocarpa* A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 456 (1928); Kew Bull. 1929: 23; Chev. Bot. 128, name only. *APD acc*

A woody climber; male flowers in long catkins; corolla in fruits yellow or orange-red when ripe, borne on the stems.

Iv. C.: Dabou (fr. Feb.) Chev. 17216! Adiopodoumé (fl. July, fr. Oct.) Miège 1700! **G. C.:** Axim (fr. Jan., Feb.) Akpabla 822! Irvine 2186! Simpa (fr. Feb.) Vigne FH 2802! S. Scarp F.R. (fr. Feb.) Moor 235!

[Closely related to *C. soyauxii* Engl. from French Cameroons and Gabon.]

2. *Chlamydocarya thomsoniana* Baill. in Adansonia 10: 276 (1872); Sleumer in E. & P. Pflanzenfam. 20B: 388, fig. 114. *APD acc*

Chlamydocarya rostrata Bullock in Kew Bull. 1933: 469, partly (fruits only, the leaves are *Prevostea africana* Benth.).

A small liane with more or less bristly stems; male flowers in catkins; corolla in fruit orange to scarlet when ripe.

S. L.: Gorahun (young fr. Mar.) Deighton 4109! **Lib.:** Ganta (fr. Sept.) Baldwin 9299! **Iv. C.:** Mé (fr. Aug.) Miège 1856! **S. Nig.:** Okomu F.R. Benin (fr. Dec.) Brenan 8512! Usonigbe F.R., Benin (fr. Nov.) Keay FHI 25553! Sapoba Kennedy 2225! Oban Talbot 1355! 1422! Calabar Thomson 12! **Br. Cam.:** Mamfe (fr. Jan.) Maitland 1167 (partly)!

Also in **French Cameroons**, **Belgian Congo** and **Gabon**.

11. NEOSTACHYANTHUS

Exell & Mendonça in Bot. Soc. Brot., sér. 2, 25: 111 (1951).

Stachyanthus Engl. (1897) — Sleumer in E. & P. Pflanzenfam. 20B: 388 (1942); not of DC. (1836).

- 1 Anthers about 2.25 mm. long, about as long as the filaments; male flowers normally 6-merous, rarely 5-merous, petals about 4.75 mm. long, calyx about 1 mm. long; male spikes up to 25 cm. long, in fascicles from the stem below the leaves; leaves obovate-oblong, slightly cordate at base, long-acuminate, 12–21 cm. long, 4.3–9.2 cm. broad, with 6–9 main lateral nerves on each side of midrib; branchlets and petioles at first rather long bristly-pilose *1. zenkeri*
- Anthers about 1 mm. long, only about half as long as the filaments; male flowers 4–5-merous, petals about 3.25 mm. long, calyx about 0.7 mm. long; male racemes up to 28 cm. long, in fascicles from the stem below the leaves and solitary and slightly supra-axillary among the leaves; leaves elliptic-ovate to elliptic-obovate, narrowed to an obtuse, rounded or very slightly cordate base, acutely acuminate, 9–20 cm. long, 4–8.5 cm. broad, with 6–9 main lateral nerves on each side of midrib; branchlets and petioles sparingly pubescent or glabrous; fruits flattened-ellipsoid, about 1.2 cm. long, endocarp pitted *2. occidentalis*

1. *Neostachyanthus zenkeri* (Engl.) Exell & Mendonça in Bol. Soc. Brot, sér. 2, 25: 111 (1951).

APD: Synonym of *Stachyanthus zenkeri* Engl.

Stachyanthus zenkeri Engl. in E. & P. Pflanzenfam. Nachtr. 1: 227 (1897); Bot. Jahrb. 24: 487, t. 8, E–K; Sleumer in E. & P.

Pflanzenfam. 20B: 390, fig. 115, E–K.

A slender twining liane, in **forest**; flowers greenish-yellow, in pendulous, cauliflorous spikes.

S. Nig.: Akure F.R. (Oct.) Keay FHI 25453! Benin Prov. (Apr.) Fairbairn 46! **F. Po:** Mildbr. 6923.

Also in **French Cameroons**, **Belgian Congo** and **Cabinda**.

2. *Neostachyanthus occidentalis* Keay & Miège in Bull. Jard. Bot. Brux. 25: 271, figs. 47–51 (1956).

APD: *Synonym of Stachyanthus occidentalis (Keay & J. Miège) Boutique*

Desmostachys tenuifolius of Chev. Bot. 126 and of F.W.T.A., ed. 1, 1: 454, partly (Dah. record), not of Oliv.

A slender twining liane, in **forest**; flowers green with yellow anthers; ripe fruits orange; midrib and main nerves of leaves yellow or orange beneath.

Iv. C.: Singrobo (Oct.) Miège 2070! La Kassa (Oct.) Miège 2075. **G. C.:** Volta River F.R. (Apr.) Vigne FH 4377! Kwahu

Prasu (Feb.) Vigne FH 1620! New Tafo (Oct.) Lovi WACRI 3925! **Dah.:** Cabolé to Bassila, Savalou (May) Chev. 23794!

S. Nig.: Gambari Group F.R., Ibadan (fl. Mar., fr. Aug.) Keay FHI 22532! Onochie FHI 19148! Iguobazowa F.R., Benin (fr. Feb.) Onochie FHI 27143!

***Neostachyanthus nigeriensis* (S. Moore) Exell & Mendonça** l.c. (1951).

Stachyanthus nigeriensis S. Moore in J. Bot. 58: 221 (1920).

The type (Talbot s.n. from Oban) consists of a single inflorescence probably of *Neostachyanthus zenkeri* and a leafy shoot of *Prevostea heudelotii* (Bak. ex Oliv.) Hall f. (Convolvulaceae). The name *N. nigeriensis* is therefore rejected under Art. 76 of the International Code of Botanical Nomenclature (1952). Excluded species.

12. IODES

Blume — F.T.A. 1: 358; *Sleumer* in E. & P. Pflanzenfam. 20B: 377 (1942).

- 1** Leaves densely tomentose beneath, broadly ovate-elliptic, acutely and abruptly acuminate, rounded at base, 10–15 cm. long, 6–8 cm. broad, glabrous above; lateral nerves about 6 pairs; cymes axillary, about 6 cm. long, tomentellous; fruits broadly ovoid, 1.3 cm. long, coarsely reticulate, thinly tomentellous. [1. *kamerunensis*](#)

Leaves thinly pilose or nearly glabrous beneath:.....**2**

- 2** Branchlets and leaves thinly pilose with long weak hairs; leaves ovate, shortly acuminate, cordate at base, 5–9 cm. long, with prominent nerves beneath; cymes short, pilose; fruits broadly ellipsoid, 1.3 cm. long, coarsely reticulate and tomentellous [2. *klaineana*](#)

Branchlets very shortly pubescent or glabrescent; leaves glabrous**3**

- 3** Leaves not shining, very laxly reticulate, broadly ovate or ovate-rounded, abruptly acuminate, rounded or subcordate at base, 9–15 cm. long, up to 11 cm. broad; fruits broadly ovoid-ellipsoid, 8 mm. long, reticulate, glabrous [3. *africana*](#)

Leaves shining and closely reticulate, otherwise as in preceding[4. *liberica*](#)

1. *Iodes kamerunensis* Engl. Bot. Jahrb. 24: 481 (1898). *APD acc*

A **forest** liane with tendrils, covered with yellow-rusty tomentum.

Br. Cam.: Johann-Albrechtshöhe (Jan.) Staudt 557. Buea (Mar.) Maitland 491!

Also in **French Cameroons**.

2. *Iodes klaineana* Pierre in Bull. Soc. Linn. Paris 1321 (1897). *APD acc*

***Iodes laurentii* De Wild.** (1907).

***Iodes talbotii* Bak. f. ex Hutch. & Dalz.** F.W.T.A., ed. 1, 1: 457 (1928); Kew Bull. 1929: 23.

A **forest** liane with tendrils, spreadingly yellow-hairy.

S. Nig.: Oban Talbot 572!

Also in **Gabon**, **Belgian Congo** and **Angola**.

3. *Iodes africana* Welw. ex Oliv. F.T.A. 1: 358 (1868); Sleumer in E. & P. Pflanzenfam. 20B: 377, fig. 108, D, G–J. *APD acc*

A weak climber with tendrils and small yellow flowers in irregularly forked cymose panicles.

S. Nig.: Gambari Group F.R., Ibadan (Feb., Aug.) Jones FHI 20259! Keay & Meikle FHI 25663! Okomu F.R., Benin (Feb.) Akpabla 1116! Ejiofor FHI 19742! Calabar (Feb.) Mann 2322! Oban Talbot 1758! **Br. Cam.:** Victoria (fr. Feb.) Maitland 436!

Extends to **Belgian Congo** and **Angola**.

4. *Iodes liberica* Stapf in Johnston Lib. 2: 588 (1906); Chev. Bot. 129. *APD acc*

Iodes reticulata Stapf (1905), not of King (1895).

A slender climbing shrub with yellowish down branchlets and tendrils, yellow flowers and red fruits.

Fr. G.: Bérézia to Diorodougou, Toma (fl. & fr. Feb.) Chev. 20785! Nzérékoré (fl. Dec., fr. Feb., May, Dec.) Adam 3833! 5265! 7345! Baldwin 13284! Macenta (Feb., Dec.) Adam 4207! 7315! **S. L.:** nr. Fort Binger to Toula Chev. 19545!

Also in **Belgian Congo**.

SALVADORACEAE

Trees or shrubs, sometimes with axillary spines. Leaves opposite, simple; stipules minute. Flowers in dense axillary fascicles or panicles, hermaphrodite or dioecious, actinomorphic. Calyx 3–4-toothed. Petals 4, free or shortly united, imbricate. Stamens 4, inserted on or near the base of the petals and alternate with them; anthers 2-celled, opening lengthwise. Disk absent or of separate glands. Ovary superior, 1–2-celled; style short. Ovules 1–2, erect. Fruit a berry or drupe. Seed erect, without endosperm; embryo with thick cordate cotyledons.

A small family mainly in tropical Africa and the Mascarene Islands.

SALVADORA

Linn. — F.T.A. 4, 1 23; Sleumer in E. & P. Pflanzenfam. 20B: 238 (1942).

Leaves opposite, entire; flowers small, subunisexual, paniculate; petals 4, united into a short tube; stamens 4; ovary 1-celled ovule 1, basal, erect.

- 1 Branches light greyish green, glabrous; leaves lanceolate to elliptic, mucronate, rounded to subacute at base, 3–7 cm. long, 1.5–3 cm. broad, rigidly chartaceous, grey when dry, glabrous, the few lateral nerves equally prominent on both sides; petiole nearly 1 cm. long; panicles divaricate, lax; calyx shallowly lobed; petals 1.5 mm. long; berry subglobose, about 6 mm. diam. *persica*

Salvadora persica Linn. — F.T.A. 4, 1: 23; Chev. Bot. 399; Sleumer l.c., fig. 74, A & G–J; Aubrév. Fl. For. Soud.-Guin. 352, t. 73, 7. *APD acc*

A shrub or small tree, up to 30 ft. high; leaves glaucous green; flowers yellowish; fruits red or purplish when ripe.

Maur.: Tichoten Charles in Hb. Chev. 28893. **Sen.:** R. Senegal Perrottet 797! Richard Tol Döllinger 75! **Fr. Sud.:** Kabarah (Aug.) Chev. 1357! Timbuktu (July) Chev. 1201! Niafounké Hagerup 89! **Fr. Nig.:** Agadès De Wailly 4935! **N. Nig.:** shores of L. Chad (fl. & fr. Dec., Jan.) Elliott 146! Foster 94! E. Vogel! Kukawa (fl. & fr. May) Rosevear FHI 26607! Bornu (Jan., Feb.) Talbot!

Extends throughout the dry regions of tropical Africa to **Egypt**, Palestine, **Arabia** and India and Ceylon.

OLACACEAE

Trees, shrubs or climbers. Leaves alternate, simple; stipules absent. Flowers actinomorphic, usually hermaphrodite and small. Calyx-lobes imbricate or open in bud. Petals free or variously connate, valvate. Disk often present, usually annular. Stamens free or rarely united into a column, the same number as and opposite the petals or fewer or more numerous, some often without anthers; anthers 2-celled, opening by slits or pore-like slits. Ovary superior or slightly immersed in the disk, 1–3-celled; style 1, with a 2–5-lobed stigma; ovules 1–5 from the apex of a central placenta in a 1-celled ovary, or pendulous from the inner angle of a 2- or more-celled ovary. Fruit drupaceous, sometimes inferior by accrescence of the calyx or receptacle. Seeds with copious endosperm and small or medium-sized straight embryo.

Confined to the tropics and subtropics.

- 1 Stamens free from each other:2
 Stamens united into a column; calyx strongly accrescent in fruit:9
- 2 Stamens (and staminodes if present) more numerous than the petals; fruit superior, sometimes enveloped by the accrescent calyx:3
 Stamens the same number as the petals; fruit wholly or partially enclosed by the accrescent receptacle; flowers in axillary clusters or very short racemes; calyx not accrescent in fruit:7
- 3 Main lateral nerves of leaves continued to the margin; stamens 3–4 times as numerous as the petals; flowers in panicles [1. Coula](#)
 Main lateral nerves looped or ending within the margin; stamens (and staminodes if present) about twice as numerous as the petals; flowers in short racemes or fascicles:4
- 4 Flowers shortly pedicellate in few-flowered axillary fascicles; calyx much enlarged in fruit and deeply lobed [Heisteria](#)
 Flowers in short racemes; calyx not enlarged in fruit, or if enlarged then truncate:5
- 5 Branchlets usually armed with spines; staminodes absent; flowers in umbellate racemes; petals densely villous within [3. Ximenia](#)
 Branchlets without spines; flowers in narrow racemes; staminodes present or absent; petals glabrous within or pilose about the middle:6
- 6 Calyx obvious, disciform in fruit or strongly accrescent and enveloping the fruit; petals glabrous within; staminodes present [4. Olax](#)
 Calyx very small, obsolete in fruit; petals pilose about the middle within; staminodes absent .. [5. Ptychopetalum](#)
- 7 Flowers 5-merous; anthers not e receptaclefused to the petals:8
 Flowers 4-merous; anthers fused to the petals for 1/3 to 1/2 their length [8. Strombosiopsis](#)
- 8 Fruit completely enclosed by th [6. Strombosia](#)
 Fruit only partially enclosed by the receptacle whose margin makes a ridge around the fruit just above its middle [7. Diogoa](#)
- 9 Calyx not splitting, much expanded in fruit; flowers in very short axillary racemes, dioecious; a shrub or small tree [9. Aptandra](#)
 Calyx in fruit at length splitting into 2–3 segments, not expanded, at first enveloping the fruit; flowers in paniculate clusters, hermaphrodite; a large tree [10. Ongoeka](#)

1. COULA

Baill. — F.T.A. 1: 351; Sleumer in E. & P. Pflanzenfam. 16B: 12 (1935).

- 1 Leaves elliptic to elongate-oblong-elliptic, long-caudate-acuminate, shortly cuneate at base, up to 30 cm. long and 9 cm. broad, papery, often rust-coloured, laxly gland-dotted beneath, with up to 14 pairs of lateral nerves and numerous faint forked parallel tertiary nerves; petiole up to 2.5 cm. long, rusty-puberulous; flowers in short rusty-puberulous panicles; calyx rim-like; petals small, thick, valvate, becoming glabrous; fruits ellipsoid-globose, 4 cm. long, with a woody shell about 6 mm. thick, smooth [edulis](#)

Coula edulis *Baill.* — F.T.A. 1: 351; Sleumer l.c., fig. 4; Aubrév. Fl. For. C. Iv. 1: 86, t. 26; Louis & Léonard in Fl. Congo Belge 1: 251, t. 23. *APD acc*

A forest tree, to 100 ft. high, rusty-pubescent on the young parts, with coriaceous leaves and walnut-like fruits.

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

2. HEISTERIA

Jacq. — F.T.A. 1: 345; Sleumer in E. & P. Pflanzenfam. 16B: 16 (1935).

Phanerocalyx *S. Moore* (1921).

- 1 Branchlets narrowly winged, glabrous; leaves more or less oblong, obtusely caudate-acuminate, 8–12 cm. long, 3–6 cm. broad, glabrous, with about 6 pairs of lateral nerves and very laxly reticulate tertiary nerves; flowers at first very small, 2–3, axillary, very shortly pedicellate, usually only one developing into fruit, with the calyx much enlarged and divided nearly to the base into 5 more or less ovate spreading segments; fruits broadly ellipsoid to globose, 1.3–2 cm. long, glabrous [1. parvifolia](#)
- Branchlets, etc., as above, but calyx very broad in fruit and very shortly lobed, broader than long ... [2. zimmereri](#)

1. **Heisteria parvifolia** *Sm.* —F.T.A. 1: 346; Chev. Bot. 123; Sleumer in E. & P. Pflanzenfam. 16B: 16, fig. 6; Louis & Léonard in Fl. Congo Belge 1: 254. **APD acc**

Phanerocalyx talbotiorum *S. Moore* (1921).

Heisteria elegans *A. Chev.* Bot. 123, name only.

A glabrous shrub or small tree up to 40 ft. high, with small greenish-white or yellowish flowers; calyx enlarged, persistent, deep red in fruit; fruit itself greyish-white; **in forest**.

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Belgian Congo**, **Angola**, **Principe** and **S. Tomé**.

2. **Heisteria zimmereri** *Engl.* in Notizbl. Bot. Gart. Berl. 2: 288 (1899); Pflanzenw. Afr. 3, 1: 85, fig. 50. **APD acc**

A small spreading tree.

(?)**Br. Cam.:** Barombi Preuss 274!

Also in **French Cameroons**, **Gabon**, **Cabinda** and **Belgian Congo**.

[Preuss 274 has as locality “Barombi am ufer des Kribi Fluss”; the Kribi R. is well within the **French Cameroons**, a long way from Barombi (i.e. Kumba), so the record of this species from our area is doubtful.]

- Heisteria winkleri** *Engl.* Bot. Jahrb. 43: 169 (1909).

Quoted in the first edition as a synonym of *H. parvifolia* Sm., is *Diospyros physocalycina* Gürke (Ebenaceae); see Mildbr. in Notizbl. Bot. Gart. Berl. 9: 1052 (1926). The type specimen of *H. winkleri* Engl. is Winkler 758 from Victoria, British Cameroons. Excluded species.

3. XIMENIA

Linn. — F.T.A. 1: 346; Sleumer in E. & P. Pflanzenfam. 16B: 22 (1935).

- 1 Branchlets often armed with rigid axillary spines, flexuous; leaves narrowly elliptic, emarginate, 3–7 cm. long, up to 3 cm. broad, glabrous, obscurely nerved; flowers in axillary umbellate racemes; pedicels about 5 mm. long; sepals 4, ovate-triangular; petals 4, oblong-linear, bearded inside; fruit superior, ellipsoid, about 3 cm. long, glabrous [americana](#)

Ximenia americana *Linn.* — F.T.A. 1: 346; Sleumer l.c. 23, fig. 11; Louis & Léonard in Fl. Congo Belge 1: 256; Aubrév. Fl. For. Soud.-Guin. 354, t. 73, 4–6. *APD acc*

APD: Synonym of Olax gossweileri Exell & Mendonça

A glabrous shrub or small tree, with white fragrant flowers and a yellow plum-like fruit; **common in the savannah regions but also near the coast.**

Widespread in the tropics.

4. OLAX

Linn. — F.T.A. 1: 348; Sleumer in E. & P. Pflanzenfam. 16B: 24 (1935).

- 1 Calyx disciform in fruit, not strongly accrescent and not enveloping the whole fruit: **2**
 Calyx strongly accrescent and completely surrounding the fruit: **3**
- 2 Fertile stamens 3 (–4), staminodes 5–6; flowers 2.5–3 mm. long, in axillary racemes 1–2.5 cm. long; fruits globose, 6–8 mm. diam.; leaves ovate-elliptic to oblong-elliptic or lanceolate, obtuse or rounded at base, very gradually long-acuminate, 7.5–16 cm. long, 3–6 (–8) cm. broad [1. gambecola](#)
- Fertile stamens 5–6, staminodes 3; flowers about 5 mm. long, on numerous short lateral often leafy branchlets; fruits depressed-globose, 11–15 mm. diam.; leaves elongate-elliptic to elliptic-lanceolate, obtuse at base, gradually acuminate, mostly less than 7.5 cm. long and 2.5 cm. broad, but sometimes up to 10 cm. long and 3.8 cm. broad [2. subscorpioidea](#)
- 3 Fertile stamens 3 (–4), staminodes 4–5; flowers 6–7 mm. long, in axillary racemes 1–2 cm. long; fruits (including the calyx) depressed-globose, about 2 cm. diam. and 1.5 cm. long; leaves lanceolate to ovate-lanceolate or elliptic, 6–15 cm. long, 1.5–6.5 (–8) cm. broad, thinly coriaceous, with about 5–6 main lateral nerves on each side of midrib, looped, strongly impressed above, margin sometimes lobulate towards the apex [3. mannii](#)
- Fertile stamens (5–) 6, staminodes 3 (–4); flowers about 4 mm. long, in axillary racemes 1–2.5 (–3.5) cm. long; fruits (including the calyx) subglobose, about 2 cm. diam., leaves elliptic to broadly oblong, rounded or cuneate at base, abruptly long-acuminate, 7–22 cm. long, 3–10 cm. broad, papery, with about 8 main lateral nerves on each side of midrib, looped, impressed above [4. latifolia](#)

1. Olax gambecola *Baill.* in Adansonia 3: 121 (1882–63); F.T.A. 1: 349. *APD acc*

APD: Synonym of Olax subscorpioidea Oliv. var. subscorpioidea

Olax viridis *Oliv.* F.T.A. 1: 349 (1868); Chev. Bot. 125; F.W.T.A., ed. 1, 1: 460; Sleumer in E. & P. Pflanzenfam. 16B: 27; Louis & Léonard in Fl. Congo Belge 1: 258, t. 24 & fig. 1.

Alsodeiopsis glaberrima *Engl. ex Hutch. & Dalz.*, F.W.T.A., ed. 1, 1: 455 (1928).

Olax pyramidata *A. Chev.* Bot. 124, name only.

A glabrous low shrub, up to 4 ft. high, rarely more; flowers white; ripe fruits red; **in forest, especially by streams.**

2. *Ptychopetalum petiolatum* Oliv. F.T.A. 1: 347 (1868); Hook. Ic. Pl. t. 2330. *APD acc*

A glabrous **forest** shrub or small tree, 12–35 ft. high.

S. Nig.: Oban Talbot 1747! **Br. Cam.:** Banga, S. Bakundu F.R. (Mar.) Brenan 9443!

Also in **French Cameroons** and **Spanish Guinea**.

6. STROMBOSIA

Blume — F.T.A. 1: 350; Sleumer in E. & P. Pflanzenfam. 16B: 21 (1935).

- 1** Veins between the main lateral nerves close (0.5–1 mm. apart), more or less parallel and conspicuous beneath; pedicels 1–3 mm. long, without bracteoles; petals 2–3 mm. long; disk 5-lobed, forming a cap around the top of the ovary; branchlets terete; petioles 1–3 cm. long; leaves ovate-elliptic to oblong, cuneate to obtuse at base, acute or shortly acuminate at apex, 7–30 cm. long, 3–16 cm. broad, with 4–8 main lateral nerves on each side of midrib; fruits ovoid or ellipsoid about 1.7 cm. long and 1.2 cm. diam. [1. grandifolia](#)

Veins between the main lateral nerves more than 1 mm. apart, distinct or indistinct; petals 3–5 mm. long:..... **2**

- 2** Pedicels without bracteoles; leaves without pustules: **3**

Pedicels with small bracteoles; disk 5-lobed, forming a cap around the top of the ovary; branchlets slightly ridged or subterete; leaves often with minute pustules on the surfaces: **4**

- 3** Branchlets subterete and slightly ridged; petioles up to 1.3 cm. long; petals about 2.5 mm. long; pedicels about 1.5 mm. long, elongating in fruit; leaves narrowly elliptic, obtuse at base, gradually rather long-acuminate, 5–15 cm. long, 1.5–5.5 cm. broad, with 5–7 main lateral nerves on each side of midrib, venation obscure; fruits obovoid-ellipsoid, 2–2.5 cm. long, 1.2–1.7 cm. diam. [2. zenkeri](#)

Branchlets strongly angled; petioles 1–3 cm. long; petals 3–5 mm. long; pedicels 3–5 mm. long; disk forming an elongated cone about 1 mm. long at the top of the ovary; leaves ovate, elliptic or oblong, obtuse or rounded at base, rounded or acute at apex, 6–20 cm. long, 3–13 cm. broad, with 5–8 main lateral nerves on each side of midrib, venation distinct; fruits obconical, 2–2.5 cm. long, 1.5–2.5 cm. diam. [3. scheffleri](#)

- 4** Petals about 3 mm. long; branchlets slightly ridged: **5**

Petals 4–5 mm. long; branchlets subterete; leaves oblong, ovate-oblong or elliptic-oblong, obtuse or rounded at base, slightly acuminate, 4.5–10.5 (–13) cm. long, 2.1–4.5 (–5.3) cm. broad, with 4–6 main lateral nerves on each side of midrib, lower surface matt when dry, with indistinct venation, usually with abundant minute pustules; petioles 1–1.5 cm. long [5. pustulata](#)

- 5** Leaves more or less shining when dry, not usually with pustules, venation on lower surface distinct; main lateral nerves 4–6 (–7) on each side of midrib; leaves elliptic, ovate-elliptic or oblong-elliptic; cuneate to obtuse or rounded at base, shortly acuminate, 5–15 cm. long, 2.5–7 (–8) cm. broad; petioles 0.7–1.2 (–2) cm. long .. [4a. glaucescens var. lucida](#)

Leaves matt when dry, usually with pustules, venation on lower surface indistinct; main lateral nerves (5–) 7–10 on each side of midrib; leaves oblong, ovate or elliptic, obtuse or rounded at base, obtuse or shortly and obtusely acuminate at apex, 6–19 cm. long, 3–8 cm. broad; petiole 1–2.5 cm. long [4. glaucescens var. glaucescens](#)

- 1. *Strombosia grandifolia* Hook. f. ex Benth.** — F.T.A. 1: 350; F.W.T.A., ed. 1, 1: 460, in part only; Sleumer in E. & P. Pflanzenfam. 16B: 22, excl. fig. 10; Louis & Léonard in Fl. Congo Belge 1: 268. *APD acc*

APD: Synonym of Strombosia scheffleri Engl.

Lavalleopsis grandifolia (Hook. f. ex Benth.) Van Tiegh. ex Engl. (1897).

L. densivenia Engl. (1897), name only.

An understorey tree, to 40 ft. (to 80 ft. fide Louis & Léonard l.c.) high, with short bole and wide spreading crown of dense shining foliage; slash revealing red sapwood; flowers cream; **in forest**.

Dah.: Boukoutou forests, Sakété (Jan.) Chev. 22871! **S. Nig.:** Akure F.R. (young fr. Apr.) Symington FHI 3398! Okomu F.R. (Jan.) Breanan & Richards 8843! Eket Talbot 3155! Oban Talbot! Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Cabinda** and **Belgian Congo**.

2. *Strombosia zenkeri* Engl. Bot. Jahrb. 43: 167 (1909). *APD acc*

A **forest** tree, to 40 ft. high; flowers pale green.

S. Nig.: Calabar (fl. & fr. Mar.) Brenan 9227! Smith 45b! Stubbs Creek F.R. Onochie FHI 32905!

Also in **French Cameroons**.

3. *Strombosia scheffleri* Engl. in Notizbl. Bot. Gart. Berl. 5, App. 21: 4, fig. A–C (1909); Louis & Léonard l.c. 1: 270. *APD acc*

Strombosia grandifolia of F.W.T.A., ed. 1, 1: 460, partly; of Sleumer l.c. fig. 10; not of Hook. f. ex Benth.

A **forest** tree, to 100 ft. high; flowers greenish-yellow or -white.

S. Nig.: Cross River North F.R., Ikom (young fr. June) Latilo FHI 31826! **Br. Cam.:** Buea (fl. Dec., young fr. Jan.) Maitland 567! Migeod 255! Bamenda (fr. Mar.) Johnstone 96/31! **F. Po:** Moka, 4,000–4,500 ft. (young fr. Feb.) Exell 846!

Also in **Uganda**, **Kenya**, **Tanganyika**, **Nyasaland**, **Belgian Congo** and **Angola**.

4. *Strombosia glaucescens* Engl. var. *glaucescens* — Bot. Jahrb. 43: 167 (1909); Louis & Léonard l.c. 267. *APD acc*

APD: Synonym of Strombosia pustulata Oliv. var. pustulata

A **forest** tree, up to 150 ft. high, with straight bole.

S. Nig.: frequent in neighbourhood of gully, Compt. 55, Okomu F.R., Benin Onochie in Hb. Brenan 9190! [The only specimen from our area is sterile and so its identification is open to some doubt.].

Also in **French Cameroons**, **Cabinda** and **Belgian Congo**.

4a. *Strombosia glaucescens* var. *lucida* J. Léonard in Bull. Jard. Bot. Brux. 18: 148 (1947); Fl. Congo Belge 1: 268.

APD: Synonym of Strombosia pustulata var. lucida (J. Léonard) Villiers

Strombosia pustulata Oliv. in Hook. Ic. Pl. t. 2299 (1894), partly (Sc. Elliot 4733, on which are based the description and drawing of the fruits); Chev. Bot. 125; F.W.T.A., ed. 1, 1: 460, partly; Aubrév. Fl. For. C. Iv. 1: 84, t. 25.

A **forest** tree, up to 80 ft. high, with straight bole; flowers white; ripe fruit blackish purple.

S. L.: Kambia (fr. Jan.) Sc. Elliot 4733! Njala (Sept.) Deighton 5173! Momenga, Kori (Oct.) Deighton 6133! Kai, Fogbo (Sept.) Tindall 37! **Lib.:** Dukwia R. (Mar.) Cooper 178! 269! Also in **Belgian Congo**.

[Possibly specifically distinct from var. *glaucescens*, but further study is needed to determine how far it is distinct from some other species in the French Cameroons and Gabon.]

5. *Strombosia pustulata* Oliv. in Hook. Ic. Pl. t. 2299 (1894), excl. Sc. Elliot 4733 and description and

drawing of fruits which are *S. glaucescens* var. *lucida*; F.W.T.A., ed. 1, 1: 460, in part only (Nigerian spec.); Kennedy For. Fl. S. Nig. 145. *APD acc*

A forest tree, to 70 ft. high, with straight bole; flowers whitish.

S. Nig.: near Lagos Rowland! Akure F.R. (young fr. Nov.) Keay FHI 25533! Nikrowa, Okomu F.R. (fr. Dec.) Brenan 8441! 8441a! Sapoba (Oct.) Kennedy 408! 1623! Ohsu F.R. Hide 10/38!

Also (?) in French Cameroons.

7. DIOGOA

Exell & Mendonça in Bol. Soc. Brot., sér. 2, 25: 109 (1951).

- 1 A glabrous tree, to 30 m. high; petioles 1·5–3·5 cm. long; leaves membranous, more or less oblong-lanceolate, cuneate or obtuse at base, gradually long-acuminate, 15–40 cm. long, 4–12 cm. broad; flowers 5-merous, in short congested axillary racemes; petals 5–6 mm. long, 2–3 mm. broad; anthers free from the petals; fruits subglobose, partially embedded in the accrescent receptacle whose margin makes a ridge around the fruit just above its middle, about 4–5 cm. diam. *zenkeri*

Diogoia zenkeri (*Engl.*) *Exell & Mendonça* l.c. t. 3 (1951); Consp. Fl. Ang. 1: 336, t. 17. *APD acc*

Strombosiosis zenkeri *Engl.* (1909) — Louis & Léonard in Fl. Congo Belge 1 272, t. 26.

Strombosia retivenia *S. Moore* (1920).

S. grandifolia of F.W.T.A., ed. 1, 1: 460, partly.

A forest tree; flowers cream.

S. Nig.: Okomu F.R., Benin (Feb.) Brenan 8996! 8996a! Richards 3294! Oban Talbot 1403! 1465! **Br. Cam.:** Ebonji, Kumba (fr. May) Olorunfemi FHI 30594! R. Metem Wum (fr. June) Ujor FHI 29261!

Also in French Cameroons, Gabon, Cabinda and Belgian Congo.

8. STROMBOSIOPSIS

Engl. in E. & P. Pflanzenfam. Nachtr. 1: 148 (1897); *Exell & Mendonça* in Bol. Soc. Brot., sér. 2, 25: 109 (1951).

- 1 A glabrous tree, to 30 m. high; petioles 1–2 cm. long; leaves coriaceous, ovate-elliptic or oblong to oblong-lanceolate or lanceolate, acute or rounded at base, shortly acuminate, 5–25 cm. long, 2·5–10 cm. broad; flowers 4-merous, in short congested axillary racemes, 0·5–1 cm. long; petals 4–5 mm. long, about 1·5 mm. broad; anthers partially fused to the petals; fruits completely embedded in the accrescent receptacle, ellipsoid, 2·5–3·5 cm. long, 2–3 cm. diam. *tetrandra*

Strombosiosis tetrandra *Engl.* l.c. (1897); Sleumer in E. & P. Pflanzenfam. 16B: 19, fig. 8; Louis & Léonard in Fl. Congo Belge 1: 271; *Exell & Mendonça* in Consp. Fl. Ang. 1; 337. *APD acc*

A forest tree, exuding red sap when slashed; flowers cream.

S. Nig.: Oban Talbot! Calabar (Mar.) Brenan 9226! Smith 45a! Aking, Calabar (young fr. Apr.) Ejiofor FHI 21888! Aboabam, Ikom Div. (fr. May) Jones & Onochie FHI 18713! **Br. Cam.:** Likomba Mildbr. 10541!

Also in French Cameroons, Spanish Guinea, Gabon, Cabinda and Belgian Congo.

9. APTANDRA

Miers in Ann. & Mag. Nat. Hist., ser. 2, 7: 201 (1851); Sleumer in E. & P. Pflanzenfam. 16B: 28 (1935). *APD acc*

- 1 Branchlets terete, glabrous; leaves oblong-elliptic, acutely acuminate, shortly cuneate at base, 6–10 cm. long, 3–5 cm. broad, glabrous and with very obscure nerves beneath; petiole up to 1 cm. long; flowers in very short axillary racemes; pedicels up to 8 mm. long, crowded; calyx very small, undulate; petals about 3 mm. long,

becoming reflexed in the upper part; fruits ellipsoid-ovoid, 2.5 cm. long, black, shining, surrounded by the spreading much-enlarged coloured entire calyx up to 8 cm. in diam. [zenkeri](#)

Aptandra zenkeri *Engl.* in E. & P. Pflanzenfam. Nachtr. 1: 147 (1897); Sleumer l.c. 29, fig. 16; Louis & Léonard in Fl. Congo Belge 1: 275. *APD acc*

A dioecious shrub, or small tree up to 40 ft. high, with green branchlets and small greenish-white flowers; enlarged calyx pink, waxy in texture; **in forest**.

G. C.: Amentia (Apr.) Vigne FH 2896! Bobiri F.R. (July) Andoh EH 5544! Kwahu Prasu (Feb.) Vigne FH 1604! Pra River Station (fr. Feb.) Vigne FH 1034! **S. Nig.:** Lagos (fr. Feb.) Millen 25! Punch! Ajilite Millen 163! Agege (fr. Nov.) Baldwin 13707! Ibadan-Ijebu Ode road (fr. Mar.) Meikle 1251!

Also in **French Cameroons**, **Spanish Guinea**, **Belgian Congo** and **Angola**.

10. ONGOKEA

Pierre in Bull. Soc. Linn. Paris 2: 1313 (1897); Sleumer in E. & P. Pflanzenfam. 16B: 30 (1935).

- 1 Branchlets compressed or slightly winged; leaves broadly oblong-elliptic, obtusely acuminate, 4–7 cm. long, 2.5–3.5 cm. broad, with obscure nerves, minutely papillose beneath; flowers in panicle clusters, small, numerous; pedicels filiform, about 3 mm. long; calyx saucer-shaped, undulate; petals at first connivent, about 3 mm. long, with oblong claw and ovate limb; fruit globose, about 2.5 cm. diam., closely invested by the persistent enlarged calyx, which ruptures into 3 segments [gore](#)

Ongokea gore (*Hua*) *Pierre* l.c. 1314 (1897); Sleumer l.c. fig. 17, D–H; Aubrév Fl. For. C. Iv. 1: 84, t. 24; Louis & Léonard in Fl. Congo Belge 1: 276, t. 27. *APD acc*

Aptandra gore *Hua* (1895).

Ongokea klaineana *Pierre* (1897) — Chev. Bot. 122; F.W.T.A., ed. 1, 1: 461; Kennedy For. Fl. S. Nig. 146.

Ongokea kamerunensis *Engl.* (1909) — Sleumer l.c. fig. 17, A–C.

A glabrous **forest** tree, up to 125 ft. high, with straight cylindrical bole without buttresses; flowers white; fruit yellow.

S. L.: Njala (May) Deighton 3953! 3971! **Iv. C.:** Bouroukrou (Dec., Jan.) Chev. 19128! Yapo (fr. Oct.) Chev. 22330! Abidjan Aubrév. 107! **G. C.:** Atieku (May) Vigne FH 1946! Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Belgian Congo** and **Angola**.

PENTADIPLANDRACEAE

Arborescent shrubs or climbers. Leaves exstipulate, alternate, simple, penni-nerved. Flowers dioecious, racemose; racemes short, axillary; bracts small, subulate. Sepals 5, free, lanceolate, imbricate. Petals 5, scale-like, thicker and loosely connivent at the base, with lanceolate free limbs. Stamens 9–13, inserted on a short stout androgynophore; filaments free, filiform; anthers basifixed, 2-celled. Rudimentary ovary present, short, 3–5-celled, with 2 series of ovules in each cell. Staminodes about 10 from the top of the gynophore in the female flower. Ovary superior, at the top of the thick gynophore, 4–5-celled, with numerous axile 2–3-seriate ovules; style 4–5-fid at the apex. Fruit a rounded berry; seeds small, numerous, immersed in pulp.

PENTADIPLANDRA

Baill. in Bull. Soc. Linn. Paris 1: 611 (1886). *Cercopetalum* Gilg (1897).

- 1 Arborescent shrub or climber; branchlets closely sulcate, glabrous; leaves oblong-obovate, obliquely cuspidate-acuminate, shortly cuneate at base, 8–12 cm. long, 3–4 cm. broad, glabrous and closely reticulate on both surfaces, venation elevated on both sides; lateral nerves 6–8 pairs, looped; petiole 5–6 mm. long; flowers about 1.5 cm. long, in short axillary and terminal racemes; pedicels 0.5–1 cm. long; sepals lanceolate, 5 mm. long, very minutely puberulous; female flower with about 10 filiform staminodes; ovary 4–5-celled, glabrous; fruit

ovoid-globose, about 3-5 cm. long[brazzeana](#)

Pentadiplandra brazzeana *Baill.* l.c. (1886); Pax & K. Hoffm. in E. & P. Pflanzenfam. 17B: 206, fig. 114 (1936); Hauman & Wilczek in Fl. Congo Belge 2: 480. *APD acc*

Cercopetalum dasyanthum *Gilg* in Engl. Bot. Jahrb. 24: 308, t. 3 (1897); op. cit. 53: 266.

Erect or half scandent; flowers conspicuous, petals white, spotted red or bluish towards the tips.

Recorded from Dschang, Ndonge and Semukina in the French Cameroons, just outside the area of our Flora; very likely to be found in the British Cameroons. Extends through French Cameroons to **Belgian Congo**.

OPILIACEAE

Trees, shrubs or woody climbers. Leaves alternate, simple; stipules absent. Flowers mostly hermaphrodite. Calyx minute. Petals conspicuous in bud, 4–5, free or more or less united, valvate. Stamens as many as the petals and opposite to them, free or united to the base of the petals; anthers 2-celled, opening lengthwise by slits. Disk-glands alternating with the stamens. Ovary superior or semi-inferior, 1-celled; stigma sessile or style slender; ovule solitary, pendulous or erect. Fruit drupaceous, often fleshy. Seeds with copious endosperm and rather small embryo.

A small family formerly included in the Olacaceae; confined to the tropics; rare in America.

Mostly with very long slender racemes.

- 1 Racemes much shorter than the leaves, clothed in bud with broad imbricate scales, the latter caducous; disk 5-partite[1. Opilia](#)
- Racemes much longer than the leaves, not clothed with scales when young; disk entire[2. Urobotrya](#)

1. OPILIA

Roxb. — F.T.A. 1: 352; Sleumer in E. & P. Pflanzenfam. 16B: 38 (1935), excl. subgen. Urobotrya.

- 1 Branchlets slightly flexuous, glabrous; leaves alternate, oblong to obovate-oblongate, acutely acuminate, cuneate at base, 6–12 cm. long, 3–5 cm. broad, glabrous, with about 5 pairs of prominent lateral nerves; racemes at first covered with broad imbricate bracts and shortly catkin-like, at length slender and about 3–4 cm. long; pedicels fasciculate, 2 mm. long, puberulous; fruits ellipsoid, 2–2.5 cm. long, finely puberulous[celtidifolia](#)

Opilia celtidifolia (*Guill. & Perr.*) *Endl. ex Walp.* Rep. 1: 377 (1842); Louis & Léonard 1: 282.

APD: Synonym of Opilia amentacea Roxb.

Groutia celtidifolia *Guill. & Perr.* Fl. Sen. 1: 101, t. 22 (1831).

Opilia amentacea of F.T.A. 1: 352; of Chev. Bot. 126; of Aubrév. Fl. For. Soud.-Guin. 366, t. 73, 8–9.

A woody climber, sometimes suberect with straight branches; flowers small, greenish-white or yellowish, fragrant; **especially common in fringing forest in the savannah regions.**

APD: Synonym of Urobotrya congolana (*Baill.*) *Hiepko subsp. congolana*

Opilia minutiflora (*Stapf*) *Engl.* (1909) — Sleumer l.c.

An erect forest shrub, to 8 ft. high, with pendulous racemes; flowers green except for the conspicuous long white filaments.

S. Nig.: Eket Talbot! Oban Talbot! Afi River F.R., Ikom (Dec.) Keay FHI 28196! 28220! 28255! **Br. Cam.:** Victoria (Jan.) Kalbreyer 6! Buea to Mayuko (fl. & fr. Feb.) Dalz. 8244! Bimbria (fr. May) Maitland 707!

[*Opilia macrocarpa* Pierre & Engl. and other species from the French Cameroons, Gabon and Spanish Guinea are probably not distinct.]

MEDUSANDRACEAE

Trees or shrubs. Leaves alternate, simple, entire or crenate; stipules present, sometimes small and early caducous. Flowers hermaphrodite, racemose or spicate, actinomorphic, hypogynous or perigynous. Sepals 5, open or imbricate in bud, free, or united only at the base. Petals 5, free, imbricate in bud. Stamens numerous, or 5 fertile opposite the petals alternating with 5 staminodes, free from each other; anthers 4-celled, opening laterally. Disk present or absent. Ovary superior, syncarpous, 1-celled, with a central column; ovules 6–8, pendulous from the apex of the column, anatropous; styles 3 (–4), free. Fruit with persistent calyx, capsular, dehiscing into 3 (–4) valves, or by the cohesion of 2 valves appearing 2-valved. Seed solitary in each fruit, with copious endosperm and small straight embryo.

A small family confined to the tropical rain forests of western Africa.

Soyauxia has been hitherto placed in the Flacourtiaceae or Passifloraceae but has remarkable affinities with the newly discovered Medusandra.

- 1 Stamens numerous, filaments much longer than the petals; staminodes absent; sepals imbricate in bud; ovary surrounded by a collar-like disk at the base; styles long; leaves entire [1. *Soyauxia*](#)
- Stamens 5, opposite the petals, filaments much shorter than the petals; staminodes 5, much longer than the petals, alternating with the fertile stamens; sepals open in bud; disk absent; styles very short; leaves crenate or crenate-serrate [2. *Medusandra*](#)

1. SOYAUXIA

Oliv. in Hook. Ic. Pl. t. 1393 (1882); Brenan in Kew Bull. 1953: 507–511.

- 1 Inflorescence very dense-flowered, continuous, 6–12 cm. long; branchlets minutely puberulous, glabrescent; leaves elongate-oblong, rounded or subacute at base, gradually acutely acuminate, 12–32 cm. long, 4–11 cm. broad, glabrous with 10–20 main lateral nerves on each side of midrib; sepals rusty tomentellous, spreading in fruit; fruit an inflated 3-angled capsule with valves suborbicular to broadly ovate, 2–3.5 cm. long and 2–2.5 cm. broad; seed trigonous, up to 2 cm. diam. [1. *grandifolia*](#)
- Inflorescence with scattered flowers, not continuous; sepals cupular in fruit; fruits, where known, oblong, not exceeding 8 mm. broad: [2](#)
- 2 Sepals glabrous outside, except at the base; mature leaves glabrous beneath; branchlets closely pubescent, leaves oblong to elliptic, rounded at base, gradually acuminate, 8–27 cm. long, 3–8 cm. broad, with 12–16 main lateral nerves on each side of midrib; fruits oblong, 12–18 mm. long; seeds black, rod-like, more or less trigonous in section, about 15 mm. long and 3–4 mm. diam. [2. *floribunda*](#)
- Sepals densely pilose or tomentose outside (except towards the margin in No. 3); mature leaves pubescent or pilose on the midrib and nerves beneath: [3](#)
- 3 Sepals outside glabrous towards the margins, about 2.5 mm. long; branchlets shortly pubescent; leaves obovate-oblong or elliptic obtuse at base, long-acuminate, 8–20 cm. long, 3–7 cm. broad with 10–15 main lateral nerves on each side of midrib [3. *gabonensis*](#)
- Sepals outside densely pilose to the margins, about 3 mm. long; leaves as above: [4](#)
- 4 Branchlets with long spreading hairs [4. *velutina*](#)
- Branchlets shortly pubescent at first, soon glabrous [5. *talbotii*](#)

5. ***Soyauxia talbotii* Bak. f.** in J. Bot. 52: 4 (1914). *APD acc*

An erect shrub, to 10 ft. high; calyx green with yellow indumentum, corolla and filaments white, anthers grey, ovary yellow-green.

S. Nig.: Ikotobo Road, Eket Talbot 3254! Uquo, Eket (fl. & fr. May) Onochie FHI 33151!

2. MEDUSANDRA

Brenan in Kew Bull. 1952: 228.

- 1 Tree, to 18 m. high; branchlets minutely puberulous; petioles 3–9 cm. long with a swollen pulvinus at each end; leaves coriaceous or subcoriaceous, elliptic or oblong-elliptic, broadly cuneate or slightly rounded at base, shortly and acutely acuminate, (6–) 10–30 cm. long, (2.5–) 5–14 cm. broad, with about 8 main lateral nerves on each side of midrib, prominent beneath, minutely puberulous beneath; inflorescences numerous, spiciform, 3–15 cm. long, solitary or paired in the leaf-axils; sepals about 1 mm. long; petals about 2 mm. long; staminodes about 8 mm. long, densely pubescent; sepals in fruit reflexed, 6–8 mm. long; capsules subglobose, 1.3–1.5 cm. long, 1.4–1.7 cm. diam., glabrescent, each with a large flattened seed [richardsiana](#)

Medusandra richardsiana Brenan l.c. 229, figs. 1 & 2 (1952). *APD acc*

An understory tree in **rain forest**; inflorescence conspicuous on account of the long white staminodes; fruits at first white with green persistent calyx, becoming brown when dry; locally abundant.

Br. Cam.: Kumba Div.: Buea to Kumba Road (fr. June) Dundas FHI 8360! Road to Bombe (fr. Nov.) Dundas FHI 8485! S. Bahundu F.R., Banga (fl. Jan.–Apr., fr. Apr.–July) Brenan 9402! 9486! Eiiojor FHI 29305! Keay & Russell FHI 28682!

OCTOKNEMATACEAE

Trees and shrubs; leaves alternate, simple, entire, exstipulate. Flowers unisexual in axillary racemes, or hermaphrodite in panicles borne on the older branches. Sepals 5, valvate. Petals absent. Stamens (or in female flower staminodes) 5, opposite the sepals, free. Disk present. Ovary inferior, 1-celled or 3 (–4)-celled almost to the top; ovules 3 (–4), at the apex of a basal threadlike placenta which reaches and is adnate to the top of the ovary; style very short, stigmas 3–5-lobed, lobes bifid. Fruit drupaceous, with a single seed; endosperm slightly ruminant, with small embryo, the radical much longer than the cotyledons.

A family of only two genera, confined to tropical Africa.

- 1 Flowers in axillary spike-like racemes, dioecious; indumentum only of stellate, sometimes scale-like hairs; fruits 1.5–3 cm. long; endocarp with 6–10 narrow ridges protruding into the seed [1. Octoknema](#)
- Flowers sessile in lax panicles borne on the older branches, apparently hermaphrodite; indumentum of simple, forked and stellate hairs; fruits 9 cm. or more long; endocarp without internally projecting ridges [2. Okoubaka](#)

1. OCTOKNEMA

Pierre in Bull. Soc. Linn. Paris 2: 1290 (1897); Mildbr. in E. & P. Pflanzenfam. 16B: 42 (1935).

- 1 Indumentum of bushy stellate hairs; leaves obovate-oblong, shortly cuneate, acuminate, 8–30 cm. long, 3–11 cm. broad, with 6–8 (–10) main lateral nerves on each side of midrib; petioles 0.8–3 cm. long, swollen towards the top; spike-like racemes axillary, densely stellate-tomentose, the males 5–8 cm. long, the females few-flowered, shorter; fruits subglobose about 1.5 cm. long, capped by the broad persistent calyx lobes [1. borealis](#)

Indumentum of appressed scale-like stellate hairs; leaves oblong, obtuse or rounded at base, narrowly acuminate, 11–38 cm. long, 4–13 cm. broad, with 6–8 main lateral nerves on each side of midrib; petioles up to 6 cm. long, swollen towards the top; spike-like racemes axillary, with scaly indumentum, the males 3–6 cm. long; fruits ellipsoid or ovoid, 1.5–3 cm. long, capped by the persistent calyx-lobes [2. winkleri](#)

1. *Octoknema borealis* Hutch. & Dalz. F.W.T.A., ed. 1, 1: 464 (1928); Kew Bull. 1929: 24; Mildbr. in E. & P. Pflanzenfam. 16B: 45; Aubrév. Fl. For. C. Iv. 1: 92, t. 28. *APD acc*

Octoknema affinis of Chev. Bot. 125.

A forest tree, 15–75 ft. or more high, with pale flaking bark; dioecious; flowers yellowish-green; ripe fruits red.

2. OKOUBAKA

Pellegr. & Normand in Bull. Soc. Bot. Fr. 93: 139 (1946); op. cit. 91: 20 (1944), French descr. only.

- 1 A large tree; branchlets pubescent; petiole about 7 mm. long; leaves ovate-elliptic to ovate-oblong, unequally rounded or subcordate at base, acute at apex, 8–15 cm. long, 3.5–8 cm. broad, densely pubescent with simple hairs beneath, glabrescent, with 3–5 main lateral nerves on each side of midrib, ascending, prominent beneath; inflorescences borne on the older branches, paniculate, up to 40 cm. long; flowers sessile apparently hermaphrodite; sepals deltoid, 1 mm. long; fruits drupaceous, ellipsoid, about 9 cm. long and 5 cm. broad, capped by the persistent sepals [aubrevillei](#)

Okoubaka aubrevillei Pellegr. & Normand in Bull. Soc. Bot. Fr. 93: 139 (1946); op. cit. 91: 25 (1944), French descr. only; Louis & Léonard in Fl. Congo Belge 1: 292, t. 31, photo 11 (the var. glabrescentifolia J. Léonard). *APD acc*

Octoknema okoubaka Aubrév. & Pellegr. in op. cit. 84: 392, fig. 1 (1937).

Okoubaka of Aubrév. Fl. For. C. Iv. 1: 88.

A forest tree, to 90 ft. high, with a cylindrical bole lacking buttresses; flowers greenish; fruits yellow when ripe. This tree has the reputation of killing the surrounding trees.

Iv. C.: Yapo, Agboville and Yakassé Aubrév. 603; 1503; 1788. G. C.: Mampong Scarp Vigne FH 1760! Krakaw, on N.E. corner of Kade Bepo F.R., Kwahu, Mpraeso (Feb.) St. C. Thompson FH 4388!

The species also occurs in Belgian Congo as var. glabrescentifolia J. Léonard.

LORANTHACEAE

Parasitic shrubs on trees, or rarely erect terrestrial trees or shrubs. Leaves mostly opposite or whorled, simple, entire, sometimes reduced to scales, rarely alternate; stipules absent. Flowers mostly actinomorphic, bisexual or unisexual, often brightly coloured. Receptacle sometimes with a calyx-like rim (calyculus). Perianth-segments valvate, free or united high up into a tube which is often split down one side. Stamens the same number as the perianth-segments and inserted on them or at their base; anthers 2-celled or rarely 1-celled, sometimes divided into numerous small cells, opening lengthwise or by pores or transverse slits. Disk present or absent. Rudimentary ovary sometimes (not in Africa) present in male, staminodes in female. Ovary inferior, usually without a distinct placenta and ovule; style simple or absent, stigma more or less capitate. Fruit a berry or drupe. Seed solitary, without a distinct testa; endosperm present or absent; embryo large.

Numerous in the tropics of both hemispheres.

Easily detected by the usually parasitic habit, inferior ovary, often brightly coloured perianth, with as many stamens as perianth-segments, inserted on them.

- 1 Flowers hermaphrodite; perianth petaloid; filaments distinct; anthers dehiscing by 2 longitudinal slits; calyculus distinct, formed by a rather deep border of the receptacle; floral bract fused with the pedicel for all its length (Subfamily LORANTHOIDEAE): **2**
- Flowers unisexual, plant monoecious or dioecious, always glabrous; perianth calyx-like; anthers sessile, opening by pores; calyculus and floral bract absent; branches articulated at the nodes; leaves opposite, with sub-basal nervation; inflorescence cymose, axillary or terminal, with 3–5 flowers arranged in a line within a cupule of 2 connate bracts; flowers (3–) 4-merous, male flowers with a hollow receptacle; perianth-lobes ovate or triangular, usually rather unequally in pairs [8. *Viscum*](#)
- 2 Inflorescence racemose; each perianth-segment composed of a lower erect part and an upper reflexed part; flowers 4-merous; filaments remaining erect at anthesis; anthers long-linear; style much shorter than the tepals; plant glabrous [1. *Helixanthera*](#)
- Inflorescence never racemose, but in umbels, heads or fascicles, or flowers solitary; perianth-segments united, the tube splitting on one side at anthesis: **3**
- 3 Flowers (3–) 4-merous: **4**
- Flowers 5-merous: **5**
- 4 Filament without a tooth in front of the anther but a little thickened and papillose at the apex; lower part of the perianth-tube with very small appendages inside, alternate with the tepals, at the top of the 4 longitudinal papillose areas [2. *Berhautia*](#)
- Filament with a small tooth at the top in front of the anther, neither thickened nor papillose; perianth-tube without internal appendages and longitudinal papillose areas; plant glabrous [3. *Englerina*](#)
- 5 Lobes of the perianth about the same length as the tube, curled back at anthesis; free part of the filaments inrolled at anthesis; anthers short, trapeziform with the connective thickened and emarginate at apex ... [4. *Globimetula*](#)
- Lobes of the perianth always much shorter than the tube, remaining erect or reflexing at anthesis; anthers rather long, with the connective always slender and never emarginate at apex: **6**
- 6 Anthers never transversely septate: **7**
- Anthers transversely septate [7. *Phragmanthera*](#)
- 7 Filament always without an apical tooth [5. *Agelanthus*](#)
- Filament always elongate, with a tooth on the inside in front of the anther [6. *Tapinanthus*](#)

1. HELIXANTHERA

Lour. Fl. Cochinch. 142 (1790); emend. Danger in Bull. Jard. Bot. Buitenz., ser 3, 10: 292 (1929); Verh. Akad. Wetensch. Amst. Afd. Natuurk., sect. 2, 29: 55 (1933); Balle in Webbia 11: 579 (1955).

Sycophila Welw. ex Van Tiegh. (1894).

6. TAPINANTHUS

Blume in Schultes f. Syst. Veg. 7: 1730 (1830); *Danser* in Verh. Akad. Wetensch. Amst. Afd. Natuurk., sect. 2, 29: 107 (1933); *Balle* in Webbia 11: 583(1955). *APD acc*

Loranthus Sect. Constrictiflori Engl. — F.T.A. 6, 1: 268.

Loranthus Sect. Erectilobi Sprague — F.T.A. 6, 1: 270.

Loranthus Sect. Purpureiflori Engl. — F.T.A. 6, 1: 267; Engl. & K. Krause in E. & P. Pflanzenfam. 16B: 166,167 (1935).

- 1 Perianth-lobes remaining erect at anthesis (Sect. Erectilobi):2
 Perianth lobes reflexing at anthesis (Sect. Constrictiflori):4
- 2 Leaves broadly ovate or elliptic, rounded or more rarely obtuse at base, rounded or obtuse rarely cuneate at apex, 9–14 cm. long, 6–9.5 cm. broad; perianth 5–7 cm. long, the lobes about 1.5 cm. long, acute and thickened at the apex and narrowly winged on both sides; apical swelling of bud just before anthesis ovoid-acute, 5-winged in the upper half; umbels 5–7-flowered[1. buntingii](#)
 Leaves smaller, not very broad (up to 5.5 cm.) in relation to their length:.....3
- 3 Plant pilose with hairs 0.5–1 mm. long, at least on younger parts; flowers distinctly pedicellate, (2–8–) 3–5–5 cm. long, perianth lobes 5–12 mm. long; umbels (2–) 4–8 (–9)-flowered; calyculus up to 3 mm. long, never tubular; leaves ovate, ovate-oblong, ovate-lanceolate or oblong-elliptic, 2.5–13.5 cm. long, 1–5.5 cm. long; bracts unilateral, ovate-elliptic, often very concave; fruits ellipsoid or obovoid up to 12 mm. long and 9 mm. broad, pilose[2. heteromorphus](#)
 Plant glabrous; flowers (1–) 2–4, (2–8–) 4–5 cm. long, often thick and rigid, subsessile in head-like umbels; calyculus tubular 5 mm. or more long; leaves lanceolate, oblong or linear, sometimes falciform, 4–18.5 cm. long, 5–27 mm. broad, more or less glaucous; fruits up to 1.3 cm. long, ellipsoid or pear-shaped[3. dodoneifolius](#)
- 4 Leaves petiolate:.....5
 Leaves sessile, broadly ovate or ovate-lanceolate, cordate at base, obtuse or subacute at apex, 2.5–8.5 cm. long, 1.8–6.2 cm. broad; umbels (2–) 4–8 (?–12)-flowered; perianth 3.7–4.2 cm. long:13
- 5 Plants entirely glabrous:6
 Plant shortly pubescent on young branchlets, peduncles, pedicels, bracts and sometimes on the receptacles, calyculi and perianths; petioles 0.5–1 cm. long; leaves ovate or elliptic, cuneate, rounded or slightly cordate at base, obtuse, acute or sometimes emarginate at apex, 2.5–12.5 cm. long, 1.5–7.5 cm. broad; umbels 8–10-flowered; perianth 3–3.8 cm. long, with the lobes slightly thickened at top; apical swelling of bud ellipsoid-oblong, about 3 mm. long and 2 mm. broad, more or less flattened on top.[12. truncatus](#)
- 6 Apical swelling of bud not distinctly 5-winged:.....7
 Apical swelling of bud distinctly 5-winged:11
- 7 Apical swelling of bud not flattened at top and without appendages, globose, ovoid or ellipsoid, 5-gonous (sometimes very slightly 5-winged in upper half), 3–3.75 mm. long, 2–3 mm. broad; perianth 2.7–3.8 (–5) cm. long; flowers subsessile, 4–8 together in subsessile umbels; leaves subopposite or sometimes subternate:8
 Apical swelling of bud flattened and with 5 minute bumps or appendages at top:9
- 8 Leaves bright green when fresh, rather broadly ovate or ovate-lanceolate, rarely elliptic or ovate-oblong, rounded or slightly cordate or sometimes obtuse at base, acute or obtuse at apex, 6–18 cm. long, 2–12 cm. broad, with 1–3 long-ascending lateral nerves arising on each side from near the base of the midrib[4. bangwensis](#)
 Leaves generally glaucous, usually narrowly elliptic, oblong or obovate, sometimes broadly elliptic, ovate, lanceolate or linear, usually cuneate or acute, sometimes obtuse, rarely rounded or subcordate at base, rounded or obtuse at apex, (1–) 2–9 (–12) cm. long, (0.4–) 0.7–3 (–5) cm. broad, with irregular pinnately arranged lateral nerves[5. globiferus](#)
- 9 Perianth lobes without subapical dorsal appendages, but with 5 minute bumps and sometimes very slightly 5-winged at the angles; perianth 2.2–3.5 cm. long:.....10
 Perianth lobes each bearing dorsally just beneath the apex a more or less triangular appendage about 0.75 mm. long; perianth about 4.4 cm. long; apical swelling of bud ellipsoid, about 4 mm. long and 2.3 mm. broad; leaves ovate to lanceolate or elliptic, rounded or cuneate at base, obtuse or acute at apex, 6–9.5 cm. long, 2.5–4.4 cm. broad, with pinnate nervation[8. farmari](#)
- 10 Apical swelling of bud 3.5–4 mm. long, 2–2.25 mm. broad; leaves subopposite or alternate, ovate or lanceolate, rarely elliptic, cordate, rounded or cuneate at base, acute or obtuse at apex, 3.5–12.5 cm. long, 1.6–6 cm. broad[6. belvisii](#)
 Apical swelling of bud 2.5–3.5 mm. long, 1.7–2.25 mm. broad; leaves subopposite or subternate, oblong, elliptic, obovate or more rarely ovate, usually narrowly cuneate at base, rounded or rarely obtuse at apex, 1–8.5 cm. long, 0.3–2.5 cm. broad[7. voltensis](#)

- 11** The apical swelling of bud globose, 4–5 mm. diam.; perianth (4.5–) 5.5–7 cm. long; leaves broadly ovate or elliptic, rounded or slightly cordate at base, abruptly acuminate (acumen itself acute and often slightly recurved), 6–12.5 cm. long, 3.7–7.5 cm. broad [9. preussii](#)

The apical swelling of bud distinctly longer than broad: **12**

- 12** Apical swelling of bud conical, about 5 mm. long and 2 mm. broad at base, 5-gonous, with the angles narrowly winged; perianth 3–3.5 cm. long, with the lobes both very acute and distinctly thickened at their extremities; leaves usually elliptic or lanceolate, rarely ovate or oblanceolate, 5–9.5 cm. long, 1.5–3 (–4) cm. broad, with crisped margins [10. ophiodes](#)

Apical swelling of bud clavate, ellipsoid or ovoid, 4–7 mm. long, 2–5 mm. broad, with 5 undulate wings 0.25–1 mm. wide, always better developed in the upper half; perianth 3–4 cm. long, with the lobes reflexed or remaining erect at anthesis; leaves glaucous and coriaceous, usually ovate, sometimes ovate-lanceolate or elliptic, 1.3–12 cm. long, 0.8–8 cm. broad, usually rounded or broadly cuneate at base, obtuse at apex. [11. pentagonia](#)

- 13** Apical swelling of bud ellipsoid, without appendages; umbels sessile or subsessile; plant glabrous [13. sessilifolius](#)

Apical swelling of bud campanulate, 5-gonous, depressed at the top and bearing 5 spreading triangular appendages about 0.75 mm. long; umbels pedunculate; plant pubescent [14. warneckei](#)

1. *Tapinanthus buntingii* (Sprague) Danser in Verh. Akad. Wetensch. Amst. Afd. Natuurk., sect. 2, 29: 109 (1933). *APD acc*

Loranthus buntingii Sprague in Kew Bull. 1916: 178; F.W.T.A., ed. 1, 1: 467.

Perianth green with rose-pink lobes. On *Cassia sieberiana*.

S. L.: Njala (Sept.) Deigliton 6122. **Lib.:** Mt. Barclay Bunting 165!

Also in (?) **A.-E. Sudan**.

2. *Tapinanthus heteromorphus* (A. Rich.) Danser l.c. 113 (1933).

APD: Synonym of Agelanthus heteromorphus (A. Rich.) Polhill & Wiens

Loranthus heteromorphus A. Rich. (1847) — F.T.A. 6, 1: 381.

L. brevilobus Engl. & K. Krause (1914).

L. tambermensis Engl. & K. Krause (1909) — F.T.A. 6, 1: 380; F.W.T.A., ed. 1, 1: 467.

L. terminaliae Engl. & Gilg (1903) — F.T.A. 6, 1: 379.

Vegetative and floral parts covered with a rusty tomentum, hairs branched, rather long and close, disappearing partly on mature leaves and branches; flowers yellow below and orange-red above. On *Anogeissus leiocarpus*, *Detarium microcarpum*, *Parkia clappertoniana* and *Terminalia avicennioides*.

Togo: Tamberna Kersting A. 502! **N. Nig.:** Sokoto (May) Dalz. 524! Zamfara F.R., Sokoto Prov. (Apr.) Keay FHI 15893! 16174! Bauchi Plateau (July) Lely P. 597! Naraguta Kennedy 7234! Yola (June) Dalz. 214!

5. *Tapinanthus globiferus* (A. Rich.) Van Tiegh. in Bull. Soc. Bot. Fr. 42: 267 (1895). *APD acc*

Loranthus globiferus A. Rich. (1847) — F.T.A. 6, 1: 352; F.W.T.A., ed. 1, 1: 467 (incl. vars.); F. W. Andr. Fl. Pl. A.-E. Sud. 2: 293, fig. 105.

(?) *L. rosiflorus* Engl. & K. Krause (1914).

(?) *L. rubrovittatus* Engl. & K. Krause (1914).

Apparently takes the place of *T. bangwensis* in the drier regions; forms transitional in the consistence, colour and shape of the leaves are known in Senegal and Nigeria. Flowers shining red. Some forms seem to connect these two species with *T. voltensis* and *T. pentagonia*. Careful field observations on the colour of flowers and fruits are needed. A form with small leaves seems to be localized around Timbuktu. On numerous hosts, including *Salvadora* and *Sclerocarya*.

Fr. Sud.: Timbuktu Chev. 1206! (July) Hagerup 166! 208! **Dah.:** Dan Gaillard! Konkobiri (July) Chev. 24308! **G. C.:** Navrongo (Nov.) Darko 453! Tumu (Apr.) Hughes 328! **Fr. Nig.:** Maradi Gailiard! **N. Nig.:** Zurmi (Apr.) Keay FHI 15683! 16186! Kano Kennedy 2943! Bornu E. Vogel 79!

APD: *Synonym of Tapinanthus belvisii* (DC.) Danser

Loranthus truncatus Engl. (1894) — F.T.A. 6, 1: 356; F.W.T.A., ed. 1, 1: 467.

Acrostephanus truncatus (Engl.) Van Tiegh. (1895).

Loranthus pubiflorus Sprague (1912) — F.T.A. 6, 1: 356; F.W.T.A., ed. 1, 1: 467.

Perianth red, with yellowish green lobes.

S. L.: Afzelius. **iv. C.:** Pobéguin 23! Bingerville (Dec.) Chev. 16047! 16059! **G. C.:** Krause 95! Atwabo (Feb.) Irvine 2288!

Apparently rare, but has probably been confused with *T. bangwensis* and *T. belvisii*.

13. *Tapinanthus sessilifolius* (P. Beauv.) Van Tiegh. l.c. (1895). *APD acc*

APD: *Synonym of Tapinanthus cordifolius* Polhill & Wiens

Loranthus sessilifolius P. Beauv. (1808) — F.T.A. 6, 1: 355; F.W.T.A., ed. 1, 1: 467.

Perianth tube red, lobes green. On *Canarium* and *Strychnos*.

Togo: Keta Beauvois! N. Nig.: Bauchi Plateau Lely P. 163! W. D. MacGregor 423!

14. *Tapinanthus warneckei* (Engl.) Danser l.c. 122 (1933).

APD: *Synonym of Tapinanthus sessilifolius* (P. Beauv.) Tiegh.

Loranthus warneckei Engl. (1908) — F.T.A. 6, 1: 356; F.W.T.A., ed. 1, 1: 467; E. & P. Pflanzenfam. 16B: 167, fig. 85 (1935).

On Pithecellobium dulce and Nerium oleander.

Togo: Messenger! Lome (Jan., Nov.) Busse 3255; Warnecke 36!

7. PHRAGMANTHERA

Van Tiegh. in Bull. Soc. Bot. Fr. 42: 243, 261 (1895); Balle in Webbia 11: 583 (1955). *APD acc*

Loranthus Sect. Lepidoti Engl. — F.T.A. 6, 1: 260.

Loranthus Sect. Rufescentes Engl. — F.T.A. 6, 1: 259; Engl. & K. Krause in E. & P. Pflanzenfam. 16B: 158 (1935).

- 1 Perianth-lobes remaining erect at anthesis;2
- Perianth-lobes reflexed at anthesis; perianth rusty-tomentose; anthers short:8
- 2 Inflated apex of bud club-shaped or long-ellipsoid; anthers 2.7–12 mm. long, with 6–30 superposed small cells:3
- Inflated apex of bud usually globular or shortly elliptic; anthers relatively short, 1–2.5 mm. long:6
- 3 Apical swelling of bud not 5-winged; perianth 2.8–6.3 cm. long, the lobes 1.2–2.2 cm. long; anthers 2.7–6.5 mm. long, with 6–10 superposed cells:4
- Apical swelling of bud narrowly 5-winged, 1.1–1.4 cm. long; perianth (6.5–) 7–10.5 cm. long, glabrescent, lobes 2.2–3 cm. long; anthers (5–) 7–12 mm. long, with 20–30 superposed cells; leaves elliptic, elliptic-oblong or rarely ovate-oblong, 5–11.3 cm. long, 3–5.6 cm. broad; petioles 1.2–2 cm. long; fruits ellipsoid, up to 1.5 cm. long[4. kamerunensis](#)
- 4 Most of the leaves with a short lamina, 1–2 times as long as broad:5
- Most of the leaves with a long lamina, 2–3 times as long as broad, 10–15 cm. long, 4–5.5 cm. broad, rigid and coriaceous, glabrous at maturity; receptacle and calyculus up to about 3 mm. long; perianth yellow towards apex, about 4 cm. long, sparsely hairy, lobes 1.2–1.4 cm. long, linear-lanceolate, acute; anthers 3–4 mm. long[3. lapathifolia](#)
- 5 Lamina mostly reaching its greatest width in the lower half, ovate, ovate-elliptic or ovate-lanceolate, 5–20 cm. long, 2.5–14 cm. broad, cordate, truncate, rounded or rarely obtuse at base; petioles 6–30 mm. long; perianth (2.8–) 3.7–6.3 cm. long, yellow, sometimes reddish especially at the apex; fruits obovoid or pear-shaped, 7–10 mm. long[1. incana](#)
- Lamina mostly reaching its greatest width in the middle, elliptic or elliptic-oblong, 3–8.8 cm. long, 1.5–4.2 cm. broad, obtuse or cuneate, rarely rounded at base; petioles 5–12 mm. long; perianth (3–) 3.5–4 cm. long, tube red, the lobes yellow below and red above; apical swelling of bud ellipsoid about 6 mm. long[2. redingi](#)
- 6 Leaves 15–18.5 cm. long, 6.3–8 cm. broad, ovate-oblong or lanceolate, thick and coriaceous, cordate at base, rusty-tomentose, subsessile (petioles up to 8 mm. long); perianth 4–4.7 cm. long, rusty-tomentose; lobes 10–11 mm. long, elliptic in the upper 3.5 mm.; anthers with 3–4 superposed cells; bracts 3–4 (–8) mm. long, sometimes foliaceous[6. talbotiorum](#)
- Leaves 3–14 cm. long, 1.2–5.8 cm. broad; petioles relatively long, 4–28 mm. long; perianth 2.7–5 cm. long, with rusty verticillate-branched hairs to 1 mm. long:7
- 7 Leaves concolorous, the tomentum rapidly caducous on both surfaces; lamina usually elliptic, rarely ovate, rounded or obtuse at each end; bracts ovate, 2–4 mm. long, not foliaceous.[7. rufescens](#)
- Leaves generally discolorous, the red tomentum persisting longer on the lower surface than above; lamina lanceolate or ovate, rarely elliptic, usually cordate or rounded at base, acute at apex; bracts 1–2.5 (–6) mm. long, sometimes foliaceous[5. polycrypta](#)
- 8 Bracts ovate, 1.5–2 mm. long, never foliaceous; leaves lanceolate-oblong or elliptic-oblong, 3–11.3 cm. long, 1.8–4.4 cm. broad, round-cordate at base, acuminate at apex, rusty-tomentose beneath with verticillate-branched hairs; petioles 2–10 mm. long; perianth 3.8–4.5 cm. long, covered with hairs about 1 mm. long; apical swelling of bud about 4 mm. diam.; lobes 9–11 mm. long; anthers 2–2.5 mm. long, with 6–7 superposed cells[8. leonensis](#)
- Bracts foliaceous, 3–25 mm. long, rounded or emarginate at apex:9
- 9 Leaves narrowly ovate, ovate-elliptic or lanceolate, 2.5–10 cm. long, 1.2–3 cm. broad, rounded or cordate at base, obtuse or cuneate at apex, usually discolorous; petioles 4–10 mm. long; perianth 3.7–4 cm. long, pubescent with hairs up to 2 mm. long; lobes 8–10 mm. long; anthers 1.5–3 mm. long, with 4–5 (–10)

superposed cells; bracts oblong-obovate, concave, 3–7 mm, long [9. nigrimana](#)

Leaves broadly ovate-elliptic or obovate, 3.5–10 cm. long, 1.8–7.5 cm. broad, rounded or cuneate at base, rounded or obtuse at apex, distinct and prominent only in lower 2/3, glabrous; petioles thick, 4–16 mm. long; perianth 4–5 cm. long, covered with rusty verticillate-branched bristles up to 5 mm. long; lobes 1–1.7 cm. long; anthers 1.75–3 mm. long, with 7–10 superposed cells; bracts unilateral, rather deeply concave, very differently developed on the same plant and sometimes on the same inflorescence [10. vinei](#)

1. *Phragmanthera incana* (Schum.) Balle in Kew Bull. 1956: 168.

APD: Synonym of Phragmanthera capitata (Spreng.) Balle

Loranthus incanus Schum. (1827) — F.T.A. 6, 1: 292, 1028; F.W.T.A., ed. 1, 1: 466; Balle in Fl. Congo Belge 1: 353.

Young parts and perianth more or less densely covered with white or brown hairs; berries red. Very variable in the shape and size of the flowers and leaves. On Alchornea, Aleurites moluccana, Anacardium occidentale, Annona senegalensis, Bauhinia, Bersama, Bombax sessile, Caloncoba welwitschii, Citrus aurantium, Coffea, Cola nitida, Croton tiglium, Funtumia, Hevea brasiliensis, Hibiscus rosa-sinensis, Lophira lanceolata, Macaranga spinosa, Manihot glaziovii, Melia azedarach, Musa, Nauclea latifolia, Parinari, Piptadeniastrum, Rauwolfia vomitoria, Sapium ellipticum and Theobroma.

SANTALACEAE

Trees, shrubs or herbs, sometimes parasitic on trees or roots. Leaves alternate or opposite, entire, sometimes reduced to scales, exstipulate. Flowers often greenish, hermaphrodite or unisexual, actinomorphic. Calyx often fleshy, adnate to the ovary, lobes 3–6, valvate or slightly imbricate. Petals absent. Stamens the same number as the calyx-lobes and opposite to them; anthers 2-celled, opening lengthwise. Disk epigynous. Ovary inferior or half inferior, 1-celled; style simple. Ovules 1–3, pendulous from the top of a basal placenta. Fruit nut-like or drupaceous. Seed without a testa; endosperm copious; embryo straight; cotyledons mostly terete.

A small family, very sparingly represented in the area of this flora.

Marks of identification are the inferior ovary, basal placenta, often parasitic habit, absence of testa to the seed, etc.

***Santalum album* Linn.**

Sandalwood

A species native to India, has been introduced into parts of our area.

THESIUM

Linn. — F.T.A. 6, 1: 411.

Semi-parasitic herbs or undershrubs with much-reduced leaves; flowers hermaphrodite; calyx-tube adnate to ovary and continuing above it; calyx-lobes 4 or 5, valvate, glabrous or pubescent within; stamens as many as calyx-lobes and opposite to them, with a short filament, inserted near the base of the lobe; ovary inferior; ovules 2–4, pendulous; fruits dry, globose, crowned by the persistent calyx.

-
- 1 Small appendages present outside at the base of and between calyx-lobes; calyx-lobes densely pubescent inside, otherwise the whole plant glabrous; stems sparingly branched:2
- Small appendages absent between calyx-lobes; calyx-lobes glabrous or rarely sparsely villous inside, about 1 mm. long; plants glabrous or pubescent; stems much-branched:3
- 2 Calyx-lobes about 5 mm. long, 4 in number; flowers in short spikes about 1 cm. long at the end of slender branches; bracts and bracteoles few, lanceolate, 2–3 mm. long [1. leucanthum](#)
- Calyx-lobes 1.5–2 mm. long, 4 (–5) in number; flowers in axillary clusters or solitary; bracts and bracteoles several, linear-lanceolate, 1–2 mm. long [2. libericum](#)
- 3 Montane plant; stems glabrous, angular; flowers several or solitary in the axil of a scaly bract; calyx-lobes 4 (–5), glabrous outside, rarely sparsely villous inside [3. tenuissimum](#)
- Savannah plant; stems pubescent at least at the base with short scabrid hairs, subterete and grooved; flowers on short lateral branches and axillary; calyx-lobes 5, sometimes scabrid-pubescent outside, glabrous inside [4. viride](#)
1. **Thesium leucanthum** Gilg — F.T.A. 8, 1: 420. *APD acc*
- Stems about 18 in. high, erect and not spreading; flowers yellow; [in savannah](#).
- N. Nig.:** Naraguta Lely 66!
- Also in **S. Angola**.
2. **Thesium libericum** Hepper & Keay in Bull. Jard. Bot. Brux. 26: 186, fig. 58 (1956). *APD acc*
- Stems about 18 in. high, tufted from a woody rootstock; flowers whitish; [in coastal savannah](#).
- Lib.:** near Monrovia (June, Aug.) Baldwin 5850! 9183! Paynesville (Apr.) Barker 1240! Duport (Nov.) Linder 1455!
3. **Thesium tenuissimum** Hook.f. — F.T.A. 6, 1: 421. *APD acc*
- A small undershrub with numerous, slender, glabrous, angular stems, 4–10 in. high, from a woody rootstock; [in montane grassland](#).
- S. L.:** Bintumane Peak, 5,500 ft. Glanville 471! **Iv. C.:** Nimba Mts., 4,900 ft. (fl. & fr. Apr.) Schnell 973! **Br. Cam.:** Cam. Mt., 7,600–12,000 ft. (fl. & fr. Nov.–Jan., fl. Feb.) 4. **Thesium viride** A. W. Hill — F.T.A., 6, 1: 426. *APD acc*
- A small perennial undershrub, with greyish-green grooved branches glabrous or scabrid, up to 15 in. high, from a woody rootstock; [in savannah woodland](#).
- N. Nig.:** Sokoto (fl. & fr. June) Dalz. 549! Kaduna (fl. & fr. Mar., Dec.) Hill 52! Meikle 765! Zungeru to Funtua (fl. & fr. Feb.) Meikle 1229! Anara F.R., Zaria (fr. May) Keay FHI 22951! Ilorin to Jebba (Feb.) Meikle 1198!
- Also in **French Cameroons** and **A.-E. Sudan**.

BALANOPHORACEAE

Fleshy herbs parasitic on roots, annual or perennial, destitute of chlorophyll and stomata. Flowers unisexual, very rarely hermaphrodite, densely crowded into unisexual or androgynous inflorescences; male flowers without or with a valvate 3–8-lobed perianth. Stamens 1–2 in the achlamydeous flowers, in those with a perianth often equal in number to, and opposite the lobes; filaments free or connate; anthers 2–4-celled or with many cells, free or connate, opening by pores or slits. Ovary 1–3-celled, adnate to the perianth when present; styles 1–2, terminal or rarely the stigma sessile and discoid; ovule solitary in each cell, mostly pendulous, nude or with a single integument. Fruit small, nut-like, 1-celled, 1-seeded. Seeds with abundant endosperm and very small embryo.

THONNINGIA

Vahl — F.T.A. 6, 1: 436; Bullock in Kew Bull. 1948: 363.

- 1 A herb, parasitic on roots of trees and shrubs; rhizome subterranean, more or less horizontal, tuberous at the point of attachment, branched, pubescent; peduncles variable in length, up to 7 cm. long; peduncles and flower-heads, densely covered with closely imbricate, rigid, ovate to lanceolate, up to 3 cm. long scales; flowers numerous in each head, unisexual; flower heads up to 4 cm. diam. [sanguinea](#)

Thonningia sanguinea *Vahl* in Skrivt. Nat. Selsk. 6: 125, t. 6 (1810); F.T.A. 6, 1: 438; Bullock l.c. 366, q.v. for full references and synonymy; Staner in Fl. Congo Belge 1: 395. *APD acc*

Thonningia dubia Hemsl. (1911) — F.T.A. 6, 1: 438; F.W.T.A., ed. 1, 1: 470.

Thonningia elegans Hemsl. (1911) — F.T.A. 6, 1: 439; F.W.T.A., ed. 1, 1: 410.

Thonningia coccinea *Vahl* of Mangenot in Rev. Gén. Bot. 56: 201–244 (1947).

Peduncle and flower-heads with crimson or pink scales, turning brown; only creamy white pollen and anthers show in the open flower-heads; **common in forest, rare in savannah**; parasitic on many different hosts.

Also in **French Cameroons, Gabon, Belgian Congo, A.-E. Sudan, Kenya, Uganda, N. Rhodesia** and **Angola**.

RHAMNACEAE

Trees or shrubs, sometimes climbing. Leaves simple, alternate or opposite; stipules mostly present. Flowers often cymose or fasciculate, small, hermaphrodite or polygamous. Calyx-lobes valvate. Petals 4 or 5, small, or absent. Stamens 4–5, opposite the petals; anthers 2-celled, opening lengthwise. Disk mostly present, perigynous. Ovary sessile, superior or subinferior, 2–4-celled; ovules solitary or rarely paired, erect from the base, anatropous. Fruit various, often drupaceous. Seeds mostly with copious endosperm and large straight embryo.

Mainly tropics and temperate regions; comparatively rare in Africa.

Recognized at once by the stamens being opposite the free often spathulate petals and presence of a disk.

- 1 Leaves alternate, or if subopposite then stipules extrapetiolar: **2**
 Leaves opposite; stipules interpetiolar; branchlets without spines or tendrils; ovary subinferior, 3-celled **6.**
[Lasiodiscus](#)
- 2 Leaves strongly 3 (–5)-nerved from the base, branchlets with stipular spines; fruits subglobose, drupaceous, 1-celled **1. Ziziphus**
 Leaves pinnately nerved; branchlets not spiny: **3**
- 3 Branchlets without tendrils; ovary superior or subsuperior; fruits without 3 lateral wings: **4**
 Branchlets with tendrils; ovary and fruit inferior, the latter with 3 lateral wings, separating when ripe into 3 cocci **6. Gouania**
- 4 Fruits drupaceous, not winged: **5**
 Fruits nut-like, 1-celled, with a long terminal wing **4. Ventilago**
- 5 Ovary 1-celled; flowers in axillary cymes, several- to many-flowered **2. Maesopsis**
 Ovary 3–4-celled; flowers solitary or few together in the leaf-axils **3. Rhamnus**

Hovenia dulcis *Thunb.*

A native of China and Japan

Colubrina ferruginosa (*Jacq.*) *Brongn.*

A native of the West Indies and tropical America.

1. ZIZIPHUS

Mill. — F.T.A. 1: 379; Suessenguth in E. & P. Pflanzenfam. 20D: 123 (1953).

- 1 Flowers solitary or 2 (–3) together; leaves suborbicular or broadly elliptic to ovate, 0.5–1.2 (–1.5) cm. long, 0.4–1 (–1.3) cm. broad, margins crenate-serrulate, densely pubescent beneath and somewhat less so above; internodes on branchlets less than 1 cm. long; fruits about 1 cm. diam [1. *lotus* subsp. *saharae*](#)
Flowers several to many, in cymes; leaves at least 1.3 cm. long and 0.9 cm. broad and usually more than 2 cm. long and 1.5 cm. broad: **2**
- 2 Leaves densely and softly tomentose all over the lower surface: **3**
Leaves pubescent beneath mainly on the nerves or nearly glabrous: **4**
- 3 Bases of leaves more or less symmetrical and equal; flowers in sessile or very shortly pedunculate, subcapitate cymes; leaves elliptic to broadly elliptic or ovate-elliptic, (1.3–) 2–7 cm. long, (0.9–) 1.1–3 cm. broad; fruits 1.5–2 cm. diam. [2. *mauritiana*](#)
Bases of leaves asymmetrical and unequal; flowers in shortly but distinctly pedunculate, branched cymes; leaves ovate to ovate-oblong or elliptic, 3.5–10 cm. long, 1.3–5.5 cm. broad; fruits about 1.8 cm. diam. [3. *abyssinica*](#)
- 4 Leaves asymmetrical and subcordate at base, ovate or broadly ovate, narrowed above to the obtuse or acute often more or less acuminate apex, 3–9 cm. long, 1.5–6 cm. broad, margins crenate-serrate; flowers in distinctly branched, pedunculate, many-flowered cymes; branches and branchlets red-brown; fruits 1.2–1.8 cm. diam. [4. *mucronata*](#)
Leaves more or less symmetrical and rounded to cuneate at base, elliptic or ovate-lanceolate; branchlets whitish: **5**
- 5 Leaves ovate-lanceolate, narrowed to the acute or obtuse apex, 2.5–8.5 cm. long, 1–3.5 cm. broad, margins slightly crenulate, strongly 3-nerved from the base, nerves often reaching to the apex, upper lateral nerves obscure; branches whitish; cymes many-flowered, subsessile or with peduncle up to 1.5 cm. long, a tree; fruits about 2 cm. diam [5. *spina-christi* var. *spina-christi*](#)
Leaves broadly elliptic or ovate-elliptic, rounded at apex, 1.4–3.4 cm. long, 1–3.4 cm. broad, margins subentire, basal nerves not reaching to the apex, with 1–2 strong upper lateral nerves on each side of midrib; branches becoming reddish-brown; cymes several-flowered, with a distinct peduncle 2–3 mm. long; a much-branched shrub; fruits 0.8–1 cm. diam. [5a. *spina-christi* var. *microphylla*](#)

1. *Ziziphus lotus* (Linn.) Desf. in Act. Acad. Sci. Paris 1788; 443, t. 21 (1788); Lam. Encycl. 3: 317 (1789). *APD acc*

Ziziphus lotus subsp. *saharae* Maire in Bull. Soc. Hist. Nat. Afr. Nord 20: 179 (1929). *APD acc*

Ziziphus saharae Batt. & Trab. (1907), provisional name only.

Ziziphus nummularia var. *saharae* (Maire) A. Chev. in Rev. Bot. Appliq. 27: 474 (1947).

Ziziphus nummularia of Aubrév. Fl. For. Soud.-Guin. 357–361, t. 74, 6.

A much-branched shrub, to 4 ft. high.

Fr. Sud.: Gao (fl. & young fr. Aug., Sept.) Bates! Hagerup 337a! Bourem Monod 483.

Also in **Rio de Oro**, **Mauritania** and **the Sahara**.

[The subsp. *lotus* occurs in N. Africa and the Mediterranean area; the subsp. *saharae* is quite distinct from *Z. nummularia* (Burm.) Wight & Arn. with which it has been confused.]

2. *Ziziphus mauritiana* Lam. Encycl. 3: 319 (1789); Chev. l.c. 476, excl. var. *abyssinica*; Aubrév. l.c. t. 74, 1–4, (as *Z. “mauritica”*), incl. vars. *APD acc*

APD: *Synonym of Ziziphus abyssinica Hochst.*

Ziziphus orthacantha DC. (1825).

Ziziphus jujuba (Linn.) Lam. (1789); F.T.A. 1: 379, partly, Chev. Bot. 136, and F.W.T.A., ed. 1, 1: 471, partly; not of Mill. (1768).

A shrub or tree to 40 ft. high, **widespread in the drier regions and often cultivated**; flowers cream; fruits reddish, edible.

Sen.: Heudelot 433! Parrot 143! Roger! **Gam.:** Dawe 78! MacCarthy Isl. (fr. Jan.) Dalz. 8041! **Fr. Sud.:** Bongouni (Apr.) Chev. 689! Bamako Hagerup 39! Timbuktu (July) Hagerup 142! Niore to Mountan Kagoro Roberty 10216! **Fr. G.:** Dombiagu Pobéguin 2111. **S. L.:** Freetown, cult. (Oct.) SLFD 26! Kambia, cult. (Dec.) Deighton 901! **Iv. C.:** Ouagadougou Serv. For. 2333. Widespread in the drier parts of tropical Africa and in S. Africa.

5. *Ziziphus spina-christi* (*Linn.*) *Desf.* var. *spina-christi* — Fl. Atlantica 1: 201 (June 1798); Willd. Sp. Pl. 1: 1105 (1798); F.T.A. 1: 380; Chev. in Rev. Bot. Appliq. 27: 475; Aubrév. l.c. t. 74, 7. *APD acc*
APD acc

Rhamnus spina-christi *Linn.* (1753).

A tree, to 30 ft. high, with pale grey-bark; **planted in towns and villages**; flowers greenish-yellow; fruits reddish when ripe.

Sen.: Niokolo-Koba Berhaut 125! **Fr. Sud.:** Koulikoro, R. Niger Vuillet 14. **Fr. Nig.:** Zinder (Oct.) Hagerup 564! **N. Nig.:** Rabba Barter 3428! Nupe Barter 736! 1707! Katsina (fl. & fr. Mar.) Meikle 1351! Gujba (Dec.) Foster 82! Dunjere, Komadugu Yobe (fl. & fr. Dec.) Elliott 138! Kukawa (fl. & fr. Jan.) E. Vogel 31!

Widespread in the drier parts of tropical Africa and **Egypt** to tropical Asia.

[The description of this cultivated variety in the key above is based only on specimens collected in W. Africa. The differences between the cultivated and wild forms are less clear in other areas.]

5a. *Ziziphus spina-christi* var. *microphylla* *Hochst. ex A. Rich.* Fl. Abyss. 1: 137 (1847). *APD acc*

Ziziphus amphibia *A. Chev.* in Rev. Bot. Appliq. 27: 480 (1947); Aubrév. l.c. 359–361.

Ziziphus spina-christi of F.W.T.A., ed. 1, 1: 470, partly (Barter 738).

A much-branched shrub **forming impenetrable thickets in river-beds**; flowers pale yellow; fruits red when ripe; an indigenous plant.

Sen.: Walo Berhaut 1396. **Fr. Sud.:** R. Bani, San (June) Chev. 1084! Sansanding Chev. 28. Tandifarma, Niafunké Chev. 42926. Bamako Vuillet. **Fr. G.:** Rio Grande, Kadé Pobéguin 1990. **G. C.:** Mpeasun Anderson 31! **N. Nig.:** Nupe Barter 738!

Also in [N.E. Africa](#) and the [Middle East](#).

2. MAESOPSIS

Engl. Pflanzenw. Ost-Afr. C: 255 (1895); Suessenguth in E. & P. Pflanzenfam. 20D: 149 (1953).

- 1 Leaves alternate or subopposite, broadly oblong-lanceolate, rounded at base, gradually acuminate, 8–15 cm. long, 3–5 cm. broad, entire or remotely toothed, slightly puberulous on the nerves beneath, with about 8–10 pairs of lateral nerves and numerous fine parallel tertiary nerves; petiole 0.5–1 cm. long; stipules subulate, 7 mm. long; cymes axillary, rusty-pubescent, about ¼ as long as the leaves; sepals puberulous; fruit oblong, acute, turgid, 3 cm. long, glabrous [eminii](#)

Maesopsis eminii *Engl.* l.c. (1895); Aubrév. Fl. For. C. Iv. 2: 207, t. 208, 1–5; Eggeling Indig. Trees Uganda, ed. 2: 323, fig. 68, photo 52; Suessenguth l.c. fig. 40. *APD acc*

Karlea berchemioides *Pierre* (1897).

Maesopsis berchemioides (*Pierre*) *A. Chev.* (1917).

A fast-growing deciduous tree, up to 90 ft. high, or rarely more; flowers small, greenish; fruits purplish-black when ripe; [in forest regrowth](#); rare in our area, except in S.E. Nigeria and the Cameroons.

Lib.: Dukwia R. (fr. May) Cooper 429! **Iv. C.:** Abidjan Aubrév. 1489. Yapou Aubrév. 606. Agboville Aubrév. 2355. **G. C.:** Mampong Scarp (fl. & fr. Also in [French Cameroons](#), [Gabon](#), [Belgian Congo](#), [Angola](#), [A.-E. Sudan](#), [Uganda](#) and [Tanganyika](#).

3. RHAMNUS

Linn. — F.T.A. 1: 381; Suessenguth in E. & P. Pflanzenfam. 20D: 59 (1953).

- 1 Shrub or small tree; branchlets pubescent at first, then glabrescent; leaves ovate to elliptic or elliptic-lanceolate, cuneate to rounded at base, acute or acutely acuminate, 2–10 cm. long, 1–4 cm. broad, margins serrulate, with 5–7 main lateral nerves on each side of the midrib; glabrous, or sparsely pubescent beneath; petioles 0.5–1.2 cm. long; flowers solitary or a few together in leaf-axils, on slender pedicels about 1 cm. long; calyx 2.5–3 mm. long, lobes triangular; petals spatulate, about 1 mm. long; disk and ovary glabrous; fruits containing 3–4 single-seeded pyreneae, globose, about 5 mm. diam., on pedicels about 2 cm. long [prinoides](#)

Rhamnus prinoides *L'Hérit.* Sert. Angl. 6, t. 9 (1788); F.T.A. 1: 382; Engl. Pflanzenw. Afr. 3, 2: 311; Staner in Bull. Jard. Bot. Brux. 15: 403, fig. 48. *APD acc*

Celtis rhamnifolia *C. Preal* (1845).

To 25 ft. high; [in montane woodland and margins of montane forest](#); flowers greenish-yellow; fruits red.

Br. Cam.: Bamenda Prov.: slopes of Mba Kokeka Mt., 6,700 ft. (fl. & fr. Jan.) Keay FHI 28391! Lakom, 6,000 ft. (fl. & fr. Apr.) Maitland 1666! Bansa Ledermann.

Also in [French Cameroons](#), and widespread on the mountains of Africa from Abyssinia to the Cape and [Angola](#).

4. VENTILAGO

Gaertn. — F.T.A. 1: 378; Suessenguth in E. & P. Pflanzenfam. 20D: 151 (1953).

- 1 Branchlets, inflorescences, outside of flowers, petioles and nerves on underside of leaves sparingly pubescent and then glabrescent; upper surface of leaves glabrous and shining from the start; leaves oblong-elliptic to oblong-lanceolate, rounded or subcordate at base, obtusely and broadly acuminate, 2.5–12.5 cm. long, 1–5 cm. broad, margins serrulate, with 5–7 main lateral nerves on each side of midrib; flowers in axillary fascicles,

sometimes on leafless branchlets; fruits broadly ovoid, produced above into an elongate-oblong-lanceolate, glabrous wing up to 5 cm. long and 1 cm. broad, girt at base by the rim-like calyx [1. africana](#)

Branchlets, inflorescences, outside of flowers, petioles and undersurfaces of leaves densely brownish-pubescent, becoming less so with age; upper surface of leaves pubescent at first; leaves ovate to oblong-lanceolate, rounded and sometimes unequal at base, acute or subacute and mucronate at apex, 2.5–8 cm. long, 1.3–4 cm. broad, margins crenulate; fruit-wings up to 6 cm. long and 1.1 cm. broad, densely golden-puberulous; otherwise similar to above [2. diffusa](#)

1. **Ventilago africana** *Exell* in J. Bot. 65, Suppl. Polypet. 80 (1927); Staner in Bull. Jard. Bot. Brax. 15: 396, fig. 45. *APD acc*

Ventilago leiocarpa of F.T.A. 1: 378, partly (Barter spec.); of Chev. Bot. 136; not of Benth.

Ventilago madraspatana of Engl. Pflanzenw. Afr. 3, 2: 310, partly, not of Gaertn.

A large, evergreen, softly woody liane; flowers greenish; **in forest, especially marshy areas.**

Port. G.: Fonte, Bubaque (May) Esp. Santo 2019! **Fr. G.:** Kouria (Oct.) Chev. 14898! **S. L.:** Mamaha (Nov.) Thomas 4586! Senge, between Gbangbama to Gbangbatok (Nov.) Deighton 2370! **iv. Also in **French Cameroons** and **Belgian Congo**.

AMPELIDACEAE

Climbing shrubs or small trees or herbs from a perennial rootstock, with nodose or jointed stems, often with watery juice. Leaves alternate or the lower sometimes opposite, simple or digitately or bipinnately compound, often pellucid-punctate; stipules usually present. Flowers hermaphrodite or unisexual, actinomorphic, small, in leaf-opposed spikes, racemes, cymes or panicles; peduncles often cirrhose. Calyx small, entire or toothed. Petals 4–5, free or united, valvate. Stamens 4–5, opposite the petals. Disk present within the stamens. Ovary 2–6-celled, cells 1–2-ovuled; style short. Fruit baccate. Seeds with copious sometimes ruminant endosperm and small embryo.

General in the tropics and warm temperate regions.

Distinguished by the usually climbing habit with tendrils, the small flowers, valvate petals with the stamens opposite to them.

- 1** Leaves simple, or 3-foliolate or digitately compound, sometimes pedate; stamens free from each other; ovary 2-celled, cells 2-ovuled; tendrils mostly present:.....**2**
 Leaves bipinnate; stamens united into a tube adnate to the base of the petals; ovary 3–6-celled, cells 1-ovuled; tendrils absent**4. *Leea***
- 2** Tendrils leaf-opposed, never borne on the inflorescence, or absent; flowers bisexual:**3**
 Tendrils borne on the inflorescence; flowers polygamo-monoecious**3. *Ampelocissus***
- 3** Petals 4; disk with margin 4-lobed, adnate to base of ovary only; style long and slender; leaves various **1. *Cissus***
 Petals 5–7; disk entire, with the ovary immersed in it; style short and stout; leaves trifoliolate**2. *Rhoicissus***

***Vitis vinifera* Linn.**

The Grape Vine is sometimes cultivated in our area.

1. CISSUS

Linn. Sp. Pl. 1: 117 (1753); Suessenguth in E. & P. Pflanzenfam. 20D: 237 (1953).

- 1** Leaves simple, sometimes lobed, but not digitately compound; ultimate branching of inflorescence subumbellate; unexpanded corolla mostly conical or subglobose, rarely cylindrical (No. 4), not constricted in the middle; mostly climbing or creeping plants, with tendrils (but see Nos. 3, 8, 9 & 22):.....**2**
 Leaves digitately compound:.....**23**
- 2** Leaves when mature digitately lobed nearly to the base, lobes often again deeply lobulate, margins dentate,

- young leaves entire or only partially lobed; leaves up to 11 cm. long, pubescent beneath; unexpanded corolla ovoid to subglobose, about 1 mm. long; fruits 4–5 mm. diam [1. *palmatifida*](#)
- Leaves not lobed or sometimes slightly so: **3**
- 3** Stems very succulent, sharply quadrangular, with sides 6–15 mm. wide, constricted at the nodes, green, usually with only a few leaves near the tips; leaves ovate-triangular, widely truncate or subcordate at base, obtuse or subacute at apex, margins rather coarsely toothed, rarely 3-lobed, up to 11 cm. long and broad; petioles up to 3.5 cm. long; flowers rather few, in short cymes; plant glabrous [2. *quadrangularis*](#)
- Stems not or only slightly succulent, if quadrangular then sides less than 6 mm. wide; leaves pubescent or glabrous: **4**
- 4** Leaves as long as broad or only slightly longer than broad, more or less cordate or very broadly rounded at base: **5**
- Leaves always longer than broad, not, or not much, cordate at base: **19**
- 5** Undersurface of leaves with a very short but dense tomentellous indumentum covering the lamina between the veins, longer hairs present or absent on the nerves and veins: **6**
- Undersurface of leaves glabrous, or pubescent or pilose mainly on the nerves and veins, but without a close tomentellous covering on the lamina between the veins: **9**
- 6** Plant erect, with stout woody stems up to 1 m. high; tendrils absent or only vestigial; leaves ovate to orbicular or polygonal-orbicular, rounded or sometimes cordate at base, rounded or obtuse at apex, up to 7.5–15 cm. long and broad, margin with setaceous teeth; petioles 1–2 cm. long; inflorescences rather densely many-flowered [3. *doeringii*](#)
- Plant climbing or trailing; tendrils well developed: **7**
- 7** Unexpanded corolla cylindrical, 2–3 mm. long, about 1 mm. diam.; flowers in ample panicles at the ends of the branches; leaves broadly ovate, cordate at base, long-acuminate, 5–10 cm. long and broad; petioles 2.5–5 cm. long [4. *amoena*](#)
- Unexpanded corolla ovoid: **8**
- 8** Outside of corolla densely pubescent; stems glabrous, with a glaucous, waxy bloom; with black medifixed structures scattered over undersurface of leaves; leaves variable in shape, often broadly ovate-orbicular, cordate at base, rounded or subacute at apex, 7–12 cm. long and broad, margins sometimes lobulate, with the nerves and veins extended into setaceous teeth; petioles 1–4 cm. long; fruits obovoid-ellipsoid, about 7 mm. long .. [5. *caesia*](#)
- Outside of corolla minutely puberulous; stems sparingly pubescent, without a glaucous bloom; undersurface of leaves without black medifixed structures; leaves broadly ovate, widely cordate at base, acutely acuminate, 5–15 cm. long, 4–14 cm. broad, margins dentate; petioles 3–8 cm. long; fruits fusiform-ellipsoid, 9–10 mm. long and 4 mm. broad [6. *oreophila*](#)
- 9** Leaves on both surfaces, petioles, stems, inflorescences and outside of flowers densely woolly-pilose, the hairs drying reddish-brown; leaves suborbicular or ovate, sometimes lobulate, broadly truncate or widely cordate at base, 5–10 cm. long and broad, margins jagged-toothed; petioles 1–5.5 cm. long; fruits glabrous [7. *rubiginosa*](#)
- Leaves not woolly-pilose beneath: **10**
- 10** Plants erect; tendrils absent or only vestigial: **11**
- Plants climbing or trailing; tendrils well developed: **12**
- 11** Leaves sparingly pubescent beneath, not reticulate, ovate, cordate at base, acuminate, 5–7 cm. long, 3.5–6 cm. broad, margins dentate; petioles 2–4 cm. long; cymes few-flowered, corolla about 2 mm. long, glabrous outside; stems glabrous [8. *touraensis*](#)
- Leaves densely pubescent on the nerves and veins beneath, conspicuously reticulate, broadly ovate to suborbicular, often repand-lobulate, deeply cordate at base, rounded at apex, 7–18 cm. long and broad, margins with setaceous teeth; petioles 3–7 cm. long; flowers rather numerous in wide panicles, corolla about 1.5 mm. long, pubescent outside; stems densely pubescent [9. *corylifolia*](#)
- 12** Outside of corolla densely pubescent; leaves rather densely but shortly pubescent beneath on nerves and veins and also on the lamina, apex acuminate, margins with setaceous teeth: **13**
- Outside of corolla glabrous or very finely puberulous; leaves glabrous, puberulous or pubescent beneath: **14**
- 13** Leaves with numerous black medifixed structures beneath; corolla about 2 mm. long; stems nearly glabrous; leaves ovate-orbicular, often with short, pointed lobes, deeply cordate at base, 10–18 cm. long, 10–14 cm. broad [10. *kouandeensis*](#)
- Leaves without black medifixed structures beneath; corolla about 1 mm. long; stems densely pubescent at first, then more or less glabrescent; leaves broadly ovate or oblong-ovate, sometimes with short, pointed lobes, widely cordate at base, 6–12 cm. long and broad [11. *sp. A*](#)
- 14** Corolla 1–1.5 mm. long, glabrous or minutely puberulous outside; fruits up to 8 mm. long: **15**
- Corolla 2–3 mm. long, glabrous outside; leaves and stems at first pubescent beneath, then more or less glabrescent; fruits 9–22 mm. long: **17**

- 15 Branchlets and petioles glabrous or nearly so; leaves beneath papillose on the lamina and finely puberulous on the midrib and nerves, otherwise glabrous; leaves drying a dull reddish-brown, broadly ovate, widely cordate at base, acutely acuminate, 6–12 cm. long, 4–11 cm. broad, margins irregularly and usually rather coarsely dentate; petioles 2–8.5 cm. long; fruits obovoid, about 5 mm. long [12. *glaucophylla*](#)
- Branchlets and petioles rather densely spreading pubescent; leaves curly pubescent on nerves and veins beneath: **16**
- 16 Leaves rounded at apex, variable in shape but usually more or less suborbicular; stems trailing; tendrils absent or short and unbranched and not coiled; flowers congested in the inflorescences; fruits about 8 mm. long; leaves 5–13.5 cm. long and broad, sometimes 3–5-lobulate, margins with setaceous teeth; petioles 0.5–4 (–7) cm. long [13. *rufescens*](#)
- Leaves acuminate, often acutely caudate-acuminate, usually broadly ovate, widely cordate at base; stems climbing; tendrils well developed, bifurcate and coiled; flowers in rather lax panicles; fruits about 4 mm. long; leaves 6–12 cm. long, 5–11 cm. broad, margins with setaceous teeth; petioles 3–9 cm. long [14. *polyantha*](#)
- 17 Stems terete; leaves ovate-suborbicular, widely cordate at base, acuminate, 10–28 cm. long and broad, margins subentire or denticulate; petioles 3–13 cm. long; fruits ellipsoid, 1.7–2.2 cm. long [15. *populnea*](#)
- Stems 4-gonous; leaf-margins distinctly toothed: **18**
- 18 Older stems with 4 or more corky wings; upper surface of leaves appressed-pubescent when young, venation rather obscure beneath; pedicels about 1 cm. long; fruits subglobose, about 1.2 cm. diam.; leaves ovate-polygonal, cordate at base, acuminate or more or less pointed at apex, 7–15 cm. long, 5.5–13 cm. broad; petioles up to 18 cm. long [16. *petiolata*](#)
- Older stems without corky wings; upper surface of leaves glabrous even when young, venation distinct and parallel beneath; pedicels 6–8 mm. long; fruits ellipsoid, about 9 mm. long and 7 mm. broad; leaves broadly ovate or suborbicular-ovate or polygonal-ovate, cordate at base, shortly acuminate, 5–12 cm. long, 5–9 cm. broad; petioles up to 6 cm. long [17. *arguta*](#)
- 19 Stems climbing or trailing; tendrils well developed: **20**
- Stems erect, or suberect, eventually becoming woody, up to 1 m. high, terete, red-tomentose when young; tendrils absent; flowers in lax cymes, appearing before the leaves; fruits ellipsoid, apex acute, about 1.2 cm. long; leaves ovate or oblong-lanceolate, rounded at base, acute at apex, 4–11 cm. long, 2.5–4.5 cm. broad, glabrous or nearly so beneath, margins subentire; petioles 0.2–1 cm. long [22. *cornifolia*](#)
- 20 Cymes with peduncles 1 cm. or more long; leaves and stems glabrous or very nearly so, petioles more than 1 cm. long: **21**
- Cymes with the common peduncle less than 5 mm. long, the flowers appearing to be subfasciculate in the leaf-axils; stems and midrib and nerves on underside of leaves quite densely pubescent to nearly glabrous; unexpanded corolla about 1 mm. long; fruits pyriform, about 6 mm. long; leaves oblong or oblong-lanceolate, rounded at base, acutely acuminate, 5.5–11 cm. long, 2–4.5 cm. broad, margins remotely denticulate; petioles 0.3–1 cm. long [21. *diffusiflora*](#)
- 21 Unexpanded corolla 2.5–3.5 mm. long, conical, acute at apex: **22**
- Unexpanded corolla 1–1.5 mm. long, ellipsoid-subglobose, rounded at apex; leaves oblong, oblong-ovate or obovate-oblong, cordate, truncate-cordate or obtuse at base, acuminate, 6–9 (–16) cm. long, 2.5–5.5 (–8.5) cm. broad, margins denticulate or dentate; petioles up to 5.5 cm. long; fruits pyriform, about 9 mm. long and 7 mm. broad [20. *barbeviana*](#)
- 22 Pedicels puberulous; unexpanded corolla 3–3.5 mm. long; leaves oblong-lanceolate or oblong-ovate, obtuse to truncate at base, rarely slightly cordate, acuminate, 8–14 cm. long, 3–9 cm. broad, margins markedly denticulate; petioles 2–6 cm. long; fruits ellipsoid, 1.1–1.8 cm. long, 0.8–1 cm. broad [18. *producta*](#)
- Pedicels glabrous; unexpanded corolla about 2.5 mm. long; leaves usually rather narrowly oblong-ovate, truncate to cordate at base, long-acuminate, 8–15 cm. long, 3–8 cm. broad, margins undulate-dentate; petioles 1–3.5 cm. long [19. *barteri*](#)
- 23 Stems creeping or climbing; with tendrils: **24**
- Stems erect, without tendrils, produced annually from a robust perennial underground stock: **40**
- 24 Leaflets pedate (i.e. lateral ones on a common stalk forked above the middle), 5 (–7): **25**
- Leaflets not pedate, 3–7: **27**
- 25 Unexpanded corolla cylindrical, much longer than broad, constricted in the middle; stipules ovate-lanceolate, persistent; terminal leaflet more or less ovate-elliptic, up to 7.5 cm. long and 4.5 cm. broad, margins serrate, petiolule long, lateral leaflets similar but smaller; plant puberulous or nearly glabrous [23. *adenocaulis*](#)
- Unexpanded corolla short and subglobose; stipules small and deciduous: **26**
- 26 Fruits 3–4 mm. diam.; pedicels of terminal flowers usually 5–6 mm. long; inflorescences usually 15–40 cm. long; leaflets usually slightly toothed or sub-entire, mostly cuneate at base; petioles and petiolules rather long; leaflets glabrous or slightly puberulous beneath [24. *debilis*](#)
- Fruits 5–8 mm. diam.; pedicels of terminal flowers usually 2–3 mm. long; inflorescences usually 5–15 cm. long; leaflets rather coarsely serrate, mostly rounded or cordate at base; petioles and petiolules rather short; leaflets

- puberulous or densely shortly pubescent on nerves beneath [25. *gracilis*](#)
- 27** Unexpanded corolla subglobose or ovoid, not constricted: **28**
- Unexpanded corolla subcylindrical, constricted in the middle; ultimate branching of inflorescence cymose: ... **29**
- 28** Ultimate branching of inflorescence cymose; unexpanded corolla subglobose; leaflets 3, oblong-elliptic, rounded at base, sharply apiculate at apex, 4–7 cm. long, 2–3 cm. broad, margins repand-denticulate with rather sharp teeth, main lateral nerves 6–9, close; petiolules well developed; stems, leaves and inflorescences crisped-puberulous; fruits subglobose, 0.7–1 cm. diam., 3–4-seeded [26. *ibuensis*](#)
- Ultimate branching of inflorescence subumbellate; unexpanded corolla oblong-ovoid; leaflets normally 5, oblong-obovate, cuneate into a fairly long petiolule at base, rounded or shortly acuminate at apex, 6–14 cm. long, 2–5 cm. broad, margins subrepand-serrate, main lateral nerves 3–5, rather distant; stems and leaves glabrous; fruits ellipsoid, up to 2.5 cm. long, 1-seeded by abortion [27. *aralioides*](#)
- 29** Petiolules 3–5 cm. long; stems half-woody; leaflets (1–) 3–5, broadly elliptic-obovate to ovate-suborbicular, rounded or subcordate at base, abruptly acuminate, 12–15 cm. long, 8–9 cm. broad, pubescent on the nerves beneath, margins undulate-crenate; petioles 12–18 cm. long; inflorescences long-pedunculate, lax, ultimate branches and flower-buds rusty-puberulous; unexpanded corolla, 2–2.5 mm. long, with sessile glands at apex [28. *ornata*](#)
- Petiolules up to 1 cm. long; stems herbaceous; leaflets not as above: **30**
- 30** The leaflets with long hairs beneath: **31**
- The leaflets with short hairs beneath: **32**
- 31** Leaflets 3, very thinly membranous, with long, jointed, mostly non-glandular hairs; stems and petioles with long, jointed sometimes gland-tipped hairs; central leaflet elliptic, cuneate or obtuse at base, shortly acuminate, 6–11 cm. long, 2.5–5 cm. broad, lateral leaflets strongly asymmetrical, broadly rounded on one side at base, margins coarsely crenate-dentate; inflorescence puberulous and with gland-tipped hairs; flower-buds glabrous or with a few non-glandular hairs [29. *adenopoda*](#)
- Leaflets 5, rarely 3, with gland-tipped hairs on midrib and nerves beneath; stems and petioles with long, gland-tipped hairs; leaflets obovate-elliptic, the central ones 9–13 cm. long, 4.5–6 cm. broad, acute at each end, margins crenate-dentate; inflorescence spreading pubescent, with gland-tipped hairs; flower-buds pubescent, sometimes with gland-tipped hairs at apex [30. *rubrosetosa*](#)
- 32** Leaflets often 7, sometimes 3–5, lanceolate, about 4 times as long as broad, cuneate at base, acute or obtuse at apex, 7–12 cm. long, 1.5–3.2 cm. broad, curly-pubescent beneath, rather densely so when young, margins dentate; petioles 1–6.5 cm. long; stems, petioles, inflorescence and flower-buds more or less densely curly-pubescent, usually with short gland-tipped hairs [35. *lelyi*](#)
- Leaflets 1–3 times as long as broad, 3–5:..... **33**
- 33** Gland-tipped hairs present on the apices of the flower-buds:..... **34**
- Gland-tipped hairs absent from the apices of the flower-buds: **37**
- 34** Leaflets and inflorescence sparingly puberulous; flower-buds almost glabrous except for the gland-tipped hairs; leaflets 3 (–4), elliptic, acute at each end, up to 8 cm. long and 3 cm. broad, crenate-dentate in upper half; petioles up to 4 cm. long [31. *sp. B*](#)
- Leaflets beneath and inflorescence more or less densely pubescent; leaves normally 5-foliolate; flower-buds puberulous:..... **35**
- 35** Stems and petioles rather densely puberulous without longer gland-tipped hairs; petioles 6–10 cm. long; leaflets elliptic or obovate-elliptic, acute or subacute at each end, up to 12.5 cm. long and 6.5 cm. broad, margins crenate-dentate [32. *sp. C*](#)
- Stems and petioles with longer and often gland-tipped hairs as well as the shorter puberulous indumentum: ... **36**
- 36** Petioles 5–17 cm. long; stems and petioles with long, often gland-tipped hairs; leaflets elliptic or obovate-elliptic, long-cuneate at base, acuminate at apex, 7.5–15 cm. long, 3.5–7 cm. broad, shortly puberulous beneath, margins crenate-dentate; fruits about 5 mm. diam., on pedicels 1–2 cm. long [33. *vogelii*](#)
- Petioles 0.8–4 cm. long; stems and petioles with rather short gland-tipped hairs; leaflets obovate-oblongate or obovate-elliptic, cuneate at base, subacute to rounded at apex, up to 12 cm. long and 6 cm. broad, densely puberulous to tomentellous beneath when young, margins irregularly serrate to subentire; leaves sometimes 3-foliolate near the apices of shoots; fruiting pedicels up to 1 cm. long [34. *cymosa*](#)
- 37** Stems and petioles with gland-tipped hairs about 1 mm. long as well as the curly-puberulous indumentum; leaflets (3–) 5, elliptic or elliptic-obovate, the lateral ones obliquely ovate, cuneate to subrounded at base, acute or acuminate at apex, up to 9 cm. long and 4.5 (–5.5) cm. broad, finely puberulous beneath, margins crenate-dentate in upper part; flower-buds puberulous [36. *lageniflora*](#)
- Stems and petioles without long gland-tipped hairs; leaflets 5:..... **38**
- 38** Unexpanded corolla 4–5 mm. long; inflorescence and flower-buds densely tomentellous, with a few sessile glands but without gland-tipped hairs; leaflets elliptic or obovate-elliptic, cuneate at base, long-acuminate at apex, up to 10 cm. long and 4 cm. broad, sparingly puberulous on midrib, nerves and veins beneath, margins denticulate towards base, crenate-serrate with sharp teeth in upper part [37. *mannii*](#)

- Unexpanded corolla about 3 mm. long; leaflets rounded at base: 39
- 39 Leaflets very minutely puberulous all over the lower surface; inflorescence puberulous; leaflets broadly obovate, obtuse at apex, central leaflet 5–7 cm. long, 4–5 cm. broad, margins rather distantly crenate ..38. [griseo-rubra](#)
 Leaflets densely puberulous on midrib, nerves and veins beneath; inflorescence shortly and densely pubescent; leaflets broadly obovate, acute at apex, central leaflet up to 6.5 cm. long and 4.5 cm. broad, margins rather sharply crenate-serrate 39. [sp. D](#)
- 40 Leaves, stems and peduncles glabrous; leaves 3-foliolate; stems unbranched, with a terminal panicle: 41
 Leaves, stems and peduncles densely hairy; leaves 3–5 (–7)-foliolate:..... 42
- 41 Leaves sessile or rarely with a petiole up to 8 mm. long; leaflets linear-lanceolate, up to 20–24 cm. long and 1.3–2.4 (–3) cm. broad, margins denticulate; stipules ovate-lanceolate, up to 17 mm. long and 7 mm. broad, with ciliate margins, persistent 40. [juncea](#)
 Leaves with distinct stout petioles 2–8 cm. long; leaflets lanceolate, or elliptic-lanceolate, 10–28 cm. long, 1.5–8 cm. broad, margins denticulate to irregularly and rather coarsely serrate in the upper part; stipules lanceolate, up to 8 mm. long and 2 mm. broad, with sparsely ciliate margins, caducous41. [jatrophoides](#)
- 42 Leaves sessile, rarely some very shortly petiolate: 43
 Leaves distinctly petiolate, rarely some at the apex nearly sessile: 44
- 43 Undersurface of leaves and stems tomentose, stems also with longer gland-tipped hairs; leaves 3-foliolate; leaflets obovate-oblongate or oblongate, up to 18 cm. long and 8 cm. broad, margins doubly crenate .42. [crotalarioides](#)
 Undersurface of leaves and stems pulverulent-puberulous, stems with longer gland-tipped hairs; leaves 3–5-foliolate; leaflets oblongate, 8–12 (–20) cm. long, 3–4 (–11) cm. broad, irregularly serrate in the upper part, with sessile reddish glands on both surfaces 43. [waterlotii](#)
- 44 Stems and petioles with long, slender, spreading, gland-tipped hairs, 1–10 mm. long; stipules large, ovate-lanceolate, up to 2.5 cm. long; leaves (3–) 5 (–7)-foliolate; leaflets oblongate, very acute, up to 24 cm. long and 7 cm. broad, thinly pubescent beneath, coarsely toothed; petioles 2–12.5 cm. long; cymes rather densely many-flowered, with long subsistent bracts 44. [crinita](#)
 Stems and petioles with short hairs, sometimes with glandular hairs up to 1 mm. long:..... 45
- 45 Flower-buds with long gland-tipped hairs at the apices, otherwise only sparingly pubescent; leaves 5–7-foliolate; leaflets lanceolate, the lateral ones oblique, gradually acute at each end, up to 22 cm. long and 7.5 cm. broad, densely pubescent beneath, puberulous above, margins irregularly crenate-serrate45. [sokodensis](#)
 Flower-buds densely and loosely pilose but without gland-tipped hairs at the apices:..... 46
- 46 Leaflets pilose with long curly hairs on both surfaces; more or less oblongate, up to 12 cm. long and 3.5 cm. broad or more; leaves (1–) 5–7 (–8)-foliolate46. [chevalieri](#)
 Leaflets puberulous above, sometimes with longer hairs beneath: 47
- 47 Leaflets scabrid-puberulous beneath; more or less oblongate, up to 12 cm. long and 5 cm. broad; leaves (3–) 5–7-foliolate47. [zechiana](#)
 Leaflets at first densely tomentose between the veins beneath, becoming shortly pubescent as the lamina expands, up to 26 cm. long and 8.5 cm. broad, central leaflets elliptic-lanceolate, cuneate at base, lateral leaflets broadly rounded at base on proximal side; leaves (3–) 5-foliolate48. [flavicans](#)

1. **Cissus palmatifida** (Bak.) Planch. in DC. Monogr. Ampelid. 473 (1887); Gilg & Brandt in Engl. Bot. Jahrb. 46: 484; Chev. Bot. 145, incl. var. *integrifolia* A. Chev. **APD acc**

Vitis palmatifida Bak. in F.T.A. 1: 397 (1868).

Cissus triangularis A. Chev. in Rev. Bot. Appliq. 30: 454 (1950).

Cissus vuilletii A. Chev. l.c. 455 (1950).

Stems suberect at first, then trailing or climbing, often purple-tinged; flowers yellow; ripe fruit black; in savannah.

APD: Synonym of Cissus phymatocarpa Masinde & L.E. Newton

Vitis quadrangularis (Linn.) Wall. ex Wight & Arn. (1834) — F.T.A. 1: 399.

A glabrous large climber or trailer, with stout succulent quadrangular and almost winged stems, leafy only on the young shoots; fruits glabrous, red when ripe; [in savannah](#) regions.

4. *Cissus amoena* Gilg & Brandt l.c. 467, fig. 4 (1912). *APD acc*

A climbing shrub with nearly glabrous branches; [in forest](#).

Br. Cam.: Ekumba-Liongo Dusen 263. Kumba Preuss 537.

Also in [French Cameroons](#).

5. *Cissus caesia* Afzel. Remed. Guin. 55 (1815); Gilg & Brandt l.c. 474; F.W.T.A., ed. 1, 1: 476, partly; White l.c. 54. *APD acc*

Vitis caesia (Afzel.) Sabine (1824) — F.T.A. 1: 396, partly.

A climber with green or pinkish flowers and black fruits; [mainly in savannah](#).

S. L.: Afzelius! Don! Waterloo (June) Lane-Poole 306! Kennedy Ridge, Freetown (Apr.) Johnston 6! Laminaiya (Apr.) Thomas 149! Pujehun (Apr.) Deighton 3690!

[White also records Barter 563 from Nupe, N. Nigeria, as this species, but the specimen is poor and the determination is open to some doubt.]

6. *Cissus oreophila* Gilg & Brandt l.c. 471 (1912). *APD acc*

Cissus clematitis A. Chev. Bot. 142, name only.

Cissus glaucophylla of F.T.A. 1: 392, partly; of Gilg & Brandt l.c. 471, partly (Barter 3277).

Cissus polyantha of F.W.T.A., ed. 1, 1: 475, partly.

A large herbaceous climber with tough stems; flowers pink in bud, cream when open; [in forest](#).

Lib.: Tappita (fr. Aug.) Baldwin 9059! Gbanga (fl. Aug., fr. Dec.) Baldwin 10519a! Traub 254! Flumpa (fr. Sept.) Baldwin 9345! **iv. C.:** Guidéko (May) Chev. 16381! **G. C.:** Bunsu (June) Hughes 1125! **S. Nig.:** Gambari, S. of Ibadan (Aug.) Jones FHI 20257! Epe Barter 3277! **Br. Cam.:** Cam. Mt., 4,500 ft. Mann 1279! Buea (Mar.) Maitkind 441!

[This is closely related to *C. myriantha* Gilg & Brandt from French Cameroons and Belgian Congo, and to *C. tiliifolia* Planch. from Belgian Congo and A.-E. Sudan.]

7. *Cissus rubiginosa* (Welw. ex Bak.) Planch. l.c. 485 (1887); Gilg & Brandt l.c. 475. *APD acc*

Vitis rubiginosa Welw. ex Bak. in F.T.A. 1: 394 (1868).

A climbing or trailing herb; [in savannah](#) regions.

S. L.: Kabala to Musaia (Sept.) Miszewski 48! **Togo:** Büttner 6! Bismarckburg Kling 58. **N. Nig.:** Bauchi Plateau (Apr.) Lely P. 204! Jos (Aug.) Keay FHI 20054! Mongu, Plateau Prov. (fl. & fr. July) Lely 388! **S. Nig.:** Awba Hills F.R., Ibadan (Oct.) Jones FHI 6363!

Widespread in tropical Africa.

8. *Cissus touraensis* A. Chev. in Rev. Bot. Appliq. 30: 455 (1950). *APD acc*

Stems erect, 11/2–3 ft. high, from a deep rootstock; in savannah.

Iv. C.: Koualé to Kouroukoro, Toura country (May) Chev. 21747!

9. *Cissus corylifolia* (Bak.) Planch. l.c. 484 (1887); Gilg & Brandt l.c. 473; White l.c. 59. *APD acc*

APD: *Synonym of Cissus doeringii Gilg & M. Brandt*

Vitis corylifolia Bak. in F.T.A. 1: 396 (1868).

Cissus dahomensis A. Chev. Bot. 143, name only, partly.

Stems thick and succulent, erect, to 3 ft. high, from a stout rootstock; calyx green in bud, becoming purple, petals yellow.

G. C.: Afram Plains (Mar.) Johnson 704! **Togo:** Sokode fide Gilg & Brandt l.c. **Fr. Nig.:** Diapaga, Gourma (July) Chev. 24426 bis! **N. Nig.:** Nupe Barter 1271! Nabardo (May) Lely 207! Abinsi (Apr.) Dalz. 673! **S. Nig.:** Upper Ogun F.R., E. of Igboho (Feb.) Keay FHI 23437!

Also in **French Cameroons**.

10. *Cissus kouandeensis* A. Chev. in Rev. Bot. Appliq. 30: 454 (1950). *APD acc*

Cissus arguta of Chev. Bot. 140, partly.

Cissus polyantha of F.W.T.A., ed. 1, 1: 475, partly.

Stems widely scandent, glaucous.

Dah.: Kouandé, Atacora Mts. (June) Chev. 24007!

[Chevalier states that his description of this species was made in the field and that the specimen was not kept; Chev. 24007, of which there is a good duplicate at Kew, was, however, collected at the same place on the same day as Chevalier cites and agrees very well with his description.]

11. *Cissus* sp. A. *APD acc*

Cissus hederifolia A. Chev. Bot. 144, name only.

Stems widely scandent or trailing; inflorescence lax, flowers small.

Fr. G.: Pobéguin 2166! Timbo to Ditinn (Sept.) Chev. 18517! **N. Nig.:** Bauchi Plateau (July) Lely P. 352!

Also in **French Cameroons** and **A.-E. Sudan**.

12. *Cissus glaucophylla* Hook. f. in Fl. Nigrit. 263 (1849); Gilg & Brandt l.c. 471, partly (excl. Barter 3277). *APD acc*

Vitis glaucophylla (Hook. f.) Bak. in F.T.A. 1: 392 (1868), partly.

V. smithiana Bak. l.c. 390 (1868).

Cissus smithiana (Bak.) Planch. (1887) — Gilg & Brandt l.c. 466.

A liane; in the forest regions.

S. L.: Afzelius. **Lib.:** Fortsville, Grand Bassa (fr. Mar.) Baldwin 11157! **S. Nig.:** Ondo (Nov.) Onochie FHI 34235! **Br. Cam.:** Victoria (fr. Feb.) Maitland 402! Mundame to Johann-Albrechtshöhe Staudt 432. Winkler 1011. **F. Po:** Clarence Cove (Nov.) T. Vogel 101!

Also in **French Cameroons**, **Spanish Guinea**, **Gabon**, **Belgian Congo** and **Angola**.

13. *Cissus rufescens* Guill. & Perr. Fl. Seneg. 1: 133 (1831); Gilg & Brandt l.c. 473; White in Kew Bull. 1951: 55. *APD acc*

Vitis rufescens (Guill. & Perr.) Miq. (1863).

V. caesia of F.T.A. 1: 396, partly.

Cissus caesia of F.W.T.A., ed. 1, 1: 476, partly.

Cissus corylifolia of Chev. Bot. 142, partly.

Cissus pseudocaesia of F.W.T.A., ed. 1, 1: 476, partly.

Perennial herb with underground stock and prostrate creeping annual stems; stems and petioles crimson; flower-buds red, open flowers yellow; **in savannah**.

Sen.: Kaolak Kaichinger. **Gam.:** Albreda Leprieur; Perrottet 139! Genieri to Kaiaff (fl. & fr. July) Fox 115! **Fr. Sud.:** Ténétou (Mar.) Chev. 660. **Fr. G.:** Heudelot 837! **G. C.:** Zantana waterside (May) Kitson. Ejura Andoh FH 5040! **Dah.:** Kouba to Farfa, Atacora Mts. (June) Chev. 24030! **N. Nig.:** Loin Barter 1273! Zaria (May) Keay FHI 25735! Savalou Chev. 23691. **N. Nig.:** Nupe Barter 1276! Gayam, Birnin Gwari (June) Keay FHI 25818! Anara F.R., Zaria (May) Keay FHI 22988! Katagum Dalz. 79! **S. Nig.:** Lagos Rowland! Ijaiye F.R., near R. Ogun (Apr.) Onochie FHI 21988!

Also in **French Cameroons**, **Ubangi-Shari**, **A.-E. Sudan**, **Abyssinia** and **Uganda**.

16. *Cissus petiolata* Hook. f. l.c. 262 (1849); Gilg & Brandt l.c. 464. *APD acc*

Vitis suberosa Welw. ex Bak. in F.T.A. 1: 392 (1868).

Cissus suberosa (Welw. ex Bak.) Planch. (1887).

Vitis pallida of F.T.A. 1: 393.

Cissus koumiensis A. Chev. Bot. 144, name only.

A climber with tetragonal stems becoming woody with age and bearing 4 or more corky wings; flowers greenish-white; fruits reddish when ripe.

Fr. G.: Koumi, between Dalaba and Songuéta (Oct.) Chev. 20167! Nzérékoré (Oct.) Baldwin 9730! **S. L.:** Gonkwi Mt., Talla Hills (fr. Feb.) Sc. Elliot 4880! **Lib.:** Vonjama (Oct.) Baldwin 9909! **G. C.:** Akwapim T. Vogel! Okroase (May) Johnson 751! Achimota (Jan., June, Sept.) Irvine 860! 1469! 1968! Akwaseho (fl. & young fr. Jan.) Irvine 1671! **Togo:** Lome Warnecke 362! **S. Nig.:** Ibadan (fr. Feb.) Ujor FHI 27972! Gambari, Ibadan (June) Jones FHI 3626! **Br. Cam.:** Victoria (Apr.) Ejiofor FHI 29332! Bulifambo, Buea (Mar.) Maitland 552! Kumba (Apr.) Hutch. & Metcalfe 149!

Also in **Belgian Congo**, **A.-E. Sudan**, **Abyssinia**, **Eritrea**, **E. Africa**, **N. Rhodesia** and **Angola**.

17. *Cissus arguta* Hook. f. l.c. 261 (1849). *APD acc*

APD: Synonym of Cissus kouandeensis A. Chev.

Vitis arguta (Hook. f.) Bak. in F.T.A. 1: 392.

Cissus producta of Gilg & Brandt l.c. 477, partly.

Herbaceous climber with somewhat succulent tetragonous stems; internodes short.

Lib.: Christy! **S. Nig.:** Lagos (June, Oct.) Dalz. 1148! 1414! Millen 77! Ibadan (Oct.) Jones & Keay FHI 13750! Ibo country (Aug.) T. Vogel 3! Addaenda, R. Niger (Sept.) T. Vogel 141!

18. **Cissus producta** *Afzel.* **Remed. Guin.** 63 (1815); Gilg & Brandt l.c. 477, partly (excl. syn. *C. arguta* Hook. f.); Chev. Bot. 145. *APD acc*

Vitis producta (*Afzel.*) *Bak.* in F.T.A. 1: 389 (1868).

Cissus purpurascens *A. Chev.* Bot. 141, name only.

Cissus arguta of F.W.T.A., ed. 1, 1: 475, partly.

Cissus barteri of Chev. Bot. 141.

Cissus afzelii of Chev. Bot. 140, partly.

A large herbaceous climber with pinkish flowers; ripe fruits black; **in forest**.

Sen.: Berhaut 1859. **Fr. Sud.:** Moussaia (fr. Feb.) Chev. 411! **Fr. G.:** Rio Nunez Heudelot 820! Massadou, S. of Macenta (May) Collenette 24! Nzérékoré to Macenta (fr. Oct.) Baldwin 9746! **S. Also in **French Cameroons, Belgian Congo, Uganda, Tanganyika, N. Rhodesia, Angola** and **S. Tomé**.

19. **Cissus barteri** (*Bak.*) *Planch.* in DC. Monogr. Ampelid. 491 (1887); Gilg & Brandt l.c. 476. *APD acc*

Vitis barteri *Bak.* in F.T.A. 1: 390 (1868).

Herbaceous climber with rather succulent terete stems, glabrous; calyx pale green; petals crimson outside, pale red within, centre of flowers white; **in forest**.

S. Nig.: Okomu F.R., Benin (Dec.) Brenan 8565! Usonigbe F.R., Benin (Nov.) Keay FHI 24668! Meikle 618! Aboabam, Ikom (Dec.) Keay FHI 28224! **Br. Cam.:** Victoria (Aug.) Kalbreyer 5! Johann-Albrechtshöhe Büsgen 69. **F. Po:** (Dec.) Barter! Mann 11!

Also in **French Cameroons, Belgian Congo** and **Cabinda**.

20. **Cissus barbeyana** *De Wild. & Th. Dur.* in Contrib. Fl. Congo 2: 11 (1900); Gilg & Brandt l.c. 478. *APD acc*

Cissus producta of F.W.T.A., ed. 1, 1: 474, partly (Barter 3258).

A small liane; corolla yellow; fruits purplish; **in forest**.

S. Nig.: Epe Barter 3258! Omo F.R., Ijebu Ode (Apr.) Tamajong FHI 16929! Okomu F.R., Benin (fl. & fr. Mar.) Ross 128! **Br. Cam.:** Buea (July) Maitland 33! S. Bakundu F.R. (Mar.) Onochie FHI 30859! Kumba (Apr.) Hutch. & Metcalfe 150! Abonando, Mamfe (Mar.) Rudatis 18!

Also in **French Cameroons, Spanish Guinea, Gabon, Belgian Congo, Angola, S. Tomé, Principe** and (?) **E. Africa**.

21. **Cissus diffusiflora** (*Bak.*) *Planch.* l.c. 496 (1887); Gilg & Brandt l.c. 479. *APD acc*

Vitis diffusiflora *Bak.* in F.T.A. 1: 390 (1868).

V. afzelii *Bak.* l.c. 389 (1868).

Cissus afzelii (*Bak.*) *Gilg & Brandt* l.c. 478 (1912); Chev. Bot. 140, partly; F.W.T.A., ed. 1, 1: 476.

A slender climber; flowers greenish, fruits red; **in regrowth forest**.

Port. G.: Buba to Saucunda, Fulacunda (fr. Sept.) Esp. Santo 2184! **Fr. G.:** Kouria (Aug.) Chev. 15065! **S. L.:** Afzelius! Don! Leicester Peak (fr. Dec.) Sc. Elliot 3830! Sugar Loaf Mt. (Sept.) Usonigbe F.R. (fl. & fr. Nov.) Ejiofor FHI 24624! Meikle 631! Oban Talbot 755! **Br. Cam.:** Ngusi to Mafura (fr. Jan.) Schlechter 12908! Johann-Albrechtshöhe Büsgen 50. **F. Po:** (fl. & fr. Nov.) Mann 570!

Also in **French Cameroons, Spanish Guinea, Gabon, Uganda, A.-E. Sudan, Belgian Congo** and **Angola**.

22. *Cissus cornifolia* (Bak.) Planch. l.c. 492 (1887); Gilg & Brandt l.c. 480. *APD acc*

Vitis cornifolia Bak. in F.T.A. 1: 390 (1868).

A **savannah** plant, with a woody base sending up erect or suberect shoots each year after the fires; flowers greenish-yellow, appearing first on leafless shoots; fruits black-purple.

G. C.: Lissa to Lambussie (fr. Mar.) Kitson 814! **N. Nig.:** Nupe Barter 1072! Zaria (Feb., June) Dalz. 420! Keay FHI 25908! Funtua (Dec.) Meikle 825! Bornu (Jan., Feb.) Talbot 1219!

Extends to Abyssinia and S. Africa.

23. *Cissus adenocaulis* Steud. ex A. Rich. Fl. Abyss. 1: 111 (1847); Gilg & Brandt l.c. 516 (q.v. for syn.); Chev. Bot. 140.

*APD: Synonym of *Cyphostemma adenocaulis* (Steud. ex A. Rich.) Desc. ex Wild & R. B. Drumm. subsp. adenocaulis*

Vitis adenocaulis (Steud. ex A. Rich.) Miq. (1863) — F.T.A. 1: 404.

Cissus tenuicaulis of Chev. Bot. 147.

Vitis tenuicaulis of F.T.A. 1: 404, partly.

A somewhat fleshy herbaceous climber with striate stems; inflorescence and flowers reddish; fruits glabrous, purplish or black; **in savannah**.

Sen.: Lecard 13! **Gam.:** Albreda Perrottet. Kuntaur (July) Ruxton 52! **Fr. Sud.:** Ségou (fr. Sept.) Chev. 3188! Bamako (July) Waterlot 1207! **S. L.:** Musaia (July) Deighton 4815! **Iv. C.:** Ouagadougou to Ouahigouya (Aug.) Chev. 24728! Linoré to Gompéla (Aug.) Chev. 24623. Gouékouma (May) Chev. 21688! Mankono (June) Chev. 21868! **Togo:** Sokode-Basari Kersting A. 85! **Dah.:** Atacora Mts. (June) Chev. 24195! Agouagon (May) Chev. 23504! **Fr. Nig.:** Diapaga (fl. & fr. July) Chev. 24407! 24481! **N. Nig.:** Nupe Barter 1272! Anara F.R., Zaria (May) Keay FHI 22978! Tilde Filani (May) Lely 224! Yola (fl. & fr. July, Oct.) Dalz. 59! Shaw 64!

Widespread in the savannah regions of tropical Africa.

24. *Cissus debilis* (Bak.) Planch. l.c. 569 (1887); Gilg & Brandt l.c. 486, fig. 5, H–K, fig. 6, D–K.

*APD: Synonym of *Cayratia debilis* (Baker) Suess.*

Vitis debilis Bak. in F.T.A. 1: 403 (1868).

Cayratia debilis (Bak.) Suesseng. in E. & P. Pflanzenfam. 20D: 278 (1953).

Cissus repens A. Chev. Bot. 146, name only.

A slender climber with nearly glabrous, grooved, almost quadrangular stems, and very small flowers and fruits; calyx green, corolla white; **in forest regions**.

Lib.: Tappita (fr. Aug.) Baldwin 9028! Cess R., Tchien Dist. (fr. Aug.) Baldwin 9008! 9018a! **Iv. C.:** Mid. Sassandra to Mid. Cavally (fr. June) Chev. 19208! Widespread in tropical Africa.

28. **Cissus ornata** *A. Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 477 (1928); Chev. Bot. 144, name only; Chev. in Rev. Bot. Appliq. 30: 456 (1950).

APD: Synonym of Cyphostemma ornatum (A. Chev. ex Hutch. & Dalziel) Desc.

A large liane, with rather stout half-woody glabrous stems.

Iv. C.: Azaguié (Sept.) Chev. 22276!

29. **Cissus adenopoda** *Sprague* in Kew Bull. 1906: 247; Bot. Mag. t. 8278; Gilg & Brandt l.c. 538, fig. 16.

APD: Synonym of Cyphostemma adenopodum (Sprague) Desc.

Cissus rowlandii *Gilg & Brandt* l.c. 523 (1912); F.W.T.A., ed. 1, 1: 477.

Cissus ibuensis of Chev. Bot. 144, partly.

Herbaceous climber with pink or purplish hairs and often with purple spots on the undersurface of the leaves; flowers greenish-yellow with purplish markings; fruits red; **in forest**.

iv. C.: Capiecrou (Jan.) Chev. 17084! **Togo:** Misahöhe Baumann 488. **S. Nig.:** Lagos (Aug.) Rowland! Gambari Group F.R., Ibadan (fr. June, Aug.) Keay FHI 16232! Oni River F.R., Ife-Ilesha (Apr.) Onochie FHI 15507! Okomu F.R., Benin (Jan.) Brenan 8902! **Br. Cam.:** Victoria to Tole Winkler 127.

Also in **French Cameroons**, **Belgian Congo**, **Uganda** and (?) **Cabinda**.

30. *Cissus rubrosetosa* Gilg & Brandt in Engl. Bot. Jahrb. 46: 532 (1912).

APD: Synonym of Cyphostemma rubrosetosum (Gilg & M. Brandt) Desc.

Cissus glandulifera A. Chev. Bot. 143, name only, partly.

Herbaceous climber with purplish glandular hairs; flowers white.

Fr. G.: Dalaba-Diaguissa Plateau (fl. & fr. Sept., Oct.) Chev. 18577! 18854 (partly)! Nimba Mts. (Feb.–Apr.) Schnell 332! 1090! Pita (July) Pobéguin 2097! **iv. C.:** Mt. Tonkui (Sept.) Schnell 1741! Vogel 24!

Also in **French Cameroons** and **Spanish Guinea**.

See also *C. sp. aff. vogelii* Hook. f. in Consp. Fl. Ang. 2: 66, t. 15.

34. *Cissus cymosa* Schum. & Thonn. Beskr. Guin. Pl. 82 (1827); Gilg & Brandt l.c. 537.

APD: Synonym of Cyphostemma cymosum (Schumach. & Thonn.) Desc. subsp. cymosum

Vitis thonningii Bak. in F.T.A. 1: 407 (1868), excl. Welw. spec.

Cissus bakeriana Planch. (1887) — Gilg & Brandt l.c. 543; Chev. Bot. 141; F.W.T.A., ed. 1, 1: 477.

A strong herbaceous climber; cymes forming large flat panicles; petals green with purple tips.

Sen.: Berhaut 193. **G. C.:** Thonning! Accra T. Vogel 35! Akwaseho, Kwahu (fr. Jan.) Irvine 1674! Achimota (fl. & young fr. June) Milne-Redhead 5103! **Dah.:** Atacora Mts. (June) Chev. 24084! **Fr. Nig.:** Gourma Chev. 24381! 24419! **N. Nig.:** Nupe Barter 101! Kukawa (Sept.) E. Vogel 71!

Also in **French Cameroons** and **Uganda**.

35. **Cissus lelyi** *Hutch.* in Kew Bull. 1921: 361.

APD: Synonym of Cyphostemma serpens (A. Rich.) Desc. subsp. serpens

Cissus serpens of F.W.T.A., ed. 1, 1: 476, not of Hochst. ex A. Rich.

Herbaceous, climbing or trailing, several feet long, with greenish-white flowers.

Sen.: Cayor (Aug.) Heudelot 473! Kaolak Kaichinger! **N. Nig.:** top of Mt. Zaranda, 5,800 ft., Bauchi (May) Lely 194! Bauchi Plateau (Apr.) Lely P. 205! Katagum Dalz. 77! Lantewa, Damaturu (June) Onochie FHI 23377!

36. **Cissus lageniflora** *Gilg & Brandt* l.c. 537 (1912).

APD: Synonym of Cyphostemma lageniflorum (Gilg & M. Brandt) Desc.

Cissus glandulifera A. Chev. Bot. 143, name only, partly.

Herbaceous climber with red gland-tipped hairs on stems and petioles; inflorescence tinged pink, flowers green.

Fr. G.: Kouria to Ymbo (Oct.) Caille in Hb. Chev. 14974! **S. L.:** Sasa, Tonko Limba (Sept.) Jordan 338! **Iv. C.:** Sanrou to Ouodé Chev. 21611! **S. Nig.:** Ondo (Sept.) Keay FHI 22570! **F. Po:** Moka (Jan.) Exell 819!

37. **Cissus mannii** (*Bak.*) *Planch.* l.c. 610 (1887); *Gilg & Brandt* l.c. 530.

APD: Synonym of Cyphostemma mannii (Baker) Desc.

Vitis mannii *Bak.* in F.T.A. 1: 477 (1868).

Herbaceous climber; in forest.

Br. Cam.: Cam. Mt., from Buea up to 7,000 ft. (fl. Nov.–Dec., young fr. Jan.) Dunlap 94! Mann 1989! Mildbr. 10805! **F. Po.:** Mildbr. 7073.

Also in **French Cameroons**.

38. **Cissus griseo-rubra** *Gilg & Brandt* l.c. 528 (1912).

APD: Synonym of Cyphostemma griseo-rubrum (Gilg & M. Brandt) Desc.

Herbaceous climber.

Togo: Lome Warnecke 365!

39. **Cissus sp. D.** *APD acc*

Scrambling herb, with fleshy stem; flowers cream; among rocks.

N. Nig.: Kufena Rock, Zaria (July) Keay FHI 25915!

40. **Cissus juncea** *Webb* in Fragm. Flor. Aethiop.-Aegypt. 57 (1854); *Gilg & Brandt* in Engl. Bot. Jahrb. 46: 490.

APD: Synonym of Cyphostemma junceum (Webb) Wild & R. B. Drumm. var. junceum

Vitis juncea (*Webb*) *Bak.* in F.T.A. 1: 401 (1868).

Perennial herb, with erect, fleshy stems to 4 ft. high, glaucous green or dull mauve; flowers and ripe fruits red; in savannah woodland.

N. Nig.: Anara F.R., Zaria (fl. & fr. May) Keay FHI 22946! 25767! Bauchi Plateau (Apr.) Lely P. 206! **Br. Cam.:** Bum, Bamenda (fr. Apr.) Maitland 1620!

Also in **French Camerouns** and **A.-E. Sudan**.

41. **Cissus jatrophoides** (*Welw. ex Bak.*) *Planch.* in DC. Monogr. Ampelid. 579 (1887); Gilg & Brandt l.c. 491.

APD: Synonym of Cyphostemma junceum subsp. jatrophoides (Baker) Verdc.

Vitis jatrophoides *Welw. ex Bak.* in F.T.A. 1: 400 (1868).

Cissus stenopoda *Gilg ex Gilg & Brandt* l.c. 490 (1912); F.W.T.A., ed. 1, 1: 476.

Cissus atacorensis *A. Chev.* in Rev. Bot. Appliq. 30: 457 (1950); Bot. 140.

Cissus pobeguini *Chev.* l.c. 458 (1950).

Ampelocissus atacorensis *A. Chev.* Bot. 138, name only.

Perennial herb with erect, fleshy stems to 4 ft. high, glaucous green or tinged purple; calyx reddish, petals yellow; fruits purple when ripe; **in savannah woodland**.

Fr. G.: Kouroussa (Mar.) Pobéguin 1083! Dalaba (Apr.) Chev. 18143! Timbo (Mar.) Chev. 12579! Pobéguin 1579! **Iv. C.:** Koualé to Kouroukoro Chev. 21748! **G. C.:** Salaga (Apr.) Krause! Maluwe, N.T. Raboutu, Birnin Gwari (June) Keay FHI 25858! **S. Nig.:** Igboho, Oyo Prov. (Feb.) Keay FHI 22514!

Also in **French Camerouns**, **Ubangi-Shari**, **E. Africa** and extending to **Angola** and Mozambique.

42. **Cissus crotalarioides** *Planch.* l.c. 577 (1887); Gilg & Brandt l.c. 498.

APD: Synonym of Cyphostemma crotalarioides (Planch.) Desc. ex Wild & R. B. Drumm.

Cissus menyanthifolia *A. Chev.* Bot. 144, name only.

Perennial herb with stout underground stock, sending up each year branched fleshy stems, pinkish at the nodes, to 4 ft. high; flowers red in bud, yellow when open; fruits grey; **in savannah woodland**.

Dah.: Pira to Cabolé Chev. 23766! Atacora Mts. (fr. June) Chev. 23941! **N. Nig.:** Nupe Barter 1669! Zaria (May) Keay FHI 25729! Anchau (fr. May) Oguia FHI 7959! Anara F.R., Zaria (May) Keay FHI 25764! Nabardo (May) Lely 210! Naraguta (Apr., May) Lely 72! P. 208!

Also in **French Camerouns**, **Ubangi-Shari**, **A.-E. Sudan**, **Belgian Congo**, **N. Rhodesia** and **Nyasaland**.

43. **Cissus waterlotii** *A. Chev.* in Rev. Bot. Appliq. 30: 456 (1960).

APD: Synonym of Cyphostemma waterlotii (A. Chev.) Desc.

Cissus koualensis *A. Chev.* Bot. 144, name only.

Cissus chevalieri of Chev. Bot. 141, partly.

Cissus crotalarioides of Berhaut Fl. Sen. 24, 173.

Perennial herb with stout underground stock, sending up annually erect, branched, fleshy stems to 3 ft. high; **in savannah**.

Sen.: Berhaut 311. Kaolak Kaichinger! **Gam.:** Farafenni (July) Fox 153! Bondali (July) Rhind in Hb. Deighton 5582! **Fr. Sud.:** Bamako (June) Waterlot 1144! **Port. G.:** Bambadinca, Bafata (June) Esp. Santo 2519! **Fr. G.:** Kouroussa (July) Pobéguin 346! 348! Kandafara Paroisse 16! Timbo to Ditinn (fr. Sept.) Chev. 18378! **Iv. C.:** Mankono (June) Chev. 21869! Sogui to Koualé (May) Chev. 21694! Tiébisson to Languira, Baoulé-Nord (fr. July) Chev. 22201!

44. **Cissus crinita** *Planch.* l.c. 581 (1887); Gilg & Brandt l.c. 494; Suesseng. in E. & P. Pflanzenfam. 20D: 241, fig. 64 L.

APD: Synonym of Cyphostemma sokodense (Gilg & M. Brandt) Desc.

APD: Synonym of Cyphostemma crinitum (Planch.) Desc.

Perennial herb, with stout underground stock, sending up annually fleshy, sparingly branched stems, to 11/2 ft. high, clothed with very long glandular hairs; flowers red in bud, cream when open; ripe fruits black.

N. Nig.: Mando, Birnin Gwari (June) Keay FHI 25811! 25832! Bauchi Plateau (May) Lely P. 312! Abinsi (Oct.) Dalz. 674!

Also in **A.-E. Sudan**.

45. *Cissus sokodensis* Gilg & Brandt l.c. 506 (1912).

APD: Synonym of Cyphostemma sokodense (Gilg & M. Brandt) Desc.

Cissus chevalieri of Chev. Bot. 141, partly.

Cissus crinita of Chev. Bot. 143, partly.

Perennial herb with stout underground stock and erect stems to 3 ft. high, glandular-pubescent.

Fr. G.: Timbo to Ditinn (fr. Sept.) Chev. 18387! Pita (May–July) Pobéguin 2096! **Togo:** Aledjo, Sokode-Basari Kersting 303. **Dah.:** near Cabolé, Savalou (May) Chev. 23767! 23801! Birni to Konkobiri (June) Chev.! Firou to Konkobiri (July) Chev. 24347! **N. Nig.:** Bauchi Plateau (May) Lely P. 340!

[The type specimen has, presumably, been destroyed and the other specimens cited here are named from the description.]

46. *Cissus chevalieri* Gilg & Brandt l.c. 508 (1912); Chev. Bot. 141, partly.

APD: Synonym of Cyphostemma pobeguinianum Desc.

APD: Synonym of Cyphostemma flavicans (Baker) Desc.

Perennial herb with stout underground stock and erect stems to 3 ft. high.

Fr. Sud.: Koba, between Diéouessikalana and Kéméné (Mar.) Chev. 607! **Fr. G.:** Kankan (fl. & fr. Aug.) Pobéguin 1086! Dalaba-Diaguissa Plateau (fr. Sept.) Chev. 18574! Kouroussa (July) Pobéguin 347!

47. *Cissus zechiana* Gilg & Brandt l.c. 46: 506 (1912).

APD: Synonym of Cyphostemma zechianum (Gilg & M. Brandt) Desc.

APD: Synonym of Cyphostemma crotalarioides (Planch.) Desc. ex Wild & R. B. Drumm.

Perennial herb, to 3 ft. high; **in savannah**.

G. C.: Navrongo (fl. & fr. May) Andoh FH 5178! **Togo:** Kete Krachi Zech 363.

[As the type specimen has, presumably, been destroyed, Andoh FH 5178 is named from the description only. Of the two specimens mentioned by Chevalier in Rev. Bot. Appliq. 30: 458 (1950), Chev. 23941 is *C. crotalarioides* and Chev. 22201 is *C. waterlotii*.]

48. *Cissus flavicans* (Bak.) Planch. l.c. 591 (1887); Gilg & Brandt l.c. 505.

APD: Synonym of Cyphostemma flavicans (Baker) Desc.

Vitis flavicans Bak. in F.T.A. 1: 413.

Cissus dahomensis A. Chev. in Rev. Bot. Appliq. 30: 458 (1950); Bot. 143.

Cissus crinita of Chev. Bot. 143, partly.

Perennial herb, with stout underground stock, sending up annually stout branched stems to 5 ft. high, covered with reddish glandular hairs; inflorescences, fruits and margins of leaflets purplish-red; open flowers cream; whole plant sticky; **in savannah woodland**.

Iv. C.: Mbayakro, Baoulé-Nord (Aug.) Chev. 22263! **G. C.:** Nkoranza (fl. & fr. Apr.) Irvine 924! **Togo:** Kpandu (fl. & fr. Apr.) Asamany 169! **Dah.:** Agouagon to Savalou (fr. May) Chev. 23679! **N. Nig.:** Nupe Yates! Anara F.R., Zaria (fl. & fr. May) Keay FHI 22859! **S. Nig.:** Kitson! Yoruba country Barter 912! 1271!

***Cissus pseudocaesia* Gilg & Brandt** l.c. 473 (1912). *APD acc*

S. L.: T. Vogel! Sc. Elliot 4155! Falaba (Feb.) Sc. Elliot 4907!

White, in Kew Bull. 1951: 57–58, suggests this may be a hybrid between *C. caesia* and *C. rufescens*. Imperfectly known species.

2. RHOICISSUS

Planch. in DC. Monogr. Ampelid. 463 (1887); Suessenguth in E. & P. Pflanzenfam. 20D: 329 (1953).

- 1 Leaflets entire, pilose when young, later glabrescent; median leaflets oblong-elliptic to obovate, obtuse or subacute at apex, 5–8 cm. long, 2.5–4 cm. broad, lateral leaflets asymmetric, subfalcate-oblong; petiolules 0.3–1.2 cm. long; petioles 1–2.5 cm. long; flowers in short, pedunculate, rusty-pilose, leaf-opposed cymes; fruits subglobose, about 1 cm. diam. [1. *revoilii*](#)

Leaflets coarsely dentate to sinuate-dentate towards the apex, persistently tomentose beneath; median leaflets more or less obovate, 3.5–11 cm. long, 3–8 cm. broad, lateral leaflets asymmetric, falcate-oblong; petiolules of the median leaflets up to 2 cm. long, of the laterals up to 0.5 cm. long; petioles 2–10 cm. long; flowers in pedunculate, tomentose, leaf-opposed cymes; fruits subglobose, about 1.2 cm. diam. [2. *erythrodes*](#)

1. **Rhoicissus revoilii** *Planch.* in DC. Monogr. Ampelid. 469 (1887); Gilg & Brandt in Engl. Bot. Jahrb. 46: 440. *APD acc*

A scrambling shrub or large climber with flexible porous stems containing copious watery sap; flowers brownish; fruits black; [in dry types of forest](#).

G. C.: 10 miles N. of Mampong, Ashanti (fl. & fr. Nov.) Vigne FH 3430! Nkontanang, Kwawu (fr. July) Akpabla 195! Asofa Hill, Achimota (Dec.) Irvine 2582!

Also in [Belgian Congo](#), [Somaliland](#), [E. Africa](#), [Mozambique](#), [S. Rhodesia](#), [Transvaal](#), [S. Arabia](#) and the [Comores](#).

2. **Rhoicissus erythrodes** (*Fres.*) *Planch.* l.c. 463 (1887); Gilg & Brandt l.c.; Suesseng. in E. & P. Pflanzenfam. 20D: 332, fig. 97.

APD: *Synonym of Rhoicissus tridentata subsp. cuneifolia (Eckl. & Zeyh.) Urton*

Vitis erythrodes *Fres.* (1837) — F.T.A. 1: 401.

A scandent shrub or climber, or trailing; [on rocky ground in savannah regions](#).

N. Nig.: Bauchi Plateau Lely P. 254!

Also in [Belgian Congo](#) and [Angola](#) and from Abyssinia and [Arabia](#) southwards to S. Africa.

3. AMPELOCISSUS

Planch. in Journ. Vigne Am. 8: 372 (1884); DC. Monogr. Ampelid. 368 (1887); Suessenguth in E. & P. Pflanzenfam. 20D: 299 (1953). *APD acc*

- 1 Leaves simple, entire or lobed:.....2

Leaves digitately compound, with 5 leaflets nearly glabrous beneath, the central ones obovate-oblongate, cuneate at base into a short petiolule, acutely acuminate, 10–17 cm. long, 3–6 cm. broad, distantly serrate-dentate, lateral leaflets usually obliquely ovate-elliptic, shorter, broader and more coarsely serrate; inflorescence puberulous; fruits about 1.2 cm. long [7. *multistriata*](#)

- 2 Undersurface of adult leaves covered by a more or less dense woolly indumentum, drying reddish- or pinkish-brown:3

Undersurface of adult leaves without a woolly indumentum, only the nerves and veins pubescent, or nearly glabrous, younger leaves sometimes with whitish loose woolly indumentum:4

- 3 Stems and petioles with long gland-tipped bristly hairs; inflorescence paniculate, with a strong main axis, the branches and axis pubescent; calyx truncate; leaves suborbicular to rather deeply 5-lobed, cordate at base, 12–30 cm. long and broad, margins doubly dentate; petioles 10–15 cm. long; fruits about 1.4 cm. long [1. *leonensis*](#)

Stems and petioles without gland-tipped hairs; inflorescence widely cymose, the branches and axis woolly-pilose; calyx distinctly lobed; leaves broadly ovate-polygonal to rather deeply 3–5-lobed, cordate at base, 9–22

- cm. long and broad, margins doubly dentate; petioles 4–14 cm. long; fruits about 1 cm. long [2. bombycina](#)
- 4 Inflorescence and young shoots, including undersurface of leaves woolly-pilose; petioles pubescent; subglobose, about 8 mm. diam.: [5](#)
- Inflorescence and young shoots puberulous; leaves puberulous on nerves and veins only beneath; petioles glabrous or nearly so: [6](#)
- 5 Flowers in densely-flowered cymes rarely more than 3.5 cm. diam.; calyx distinctly lobed; fruits crowded; leaves suborbicular in outline, with 3–5 broad lobes rounded at apex, or ovate-orbicular and only slightly lobed, cordate at base, 8–17 cm. long and broad, margins rather sharply dentate; petioles 4–14 cm. long [3. grantii](#)
- Flowers in a spreading cyme more than 3.5 cm. diam.; calyx truncate; fruits not crowded, infructescence up to 15 cm. diam.; leaves suborbicular or broadly ovate, or 3–5 lobed, acuminate at apex, cordate at base, 9–14 cm. long and broad, margins closely dentate; petioles 6–13 cm. long [4. gracilipes](#)
- 6 Leaves not lobed, or only slightly 3-lobed, suborbicular, deeply cordate at base, shortly acuminate, 17–20 cm. long, 19–22 cm. broad, margins distantly shortly dentate; petioles up to 20 cm. long; inflorescence a stout panicle [5. macrocirrha](#)
- Leaves deeply 5–7-lobed, sometimes the lobes themselves with secondary lobes, widely cordate or truncate at base, acute to long-acuminate at apices of lobes, margins irregularly denticulate or serrulate, up to 35 cm. long and broad; petioles up to 21 cm. long; inflorescence a slender pyramidal panicle [6. cavicaulis](#)

1. **Ampelocissus leonensis** (*Hook. f.*) *Planch.* in Journ. Vigne Am. 9: 30 (1885); Gilg & Brandt in Engl. Bot. Jahrb. 46: 427 (excl. Barter 1276); Chev. Bot. 139. *Cissus leonensis* Hook. f. (1849). **APD acc**

Vitis leonensis (*Hook. f.*) *Bak.* in F.T.A. 1: 398 (1868) (excl. Barter 1276).

V. salmonea *Bak.* l.c. 394 (1868).

Ampelocissus salmonea (*Bak.*) *Planch.* (1885) — Gilg & Brandt l.c. 426; Chev. Bot. 139; F.W.T.A., ed. 1, 1: 478, partly (excl. distrib. S. Nig.); Berhaut Fl. Sen. 149.

Ampelocissus bakeri *Planch.* (1885) — Gilg & Brandt l.c.; Chev. Bot. 138; F.W.T.A., ed. 1, 1: 478.

An extensive climber with stout but scarcely woody stems, pubescent and with purple gland-tipped setae; flowers green; ripe fruits purple.

Also in **French Cameroons, Ubangi-Shari-Chad, A.-E. Sudan, E. Africa, N. Rhodesia & S. Rhodesia, Nyasaland and Mozambique.**

4. *Ampelocissus gracilipes* Stapf in J. Linn. Soc. 37: 90 (1905); Gilg & Brandt l.c. 425. *APD acc*

A climber with softly woody stout stems, pale brownish woolly-pilose on the young parts, minutely warted on older stems; flowers and fruits reddish; **in forest vegetation.**

Lib.: Sinoe Basin Whyte! R. Cestos, Grand Bassa Dinklage 1941. Gletown, Tchien (fr. July) Baldwin 9941a! **G. C.:** Akwapim (fr. June) Rumsey 9!

5. *Ampelocissus macrocirrha* Gilg & Brandt l.c. 424, fig. 1, A (1911). *APD acc*

A climber with stout woody glabrous stems and strong branched tendrils.

Br. Cam.: Buea Deistel. Johann-Albrechtshöhe Staudt 620. **F. Po:** (Jan.) Mann 226!

Also in **French Cameroons.**

[Doubtfully distinct from the next species.]

6. *Ampelocissus cavicaulis* (Bak.) Planch. l.c. 32 (1885); Gilg & Brandt l.c. 426, fig. 1, C.

APD: Synonym of *Cissus bathyrhakodes* Werderm.

APD: Synonym of *Ampelocissus abyssinica* (Hochst. ex A. Rich.) Planch.

Vitis cavicaulis Bak. in F.T.A. 1: 400 (1868).

A large climber.

S. Nig.: Sapoba (Aug.) Latilo FHI 27323! **Br. Cam.:** Bulifambo, Buea (Mar.) Maitland 583!

Also in **French Cameroons, Spanish Guinea, Gabon, Belgian Congo, A.-E. Sudan, Uganda and Angola.**

7. *Ampelocissus multistriata* (Bak.) Planch. in DC. Monogr. Ampelid. 398 (1887); Chev. Bot. 139; Chev. in Rev. Bot. Appliq. 30: 450. *APD acc*

Vitis multistriata Bak. in F.T.A. 1: 410 (1868).

V. pentaphylla Guill. & Perr. Fl. Seneg. 1: 135, t. 33 (1831), not of Thunb. (1784).

Ampelocissus pentaphylla (Guill. & Perr.) Gilg & Brandt l.c. 427 (1911); F.W.T.A., ed. 1, 1: 478.

Ampelocissus leprieurii Planch. (1885).

Cissusibuensis of F.W.T.A., ed. 1, 1: 477, partly (S.L. record).

A large herbaceous climber with glabrous, striate stems; inflorescence crowded, reddish; fruits smooth, grape-like; **in the savannah regions.**

Sen.: Kaolak Kaichinger. **Gam.:** Ingram! Albreda (June, July) Perrottet. Abuko Dalz. 8040! Genieri (July) Fox 137! **Fr. Sud.:** Kalédougou (June) Chev. 983. **Fr. G.:** Karkandy Heudelot 860! **S. Sokode-Basari Kersting 158. **N. Nig.:** Patti Lokoja (Nov.) Dalz. 201! Katsina Ala (July) Dalz. 792! **S. Nig.:** Lagos Dawodu 121! Sapoba Kennedy 1774! Onitsha Barter 1754! **Br. Cam.:** Buea (Nov.) Migeod 64! **F. Po:** Barter! T. Vogel 92!

Widespread in tropical Africa in moister woodland and forest.

RUTACEAE

Shrubs or trees, rarely herbs. Leaves simple or compound, mostly gland-dotted; stipules absent. Flowers hermaphrodite or unisexual, actinomorphic. Sepals 4–5, imbricate, free or connate. Petals imbricate, rarely valvate, mostly free. Stamens the same or double the number of the petals, rarely numerous, free or rarely united; anthers 2-celled, introrse, opening lengthwise. Disk usually present within the stamens. Ovary superior, syncarpous and often 4–5-celled, or the carpels free (secondary apocarp); styles free or connate. Ovules often 2, superposed. Fruit baccate, drupaceous or coriaceous, rarely a capsule. Seeds with or without endosperm.

Readily recognized by the gland-dotted usually compound leaves.

- 1** Fruits consisting of 1–5 separate dehiscent carpels each containing a single shining black or bluish seed; branchlets, and often main stem and branches, leaves and inflorescences covered with prickles; leaves imparipinnate with several to many leaflets; flowers unisexual [1. Fagara](#)
- Fruits indehiscent; plants without prickles but sometimes with axillary spines; leaves simple, 1–3-foliolate, digitate or imparipinnate: **2**
- 2** Leaves imparipinnate with numerous alternately arranged leaflets; branchlets without spines; flowers bisexual; fruits fleshy, 1-seeded [2. Clausena](#)
- Leaves simple, 1–3-foliolate, digitate, or imparipinnate with up to 3 pairs of opposite leaflets: **3**
- 3** Branchlets with single or rarely paired axillary spines; leaves simple, 1–3-foliolate or imparipinnate; flowers bisexual: **4**
- Branchlets without spines; leaves digitately (2–) 3–5-foliolate; flowers often unisexual³²: **6**
- 4** Fruits hard-shelled, 5–10 cm. diam.; ovules and seeds numerous in each cell; styles short: **5**
- Fruits soft, up to 3 cm. diam.; ovary (3–) 4–5-celled; ovules solitary in each cell; style longer than the ovary; stamens 8–10; leaves simple, 1–3-foliolate, or imparipinnate with up to 3 pairs of opposite leaflets; petioles and rhachides often winged [5. Citropsis](#)
- 5** Stamens 15–20; disk slightly lobed; ovary about 8-celled; leaves normally 3-foliolate [3. Afraegle](#)

- Stamens 8–10; disk large, with about 10 rounded lobes; ovary 5–6-celled; leaves normally simple, but apparently sometimes 1–3-foliolate [4. *Aeglopsis*](#)
- 6 Ovary 4-celled; fruit 4-celled, each cell 2-seeded; stamens or staminodes 8; leaves (3–) 5-foliolate [6. *Araliopsis*](#)
 Ovary 1–2-celled, or composed of up to 4 carpels which separate in fruit, each 1-seeded; stamens or staminodes 4–5; leaves (1–) 3 (–5)-foliolate: [7](#)
- 7 Carpels 2–4, more or less free, becoming quite free in fruit, or 1–3 aborting but evident [7. *Oricia*](#)
 Carpels solitary, or 2 united, not separating in fruit: [8](#)
- 8 Ovary and fruit 2-celled [8. *Diphasia*](#)
 Ovary and fruit 1-celled [9. *Teclea*](#)

Citrus spp.

Oranges, lemons, limes, grapefruits, etc.

Are cultivated.

***Chloroxylon swietenia* DC.**

Satinwood.

From tropical Asia is cultivated.

***Glycosmis citrifolia* (Willd.) Lindl.**

A native species of China, it is cultivated.

***Eriander* H. Winkl. in Engl. Bot. Jahrb. 41: 277 (1908).**

This is *Oxystigma* Harms (Caesalpiniaceae), see p. 466. Excluded genus.

1. FAGARA

*APD: Synonym of *Zanthoxylum* L.*

Linn. Syst. Nat., ed. 10: 897 (1759); *Engl. in E. & P. Pflanzenfam.* 19A: 217 (1931).

- 1 Leaflets not acuminate or only very slightly so, rigidly papery, oblong or oblong-oblong, sometimes emarginate at the apex, subacute at the base, 5–10 cm. long, 2–4 cm. broad, glabrous; branchlets and leaf-rhachis armed with sharp recurved prickles; panicles nearly as long as the leaves; flowers clustered and sessile; fruits ellipsoid, about 6 mm. long; seeds black and shining [1. *zanthoxyloides*](#)
 Leaflets conspicuously acuminate: [2](#)
- 2 The leaflets pilose or pubescent beneath: [3](#)
 The leaflets glabrous beneath: [5](#)
- 3 Branchlets, leaf-rhachides and lower surface of leaves softly and densely pubescent; leaflets 9–15, oblong-lanceolate, 12–13 (–20) cm. long, 4–6 (–9.5) cm. broad, margins crenulate, closely gland-dotted; fruits ovoid, 1 cm. long, slightly pubescent [2. *pubescens*](#)
 Branchlets, leaf-rhachides and midrib and nerves hirsute with rather long spreading hairs: [4](#)
- 4 Leaflets 5–10 cm. long, 2–3.5 cm. broad, usually 13–15, with few scattered glands, with petiolules 1–1.5 mm. long; lamina oblong-oblong, abruptly acuminate; inflorescence with few or many long spreading hairs; pedicels 2–3 mm. long; fruits subglobose, 5–6 mm. long, glabrous and muricate [3. *viridis*](#)
 Leaflets 6.5–25 cm. long, 4–8 cm. broad, 9–11, with numerous gland-dots, lateral leaflets sessile; lamina oblong-obovate, oblong or ovate-oblong, long-acuminate; inflorescence densely pubescent; pedicels 1 mm. long [4. *buesgenii*](#)
- 5 Trees and erect shrubs: [6](#)
 Lianes; stems, petioles and rhachides of leaves and inflorescences with numerous recurved prickles: [12](#)
- 6 Leaf-rhachides 50–100 cm. long; leaflets 31–51, elongate-oblong, asymmetrical at the base, 12–25 cm. long, 3.5–9 cm. broad, with numerous spreading lateral nerves; panicles very large; flowers sessile on the branches; fruits suborbicular about 5 mm. diam.: [7](#)
 Leaf-rhachides up to 45 cm. long, with 8–25 leaflets; leaflets up to 13 cm. long and 5 cm. broad, or if larger than main lateral nerves 8–10 and flowers distinctly pedicellate; pedicels 0.5–3 mm. long; fruits up to 7 mm. long: [8](#)

- 7 Petiolules up to 5 mm. long, leaflets obtuse to subcordate at base, asymmetrical but usually with the two sides of the lamina joining the petiolule at about the same level; leaf-rhachides prickly; leaflets 12–25 cm. long, 3.5–9 cm. broad [5. *macrophylla*](#)
- Petiolules 7–10 mm. long, leaflets strongly asymmetrical at base, the distal side broad, rounded, joining the petiolule well below the narrow, cuneate proximal side; leaf-rhachides unarmed or with a few prickles near the base only; leaflets 12–20 cm. long, 5–8 cm. broad [6. *melanorhachis*](#)
- 8 Main lateral nerves 8–10 on each side of midrib, bowed and looped; leaflets 9–13, rather obliquely oblong-elliptic or ovate-elliptic, rounded or obtuse at base, rather abruptly and often long-acuminate, 5–20 (–25) cm. long, 2.5–9 (–12.5) cm. broad, usually the upper leaflets larger than the lower ones, with very numerous translucent yellowish gland-dots, rhachis up to 45 cm. long; pedicels 2–3 mm. long; lateral branches of inflorescence paniculate; fruits 5–7 mm. long [7. *rubescens*](#)
- Main lateral nerves more than 10 on each side of midrib, close and more or less parallel; leaflets up to 13 cm. long and 5 cm. broad; gland-dots few or numerous; pedicels 0.5–1.5 mm. long: 9
- 9 Lateral branches of inflorescence paniculate; pedicels 1–1.5 mm. long; fruits 3.5–4.5 mm. long; leaflets up to 10.5 cm. long and 3.2 cm. broad, with gland-dots mostly confined to the margins: 10
- Lateral branches of inflorescence spike-like; pedicels up to 0.75 mm. long; leaflets 3–13 cm. long, 1.8–5 cm. broad, distinctly petiolulate: 11
- 10 Leaflets sessile, 20–25, each with a small pouch on one side at the base, oblanceolate, sometimes slightly oblique, cuneate at base, crenate towards the shortly acuminate apex, acumen itself emarginate, 1.4–7.5 cm. long, 0.6–1.8 cm. broad [8. *parvifoliola*](#)
- Leaflets with petiolules 1.5–3 mm. long, 8–18, without pouches at the base, narrowly oblong-falcate, asymmetrically cuneate to rounded at base, longcaudate-acuminate, margins subentire, 4–10.5 cm. long, 1.2–3.2 cm. broad [9. *lemairei*](#)
- 11 Leaflets with reddish translucent glands scattered over the surface; flowers in small fascicles along the lateral branches of the inflorescence, pedicels 0.5 mm. long or less; leaflets 9–21, oblong to ovate, often obliquely so, rounded or obtuse at base, long-acuminate, margins crenulate, 3–13 cm. long, 1.8–4.8 cm. broad [10. *lepreurii*](#)
- Leaflets with glands which do not appear translucent; flowers separate along the lateral branches of the inflorescence, pedicels about 0.75 mm. long; leaflets about 9, oblong or oblong-obovate, cuneate at base, abruptly long-acuminate, margins crenate, 6.5–12 cm. long, 3–5 cm. broad [11. *sp. A*](#)
- 12 Leaflets 9–11, oblong, rounded at base (except the apical leaflet which is cuneate), long-acuminate, margins crenate, 4.5–13 cm. long, 2–4.5 cm. broad; pedicels about 4 mm. long in flower, up to 7 mm. long in fruit; fruits 8–9 mm. long [12. *dinklagei*](#)
- Leaflets up to about 43, oblong, cordate at base, rather abruptly acuminate, margins inrolled, 5–9 cm. long, 3.5–5.5 cm. broad, terminal leaflet up to 22 cm. long and 7.5 cm. broad; leaf-rhachides up to about 70 cm. long; pedicels 1–1.5 mm. long in fruit; fruits 5–6 mm. long [13. *sp. B*](#)

1. ***Fagara zanthoxyloides* Lam.** Encyl. Méth. Bot. 2: 446 (1786); Aubrév. Fl. For. C. Iv. 2: 84–86, t. 159, D; Fl. For. Soud.-Guin. 364, t. 80, 4–7.

APD: *Synonym of Zanthoxylum zanthoxyloides (Lam.) Zepern. & Timler*

***Zanthoxylum senegalense* DC.** (1824) — F.T.A. 1: 305; Chev. Bot. 100.

***Fagara senegalensis* (DC.) A. Chev.** Bot. 101 (1920).

***Zanthoxylum polygamum* Schum.** (1827).

A glabrous shrub or tree, up to 40 ft. high, with shining aromatic foliage and bark; flowers cream-white; **locally abundant in coastal areas.**

Sen.: Kounoun & Saffal Isl. Perrottet 141! Carabane (Jan.) Chev. 3153! Floup-Fedyan Chev. 3152. R. Casamance (fr. May) Leprieur! R. Salum Brunner 71! **Gam.:** Hayes 518! **Fr. 2. ***Fagara pubescens* A. Chev.** in Bull. Soc. Bot. Fr. 58, Mém. 8: 144 (1912); Aubrév. Fl. For. C. Iv. 2: 86.

APD: *Synonym of Zanthoxylum chevalieri P. G. Waterman*

***Zanthoxylum melanacanthum* of Chev.** Bot. 100.

A shrub, or small tree, 6–20 ft. high, with tomentose branchlets armed with straight spines; flowers white; fruits red when ripe.

Fr. G.: Dalaba-Diaguissa Plateau (Sept., Oct.) Chev. 18348! 18882. Labé (fr. Feb.) Chev. 12267! **S. L.:** Bafodeya (Apr.) Sc. Elliot 5495! **G. C.:** Sang, W. Prov. (Aug.) Vigne FH 1289!

3. **Fagara viridis** A. Chev. l.c. 143 (1912); Aubrév. l.c. t. 160, C.

APD: Synonym of Zanthoxylum viride (A. Chev.) P. G. Waterman

Fagara attiensis Hutch. & Dalz., F.W.T.A., ed. 1, 1: 481 (1928), partly (Johnson 750).

A small tree or shrub, 6–12 ft. high with pubescent, spiny branchlets; flowers greenish-white in large terminal panicles.

S. L.: Musaia (fl. July, fr. Sept., Oct.) Deighton 4800! 4892! Miszewski 3! 12! Jigaya (fr. Sept.) Thomas 2672! Yetaya (fr. Sept.) Thomas 2459! Kabala (fr. Sept.) Thomas 2244! 2603! **Iv. C.:** Droupleu (May) Chev. 21445! **G. C.:** Kumasi (June) Vigne FH 1743! Okroase (May) Johnson 750!

4. **Fagara buesgenii** Engl. Bot. Jahrb. 46: 407 (1911).

APD: Synonym of Zanthoxylum buesgenii (Engl.) P. G. Waterman

Fagara viridis of F.W.T.A., ed. 1, 1: 481, partly (Talbot 1274).

A scandent shrub; in forest.

S. Nig.: Oban Talbot 1274! 1508!

The type is from an unspecified part of the Cameroons.

5. **Fagara macrophylla** Engl. in E. & P. Pflanzenfam. 3, 4: 118 (1896); Chev. Bot. 100; Aubrév. Fl. For. C. Iv. 2: 88, t. 159, B.

APD: Synonym of Zanthoxylum gillettii (De Wild.) P. G. Waterman

Zanthoxylum? macrophyllum Oliv. F.T.A. 1: 304 (1868), not of Miq. (1859).

An evergreen forest tree 30–40 ft. high, rarely up to 120 ft. high; bole and larger branches covered with large woody-based prickles; leaves very large, clustered at the ends of the branches.

S. L.: Bandama (fr. Mar.) Aylmer 582! Njala Deighton 1826! **Lib.:** Bonuta (Oct.) Linder 919! **Iv. C.:** Aubrév.! **G. C.:** Dunkwa Vigne 888! **S. Nig.:** Ibadan F.R., (fl. Sept., fr. Jan.) Punch 127! Shasha F.R. (May) Richards 3433! Uregin, Benin (young fr. July) Unwin 114! Sapoba Kennedy 332! 2288! **Br. Cam.:** Victoria Maitland 202!

Also in **French Cameroons**, **Gabon**, **Belgian Congo**, **A.-E. Sudan**, **Uganda**, **Angola** and **the islands of Principé** and **S. Tomé**.

There appear to be several infraspecific variants; intensive and extensive field research is needed.

6. **Fagara melanorhachis** Hoyle in Kew Bull. 1933: 174.

APD: Synonym of Zanthoxylum gillettii (De Wild.) P. G. Waterman

A forest tree, similar to the last.

S. Nig.: Sapoba (Apr.) Kennedy 337! 2086! 2297! Enugu Rosevear 2/28!

[Perhaps not distinct from *F. inaequalis* Engl. (1917) from French Cameroons, Belgian Congo and N. Rhodesia.]

7. **Fagara rubescens** (Planch. ex Hook. f.) Engl. in E. & P. Pflanzenfam. 3, 4: 118 (1896).

APD: Synonym of Zanthoxylum rubescens Planch. ex Hook. f.

Zanthoxylum rubescens Planch. ex Hook. f. (1849); F.T.A. 1: 305.

Z. melanacanthum Planch. ex Oliv. F.T.A. 1: 305 (1868).

Fagara melanacantha (Planch. ex Oliv.) Engl. (1896) — F.W.T.A., ed. 1, 1: 481; Aubrév. Fl. For. C. Iv. 2: 90, t. 160, A.

Fagara welwitschii Engl. (1896).

Fagara afzelii Engl. (1896).

Fagara altissima Engl. (1911).

Fagara bouetensis Pierre ex Engl. (1915).

Fagara attiensis Hutch. & Dalz., F.W.T.A., ed. 1, 1: 481 (1928) and Kew Bull. 1929: 24, partly (Chev. 17423, Thomas 1747); Aubrév. l.c.

Zanthoxylum attiense A. Chev. Bot. 99, name only.

An **understorey forest** tree, to 30 ft. high, armed with black thorns; flowers greenish or whitish, numerous in large panicles.

Port. G.: Dandum, Bafata (June) Esp. Santo 2690! Fulacunda Esp. Santo 2204! **S. L.:** Afzelius! T. Vogel 181! Njala (fl. June, fr. Aug.) Deighton 3013! 3017! 3242! Russell (May) Deighton 2685! Extends to **Angola**, **Belgian Congo**, A.–E. **Sudan** and **Uganda**.

11. *Fagara* sp. **A.** *APD acc*

Zanthoxylum crenatum A. Chev. Bot. 99, name only.

Fagara angolensis of F.W.T.A., ed. 1, 1: 481, partly; Aubrév. Fl. For. C. Iv. 2: 88, partly.

Perhaps only a form of *F. lepreurii*, but further material required.

Iv. C.: Soubré to Pehiri (June) Chev. 19183!

12. *Fagara dinklagei* Engl. Bot. Jahrb. 23: 147 (1896).

APD: *Synonym of Zanthoxylum dinklagei* (Engl.) P. G. Waterman

Fagara klainei Pierre ex De Wild. (1925).

(?) *F. poggei* Engl. (1896).

A liane with numerous sharp thorns; **in forest**.

S. Nig.: Okomu F.R. (fl. Feb., fr. Sept.) Onochie FHI 19731! 34326! Oban Talbot 427!

Also in **French Cameroons** and **Gabon**.

13. *Fagara* sp. **B.** *APD acc*

A liane with prickly stems up to 3 in. diam.; **in forest**.

Iv. C.: Téké Forest (fr. Aug.) Miège 1935!

2. CLAUSENA

Burm. f. — F.T.A. 1: 307; Engl. in E. & P. Pflanzenfam. 19A: 320 (1931); Swingle in Webber & Batchelor, Citrus Industry 1: 158 (1943).

- 1 Leaflets 17–32, alternate, obliquely ovate or ovate-lanceolate, cuneate to rounded at base, acuminate, acute, obtuse or rounded at apex, very variable in size, up to about 11 cm. long and 5 cm. broad, margins entire or crenulate, nearly glabrous to densely pubescent beneath, glandular-punctate; flowers in lax narrow panicles at least half as long as the leaves; petals glabrous; fruits ellipsoid, about 9 mm. long and 7 mm. broad, glabrous *anisata*

Clausena anisata (Willd.) Hook. f. ex Benth. in Fl. Nigrit. 256 (1849); F.T.A. 1: 308; Chev. Bot. 101 (incl. var.); Swingle l.c. 183 (incl. var.). *APD acc*

Amyris anisata Willd. (1799).

Clausena pobeguini Pobéguin (1906).

Clausena inequalis of F.T.A. 1: 307; of Chev. Bot. 102; of F.W.T.A., ed. 1, 1: 479; not of (DC.) Benth.

A shrub or small tree, up to 20 ft. high, with odorous leaves, cream-white flowers and shining black drupes.

Fr. G.: Labé Chev. 12292. Timbo Pobéguin 118. Diaguissa Chev. 12646. Mamou (Nov.) Chev. 14662. Farana Chev. 1341. **S. L.**: Regent Sc. Elliot 4146! Bafodeya Hills (Apr.) Sc. Elliot 5685! 6. ARALIOPSIS

Engl. in E. & P. Pflanzenfam. 3, 4: 175 (1896); op. cit. 19A: 304 (1931); Verdoorn in Kew Bull. 1926: 393. *APD acc*

- 1 Branchlets and leaves glabrous; leaves (3–) 5-foliolate, petioles 5–19 cm. long; leaflets obovate-oblong to obovate, cuneate into the 1–2 cm. petiolule at the base, abruptly long-acuminate, 8–27 cm. long, 3.5–10.5 cm. broad, with numerous parallel lateral nerves; panicles many-flowered, axillary, pubescent, pedicels up to 4 mm. long; flowers glabrous outside, unisexual [tabouensis](#)

Araliopsis tabouensis Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 83: 488, fig. 1 (1936); Aubrév. Fl. For. C. Iv. 2: 90, t. 161.

APD: Synonym of Vepris tabouensis (Aubrév. & Pellegr.) Mziray

An evergreen tree to 100 ft. high with cylindrical bole and rough bark; flowers whitish; **in rain forest.**

Lib.: Dukwia R. Cooper 341! **Iv. C.:** Youkou to Patokla, Tabou region (May, June) Aubrév. 1304! **G. C.:** Simpa (Feb., Mar.) Kinloch FH 3235! Vigne FH 2807! Axim (Feb.) Irvine 2249! **S. Nig.:** Umon-Ndealichi F.R., Itu, Calabar Prov. Iyizoba FHI 20809!

Araliopsis sp.

Forest tree, about 10 ft. high; leaves 5-foliolate, petioles 17–28 cm. long; leaflets more or less obovate elliptic, 13–34 cm. long, 7–16.2 cm. broad; male panicles terminal, very dense; sepals and petals green without, petals within and filaments white. On account of its 8 stamens I refer this plant provisionally to Araliopsis; fruits are however required to determine its exact position. It is possible that the specimen (Olorunfemi FHI 30709) which I have tentatively referred to as Oricia sp. B, on account of its apocarpous fruits, is conspecific; the distinctions between the genera Oricia, Araliopsis and Vepris and their allies need to be thoroughly revised.

S. Nig.: Boje to Iso Bendiga, Afi River F.R., Ikom Div. (Dec.) Keay FHI 28258!

Imperfectly known species.

7. ORICIA

Pierre in Bull. Soc. Linn. Paris 2: 1288 (1897); Verdoorn in Kew Bull. 1926: 411; *Engl.* in E. & P. Pflanzenfam. 19A: 303.

- 1 Branches of inflorescence tomentose, flowers sessile, outside of corolla glabrous; leaves (1–) 3-foliolate; leaflets obovate-elliptic to elongate-elliptic, cuneate at base, obtuse or subacute at apex, 3.5–28 cm. long, 1.5–10 cm. broad [l. suaveolens](#)
- Branches of inflorescence tomentellous, pedicels 1.5–3 mm. long, outside of corolla puberulous; leaves 3-foliolate; leaflets elongate-oblong, cuneate at base, shortly acuminate, 10–35 cm. long, 4–12 cm. broad [2. trifoliolata](#)

1. **Oricia suaveolens (Engl.) Verdoorn** in Kew Bull. 1926: 413; Aubrév. Fl. For. C. Iv. 2: 92, t. 162, 1–5.

APD: Synonym of Vepris suaveolens (Engl.) Mziray

Teclea suaveolens Engl. (1896).

Oricia leonensis Engl. (1903).

An **understorey forest** tree, to 30 ft. high; flowers greenish-white.

2. *Oricia trifoliolata* (Engl.) Verdoorn l.c. (1926).

APD: Synonym of Vepris trifoliolata (Engl.) Mziray

Araliopsis trifoliolata Engl. (1917).

A forest tree.

Br. Cam.: Victoria (Mar.) Maitland 586! Zahn 499!

1. *Oricia* sp. A. *APD acc*

Tree, to 45 ft. high; leaves 3-foliolate, midribs densely pubescent beneath. Flowers not known.

Lib.: Mecca (fr. Dec.) Baldwin 10807!

Imperfectly known species.

2. *Oricia* sp. B. *APD acc*

Forest tree, to 25 ft. high; leaves 5-foliolate, leaflets up to 40 cm. long. Flowers not known; but see note under *Araliopsis* “imperfectly known species.”

Br. Cam.: S. Bakundu F.R. (fr. Aug.) Olorunfemi FHI 30709!

Imperfectly known species.

8. DIPHASIA

APD: Synonym of Vepris Comm. ex A. Juss.

Pierre in Bull. Soc. Linn. Paris, nouv. sér. 70 (1898); Verdoorn in Kew Bull. 1926: 411; Engl. in E. & P. Pflanzenfam. 19A: 304 (1931).

- 1 Branchlets, petioles and midribs and nerves on underside of leaflets hispid with yellowish or grey hairs; petioles 2–10 cm. long; leaflets 3, elliptic-obovate, cuneate into a short petiolule at base, acuminate at apex, 5–18 cm. long, 2·3–7 cm. broad; inflorescence of terminal and axillary panicles; fruits about 1 cm. long, 2-lobed, or of one oblique carpel with the other aborting and forming a swelling at the base of the fruit [klaineana](#)

Diphasia klaineana Pierre l.c. (1898).

APD: Synonym of Vepris hiernii Gereau

Diphasia angolensis of Verdoorn in Kew Bull. 1926: 411, partly; of Aubrév. Fl. For. C. Iv. 2: 84.

An understorey forest tree, to 50 ft. high; flowers white.

Iv. C.: Port Bouët Aubrév. 2004! Agnéby (Apr.) Aubrév. 2264. **G. C.:** Bosusu (July) Moor FH 340! S. Scarp F.R. Moor FH 2239! S. Fomang Su F.R. (fr. Jan.) Vigne FH 2698! Bobiri F.R. (fl. May, fr. Sept.) Foggie FH 4893! C. J. Taylor FH 5273! Worobong F. R. (fl. & fr. Nov.) Vigne FH 4269! 4270!

Also in **Gabon**.

9. TECLEA

APD: Synonym of Vepris Comm. ex A. Juss.

Del. in Ann. Sci. Nat., sér. 2, 20: 90 (1843); Verdoorn in Kew Bull. 1926: 401; Engl. in E. & P. Pflanzenfam. 19A: 314 (1931).

- 1 Inflorescences quite glabrous, up to 2·5 cm. long, axillary, racemose or sparingly branched; petioles not winged;

leaflets distinctly petiolulate, with numerous lateral nerves:2

Inflorescences rather densely but minutely spreading-puberulous, up to 4 cm. long, axillary and terminal, usually many-flowered and paniculate; petals 1·5–2 mm. long; petioles (0·8–) 2–7 cm. long, narrowly winged; leaflets sessile, elongate-elliptic, cuneate at base, acuminate at apex, 4·5–21 cm. long, 1·2–8 cm. broad; fruits oblong-ellipsoid, at least 8 mm. long and 4 mm. broad [3. verdoorniana](#)

- 2 Petals 3–4 mm. long; racemes up to 1·5 cm. long, with 1–3 (–5) flowers; petioles 2·5–13·5 cm. long; petiolules 0·5–2·5 cm. long; leaflets elongate-elliptic, cuneate at base, obtusely long-acuminate, 8·5–15 cm. long, 3·2–6·3 cm. broad; fruits ellipsoid, up to 2·5 cm. long and 1·5 cm. broad [1. afzelii](#)

Petals 2 mm. long; racemes up to 2·5 cm. long with several flowers; petioles 1·8–4 cm. long; petiolules up to 6 mm. long; leaflets lanceolate-elongate-elliptic, cuneate at base, gradually long-acuminate, 4·3–12·5 cm. long, 1·7–4·8 cm. broad [2. sudanica](#)

1. **Teclea afzelii** Engl. Bot. Jahrb. 23: 153 (1896); Chev. in Rev. Bot. Appliq. 30: 76. (?) T. acuminata Engl. Bot. Jahrb. 36: 245 (1905).

APD: Synonym of Vepris afzelii (Engl.) Mziray

Teclea zenkeri of Verdoorn in Kew Bull. 1926: 407, partly, of F.W.T.A., ed. 1, 1: 482; not of Engl. (1896).

A glabrous forest shrub or small tree; flowers orange-red; ripe fruits yellow.

Fr. G.: Mt. Loura, Fouta Djallon Chev. **S. L.:** Afzelius! **S. Nig.:** Afi River F.R., Ikom (fr. May) Latilo FHI 30993! **Br.**

Cam.: Johann-Albrechtshöhe Staudt 590! Bibundi (Apr.) Schlechter 12410.

Also in **French Cameroons**.

2. **Teclea sudanica** A. Chev. in Bull. Mus. Hist. Nat., sér. 2, 5: 408 (1933); Rev. Bot. Appliq. 30: 78, t. 4 C.

APD: Synonym of Vepris heterophylla (Engl.) Letouzey

A shrub, to 10 ft. high; on rocky hills in savannah regions.

Fr. Sud.: Boulouli (Sept.) Vuillet 749! Kita Dubois 55! Fô (June) Chev. 966! **G. C.:** Yeji Dist. Kitson!

[Apparently close to T. nobilis Del. which is widespread in N.E. and E. Africa.]

3. **Teclea verdoorniana** Exell & Mendonça in Consp. Fl. Ang. 1: 270 (1951).

APD: Synonym of Vepris verdoorniana (Engl. & Mendonça) Mziray

Teclea grandifolia of Verdoorn in Kew Bull. 1926: 407; of F.W.T.A., ed. 1, 1: 482; of Chev. in Rev. Bot. Appliq. 30: 76, t. 4 A; not of Engl. (1896).

A forest shrub or small tree; petals greenish-white, stamens white.

S. L.: Sugar loaf Mt. (May) Barter! **Lib.:** Mt. Bili (Dec.) Barker 1181! **Iv. C.:** Groumania (fl. Jan., fr. May) Aubrév. 795!

Also in **Belgian Congo (Haut Uele)**.

1. **Teclea ferruginea** A. Chev. in Bull. Mus. Hist. Nat., sér. 2, 5: 409 (1933); Rev. Bot. Appliq. 30: 76.

A shrub, 5 ft. high.

Fr. Sud.: Sangali, 150 km. from Bandiagara (fl. buds May) Rogeon 293.

Type specimen not traced. Imperfectly known species.

2. **Teclea carpopunctifera** A. Chev. in Rev. Bot. Appliq. 30: 78, t. 4 B (1950). *APD acc*

A small tree; in forest.

Iv. C.: Kokroum Bégué 2951.

Type specimen not traced.

SIMAROUBACEAE

Trees or shrubs, sometimes with bitter bark, rarely spiny. Leaves alternate or rarely opposite, imparipinnate, rarely simple, not or very rarely gland-dotted; stipules absent. Flowers small, unisexual or polygamous, actinomorphic. Calyx-lobes 3–5. Petals 3–5, imbricate or valvate, rarely absent, free or united into a tube. Disk present. Stamens inserted at the base of the disk, equal or double the number of the petals, rarely more numerous, free, sometimes with a scale at the base; anthers 2-celled, opening lengthwise. Ovary 2–5-lobed, 1–5-celled, or carpels quite separate; styles 2–5; ovules usually solitary, rarely 2 or more, axile. Fruit usually indehiscent, dry or drupaceous. Seeds with or without endosperm; embryo straight or curved.

Mainly tropical regions.

Sometimes with bitter bark; leaves eglandular, pinnate, exstipulate.

- 1 Ovary 4 (–5)-celled; branchlets often with thorns; stamens 8–10, each with a hairy petaloid scale at the base. [1. *Harrisonia*](#)
Ovary of 4–5 free carpels, each with a single ovule; branchlets not thorny: [2](#)
- 2 Stamens each with a hairy petaloid scale at the base: [3](#)
Stamens without petaloid scales at the base: [5](#)
- 3 Calyx open in bud, regularly lobed: [4](#)
Calyx closed in bud, rupturing into 2–3 (–4) unequal segments; stamens 10 (–14) [4. *Hannoa*](#)
- 4 Leaf-rhachis narrowly winged; leaflets 3–4 pairs; stamens 10. [2. *Quassia*](#)
Leaf-rhachis not winged; leaflets 5–15 pairs; stamens 10–18. [3. *Pierreodendron*](#)
- 5 Stamens 10; leaf-rhachis not constricted at the base and nodes; leaflets 6–12 pairs; fruits about 10 cm. long. [5. *Gymnostemon*](#)
Stamens 4; leaf-rhachis (when dry) constricted at the base and nodes; leaflets 4–6 pairs; fruits about 1 cm. long. [6. *Bucea*](#)

Picrasma javanica Bl.

A species native of tropical Asia is sometimes cultivated in our area.

1. HARRISONIA

R.Br. ex A. Juss. — F.T.A. 1: 311; Engl. in E. & P. Pflanzenfam. 19A: 382 (1931).

- 1 Leaflets usually opposite, 4–8 pairs, oblanceolate to elliptic, narrow at base, rounded or slightly acuminate at apex, about 4 cm. long and 1.5 cm. broad, entire or crenate, slightly pubescent beneath; rhachis narrowly winged; panicles terminal, many-flowered; flowers globose in bud, tomentose, small; fruits depressed-globose, 7–8-lobulate, hollowed on the top, about 6 mm. diam. [abyssinica](#)

Harrisonia abyssinica Oliv. F.T.A. 1: 311 (1868); Engl. l.c., fig. 177. *APD acc*

Harrisonia occidentalis Engl. (1895) — Chev. Bot. 105; F.W.T.A., ed. 1, 1: 485; Aubrèv. Fl. For. C. Iv. 2: 100, t. 167.
Zanthoxylum guineense Stapf (1906).

A shrub, or small tree up to 30 ft. high; the leaves often with paired thorns at the base, with branches sometimes long and sarmentose, and erect panicles of small white flowers; [characteristic of areas marginal between forest and savannah](#).

Widespread in tropical Africa.

2. QUASSIA

Linn. — F.T.A. 1: 312; Engl. in E. & P. Pflanzenfam. 19A: 377 (1931).

- 1 Leaflets opposite, 3–4 pairs, obliquely elliptic, unequal-sided at base, caudate-acuminate, 10–15 cm. long, 4–6 cm. broad, thin, glabrous, with about 9 pairs of obscure lateral nerves; rhachis narrowly winged, often constricted at the joints; panicles very narrow, shorter than the leaves; pedicels 5 mm. long; petals linear-oblong, 1.5 cm. long; stamens shortly pilose towards the base; fruits slightly flattened, obovate-elliptic, with sharp edges, about 2.5 cm. long, very laxly reticulate. [africana](#)

Quassia africana (Baill.) Baill. in *Adansonia* 8: 89 (1868); F.T.A. 1: 312. *APD acc*

Simaba africana Baill. (1867) — Cronquist in *Lloydia* 7: 81.

A glabrous shrub, 8–12 ft. high; in forest.

Br. Cam.: R. Cameroon (Jan.) Mann 2191!

Extends to **Belgian Congo** and **Angola**.

Quassia amara Linn.

A native species of tropical America is cultivated in our area.

3. PIERREODENDRON

Engl. Bot. Jahrb. 39: 575 (1907); Little in *Phytologia* 3: 156 (1949).

Simarubopsis Engl. (1911).

Mannia Hook. f. (1862) — F.T.A. 1: 312; F.W.T.A., ed. 1, 1: 484; not of Opiz (1829), nor of Trevis. (1857).

- 1 Stamens 15–18; anthers 2–3 mm. long; leaves up to 1 m. long, with 5–15 pairs of subopposite leaflets, plus the terminal one; leaflets oblong-elliptic, rounded and unequal sided at base, rounded and with a very abrupt, short, thick acumen at apex, 10–30 cm. long and 3–9 cm. broad, leathery, with numerous much-branched lateral nerves, slightly impressed above; petiolules about 3 mm. long; racemes clustered or paniculate, up to 40 cm. long; pedicels up to 7 mm. long; calyx-lobes orbicular, about 2.5 mm. long, petals up to 1 cm. long; fruits oblong-ellipsoid, about 7 cm. long and 4–5 cm. broad, apiculate, woody. [1. africanum](#)
- Stamens 10; anthers 4–5 mm. long; otherwise, apparently, as above. [2. kerstingii](#)

1. Pierreodendron africanum (Hook. f.) Little in *Phytologia* 3: 156 (1949).

APD: *Synonym of Quassia grandifolia* (Engl.) Noot.

Mannia africana Hook. f. (1862) — F.T.A. 1: 312; F.W.T.A., ed. 1, 1: 484, partly; Kennedy For. Fl. S. Nig. 152.

Pierreodendron grandifolium Engl. (1907).

A forest tree, to 60 ft. high, with straggling habit; inflorescences and flowers reddish-purple.

S. Nig.: Ewusa to Ebele, Ishan (Aug.) Onochie FHI 33251! Sapoba (fl. Aug.–Sept., fr. Sept., Oct.) Kennedy 1809! Nun R. (Sept.) Mann 480! Calabar (Feb.) Mann 2266!

Also in **French Cameroons**, **Gabon**, **Belgian Congo** and **Angola**.

2. Pierreodendron kerstingii (Engl.) Little l.c. (1949). *APD acc*

Simarubopsis kerstingii Engl. Bot. Jahrb. 46: 280, fig. 1 (1911).

Mannia kerstingii (Engl.) Harms in E. & P. Pflanzentam. 19A: 371, fig. 168 (1931).

M. simarubopsis Pellegr. in Bull. Soc. Bot. Fr. 77: 665 (1930); Aubrév. Fl. For. C. Iv. 2: 102, t. 168.

A large forest tree, to 80 ft. high; flowers red, ripe fruits yellow.

Iv. C.: Abidjan Aubrév. 192; 346. **G. C.:** Kwaben (Aug.) Vigne FH 1297! Aburi Johnson 985! **Togo:** Kulumi, Sokode-Basari (fr. Dec.) Kerling A. 708!

This genus is still poorly known; more good specimens and field observations are much needed. Aubréville (l.c.) suggests that the Ivory Coast plant may be different from *P. kerstingii*. It is possible, however, that there is really only one species in the genus, with dimorphic flowers. The genus is also represented at Kew by the following sterile specimens which may

belong to either species: — S. L.: Bo to Yele King 276! Iv. C.: Dabou Chev. 16212! (cited as *Trichoscypha mannoides* A. Chev. Bot. 161, name only). S. Nig.: Olokemeji Onochie & Jones FHI 14179! Illa Thomas 1916!

4. HANNOA

Planch. — F.T.A. 1: 309; Engl. in E. & P. Pflanzenfam. 19A: 380(1931).

- 1 Tree to 35 m. high, with tall straight bole in rain forest; leaflets (2–) 3–8 pairs, plus the terminal leaflet, on petiolules up to 1.2 cm. long, oblong or elliptic, cuneate at base, rounded and broadly mucronate or emarginate at apex, 3.5–19 cm. long, 2–7.5 cm. broad, leathery, glabrous, main lateral nerves impressed above and beneath; panicles terminal, lax, longer than the leaves, puberulous; flowers more or less glomerate, puberulous outside; petals about 4 mm. long; fruits oblong, 2.5–3.2 cm. long, 1.5–2.5 cm. diam., glabrous. .. [1. *klaineana*](#)

Tree to 10 m. high in understorey of montane forest; leaflets 2–3 pairs, plus the terminal leaflet, on petiolules up to 2.2 cm. long, oblong, cuneate at base, rounded and mucronulate or emarginate at apex, 6–16 cm. long, 2–6 cm. broad; panicles rather shorter than the leaves; otherwise similar to above. [2. *ferruginea*](#)

Tree to 12 m. high, with fire-tolerant, deeply furrowed bark, in [savannah](#); leaflets 2–5 pairs, plus the terminal leaflet, on petiolules up to 4 cm. long, oblong-elliptic or obovate-oblong, cuneate at base, rounded and mucronulate or emarginate at apex, 3.5–9.5 cm. long, 1.5–5.2 cm. broad; panicles longer than the leaves; fruits oblong, 1.6–2 cm. long, 1–1.3 cm. diam., glabrous; otherwise similar to *klaineana* [3. *undulata*](#)

1. **Hannoa klaineana** *Pierre & Engl.* in Engl. Bot. Jahrb. 46: 282 (1911), incl. vars.; Chev. Bot. 103; Aubrév. Fl. For. C. Iv. 2: 102, t. 169; Kennedy For. Fl. S. Nig. 153.

APD: Synonym of Quassia silvestris Cheek & Jongkind

A large [forest](#) tree, with straight clear bole covered with smooth grey bark, without buttresses; wood white, soft; foliage shining, glabrous; flowers yellowish-white; ripe fruits black and shining.

Fr. G.: Kouria (Oct.) Chev. 14711! Conakry (fr. Dec.) Chev. 25690! **S. L.:** Devils' Hill, Hangha (Sept.) Aylmer 595! Njala (fr. Feb.) Deighton 2608! 5299! Heddle's Farm (Oct.) Lane-Poole 393! Also in **French Camerouns** and **Ubangi-Shari**.

5. GYMNOSTEMON

Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 84: 183 (1937).

- 1 A tree, with glabrous stems and imparipinnate leaves; leaf-rhachis 20–45 cm. long; leaflets coriaceous, subsessile, 6–12 pairs, opposite or subopposite, oblong, cuneate or obtuse at base, long-caudate-acuminate, 8–13.8 cm. long, 2–4.5 cm. broad, with 12–16 main lateral nerves on each side of midrib; panicles terminal; pedicels about 5 mm. long, like the flowers rusty-villous; calyx about 2 mm. long; petals about 4.5 mm. long, villous on both sides; disk fleshy, lobed, pubescent; stamens 10, about 3 mm. long; carpels 5, free, villous; fruits ovoid, about 10 cm. long and 8 cm. diam., pustulose outside. [zaizou](#)

Gymnostemon zaizou *Aubrév. & Pellegr.* l.c. 184, fig. 1 (1937). *Mannia?* zaizou Aubrév. Fl. For. C. Iv. 2: 104 (1936), French descr. only. *APD acc*

A large forest tree, with habit of an Entandrophragma; leaves clustered at the ends of the branches.

Iv. C.: Gagnoa to Sassandra Aubrév. 707! Guigio Aubrév. 1225! 2773!

6. BRUCEA

J. F. Mill. — F.T.A. 1: 309; Engl. in E. & P. Pflanzenfam. 19A: 386 (1931).

- 1 Leaflets rusty-tomentose beneath, densely so at first; leaves imparipinnate, with 4–5 opposite or subopposite leaflets; leaf-rhachis (when dry) constricted at the joints, 10–35 cm. long; leaflets oblong-ovate to ovate-lanceolate, unequal and rounded or obtuse at base, gradually acuminate, 4.5–14 cm. long, 2–7 cm. broad, margins undulate, with 6–9 main lateral nerves on each side of midrib; panicles elongated, up to about 35 cm. long, the flowers clustered and subsessile on the tomentose axis; fruits ellipsoid, about 1 cm. long, reticulate. [1. antidysenterica](#)

Leaflets pubescent on the midrib and nerves beneath; leaves imparipinnate, with 4–6 pairs of opposite or subopposite leaflets; leaf-rhachis up to 100 cm. long; leaflets ovate-oblong, rounded or slightly cuneate at base, gradually acuminate, 11–27 cm. long, 4–13 cm. broad; panicles very narrow, many-flowered, up to 40 cm. long; otherwise similar to above. [2. guineensis](#)

1. **Brucea antidysenterica** *Lam.* Encycl. Méth. Bot. 1: 471 (1785); F.T.A. 1: 309. *APD acc*

Brucea salutaris *A. Chev.* (1912) — Chev. Bot. 104.

A shrub or tree, to 30 ft. high; flowers green; ripe fruits brown; **in montane forest**.

Fr. G.: Diaguissa Plateau, 3,200–4,200 ft. Chev. 12703! 18596; 18760. **S. Nig.:** Oban Talbot 1347! **Br. Cam.:** Cam. Mt., 7,000–8,000 ft. (Dec., Jan.) Mann 1188! 2174! Maitland 1329! Lakom, Bamenda (fr. May) Maitland 1588! Abakpa (fr. Apr.) Ujor FHI 30051! Bafing, 4,000 ft. (Feb.) Johnstone 63/31!

Widespread on mountains in tropical Africa.

2. **Brucea guineensis** *G. Don* Gen. Syst. 1: 801 (1831). *APD acc*

Brucea macrophylla *Oliv.* F.T.A. 1: 310 (1868); F.W.T.A., ed. 1, 1: 486.

Brucea paniculata of F.T.A. 1: 310, partly (syn. *B. guineensis* *G. Don* only).

A shrub or tree, to 15 ft. high, with long panicles of small flowers with red corollas; **in clearings in lowland rain forest**; possibly only varietally distinct from the above.

S. L.: Don! **G. C.:** Obuom Mine (June) Vigne FH 2974! **Br. Cam.:** Ambas Bay (Feb.) Mann 774! Victoria (fr. May, Aug.) Maitland 703! Bulifambo (Mar.) Maitland 579!

Also in **French Cameroons** and **Spanish Guinea**.

Brucea paniculata Lam. — F.T.A. 1: 310 (excl. syn. *B. guineensis* G. Don).

This is *Trichoscypha smeathmannii* Keay (Anacardiaceae).

Excluded species.

IRVINGIACEAE

Trees; leaves alternate, simple, not gland-dotted, with well-developed stipules enclosing the young buds, caducous and leaving a scar around the stem. Flowers hermaphrodite, actinomorphic. Calyx-lobes 4–5, imbricate. Disk present. Stamens 8–10; anthers 2-celled, opening lengthwise. Ovary 2-celled; ovules 1 per cell; style solitary. Fruits drupaceous or samaroid. Seeds without or with scant endosperm.

A small family of tropical Africa

Distinguished from the Simaroubaceae mainly by the large stipules with their annular scars; clearly differentiated from the Simaroubaceae on anatomical grounds (see, for instance, Metcalfe & Chalk, *Anatomy of the Dicotyledons* 1: 324).

- 1 Ovary (4–) 5 (–6)-celled; fruits depressed, (4–) 5 (–6)-seeded and -angled; stipules up to 10 (–20) cm. long. ... [1. Klainedoxa](#)
Ovary 2-celled; stipules up to 3 cm. long: [2](#)
- 2 Fruit drupaceous. [2. Irvingia](#)
Fruit samaroid. [3. Desbordesia](#)

1. KLAINEDOXA

Pierre ex Engl. (1896) — E. & P. *Pflanzenfam.* 19A: 396 (1931).

- 1 A glabrous tree; leaves ovate-elliptic or elliptic, cuneate, obtuse or rounded at base, gradually tapered to an acute or subacuminate apex, 5–16 cm. long, 2–6.5 cm. broad, leathery, closely and finely reticulate on both surfaces, with numerous main lateral nerves; petioles 5–8 mm. long; stipules linear, acute, up to 10 cm. long, caducous; on young trees leaves lanceolate, up to 40 cm. long and 10 cm. broad, stipules up to 20 cm. long; racemes paniculate, up to about 12 cm. long; pedicels about 3 mm. long; sepals broadly obovate, about 1.5 mm. long; petals about twice as large; fruits depressed-globose, usually 5-angled, hard, 5–8 cm. diam. ... [gabonensis var. oblongifolia](#)

Klainedoxa gabonensis var. oblongifolia Engl. *Bot. Jahrb.* 32: 125 (1902); E. & P. *Pflanzenfam.* 19A: 396, fig. 185, A–D; Kennedy *For. Fl. S. Nig.* 150.

APD: Synonym of Klainedoxa gabonensis Pierre ex Engl.

Klainedoxa oblongifolia (Engl.) Stapf in Broun & Massey *Fl. Sud.* 228 (1929); F.W.T.A., ed. 1, 1: 483, in syn.

Klainedoxa zenkeri Van Tiegh. (1905).

Klainedoxa gabonensis of F.W.T.A., ed. 1, 1: 483; Aubrév. *Fl. For. C. Iv.* 2: 95, t. 164.

An evergreen tree to 150 ft. high, with broad crown and narrow very widely spreading buttresses; flowers pinkish; **in forest**. Young trees have thorny stems, very large leaves and long stipules.

3. DESBORDESIA

Pierre ex Van Tiegh. in Ann. Sci. Nat. 9, 1: 289 (1905); Engl. in E. & P. Pflanzenfam. 19A: 402 (1931).

- 1** A glabrous tree; leaves oblong, cuneate to obtuse at base, often somewhat asymmetric, acutely acuminate at apex, 5–16 cm. long, 2–6.5 cm. broad, leathery, with 8–10 main lateral nerves on each side of midrib, closely reticulate on both surfaces, shining above, dull and often glaucous beneath; petioles about 1 cm. long; stipules thin, up to 1 cm. long, very early caducous; racemes more or less paniculate up to about 10 cm. long; pedicels about 3 mm. long; sepals about 1 mm. long; petals about 2 mm. long; fruits samaroid, more or less oblong, obtuse, rounded or emarginate at each end, 8.5–14.5 cm. long, 3–4.5 cm. broad, about 5 mm. thick, glabrous [glaucescens](#)

Desbordesia glaucescens (Engl.) Van Tiegh. l.c. 290 (1905); Engl. l.c., fig. 185. *APD acc*

Irvingia glaucescens Engl. Bot. Jahrb. 32: 124 (1902).

Desbordesia soyauxii Van Tiegh. (1905).

Desbordesia pierreana Van Tiegh. (1905).

A large **forest** tree, with buttresses.

S. Nig.: Ikom Catterall 8! Ukon F.R., Ikom Div. Kennedy 3078! **Br. Cam.:** Victoria (Apr.) Maitland 625! Likomba Mildbr. 10741! Malende Ejiofor FHI 29366! Johann-Albrechtshöhe (Feb.) Staudt 940!

Also in **French Cameroons**, **Gabon**, **Spanish Guinea**, **Gabon** and **Cabinda**.

A sterile specimen (Keay FHI 25629) from Usonigbe F.R., Benin Prov., S. Nig., is probably this also.

BURSERACEAE

Trees or shrubs, secreting resin or oil. Leaves alternate, rarely opposite, pinnate, rarely 1-foliolate; stipules absent. Flowers hermaphrodite or often unisexual, small. Sepals 3–5, imbricate or valvate. Petals 3–5, rarely absent, free or variously connate, imbricate or valvate. Disk present. Stamens the same or double the number of the petals; filaments free; anthers 2-celled, opening by slits. Ovary superior, 2–8-celled; ovules 2 or 1 in each cell, axile. Fruit a drupe or rarely a capsule. Seeds without endosperm; cotyledons often contortuplicate.

Confined to the tropics.

Recognized by the frequently fragrant resinous wood, pinnate leaves, usually drupaceous fruit, and seeds without endosperm.

- 1** Fruits capsular; flowers bisexual; sepals and petals 5; stamens 10 [1. Boswellia](#)
Fruits drupaceous; flowers bisexual or unisexual: [2](#)
- 2** Sepals and petals 4; stamens 8; receptacle concave; leaves simple, 3-foliolate or imparipinnate, leaflets often toothed [2. Commiphora](#)
Sepals and petals 3; stamens 6; receptacle flat or convex; leaves imparipinnate; leaflets entire: [3](#)
- 3** Fruits excentric with style lateral; only species in our area a tree with stilt roots and glabrous stems, leaves and inflorescences [3. Santiria](#)
Fruits symmetrical with style terminal; all species in our area trees without stilt roots and with pubescent stems, leaves and inflorescences: [4](#)
- 4** Indumentum stellate; ovary (in our species) 2-celled, the cells not separated by an axial intrusion .. [4. Dacryodes](#)
Indumentum simple; ovary 3-celled, the cells separated by a 3-winged axial intrusion and covered by mesocarpal lids forming a 3-gonous spindle-shaped “stone” in fruit [5. Canarium](#)

1. BOSWELLIA

Roxb. — F.T.A. 1: 323; Engl. in E. & P. Pflanzenfam. 19A: 419 (1931).

- 1 Inflorescence a simple raceme; racemes numerous and bunched at the end of the thick shoots, up to 25 cm. long, glabrous or nearly so; pedicels spreading, about 1 cm. long; sepals triangular-ovate, 1.25 mm. long; petals about 7 mm. long; leaflets about 8 pairs, opposite, obliquely lanceolate, acutely acuminate, 7–9 cm. long, 1.5–2 cm. broad, coarsely serrate [1. dalzielii](#)

Inflorescence a panicle; panicles few, up to 30 cm. long, softly pubescent; pedicels about 0.5 cm. long; sepals broadly triangular; petals as above; leaflets sub-alternate, linear-lanceolate, long-acuminate, about 8 cm. long and 1.5 cm. broad, serrate [2. odorata](#)

1. **Boswellia dalzielii** *Hutch.* in Kew Bull. 1910: 136; Chev. Bot. 110; Aubrév. Fl. For. Soud.-Guin. 371, t. 77, 1–3. *APD acc*

A [savannah](#) tree, to 12–40 ft. high, with pale papery bark; flowers white, fragrant, the petals sometimes red-veined, flowering before the leaves.

Iv. C.: Mossi Dist. (Aug.) Chev. 24612. **Fr. Nig.:** Gourma Dist. Chev. 24424! **N. Nig.:** Sokoto (Feb.) Lely 811! Kontagora (Feb.) Dalz. 279! Zaria Prov. Dalz. 340! Shaw 105! Bauchi Plateau (Mar.) Lely P. 176! **Br. Cam.:** Gwoza, Dikwa Div. (Dec.) McClintock 79!

Also in [French Cameroons](#) and [Ubangi-Shari](#).

2. **Boswellia odorata** *Hutch.* l.c. 137 (1910); Aubrév. l.c., t. 77, 4–5.

APD: *Synonym of Boswellia papyrifera (Delile) Hochst.*

APD: *Synonym of Boswellia dalzielii Hutch.*

A [savannah](#) tree, similar to the last.

N. Nig.: Yola town and province (Feb.) Dalz. 167!

Also in [French Cameroons](#).

2. COMMIPHORA

Jacq. Hort. Schoenb. 2; 66 (1797); Engl. in E. & P. Pflanzenfam. 19A: 429 (1931).

Balsamodendrum *Kunth* (1824) — F.T.A. 1: 324.

Heudelotia *A. Rich.* (1832).

- 1 Leaves imparipinnate; flowers in pedunculate inflorescences: [2](#)
 Leaves 3-foliolate, or simple; flowers subsessile or shortly pedicellate in the leaf-axils: [3](#)

- 2 Leaflets 5–6 pairs, very acutely acuminate, oblong-ovate, unequal-sided at base, 6–12 cm. long, 2.5–4.5 cm. broad, thin, obscurely crenulate, glabrous; petiolule 1 cm. long; panicles as long as or longer than the leaves, the flowers crowded at the ends of the lateral branchlets, thinly pubescent; male flowers turbinate, pedicellate, about 5 mm. long; fruits subglobose, about 1.2–2 cm. diam., verrucose when dry [1. kerstingii](#)

Leaflets (1–) 2–4 (–5) pairs, rounded at apex, oblong, 2–5 cm. long, 1–2 cm. broad, softly pubescent on both sides, subsessile; flowers few on an axillary peduncle up to 5 cm. long; calyx villous; fruits ellipsoid, about 1 cm. long, shortly pubescent [2. pedunculata](#)

- 3 Leaves 3-foliolate; leaflets softly pubescent beneath, coarsely crenate-dentate, obovate, cuneate at base, the terminal one the largest, up to 4 cm. long and 2.5 cm. broad; petiole shorter than the leaflets; branchlets often terminated by a spine; flowers axillary, subsessile, glabrous; fruits broadly ellipsoid, 7–8 mm. long, glabrous, with a purplish bloom [3. africana](#)

Leaves 3-foliolate or simple, glabrous, margins obscurely crenate or entire: [4](#)

- 4 Leaves 3-foliolate; leaflets obovate-rhomboid, acute or subacute at each end, 2.5–6.5 cm. long, 1.5–3 cm. broad, very thin; petioles 2–6 cm. long; fruits ellipsoid-globose, 1 cm. long; mesocarp covering the endocarp [4. dalzielii](#)

Leaves simple (rarely 3-foliolate), broadly ovate to suborbicular or oblong, rounded at each end, 1.2–5 cm. long, 0.8–3.8 cm. broad; petioles 1–4.5 cm. long; fruits ellipsoid, beaked, about 8 mm. long; mesocarp consisting of 4 narrow arms [5. quadricincta](#)

1. ***Commiphora kerstingii* Engl.** Bot. Jahrb. 44: 152 (1910); Aubrév. Fl. For. Soud.-Guin. 373, 375, t. 78, 6-7. *APD acc*

Commiphora ararobba Engl. (1911).

A tree 20–30 ft. high, with smooth green bark eventually peeling in brownish papery strips; panicles crowded at the ends of the branches which are brownish tomentellous and marked by leaf-scars; often planted.

Togo: Ssoruba village (Apr.) Kerstings A. 553! **N. Nig.:** Sokoto Dalz. 572! Bauchi Plateau (Mar) Lely P. 195! Yola (May) Dalz. 165! **S. Nig.:** Ibadan (Mar.) Chizea FHI 24484! Oban Talbot 1549!

Also in **French Cameroons**, **Chad Territory** and **Ubangi-Shari**.

2. ***Commiphora pedunculata* (Kotschy & Peyr.) Engl.** in DC. Monogr. Burserac. 23 (1883); Chev. Bot. 110; Aubrév l.c., t. 78, 5. *APD acc*

Balsamodendrum pedunculatum Kotschy & Peyr. (1867) — F.T.A. 1: 326.

A small tree with leaves usually crowded at the ends of the yellowish pubescent branchlets; flowers whitish the lateral branchlets occasionally hardening into spines.

Canarium zeylanicum (Retz.) Blume

Canarium auriculatum H. Winkl. (1908) — F.W.T.A., ed. 1, 1: 488)

A native of Ceylon, it has been introduced into our area.

MELIACEAE

Trees or shrubs, mostly with hard scented wood, very rarely subherbaceous. Leaves alternate, mostly pinnate; stipules absent. Flowers actinomorphic, mostly hermaphrodite. Calyx often small, imbricate, rarely valvate. Petals free or partially connate, contorted or imbricate, or adnate to the staminal tube and valvate. Stamens mostly 8 or 10, rarely numerous, mostly with connate filaments, and the anthers often sessile in the tube; anthers 2-celled, opening lengthwise; disk various. Ovary superior, often 3–5-celled, stigma often disci-form or capitate; ovules mostly 2, rarely 1 or more. Fruit baccate, capsular or rarely a drupe, often with a large central axis. Seeds with or without endosperm, sometimes winged.

Mainly a tropical family.

Readily recognized by the pinnate eglandular leaves and the stamens, usually connate into a tube resembling a corolla.

- 1 Leaves pinnate or bipinnate, rarely 3-foliolate, very rarely 1-foliolate, flowers mostly in panicles or racemes: ...2
 Leaves simple, flowers solitary, paired, subumbellate or in very short racemes; ovary 4–10 (or more) celled, fruit capsular; seed not winged [11. Turraea](#)
- 2 Leaves not bipinnate:3
 Leaves bipinnate or tripinnate; leaflets toothed, anthers borne just within the staminal tube, ovary and fruit usually 5 celled; fruit drupaceous, introduced trees [13. Melia](#)
- 3 Petals free to the base; leaves pinnate:4
 Petals united into a club shaped tube; anthers borne just within the staminal tube; ovary 4–5-celled, with 2 ovules per cell, fruit capsular; seed not winged, arillate; leaves pinnate or (1–) 3 foliolate [10. Turraeanthus](#)
- 4 Seed winged; fruit a woody or coriaceous, dehiscent capsule; ovary (3–) 4–5-celled, each cell containing 4–12 ovules:5
 Seed not winged, fruit fleshy, at least at first.....8
- 5 Capsule more or less globose, woody, 4–5-valved, erect; seed flat, winged all round; anthers included within the staminal tube; all parts glabrous [1. Khaya](#)
 Capsule much longer than broad; seed with a long terminal or basal wing; anthers exerted or nearly exerted from the staminal tube:.....6
- 6 Flowers 5-merous; capsule with 5 woody valves; seed attached by the body end to the distal end of the central column, the wing thus directed towards the base:7
 Flowers 4-merous; capsule with 4 coriaceous valves, pendulous; seed attached by the wing end to the distal end of the central column, the body thus hanging freely at the base [4. Lovoa](#)
- 7 Anthers borne on the rim of the entire or lobed staminal tube; capsule pendulous, without fibres between the valves; leaves entire or nearly so; forest trees [2. Entandrophragma](#)
 Anthers borne just within the lobes of the staminal tube; capsule erect, with fibres adhering loosely between the valves after dehiscence; leaves undulate on the margins; savannah trees [3. Pseudocedrela](#)
- 8 Fruit a large, at least 6 cm. diam, septicidal capsule, ovules 2–8 per cell; seed large, anthers included in the staminal tube [5. Carapa](#)
 Fruit up to 5.5 cm diam, a loculicidal or septicidal capsule, or indehiscent, ovules 1–2 per cell9
- 9 Leaflets entire, indigenous plants 10
 Leaflets coarsely serrate or lobed, introduced trees, ovary 3 celled; fruit drupaceous, 1-seeded; anthers borne just within the staminal tube [12. Azadirachta](#)
- 10 Ovary and fruit 2–5-celled, fruit capsular (except No. 7), seeds mostly with brightly coloured arils..... 11
 Ovary and fruit 1-celled; fruit indehiscent, beaked, more or less moniliform, 1–4 seeded, baccate, anthers borne just within the staminal tube [9. Heckeldora](#)
- 11 Anthers borne on the rim of the entire or lobed staminal tube..... 12
 Anthers borne within the staminal tube; fruit dehiscent [8. Guarea](#)

- 12 Fruit dehiscent; staminal tube deeply lobed (except in *T. preuriana*) [6. *Trichilia*](#)
 Fruit indehiscent, staminal tube entire or slightly denticulate [7. *Ekebergia*](#)
Cedrela mexicana *M. J. Roem.*

 A native of tropical America.

1. KHAYA

A. Juss. — F T A: 337; Harms in E. & P. Pflanzenfam. 19B, 1; 49 (1940).

Saplings of all the species have large leaves with more numerous leaflets; the measurements given in the above key are for crown leaves.

- 1 Trees of savannah and fringing forest outliers in the savannah regions; flowers normally 4-merous, ovary tapering into a slender style, fruit normally 4-valved, 4–6 cm. diam, leaflets usually drying pale glaucous green, 3–4 (–7) pairs, oblong or oblong-elliptic, more than twice as long as broad, rounded or obtuse or shortly acuminate at apex, 6–12 cm long, 2–5 cm broad, with 8–16 main lateral nerves on each side of midrib [1. *senegalensis*](#)
 Trees of the forest regions and forest outliers in the savannah; flowers (4–) 5-merous; ovary abruptly contracted into a very short style; fruit (4–) 5 valved, 4–10 cm. diam, leaflets not drying pale glaucous green..... [2](#)
 2 Leaflets 10–25 cm long, 6–10 cm broad, with 12–15 main lateral nerves on each side of midrib, flowers 5 merous; fruit 7–10 cm diam, with 5 valves, 5–12 mm. thick; leaves with (3–) 4 (–5) pairs of rather thin papery leaflets, broadly elliptic or ovate-elliptic, shortly cuneate or rounded at base, shortly acuminate; bark scaly; in forest outliers and the drier parts of the forest regions [2. *grandifoliola*](#)
 Leaflets mostly up to 15 cm long and 8 cm broad, rarely more, rather leathery, with 5–9 main lateral nerves on each side of midrib, valves of fruit up to 3 mm., rarely to 5 mm thick..... [3](#)
 3 Leaflets (2–) 3 (–4) pairs, broadly elliptic or ovate-elliptic, very shortly acuminate, 8–15 cm long, 4–8 cm broad, flowers 4–5-merous; fruit 4–5-valved, 6–10 cm. diam, bark smooth and pale, in the drier parts of the forest regions [3. *anthotheca*](#)
 Leaflets (4–) 5–6 (–7) pairs, oblong, abruptly long acuminate, 5–14 cm. long, 2–5 7 cm. broad, flowers usually 5-merous; fruit usually 5-valved, 4–7 cm. diam.; bark scaly, often brown, in the moister parts of the forest regions [4. *ivorensis*](#)
1. *Khaya senegalensis* (*Desr.*) *A. Juss.* in Mém. Mus. Hist. Nat. Paris 19: 250, t. 21 (1830); Guill. & Perr. Fl. Seneg. 1: 130, t. 32; F. T. A. 1: 338; Chev. Bot. 117 (incl. vars); Aubrév. Fl. 2. ENTANDROPHRAGMA

C.DC. in Bull. Herb. Boiss. 2: 582 (1894); Harms in E. & P. Pflanzenfam. 19B, 1: 55 (1940); Notizbl. Bot. Gart. Berl. 14: 43! (1940).

Saplings of all the species below have leaves which may be considerably larger than the crown leaves whose measurements are given above.

- 1** Central column of fruit with a 1–2.5 cm. long, slender stipe above the insertion of the thin valves; petals velutinous outside, 5–7 mm. long; staminal tube deeply lobed; leaves with 5–9 pairs of somewhat bullate leaflets; main lateral nerves 14–22 pairs, very prominent beneath, impressed above; rachides 5–30 cm. long, petioles 6–15 cm. long, laterally winged, rusty-tomentellous; leaflets oblong, oblong-elliptic or obovate-oblong, obtusely cuneate or rounded at base, obtuse or obtusely somewhat acuminate at apex, 3.5–15 cm. long, 2–6 cm. broad, pubescent on the midrib and nerves beneath; fruits (9–) 17–23 (–30) cm. long, 3–5 cm. broad, valves opening from the apex and strongly recurving, 1.7–2 cm. broad in the widest part, 3–4 mm. thick, seeds 3–10 on each face of column [1. candollei](#)

Central column of fruit without a stipe above the insertion of the valves; petals puberulous or glabrous outside; staminal tube not lobed; leaflets with 6–16 pairs of main lateral nerves, not impressed above: **2**

- 2** Valves of fruit 7–12 mm. thick, opening from the apex, remaining firmly attached at base to the central column, not recurved, 3–4 cm. broad at widest part, roughly lenticellate outside; fruit 18–28 cm. long, 5–7 cm. broad; seeds 5–6 on each face of column, hilum small, suborbicular; petals puberulous outside, about 6 mm. long; leaves with 8–16 pairs of subopposite or alternate leaflets; rachides 10–30 cm. long, petioles 5–14 cm. long, slightly winged, rusty-puberulous; leaflets oblong-lanceolate, the lower ones often ovate, asymmetrically rounded or subcordate at base, gradually acuminate at apex, 3.5–15 cm. long, 1.5–5 cm. broad, with 10–16 pairs of main lateral nerves prominent beneath, often with tufts of hair in the axils [2. utile](#)

Valves of fruit 2.5–4 mm. thick, either opening from the base and remaining joined together for some time at the apex, or splitting at apex and base at about the same time, always falling away from the central column; leaflets with 6–12 pairs of main lateral nerves: **3**

- 3** Fruit 14–22 cm. long, 3.5–5 cm. broad; valves 2.5–3 cm. broad, not ridged, opening from base and remaining joined together for some time at the apex; column attenuated to the base, dark red-brown in colour, with 5–6 seeds per face, hilum linear; petals glabrous, 4–5 mm. long; leaves with 7–10 opposite or subopposite pairs of leaflets; rachides 25–45 cm. long, petioles 12–16 cm. long, scarcely winged, glabrous or puberulous; leaflets oblong, oblong-elliptic or obovate-oblong, rounded or obtuse at base, rounded at apex and usually mucronate, 7–28 cm. long, 3–10.5 cm. broad, with 9–12 pairs of main lateral nerves, not very prominent beneath, venation obscure, usually rather densely pubescent on the sides of the midrib and nerves beneath [3. angolense](#)

Fruit 6.5–10 (–15.5) cm. long, 2.7–3.5 cm. broad, valves 1.4–2.2 cm. broad, with an indistinct median ridge, opening at apex and base more or less simultaneously; column broad at base, rather pale brown or yellow, with 3–4 seeds per face, hilum linear-lanceolate; petals puberulous, about 2 mm. long; leaves with 5–9 pairs of opposite or subopposite leaflets; rachides 15–55 cm. long, petioles 5–10 cm. long, flattened and slightly winged, rusty-tomentellous; leaflets oblong to oblong-lanceolate, the lower ones ovate to ovate-oblong, cuneate to rounded and usually asymmetrical at base, shortly and obtusely, rarely acutely acuminate, 8–13 cm. long, 2.5–5 cm. broad, with 6–12 pairs of main lateral nerves, venation closely reticulate, almost glabrous when mature [4. cylindricum](#)

Trees with longer (10–15.5 cm.) fruits in Gold Coast and Ivory Coast, and with pyriform fruits in Benin may prove to be distinct varieties. A certain amount of variation is known within each of the above species. These variations occur especially in the size and shape of fruit, in the amount of indumentum and probably also in the bark. They do not seem of sufficient taxonomic importance to warrant specific or varietal rank. In view, however, of the great economic importance of the genus it would be as well for forest officers to study whether the infraspecific variation has any importance silviculturally or from the point of view of the quality of the timber. Reference should be made to Panshin in Amer. Journ. Bot. 20: 648 (1933), Harms in Notizbl. Bot. Gart. Bert. 14: 431 (1939), and Pellegrin in Notulae Syst. 9: 37 (1940).

3. PSEUDOCEDRELA

Harms in Engl. Bot. Jahrb. 22: 153 (1895); E. & P. Pflanzenfam. 19B, 1: 67 (1940).

- 1 Leaves pinnate; leaflets alternate or rarely subopposite, 6–8 on each side, ovate-oblong or ovate-lanceolate, rounded and unequal-sided at base, obtuse at apex, undulately toothed or subentire, up to 15 cm. long and 6 cm. broad, softly pubescent mainly on the nerves beneath; lateral nerves about 10–12 pairs, spreading; rhachis softly tomentose; panicles thyrsoid, up to about 30 cm. long; branches rather long; pedicels about 4 mm. long, puberulous; calyx about 1 mm. long, 5-lobed; petals contorted, 2.5–3 mm. long, thinly pubescent up the

middle, staminal column broadly campanulate, about 25 mm. long; anthers 10, fruits 5 celled, oblanceolate in outline, 10–12 cm long, 3 cm thick, opening by 5 nearly flat recurving woody valves and leaving the sharply 5 angled axis, seeds with a long terminal membranous wing about 6 cm long with a stronger nerve on one side

Widespread in tropical Africa, extending to S. Africa, Madagascar, Réunion and **Arabia**.

10. **Trichilia retusa** *Oliv.* F.T.A. 1: 334 (1868); Harms l.c. 110; Pellegr. l.c. 17; Staner l.c. 152, t. 2, D–F.
APD acc

A nearly glabrous tree of **fringing forests**, up to 40 ft. high, with fragrant white flowers and usually 2-valved fruits.

N. Nig.: Nupe Barter 1181! Jebba (Dec.) Hagerup 733! Ibaji-Ojoku F.R. (Feb.) J. E. Taylor L. 9! Idah T. Vogel 50! Echonga, Kabba Prov. (Feb.) Jones FHI 634! Abinsi (Jan.) Dalz. 865!

Also in **Ubangi-Shari**, **A.-E. Sudan** and **Belgian Congo**.

Limonia? monadelphina *Thonn.* in Schum. Beskr. Guin. Pl. 217 (1827); F.T.A. 1: 336.

I have examined an authentic specimen of this from the Vahl herbarium, Copenhagen. It consists only of an incomplete leaf, which might possibly be regarded as coming within the rather broad interpretation of *Trichilia heudelotii* which I have given above. A more exact determination would be most unconvincing. I consider, therefore, that it is scientifically undesirable to make a new combination to replace the well-known *T. heudelotii* Planch. ex Oliv. which has excellent and widely distributed type specimens. Imperfectly known species.

7. EKEBERGIA

Sparrm. — F.T.A. 1: 332; Harms in E. & P. Pflanzenfam. 19B, 1: 119 (1940).

Charia C. DC. (1907).

- 1 Leaves pinnate; leaflets oblong or elliptic, unequal-sided and shortly cuneate at base, shortly acuminate, 5–10 cm. long, 2.5–4.5 cm. broad, glaucescent and finely reticulate beneath; rachis flat on the upper surface towards the base; panicles axillary, up to 3/4 as long as the leaves, puberulous; pedicels up to 2 mm. long; flower-buds ellipsoid; calyx saucer-shaped, dentate, about 1.5 mm. long, puberulous; petals about 5 mm. long, pubescent; stamens 10, monadelphous; fruits drupaceous, subglobose, 1.5–2 cm. long, glabrous. [.senegalensis](#)

Ekebergia senegalensis A. Juss. in Mém. Mus. Hist. Nat. Paris 19: 234, t. 17, fig. 16a (1830); Guill. & Perr. Fl. Seneg. 1: 126, t. 31; F.T.A. 1: 333; Chev. Bot. 112; Aubrév. Fl. For. C. Iv. 2: 157, t. 187; Pellegr. in Notulae Syst. 9: 5; Aubrév. Fl. For. Soud.-Guin. 383.

APD: Synonym of Ekebergia capensis Sparrm.

Charia chevalieri C. DC. (1907).

Ekebergia chevalieri (C. DC.) Harms (1911).

Charia indeniensis A. Chev. (1909).

Ekebergia indeniensis (A. Chev.) Harms (1915).

Sorindeia doeringii Engl. & K. Krauae (1911).

Ekebergia dahomensis A. Chev. Bot. 112, name only.

A tree to 50 ft. high, rarely more, with spreading crown and dense foliage, and smooth grey bark becoming rough and scaly; petals yellowish; fruits reddish when ripe, containing 2–4 bright red seeds with yellow aril; [in savannah regions and drier parts of the forest regions](#). The species seems to vary a good deal in size of leaflets and indumentum of the leaves.

Extends to Ubangi-Shari, [Belgian Congo](#) and [Angola](#).

8. GUAREA

Allem. in Linn. Mant. 2: 150 (1771); Harms in E. & P. Pflanzenfam 19B, 1: 129 (1940), excl. Sect. Heckeldora (Pierre) Harms.

- 1 Trees up to 13 m. high or shrubs, in the understorey of forest; inflorescences pendulous, long and slender, with few flowers on the short lateral branches; leafy branchlets slender; leaflets alternate, rarely subopposite, venation very obscure; seeds with the cotyledons juxtaposed and radicles terminal:2
- Trees up to 50 m. high, attaining the highest stratum of the forest; inflorescences erect, stout, more or less pyramidal, with relatively long lateral branches, 1–15 (–25) cm. long; leafy branchlets stout; leaflets opposite or subopposite; seeds with the cotyledons superposed and radicles lateral, completely enveloped in an aril: ...3
- 2 Petals hairy all over the outer surface, 6–10 mm. long; flowers aggregated in fascicles; inflorescences up to 65 cm. long; petioles 8–12 cm. long, rhachides 15–34 cm. long, shortly tomentellous, glabrescent; leaflets 8–13 (–17), elongate-oblong, obtuse or cuneate and often asymmetrical at base, long-acuminate, 5.5–23 cm. long, 3–6.5 cm. broad, with numerous rather faint main lateral nerves, minutely puberulous beneath; fruits subglobose,

rather deeply lobed, 1–2 cm. diam., tomentellous [1. *glomerulata*](#)

Petals hairy only on the margins, 8–10 mm. long; flowers borne laxly and often singly on the inflorescences which are up to 20 cm. long; petioles 4.5–10 cm. long; rachides 6–17 cm. long, minutely puberulous; leaflets 5–13, oblong-elliptic, cuneate to rounded at base, long-acuminate, 3–16 cm. long, 1.2–5.8 cm. broad, with 6–12 rather obscure main lateral nerves, nearly glabrous; fruits depressed-globose, apparently not lobed, 2–2.5 cm. diam., minutely tomentellous [2. *leonensis*](#)

- 3 Petioles 2–4.5 cm. long, with distinct incurved wings 3–6 mm. wide; reticulation of veins distinct on undersurface of leaflets; calyx denticulate; petals 5–7 mm. long, densely tomentellous outside; fruits velvety-tomentellous, subglobose, 3–5.5 cm. diam.; rachides 2–18 cm. long; leaflets 6–15, oblong, oblong-lanceolate or oblong-oblancheolate, cuneate, or sometimes rounded, and often asymmetrical at base, gradually obtuse to long-acuminate at apex, margins often undulate, 8–32 cm. long, 2.5–10.5 cm. broad, glabrous except for a few hairs on midrib and nerves beneath, with 16–22 main lateral nerves on each side of midrib, prominent beneath; slash without latex [3. *cedrata*](#)

Petioles 7–14 cm. long, scarcely winged; ultimate reticulation of veins obscure on undersurface of leaflets; calyx subtruncate; petals 8–10 mm. long, tomentellous outside; fruits glabrous and often rugose outside, subglobose, 3–4 cm. diam.; rachides 8–30 cm. long; leaflets 7–17, elongate-elliptic, cuneate or obtuse at base, obtuse to acute or acuminate at apex, 9–24 cm. long, 3–9 cm. broad, glabrous, with 9–16 main lateral nerves on each side of midrib; slash with white latex [4. *thompsonii*](#)

1. ***Guarea glomerulata* Harms** in Engl. Bot. Jahrb. 23: 150 (1896); in E. & P. Pflanzenfam. 19B, 1: 134; Staner in Bull. Jard. Bot. Brux. 16: 199, t. 11, D.

APD: *Synonym of Neoguarea glomerulata (Harms) E.J.M. Koenen & J. J. de Wilde*

***Guarea glomerulata* var. *obanensis* Bak. f.** in Cat. Talb. 18 (1913).

A shrub or small tree, 10–20 ft. high, with drooping branches and pendulous racemes; petals pink; fruits dull scarlet, with golden hairs, dehiscing to expose deep orange shining seeds in a white floss; [in rain forest](#).

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

Baldwin 11378 from Liberia, 25 miles from mouth of Sangwin R., may also be this species. Further study in the field is needed to see if any satisfactory subdivision of this variable species is possible.

10. TURRAEANTHUS

Baill. in *Adansonia* 11: 261 (1874); Harms in *E. & P. Pflanzenfam.* 19B, 1: 147 (1940).

- 1 Leaves pinnate, with (5–) 8–24 (–30) alternate or subopposite leaflets; petioles 5–10 cm. long, rhachides 4–60 cm. long, densely rusty-puberulous when young; petiolules 0.5–1.5 cm. long; leaflets more or less elongate-oblong, rounded or shortly cuneate at base, rounded or obtuse and shortly apiculate at apex, the apiculum itself spatulate or with the margins up rolled, 6–25 cm. long, 2.5–8 cm. broad, soon glabrous, with 15–30 main lateral nerves on each side of midrib, slightly prominent beneath; flowers in lateral panicles up to 70 cm. long, all parts rusty-tomentellous; corolla 1.5–2 cm. long, stout; capsules subglobose or pyriform about 3 cm. diam., puberulous, glabrescent [1. africanus](#)

Leaves pinnately (1–) 3 (–5)-foliolate; petioles 6–16 cm. long, rhachides up to 10 cm. long, glabrous or sparingly puberulous; petiolules often twisted, about 5 mm. long; leaflets very broadly elliptic, very shortly cuneate at base, obtusely caudate acuminate, 10–25 cm. long, 8–14 cm. broad, thin, glabrous, with 3–4 looped main lateral nerves on each side of midrib, prominent beneath; flowers in axillary cymes up to 2 cm. long; corolla 0.8–1.4 cm. long, slender; fruits not known [2. mannii](#)

1. **Turraeanthus africanus** (*Welw. ex C. DC.*) *Pellegr.* in *Notulae Syst.* 2: 16 & 68 (1911); Chev. *Bot.* 111; Aubrév. *Fl. For. C. Iv.* 2: 126, t. 176; Harms in *E. & P. Pflanzenfam.* 19B, 1: 149; Pellegr. in *op. cit.* 9: 8; Staner in *Bull. Jard. Bot. Brux.* 16: 210. *APD acc*

Guarea africana *Welw. ex C. DC.* (1878).

Bingeria africana (*Welw. ex C. DC.*) *A. Chev.* (1909).

Turraeanthus zenkeri *Harms* (1896) — *F.W.T.A.*, ed. 1, 1: 496.

Turraeanthus vignei *Hutch. & Dalz.* *F.W.T.A.*, ed. 1, 1: 496 (1928); *Kew Bull.* 1929: 25.

A forest tree, 40–110 ft. high, with heavy dark green foliage; bark whitish or yellowish, fissured; slash pale yellow, strongly scented; flowers white or yellowish; fruit a yellow fleshy capsule with 4–5 seeds; often gregarious, especially in moist places.

11. TURRAEA

Linn. — *F.T.A.* 1: 330; Harms in *E. & P. Pflanzenfam.* 19B, 1: 85 (1940).

- 1 Staminal tube 2.5–2.8 cm. long, anthers exserted, 1 mm. long, lobes much shorter; petals about 3.5 cm. long and 2.5 mm. broad; calyx with obtuse lobes about 2 mm. long; ovary 5-celled; flowers several together in small racemes 1–1.5 cm. long; leaves elliptic to ovate-elliptic, often sinuate-lobate, cuneate to rounded at base, acuminate, very thin, up to 12 cm. long and 3.5 cm. broad [1. leonensis](#)

Staminal tube 0.9–1.4 cm. long; petals 1.3–2.3 cm. long; flowers in fascicles or pseudo-umbels or solitary or paired: [2](#)

- 2 Anthers inserted at the top of the staminal tube, 1.5–2.5 mm. long, directly visible from the outside, not hidden by the linear or filiform alternating lobes; flowers not in subsessile fascicles; ovary 5–10 (or more)-celled; main lateral nerves 4–6 on each side of midrib; leaves sometimes lobate: [3](#)

Anthers inserted within the broad apical lobes of the staminal tube, about 1 mm. long; staminal tube 1 cm. long; petals 1.3–1.5 cm. long; flowers up to 20 together in subsessile fascicles; ovary 5-celled; stigma ovoid-ellipsoid; leaves elliptic or obovate-elliptic, cuneate at base, acuminate, 5–15 cm. long, 1.3–6 cm. broad, with 8–10 main lateral nerves [4. pellegriniana](#)

- 3 Flowers up to 15 together in pseudo-umbels on peduncles (0.9–) 2.5–4.5 (–6.5) cm. long; style-apex clavate below stigma; Staminal tube 1.2–1.4 cm. long; petals spatulate with long slender claw, 1.8–2.3 cm. long;

leaves broadly elliptic or ovate-elliptic, sometimes lobate, rounded to cuneate at base, acuminate, 4–16 cm. long, 2–7·3 cm. broad [2. vogelii](#)

Flowers solitary or paired, on peduncles up to 0·3 cm. long; style-apex ellipsoid below stigma; staminal tube 0·9–1·3 cm. long, petals oblanceolate, 1·4–2·3 cm. long; leaves more or less oblong-obovate to rhomboid, usually lobate, rounded to cuneate at base, shortly and obtusely acuminate, 2·5–9 cm. long, 1·3–5 cm. broad [3. heterophylla](#)

12. AZADIRACHTA

A. Juss. in Mém. Mus. Hist. Nat. Paris 19: 220 (1830); Harms in E. & P. Pflanzenfam. 19B, 1: 102 (1940). *APD acc*

- 1 Leaves pinnate; leaflets 5–8 pairs, ovate-lanceolate to lanceolate, falcate, very asymmetrical at base, long-acuminate, coarsely serrate on margins and occasionally lobed, up to about 11 cm. long and 3 cm. broad,

glabrous; panicles many-flowered, axillary, glabrous; pedicels about 1.5 mm. long; sepals ovate-suborbicular, about 1 mm. long; petals oblanceolate, 5–6 mm. long; staminal column about 4.5 mm. long, anthers within the lobed apex; fruits ellipsoid, drupaceous, 1-seeded, glabrous, 1.2–2 cm. long [indica](#)

***Azadirachta indica* A. Juss.** l.c. 221, t. 13, 5 (1830); Kennedy For. Fl. S. Nig. 182; Harms l.c. fig. 26, M–S.

***Melia azadirachta* Linn.** (1753).

***M. indica* (A. Juss.) Brandis** (1874).

An evergreen tree, to 80 ft. high, with abundant panicles of white flowers, and yellow fruits; introduced for shade and firewood, and known as “Neem.”

A native of India, now widely distributed and often naturalized in tropical and subtropical countries.

13. MELIA

Linn. — F.T.A. 1: 332; Harms in E. & P. Pflanzenfam. 19B, 1: 99 (1940).

- 1 Leaves bipinnate; leaflets 4–6 pairs, ovate-lanceolate, unequal-sided at base, long-acuminate, 3–8 cm. long, 1–3 cm. broad, serrate, glabrous or nearly so; panicles subcorymbose, nearly as long as the leaves; pedicels up to 1 cm. long, slightly pubescent; sepals elliptic, pubescent, 2.5 mm. long; petals contorted, oblanceolate, about 8 mm. long, thinly pubescent; staminal column 7–8 mm. long, slender, glabrous, anthers within the apex; fruit ellipsoid, drupaceous, usually 5-celled, 1–1.5 cm. long [azedarach](#)

***Melia azedarach* Linn.** — F.T.A. 1: 332; Harms l.c., fig. 26, A–L.

A small tree, with abundant panicles of lilac flowers; introduced for ornament and known as Persian Lilac.

A native of India, now widely distributed and often naturalised in tropical and subtropical countries.

SAPINDACEAE

Trees, shrubs or climbers. Leaves alternate or rarely opposite, simple, or 1- or 3-foliolate, or pinnate or bipinnate; stipules rarely present. Flowers actinomorphic or zygomorphic, sometimes very small, mostly unisexual, variously arranged. Sepals imbricate or rarely valvate. Petals 1–5, sometimes absent, imbricate. Disk usually present, sometimes unilateral. Stamens hypogynous, often 8, inserted within the disk or unilateral; filaments free, often hairy; anthers 2-celled. Ovary superior, entire or vertically lobed to the base, 1–8-celled; style terminal or gynobasic; ovules 1–2, rarely many in each cell, axile. Fruit capsular or indehiscent, rarely winged. Seeds without endosperm, often conspicuously arillate; embryo with usually plicate or twisted cotyledons.

A fairly large and mostly tropical family

With reduced unisexual flowers and often pinnate leaves; no endosperm.

- 1 Leaves imparipinnate, or biternate, or 1- or 3-foliolate, or simple: [2](#)
 Leaves paripinnate; tendrils absent: [5](#)
 2 Tendrils present, circinate coiled, borne on the peduncles; climbing herbs and shrubs; calyx 4-merous (in our species); petals 4; stamens 8; ovary 3-celled; ovules 1 per cell: [3](#)
 Tendrils absent; trees or shrubs; ovary 2–3-celled; calyx 4-merous (in our species): [4](#)
 3 Fruits firm, not bladder-like; leaves imparipinnate; woody plants [1. Paullinia](#)
 Fruits bladder-like and membranous; leaves biternate; leaflets coarsely toothed or lobed; herbaceous climbers [2. Cardiospermum](#)
 4 Fruits apocarpous, usually only 1 coccus developing, not winged, indehiscent; ovules 1 per cell; petals 4; stamens 8; leaves 1- or 3-foliolate [3. Allophylus](#)
 Fruits syncarpous, membranous, winged, tardily dehiscent; ovules 2 per cell; petals absent; stamens 5–8; leaves simple [16. Dodonaea](#)
 5 Fruits indehiscent: [6](#)

-
- Fruits dehiscent; calyx (4–) 5-merous: **13**
- 6** Petals (3–) 4–5; calyx (4–) 5-merous; ovules 1 per cell: **7**
- Petals absent; flowers regular: **10**
- 7** Fruits with a basal style, mostly only 1 lobe fertile; flowers regular; petals usually 5; ovary 2–3-lobed: **8**
- Fruits with a terminal style, lobed or ribbed; flowers zygomorphic; petals usually 4: **9**
- 8** Leaflets 2–10 or more pairs; ovary apocarpous; stamens (8–) 12–30 [4. *Deinbollia*](#)
- Leaflets 1–2 pairs; ovary syncarpous; stamens 6–8 [5. *Aphania*](#)
- 9** Calyx urceolate; stamens 7–15; ovary 3–8-celled; fruits 3–8-ribbed; inflorescences borne on the thick main stem, sometimes close to the ground [6. *Chytranthus*](#)
- Calyx campanulate; stamens (6–) 8; ovary 3-celled; fruits 3-lobed; inflorescences borne on slender branches .. [7. *Pancovia*](#)
- 10** Stamens (6–) 8–13; ovules 1 per cell: **11**
- Stamens (3–) 4–5; ovules 2 per cell; calyx 4–5-merous; ovary 2-celled; fruits normally 1-celled and 1-ovuled by abortion [17. *Zanha*](#)
- 11** Calyx 5-merous; stamens 8–13; ovary 3-celled: **12**
- Calyx usually 4-merous; stamens 6–8; ovary 2-celled; fruits 1–2-lobed; seed without aril [9. *Melanodiscus*](#)
- 12** Stamens 8; fruits 1–3-lobed; seed without aril [8. *Placodiscus*](#)
- Stamens (8–) 10–13; fruits normally 1-celled by abortion; seed with a glutinous aril [10. *Lecaniodiscus*](#)
- 13** Petals (4–) 5; ovules 1 per cell; seed with fleshy aril: **14**
- Petals absent, or 1–2, without scales; ovary 3-celled; ovules 2 per cell; fruits (2–) 3-lobed; seed blue, pilose by the hilum but without a fleshy aril; stamens 7–8 [18. *Majidea*](#)
- 14** Ovary 3-celled; stamens 7–18: **15**
- Ovary 2-celled; fruits 1–2-lobed; seed with cupular aril; petals each with 2 scales; stamens 6–8 [12. *Aporrhiza*](#)
- 15** Calyx with free sepals, imbricate in 2 series; stamens 7–10 [11. *Laccodiscus*](#)
- Calyx with slightly imbricate sepals, or small and toothed: **16**
- 16** Stamens 10–18; seed completely covered by the red or orange aril [13. *Lychnodiscus*](#)
- Stamens 8–10; aril cupular or short, not surrounding the seed: **17**
- 17** Petals funnel-shaped through the concrescence of the scales; fruits more or less pyriform, valves not woody; seed shining black with yellow cupular aril [14. *Blighia*](#)
- Petals with free scales; fruits subglobose, valves woody [15. *Eriocoelum*](#)

***Sapindus saponaria* Linn.**

A native of tropical Asia.

***Harpullia pendula* Planch. ex F. Müll.**

A native of Australia.

Talbot 720 from Oban, S. Nigeria, appears to belong to this family. It is a woody plant with simple oblanceolate leaves, 33–36 cm. long and 12–13.5 cm. broad, with about 20 main lateral nerves on each side of the puberulous midrib. The brown-tomentellous axillary racemes are about 4 cm. long. A painting of the living plant, done by Mrs. Talbot, shows flowers with white petals, reminiscent of *Pancovia*. The fruits also resemble *Pancovia*. More material of this remarkable plant is needed.

Linn. — F.T.A. 1: 419; Radlk. in Engl. Pflanzenr. Sapindac. 219 (1931).

- 1 Branchlets softly pubescent to nearly glabrous, ribbed; leaves imparipinnate; rachis conspicuously winged, wings leafy; leaflets 2 pairs and an odd one, opposite, oblong to obovate, rather coarsely and remotely toothed, glabrous to pubescent beneath and with hairy pits in the axils of the nerves; flowers racemose; peduncle axillary, stout, with one or two spirally coiled tendrils at the apex, with a short raceme of clustered small flowers beyond; capsule woody, turbinate, slightly 3-lobed at the top, shortly beaked, about 3 cm. long; septa spongy [pinnata](#)

Paullinia pinnata *Linn.* — F.T.A. 1: 419; Chev. Bot. 148; Radlk. l.c. 247; Schnell in Ic. Pl. Afr. 36. *APD acc*

A woody or subwoody climber with tendrils, small white flowers and scarlet capsular more or less 3-angled fruit; **usually in regrowth vegetation in the forest regions, and in streamside vegetation in the savannah regions.**

Widespread throughout tropical Africa, except in very dry regions; also in Madagascar and tropical America.

2. CARDIOSPERMUM

Linn. — F.T.A. 1: 417; Radlk. in Engl. Pflanzenr. Sapindac. 370 (1932).

- 1 Flowers 8–10 mm. long; posterior disk glands elongate; fruits up to 6.5 cm. long and 3.5 cm. broad; stems often, but not always, with long spreading setose hairs; leaflets more or less curly-pubescent beneath, especially in the axils of the main lateral nerves [1. grandiflorum](#)
- Flowers about 3 mm. long; disk-glands small; fruits 1–4 cm. long and broad, often truncate at the top and more or less trigonous; stems without long spreading setose hairs; leaflets rather stiffly puberulous or shortly pubescent beneath, not hairy in the axils of the main lateral nerves [2. halicacabum](#)

1. **Cardiospermum grandiflorum** *Swartz* Prod. 64 (1788); Radlk. in Engl. Pflanzenr. Sapindac. 372. *APD acc*

Cardiospermum barbicaule *Bak.* in F.T.A. 1: 418 (1868).

Cardiospermum caillei *A. Chev.* Bot. 148, name only.

(?) **C. halicacabum** var. **grandiflorum** *A. Chev.* Bot. 149.

Herbaceous climber with creamy-white fragrant flowers, a pair of tendrils at the apex of the inflorescence and more or less 3-angled bladderly fruits. Plants with the stems setose-pilose are called, by Radlkofer, forma *hirsutum* (Willd.) Radlk.; those specimens from our area whose stems lack the long setose hairs are Radlkofer's forma *elegans* (Kunth) Radlk.

Widespread in tropical and subtropical regions.

The infraspecific variation in the above two species requires study in the field and by experiment.

3. ALLOPHYLUS

Linn. Sp. Pl. 1: 348 (1753); Radlk. in Engl. Pflanzenr. Sapindac. 455 (1932). *APD acc*

Schmidelia *Linn.* (1767) — F.T.A. 1: 420.

- 1 Leaves 3-foliolate; petioles usually more than 3.5 cm. long:2
Leaves 1-foliolate, toothed; inflorescence with an unbranched main axis bearing numerous distinctly pedunculate cymules; petioles 1–3.5 cm. long: 11
- 2 Inflorescence with several well-developed lateral branches (but see No. 2d), mostly longer than the leaves:3
Inflorescence simple or subsimple, or with short lateral cymules; leaflets toothed, hairy:9
- 3 Leaflets toothed, pubescent or pilose beneath:4
Leaflets entire, glabrous, membranous, obovate, shortly cuneate at base, obtusely acuminate, central ones 7–10.5 cm. long, 3–5.3 cm. broad; panicles longer than the leaves, slender, sparingly puberulous, 10–20 cm. long. [.4. talbotii](#)
- 4 Leaflets bullate, sparsely puberulous beneath except for conspicuous tufts of hairs in the axils of veins as well as along the midrib; a tree of montane forest; central leaflets obovate, cuneate at base, rounded or very shortly acuminate, 8–19 cm. long, 3.7–9.5 cm. broad [1. bullatus](#)
Leaflets not bullate, undersurface densely or sparsely hairy, without tufts in the axils of the veins, but sometimes with tufts along the midrib; shrubs and small trees, not in montane forest:5
- 5 Central leaflets up to 16 cm. long and 7.5 cm. broad; petioles up to 6 cm. long; flowers borne singly or in sessile fascicles along the inflorescence-axes:6
Central leaflets 18–38 cm long, 8.5–16 cm broad; petioles 8–16 cm long, stout, semiterete and slightly winged above; flowers borne in distinctly pedunculate lateral cymules along the axes of the inflorescence which is shorter than the leaves; central leaflets more or less obovate, long-cuneate at base, acuminate, lateral leaflets rather strongly asymmetrical; branchlets, petioles and under surface of leaflets sparingly puberulous or glabrescent. [3. grandifolius](#)
- 6 Branchlets, petioles and undersurface of leaflets long-spreading pilose [2c. africanus forma chrysothrix](#)
Branchlets, petioles and undersurface of leaflets pubescent or puberulous:7
- 7 Undersurface of leaflets very densely pubescent [2b. africanus forma subvelutinus](#)
Undersurface of leaflets sparingly pubescent or puberulous or with tufts along the midrib:8
- 8 Venation of leaflets prominently reticulate beneath; inflorescences well-branched [2a. africanus forma africanus](#)
Venation of leaflets obscure beneath; leaflets with conspicuous tufts along the midrib beneath, otherwise nearly glabrous; inflorescences sparingly branched or some simple; leaflets up to 7 cm. long [2d. africanus forma senegalensis](#)
- 9 Flowers borne singly or in fascicles directly on the main axis of the inflorescence; branchlets, petioles and

undersurface of leaflets spreading-pilose with brown hairs; central leaflets 4.5–11 cm. long and 2.5–5.5 cm. broad; inflorescences simple or subsimple, 17 cm long. [5. *spicatus*](#)

Flowers borne in distinctly pedunculate lateral cymes along the main axis of the inflorescence: **10**

- 10** Branchlets, petioles and undersurface of leaflets softly pubescent, sometimes glabrescent; inflorescences up to 12 cm. long, usually longer than the petioles, lateral cymes short; central leaflets 7–21 cm. long, 3–8 cm. broad [6. *welwitschii*](#)

Branchlets, petioles and undersurface of leaflets spreading-setose; inflorescences up to 9.5 cm. long, usually shorter than the petioles, lateral cymes up to 3 cm. long; central leaflets 11–18 cm. long, 4–9 cm. broad. .. [7. *conraui*](#)

- 11** Leaves cuneate at base, 18–45 cm. long, 6.5–15 cm. broad oblong-oblongeolate, margins sinuate-dentate in upper half, long acuminate, with 12–15 main lateral nerves on each side of midrib; inflorescences 2.5–8 cm. long; branchlets and petioles densely pubescent; leaves pubescent mainly on midrib beneath. [8. *megaphyllus*](#)

Leaves rounded, obtuse or rarely some subcuneate at base, 9–22 cm. long, 3.5–10 cm. broad, acuminate; inflorescences 2–3 cm long: **12**

- 12** Branchlets, petioles and both sides of leaves densely spreading setose; leaves oblong-oblongeolate or oblong-lanceolate, up to 22 cm. long and 7 cm. broad, with 12–16 main lateral nerves on each side of midrib. [9. *nigericus*](#)

Branchlets and petioles pubescent; leaves pubescent mainly on and near midrib beneath, elongate elliptic or more or less obovate, 9–20 cm. long, 3.5–10 cm. broad, with 10–14 main lateral nerves on each side of midrib. .. [10. *hirtellus*](#)

1. *Allophylus bullatus* Radlk. in Sitzb. Math.-Phys. Akad. Münch. 38: 223 (1908): Pflanzenr. 534. *APD acc*

A tree 30–50 ft. high, with erect inflorescences, terminal and in the upper leaf-axils; **in montane forest.**

Br. Cam.: Cam. Mt., 3,200–7,600 ft. (fl. Apr., May, fr. Dec., Feb.) Mann 1184! 2167! Maitland 685! 690! 1089! 1317! Bamenda Lightbody! L. Oku, 7,000 ft., Bamenda (fr. Jan.) Keay FHI 2487!

2. *Allophylus africanus* P. Beauv. Fl. Oware 2: 75, t. 107 (1819); Radlk. in Pflanzenr. 536, fig. 12; Aubrév Fl. For. C. Iv. 2: 182, t. 206, 7–12; Fl. For. Soud.-Guin. 390, t. 82, 3. *APD acc*

***Schmidelia africana* (P. Beauv.) DC. (1824) — F.T.A. 1: 421; Chev. Bot. 149.**

Usually shrubs, sometimes small trees to 25 ft. high; flowers creamy-white in almost catkin-like racemes, sweet-scented; ripe fruits red; **especially in forest regrowth and margins, and in protected places in the savannah regions.**

A variable species, widespread in tropical Africa, which requires intensive and extensive experimental study. Of the forms described by Radlkofer the following seem worth maintaining, for the moment, in our area, but some specimens are intermediate:

2a. *Allophylus africanus forma africanus* *APD acc*

Some of the specimens from drier regions are more hairy and approach the forma subvelutinus.

***Allophylus hirtellus* var. *barteri* Bak. f.** (1919).

Allophylus nigericus of F.W.T.A., ed. 1, 1: 500, partly.

A shrub, 3–20 ft. high; flowers white; **in forest**.

S. Nig.: Angiama Barter 85! Oban Talbot 1392! **Br. Cam.:** Amba Bay (Jan.) Mann 727! Likomba (Oct.) Mildbr. 10501! **F. Po:** (Nov.) Mann! T. Vogel 96!

1. ***Allophylus* sp.**

More material and field observations required. “Small tree by stream.”

Br. Cam.: Bambui, Bamenda (Apr.) Maitland 1462!

Perhaps a form of *A. africanus*, but possibly distinct. Imperfectly known species.

2. ***Allophylus oreodryadum* Gilg ex Mildbr.** Wiss. Ergebn. 1910–11: 186 (1922), name only.

Specimen not traced.

F. Po: 4,5000–4,800 ft. Mildbr. 6406.

Imperfectly known species.

4. **DEINBOLLIA**

Schum. — F.T.A. 1: 431; Radlk. in Engl. Pflanzenr. Sapindac. 669 (1932).

- | | | |
|---|---|----------------------------|
| 1 | Rhachides, petiolules and undersurface of leaflets densely to sparingly hirsute: | 2 |
| | Rhachides, petiolules and undersurfaces of leaflets glabrous or sparingly puberulous: | 4 |
| 2 | Leaflets 2–3 pairs, rounded and more or less reflex at apex; petioles 5–9 cm. long, usually longer than the 4–6 cm. long rhachides, both very slightly winged; leaflets opposite or alternate, elliptic-oblongate, unequally cuneate at base, 6.5–9 cm. long, 2–3.2 cm. broad. | <u><i>I. voltensis</i></u> |
| | Leaflets (3–) 5–12 or more pairs, more or less distinctly acuminate at apex; petioles shorter than the rhachides; leaflets mostly larger than above: | 3 |
| 3 | Leaflets (3–) 5–9 (–12) pairs, elliptic to oblong, rounded to subacute at base, shortly acuminate, 5–18 cm. long; | |

- 2.3–7.5 (–10) cm. broad, with 6–12 main lateral nerves on each side of midrib; racemes or panicles up to 60 cm. long, together with the calyces densely brownish-hirsute; petals 5–7 mm. long; fruits subglobose, 1.3–1.5 cm. diam., tomentose. [2. *pinnata*](#)
- Leaflets probably at least 12 pairs, elongate-oblong or elliptic, rounded at base, subacute or subacuminate at apex, up to 40 cm. long and 10.8 cm. broad, with 17–20 main lateral nerves on each side of midrib; leaves up to 1.3 m. long, crowded at the top of the stem; panicles terminal, erect, up to 1 m. long and 1.3 m. wide, together with the calyces densely brownish-hirsute; petals about 5 mm. long, fruits subglobose, at least 1 cm. diam., tomentose. [3. *sp. A*](#)
- 4 Leaflets more than 2.5 cm. broad: [5](#)
- Leaflets 0.6–2.4 cm. broad, lanceolate, long-cuneate, gradually acuminate, 4–12 cm. long; petioles 3–6.5 cm. long, rhachides 7–14 cm. long; leaflets 5–7 pairs, alternate or subopposite; inflorescences axillary, narrow, 1.5–11 cm. long, puberulous; sepals 2 mm. long, sparingly puberulous outside; developing fruit soon glabrous [10. *saligna*](#)
- 5 Flowers 2–5 mm. long, sparingly puberulous outside: [6](#)
- Flowers 6–8 mm. long: [9](#)
- 6 Flowers 3–5 mm. long: [7](#)
- Flowers 2 mm. long; inflorescence-axis and pedicels whitish-pubescent; ovary pubescent, developing fruit soon glabrous; petioles 10–22 cm. long, rhachides about 40 cm. long; leaflets 4–6 pairs, alternate, oblong-elliptic or ovate-oblong, obtuse or cuneate at base, acuminate, 12–25 cm. long, 6–10 cm. broad; inflorescences simple or paniculate, usually on old wood, 10–30 cm. long. [7. *maxima*](#)
- 7 Inflorescence-axes and pedicels sparingly puberulous with whitish hairs; ovary pubescent; developing fruit soon glabrous, 1.3–1.5 cm. diam. when mature: [8](#)
- Inflorescences-axes and pedicels rather densely pubescent or puberulous with brown hairs; ovary densely villous, fruit eventually glabrescent about 1.5 cm. diam.; petioles (7–) 11–27 cm. long, stout, rhachides (18–) 40–60 cm. long; leaflets (5–) 7–10 pairs, alternate or subopposite, more or less oblong-elliptic, obtuse at base, shortly acuminate, 6–28 cm. long, 3–10 cm. broad; inflorescences paniculate, in leaf-axils, and on old wood, 5–50 cm. long. [6. *grandifolia*](#)
- 8 Leaflets 4–8 pairs, 7–20 cm. long, 2.5–7 cm. broad, opposite to alternate, usually cuneate at base, long-acuminate; petioles 8–28 cm. long, rhachides 19–30 cm. long; inflorescences often unbranched, or with only a few branches, borne on woody parts of the stem below the leaves, 8–80 cm. long. [4. *cuneifolia*](#)
- Leaflets 3–4 pairs, 20–33 cm. long, 8–12 cm. broad, opposite or subopposite, cuneate or obtuse at base, shortly acuminate; petioles 17–25 cm. long, rhachides 18–32 cm. long; inflorescences with few branches, axillary, about 20 cm. long; [5. *calophylla*](#)
- 9 Sepals densely pubescent or pilose outside except for the margins; stamens 20–24; petioles about 20 cm. long, rhachides about 40 cm. long; leaflets 6–7 pairs, subopposite or alternate, oblong-elliptic, subfalcate, obtuse at base, acuminate, 16–25 cm. long, 7.5–10 cm. broad; inflorescences paniculate or subsimple, terminal and (?) from old wood below the leaves, up to 70 cm. long, pubescent. [8. *insignis*](#)
- Sepals glabrous or very minutely and laxly puberulous outside; stamens 27–29; leaves about 1 m. long; leaflets alternate, lanceolate-oblong, subacute and slightly unequal at base, subsessile, long-acuminate, 20–22 cm. long, 6.7 cm. broad; panicles terminal, glabrous, about 40 cm. long. [9. *macrantha*](#)

1. **Deinbollia voltensis** *Hutch. ex Burtt. Davy & Hoyle* Checklists Brit. Emp. 3: 126 (1937), English descr. only. *APD acc*

An undershrub, “common on land flooded annually by Volta R.”; flowers white in clusters on the long slender branches of the terminal panicle.

G. C.: Yeji, Volta R. (Apr.) Dalz. 21! Vigne FH 1702!

[This name is only provisional. The species seems to be close to a group common in eastern and southern Africa, which includes *D. oblongifolia* (E. Mey.) Radlk. and is in need of thorough revision. More material of the West African plant is required.]

2. **Deinbollia pinnata** *Schum. & Thonn.* Beskr. Guin. Pl. 242(1827); F.T.A. 1: 432; Chev. Bot. 151; Radlk. in Engl Pflanzenr Sapindac. 676; Aubrév Fl. For. C. Iv. 2: 196, t. 195, 1–6 *APD acc*

APD: *Synonym of Deinbollia molliuscula Radlk.*

Ornitrophe pinnata Poir. (1808).

Schmidelia? pinnata (Poir) DC. (1824).

Prostea pinnata (Poir) Camb. (1829).

Deinbollia elliotii Gilg (1897) — Radlk. l.c. 677.

Deinbollia leptophylla Gilg ex Radlk. l.c. 679 (1932).

Deinbollia dahomensis A. Chev. Bot. 151, name only.

An erect shrub or small tree, 4–15 ft. high, rarely more, with the inflorescence erect towards the top of the shoots; flowers creamy-white; fruits orange; **especially in regrowth forest vegetation.**

Fr. G.: Macenta (young fr. May) Collenette 27! Dalaba-Diaguissa Plateau Chev. 18710, Nzo Chev. 21074. **S. L.:** Kafogo (Apr.) Sc. Elliot 5494! Bafodeya (Apr.) Sc. Elliot 5126b! Beria, Falaba (Mar.) Bunso, E. Prov. (Oct.) Darko 1042! Anibil Wharf (Feb.) Vigne FH 2821! Dakabansa-Bekwai (Feb.) Vigne FH 4947! Krokosua F.R. (Feb.) Cansdale FH 3988! **Togo:** Ntumada, Hohoe Dist. (Dec.) St. C. Thompson FH 3566!

[This species is recorded by Andrews in his Fl. Pl. A.-E. Sud. 2: 339 (1952), but the specimen (Hoyle 826) on which the record is based is not *D. grandifolia* Hook. f.]

7. *Deinbollia maxima* Gilg in Mém. Soc. Linn. Normand. 26, 2: 73 (1924); Radlk. l.c. 683. *APD acc*

A small tree; **in forest.**

S. Nig.: Oban Talbot 1290! 1751!

Also in **French Camerouns** and **Gabon**.

[Radlk. also records this species from Sierra Leone, but I have not seen the specimen (Afzetim s.n.), nor any other specimens of the species from Sierra Leone.]

8. **Deinbollia insignis** *Hook. f.* in *Fl. Nigrit.* 250 (1849); *F.T.A.* 1: 431, partly (spec. ex *F. Po* only); *Radlk. l.c.* 680, partly (spec. ex *F. Po* only); *Kennedy For. Fl. S. Nig.* 185. *APD acc*

A forest tree 12–25 ft. high; calyx green, corolla yellow; ripe fruits yellowish-orange.

S. Nig.: Sapoba (June) *Kennedy* 768! 1121! 2290! *Onochie FHI* 20698! **F. Po:** (Nov., Jan.) *Mann* 159! 591. *T. Vogel* 166!

[The Nigerian material has the sepals and inflorescence rather more densely covered with rather longer hairs than the *F. Po* material.]

9. **Deinbollia macrantha** *Radlk. l.c.* 681 (1932). *APD acc*

A small tree in forest.

Br. Cam.: Kumba (Nov.) *Büsgen* 29.

10. **Deinbollia saligna** *Keay* in *Bull. Jard. Bot. Brux.* 26: 193, fig. 60 (1956). *APD acc*

A shrub, up to 3 ft. high, with white flowers; on rocky beds and banks of rivers in forest country.

S. Nig.: Oban Talbot 583! *Kwakam, Anigeje, Calabar Prov. (Apr.) Ujor FHI* 31776! **Br. Cam.:** Ndian R., Kumba (Mar.) *Smith* 80/36!

1. **Deinbollia brachybotrys** *Gilg* in *Engl. Bot. Jahrb.* 24: 295 (1897); *Radlk. l.c.* 686.

APD: *Synonym of Deinbollia dasybotrys Gilg ex Radlk.*

S. L.: Afzelius.

Probably equals *D. cunneifolia* Bak., but type specimen presumably destroyed. Imperfectly known species.

2. **Deinbollia unguiculata** *Gilg l.c.* 296 (1897); *Radlk. l.c.* 685. *APD acc*

S. L.: Afzelius.

Probably equals *D. cuneifolia* Bak., but type specimen presumably destroyed. Imperfectly known species.

5. APHANIA

Blume, *Bijdr. Fl. Nederl. Ind.* 5: 236 (1825); *Radlk. in Engl. Pflanzenr. Sapindac.* 699 (1932).

APD: *Synonym of Lepisanthes Blume*

- 1 Branchlets, inflorescences, petioles, rhachides and petiolules yellowish-pubescent; leaflets 1 or 2 pairs, opposite or subopposite, with swollen petiolules, broadly oblanceolate to obovate-elliptic or elongate-oblong, cuneate or obtuse at base, obtusely pointed at apex, 8–25 cm. long, 3–8 cm. broad, strongly reticulate on both surfaces, glabrous; petioles 0·1–2·5 cm. long, rhachides 0 or 0·7–4·8 cm. long; flowers polygamous in rather lax terminal panicles; bracts and sepals ciliate; petals (3–) 5; stamens 7–8, filaments villous; ovary didymous, one carpel usually abortive, glabrous; fruits obovoid or ellipsoid, 1·3–1·8 cm. long, with a basal style and the abortive carpel persisting at the base[senegalensis](#)

- Aphania senegalensis** (*Juss. ex Poir.*) *Radlk. in Sitzb. Math.-Phys. Akad. Münch.* 8: 238 (1878); *Chev. Bot.* 151; *Radlk. in Engl. Pflanzenr. Sapindac.* 703; *Aubrév. Fl. For. C. Iv.* 2: 192–194, t. 202, incl. var. *silvatica* (*A. Chev. ex Hutch. & Dalz.*) *Aubrév.* (1936); *Aubrév. Fl. For. Soud.-Guin.* 386, t. 82, 4. *APD acc*

Sapindus senegalensis *Juss. ex Poir.* (1804) — *F.T.A.* 1: 430.

Aphania silvatica *A. Chev. ex Hutch. & Dalz.* *F.W.T.A.*, ed. 1, 1: 502 (1928); *Kew Bull.* 1929: 26; *Radlk. l.c.* 705; *Chev. Bot.* 152,

name only.

A forest tree to 55 ft. high, with short bole and dense drooping foliage; flowers greenish-white, fragrant; ripe fruits red, edible; in moist places in the forest regions and especially in fringing forest in the savannah regions.

Sen.: Walo Heudelot! Richard Tol (fl. Jan., Feb., fr. May) Roger 11! Perrottet 109! R. Salum Brunner 156! Samanding (Feb.) Chev. 3031! **Gam.:** Don! Genieri (Feb.) Fox 30! **Port. Also in French Cameroons, Ubangi-Shari, Gabon, Belgian Congo, A.-E. Sudan, Abyssinia, Eritrea, E. Africa and Angola.

6. CHYTRANTHUS

Hook. f. — F.T.A. 1: 429; Radlk. in Engl. Pflanzenr. Sapindac. 782 (1932).

Glossolepis Gilg (1897) — F.W.T.A., ed. 1, 1: 503; Radlk. l.c. 778.

- 1 Leaves hairy, at least on the petioles, rachides, petiolules and midribs and main nerves beneath; stamens 7–9: 2
Leaves quite glabrous; stamens 12–15: 6
- 2 Leaflets 3–4 pairs, densely setose on midrib and nerves beneath; ovary and fruit 6–8-celled; inflorescences up to 15 cm. long: 3
Leaflets 5–11 pairs, puberulous on midrib and nerves beneath, sometimes with long weak hairs as well especially when young and near the petiolules; ovary and fruit 3–6-celled; inflorescences up to 35 cm. long: 4
- 3 Leaflets obtuse to cuneate at base; rachides 15–21 cm. long; inflorescences and flowers densely bristly-tomentose, up to 8 cm. long; leaflets oblanceolate-elliptic or oblong-elliptic, long-acuminate, 16–30 cm. long 5.2–9.5 cm. broad, with 14–22 main lateral nerves on each side of midrib; petioles 12–20 cm. long. [1. setosus](#)
Leaflets rounded to subcordate and unequal at base; rachides 10–15 cm. long; inflorescences up to 15 cm. long; leaflets oblong-elliptic, 17–25 cm. long, 6.5–10 cm. broad, with 11–16 main lateral nerves on each side of midrib; petioles 10–15 cm. long. [2. ellipticus](#)
- 4 Leaflets 5–6 pairs, 9–15 cm. broad, 20–40 cm. long, oblong, obtuse to rounded at base, acuminate, rather densely puberulous on midrib nerves and sometimes on lamina beneath, without long weak hairs; main lateral nerves 21–25 on each side of midrib, prominent beneath, midrib pubescent above; inflorescences 20–35 cm. long; ovary 6-celled. [3. atrovioleaceus](#)
Leaflets 7–11 pairs, up to 7.5 cm. broad, with long weak hairs especially when young and near the petiolules; main lateral nerves 12–20; ovary 3- or 5-celled: 5
- 5 Leaflets 7–9 pairs, upper pairs usually larger than the rest, midribs glabrous above; inflorescences and flowers densely bristly tomentose; main axis of inflorescence up to 30 cm. long, with, often secondly arranged, short lateral branches each bearing several flowers; upper leaflets narrowly oblong-oblanceolate, middle ones elongate-oblong, lower ones oblong-lanceolate, all more or less obtuse at base and long-acuminate, up to 32 cm. long and 7.5 cm. broad; petioles 15–25 cm. long, rachides 36–48 cm. long; ovary 3-celled (? always). [4. villiger](#)
Leaflets 9–11 pairs, upper pairs usually smaller than the middle ones, midribs pubescent above; inflorescences and flowers tomentellous; main axis of inflorescence 15–24 cm. long, bearing the flowers 1–3 together, with conspicuous bracts; leaflets elongate-oblong to oblanceolate, obtuse at base, abruptly long-acuminate, up to 28 cm. long and 6.8 cm. broad; petioles 13–23 cm. long, rachides 36–54 cm. long; ovary 5-celled; fruits with 5 broad and 5 alternating narrow wings. [5. bracteosus](#)
- 6 Leaflets 4–6 pairs, the upper more or less obovate-oblong and much larger than the lower which are more or less ovate-oblong, rounded to cuneate at base, shortly acuminate, 8–38 cm. long, 5–12 cm. broad; petioles 16–27 cm. long, rachides 26–40 cm. long; racemes up to 30 cm. long; calyx subglobose-saccate, about 6 mm. long, shortly tomentose outside; petals broad at base, oblong, 7–8 mm. long, 2–3 mm. broad; fruits ribbed, 10–15 cm. long. [6. macrobotrys](#)
Leaflets 8–11 pairs, all more or less the same size and shape, oblong, rounded to cuneate at base, abruptly and often long-acuminate, 11–24 cm. long, 4.2–6.8 cm. broad; petioles 16–22 cm. long, rachides 48–66 cm. long; racemes up to 60 cm. long; calyx ovoid-saccate, 10–12 mm. long, tomentellous outside; petals narrowed at

base, loriform, 12–13 cm. long, 2 mm. broad; fruits ribbed. [Z. talbotii](#)

1. **Chytranthus setosus** *Radlk.* in Sitzb. Math.-Phys. Akad.-Münch. 20: 240 (1890); Chev. Bot. 152; Engl. Pflanzenr. Sapindac. 785, fig. 18. *APD acc*

A shrub or small tree, to 15 ft. high, cauliflorous, with cream flowers in short dense spike-like inflorescences; [in forest](#).

Dah.: Sakété (Jan.) Chev. 22884; 22885. **S. Nig.:** Omo F.R., Ijebu-Ode Prov. (fl. buds Jan.) Onochie FHI 20680! Okomu F.R., Benin (ft. buds Feb.) Brenan 9127! Calabar R. (Feb.) Mann 2281!

Also in [French Cameroons](#) and extending to Cabinda and [Belgian Congo](#).

2. **Chytranthus ellipticus** *Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 504 (1928); Kew Bull. 1929: 26; Radlk. in Engl. Pflanzenr. Sapindac. 798. *APD acc*

A tree, up to 30 ft. high, cauliflorous, with whitish flowers in dense spike-like inflorescences; [in forest](#).

S. Nig.: Sapoba Kennedy 2222! Okomu F.R., Benin (Dec.) Brenan 8579! Oban Talbot 1399! Eket Talbot 3129!

3. **Chytranthus atrovioleaceus** *Bak. f. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 1: 504 (1928); Kew Bull. 1929: 26; Radlk. l.c. 786. *APD acc*

Chytranthus macrophyllus var. **obanensis** *Bak. f.* in Cat. Talb. 19 (1913).

A shrub or small tree (? up to 60 ft. fide Talbot); flowers on the main stem, with deep red velvety calyx; [in forest](#).

S. L.: Heirakohun Smythe 126! **G. C.:** Kwahu Prasu (Feb.) Vigne FH 1608! **S. Nig.:** Shasha F.R. (Feb.) Lamb 192! Oban Talbot 1583! 1596!

4. **Chytranthus villiger** *Radlk.* l.c. 794 (1932).

APD: Synonym of Chytranthus carneus Radlk.

A small tree, to 15 ft. or more high; cauliflorous, with white velvety flowers in slender panicles at the base of the stem; [in forest](#).

S. L.: Makump (July) Thomas 960! Yonibana (Nov.) Thomas 4993! **Lib.:** Gbanga (Sept.) Linder 611! Nyaake, Webo (June) Baldwin 6214! **iv. C.:** Banco Aubrév. 480! **G. C.:** Huniso, W. Prov. (fr. Jan.) Irvine 1063! Bawdia, W. Prov. (Dec.) Vigne FH 3152!

Also in [French Cameroons](#).

5. **Chytranthus bracteosus** *Radlk.* l.c. 787 (1932).

APD: Synonym of Chytranthus angustifolius Exell

A tree, 10–55 ft. high, almost unbranched; inflorescences brown, rigid, borne all up the trunk; [in forest](#).

Br. Cam.: S. Bakundu F.R., Banga (fl. buds Mar., young fr. Aug.) Brenan 9487! Olorunfemi FHI 30720!

Also in [French Cameroons](#).

[Our material is determined from the description as the type is not available; a sterile specimen (Linder 983) from Peahtah, Lib., may also belong here.]

6. **Chytranthus macrobotrys** (*Gilg*) *Exell & Mendonça* in Consp. Fl. Ang. 2: 84 (1954). *APD acc*

Glossolepis macrobotrys *Gilg* in Engl. Bot. Jahrb. 24: 299, t. 1 (1897); Radlk. in Engl. Pflanzenr. Sapindac. 780, fig. 17.

A [forest](#) shrub or small tree, to 35 ft. high, rarely more, sparingly branched; racemes on old wood, pendulous, with erect brownish flowers.

G. C.: Amentia (Dec.) Vigne FH 1490! S. Fomang Su F.R. (Jan.) Vigne FH 2678! Kumasi (Jan.) Vigne FH 999! Owabi (Dec.) Lyon FH 2632! **Togo:** Kabosu, Kobo River F.R., (Dec.) St. C. Also in **French Cameroons**, **Cabinda** and **Belgian Congo**.

[Aubrév. Fl. For. C. Iv. 2: 177 records *Glossolepis* in the Ivory Coast (Aubrév. 391) but does not give the species; it may be this.]

7. **Chytranthus talbotii** (*Bak. f.*) *Keay* in *Bull. Jard. Bot. Brux.* 26: 194 (1956). *APD acc*

Glossolepis talbotii *Bak. f.* in *Cat. Talb.* 20 (1913); *Radlk. l.c.* 781.

G. pilgeriana *Gilg ex Engl.* *Pflanzenw. Afr.* 3, 2: 276 (1921); *Mém. Soc. Linn. Normand* 26, 2: 71 (1924); *Radlk. l.c.* 780.

A forest tree, to 30 ft. high, sparingly branched; racemes on the basal part of the trunk, pendulous, with erect whitish flowers with mauve filaments and reddish anthers.

S. Nig.: Oban Talbot 1258a! 1686! Boshi-Okwango F.R., Obudu (May) Latilo FHI 30940! **Br. Cam.:** Mombo, Kumba Div. (May) Olorunfemi FHI 30564! S. Bakundu F.R., Banga (Mar.) Brenan 9417!

Also in **French Cameroons**, **Gabon** and **Spanish Guinea**.

1. **Chytranthus brunneo-tomentosus** *Gilg ex Radlk. l.c.* (1932).

APD: *Synonym of Chytranthus atrovioleaceus Baker f. ex Hutch. & Dalziel*

A small tree, leaflets 3–6 pairs; stamens 7–8; ovary 5-celled.

Br. Cam.: Bangwe, on margin of forest (Apr.) Conrau 94; 172.

Type specimen presumably destroyed. [An incomplete specimen (Ujor FHI 29262), from Wum Dist., Bamenda, British Cameroons, may also belong here; better material needed.]. Imperfectly known species.

2. **Chytranthus prieurianus** *Baill.* in *Adansonia* 9: 241 (1874); *Radlk. l.c.* 793. *APD acc*

Described from a plant formerly cultivated in a hot house at Paris and said to have been collected by Leprieur possibly in West Africa,

Imperfectly known species.

3. **Chytranthus sp. A.** *APD acc*

Shrub or tree, to 33 ft. high; inflorescences produced from raised woody cushions around the base of the trunk; fruits succulent, orange-yellow, 3-celled. This incomplete material is possibly *C. welwitschii* Exell or *C. mannii* Hook. f.

S. Nig.: Akilla plantations, Ijebu Ode Prov. (fr. Jan.) Onochie & Oladoyinbo FHI 20660! Okomu F.R., Benin Brenan 8611!

Imperfectly known species.

4. **Chytranthus sp. B.** *APD acc*

Leaflets 5 pairs, upper pairs large, lower pairs small, sparingly pilose on midrib beneath and on rachis and petiolules. Better material needed.

S. Nig.: Oban Talbot!

Imperfectly known species.

7. PANCOVIA

Willd. Sp. Pl. 2: 285 (1799); *Radlk. in Engl. Pflanzenr. Sapindac.* 799 (1932).

- 1 Racemes or flower-clusters not exceeding 13 cm. long:2

Racemes 15–30 cm. long; pedicels about 5 mm. long; calyx shortly campanulate, about 4 mm. long, with rather long lobes; petioles 8–14 cm. long; leaflets 3–4 pairs, ovate-lanceolate to elliptic-oblong, subcuneate to the up

to 1 cm. long petiolule, acutely acuminate, 14–20 cm. long, 4.5–8 cm. broad, without scale-like glands beneath.

..... [5. *polyantha*](#)

2 Leaflets without scale-like glands: **3**

Leaflets with minute scale-like glands beneath; petioles 3.5–9 cm. long; leaflets 2–3 pairs, elliptic-lanceolate, cuneate at base, shortly acuminate, 7–20 cm. long, 5–9 cm. broad; racemes about 4 cm. long, pedicels short; calyx campanulate, tomentellous. [6. *subcuneata*](#)

3 Flowers subsessile in axillary clusters less than 5 mm. long; calyx cupular, about 4 mm. long, tomentellous; petioles 1.5–6.5 cm. long, rhachides 0.5–1.2 cm. long; leaflets 2 pairs, opposite or subopposite, obovate-elliptic, cuneate at base, distinctly but obtusely acuminate, 4.5–17 cm. long, 1.5–6.5 cm. broad, glabrous, reticulate on both surfaces. [1. *sessiliflora*](#)

Flowers in racemes 1–10 cm. long; **4**

4 Pedicels up to 2 mm. long; calyx turbinate, about 3 mm. long, tomentellous; racemes 1–7 cm. long; petioles 2–9 cm. long; leaflets 1–2 pairs, opposite or sub-opposite, elliptic, cuneate or obtuse at base, obtusely acuminate, 3–17 cm. long, 2.3–8.3 cm. broad, glabrous, reticulate on both surfaces. [2. *turbinata*](#)

Pedicels 3–8 mm. long; calyx shortly campanulate, about 4 mm. long, with rather long lobes: **5**

5 Racemes 1–2 (–4) cm. long; pedicels 5–8 mm. long; calyx shortly tomentose; petioles 2–6 cm. long, rhachides 0 or 1.5–6 cm. long; leaflets (1–) 2 (–3) pairs, opposite or subopposite, oblong-elliptic to obovate-elliptic, obtuse or cuneate at base, shortly and obtusely acuminate or obtuse at apex, 4.5–14 cm. long, 3.2–6.2 cm. broad, glabrous, reticulate beneath. [3. *bijuga*](#)

Racemes (2–) 4–13 cm. long; pedicels 3–5 mm. long; calyx tomentellous or puberulous; petioles 4–9 cm. long, rhachides 0 or 2–13 cm. long; leaflets (1–) 3–4 pairs, opposite or alternate, lanceolate to elliptic cuneate or obtuse at base, distinctly acuminate, 4–20 cm. long, 1.5–8 cm. broad, glabrous, reticulate on both surfaces. [4. *pedicellaris*](#)

1. *Pancovia sessiliflora* Hutch. & Dalz. F.W.T.A., ed. 1, 1: 504 (1928); Kew Bull. 1929: 27; Radlk. in Engl. Pflanzenr. Sapindac. 1495. *APD acc*

A small shrub, sometimes trailing, with small whitish flowers and red 2-lobed fruit.

S. Nig.: Ikoyi Plains, Lagos (Feb.) Dalz. 1178! Agege (Nov.) Kitson! Olokemeji (Nov.) Jones, Keay & Onochie FHI 4920! S. of Okeigbo (fr. Feb.) Jones & Onochie FHI 14728! Etemi, Omo F.R. (Mar.) Jones & Onochie FHI 17016!

2. *Pancovia turbinata* Radlk. in Sitzb. Math.-Phys. Akad. Münch. 8: 270 (1878); Engl. Pflanzenr. Sapindac. 804 (excl. syn. *Aphania golungensis* Hiern); Aubrév. Fl. For. C. Iv. 2: 203, t. 206, 2–6 (excl. syn.). *APD acc*

Pancovia bijuga of F.W.T.A., ed. 1, 1: 504, partly.

An erect shrub or small tree; flowers dull yellowish cream.

Fr. G.: Heudelot 869! **Iv. C.:** Port Bouët Aubrév. 1518. **Br. Cam.:** Barombi (fl. buds Mar.) Preuss 9. S. Bakundu F.R., Banga, Kumba Div. (Jan.) Keay FHI 28562!

3. *Pancovia bijuga* Willd. Sp. Pl. 2: 285 (1799); Chev. Bot. 152; Radlk. l.c. 802; Aubrév. l.c. 203, t. 206, 1. *APD acc*

Erioglossum cauliflorum Guill. & Perr. Fl. Seneg. 118, t. 28 (1831); F.T.A. 1: 420.

Pancovia guineensis Willd. ex A. Chev. Bot. 152, name only.

A small tree, much-branched; flowers cream.

Sen.: Itou, R. Casamance (Apr., May) Perrottet. **Iv. C.:** Akakoumoëkrou (Dec.) Chev. 22527! 22536! 22547! **G. C.:** Drabonso, Ashanti (Feb.) Cansdale FH 4144! Pokoase (Feb.) 4. *Pancovia pedicellaris* Radlk. & Gilg in Engl. Bot. Jahrb. 24: 302 (1897); Radlk. in Engl. Pflanzenr. Sapindac. 803.

APD: *Synonym of *Pancovia turbinata* Radlk.*

A shrub or small tree, 15–30 ft. high, with very hard wood; in forest.

Br. Cam.: Johann-Albrechtshöhe (Jan., Feb.) Staudt 596! 798.

Also in **French Cameroons** and **Spanish Guinea**.

5. **Pancovia polyantha** *Gilg ex Engl.* Pflanzenw. Afr. 3, 2: 276 (1921); Radlk. l.c. 803. *APD acc*

A forest shrub (?).

Br. Cam.: Johann-Albrechtshöhe (Mar.) Staudt 906!

6. **Pancovia subcuneata** *Radlk.* in Engl. Pflanzenr. Sapindac. 806 (1932); E. & P. Pflanzenfam. Nachtr. 3: 203 (1907), name only. *APD acc*

Pancovia bijuga of F.W.T.A., ed. 1, 1: 504, partly (S.L. record).

A shrub (?).

S. L.: Afzelius.

Pancovia sp. *APD acc*

Understorey tree, 15 ft. high; **in forest outlier**; leaves with a single pair of lanceolate leaflets; flowers and fruits required.

N. Nig.: Kurmin Damisa, Jemaa, Plateau Prov. Keay & Onochie FHI 21660!

Imperfectly known species.

8. **PLACODISCUS**

Radlk. in Sitzb. Math.-Phys. Akad. Münch. 8: 332 (1878); Engl. Pflanzenr. Sapindac. 810 (1932).

- 1 Leaflets 2–5 (–6) pairs:.....2
 Leaflets 8–18 pairs, the lowest pair well away from the stem and not resembling leafy stipules; racemes borne on the main stem and among the lower leaves, axes without glandular hairs:.....8
- 2 Leaves sessile, quite glabrous; leaflets 2 pairs, the lowest pair resembling large leafy stipules, ovate, upper pair larger, elongate-elliptic, cuneate at base, acuminate, 7–25 cm. long, 2.5–8 cm. broad, with 7–12 main lateral nerves on each side of midrib; rhachides 1–12.5 cm. long; male racemes axillary, 3–11 cm. long, bracts 1.5 mm. long, conspicuous; female racemes axillary or on older wood below the leaves, up to 34 cm. long; flowers subsessile, crowded, calyx turbinate, about 3.5 mm. long and wide, puberulous; fruits 1–2-lobed by abortion, up to 3 cm. long and broad, tomentellous at least when young.[1. pseudostipularis](#)
 Leaves distinctly petiolate; leaflets 2–5 (–6) pairs, the lowest pair well away from the stem and not resembling leafy stipules; flowers distinctly pedicellate:.....3
- 3 Inflorescence-axes without glandular hairs:4
 Inflorescence-axes with numerous glandular hairs; racemes borne on the main stem:.....7
- 4 Inflorescences axillary and sometimes just below the foliage; calyx about 5 mm. long; bracts up to 1 mm. long; leaflets 2–3 pairs:5
 Inflorescences on the main stem; pedicels 1.5–2.5 mm. long; calyx 2.5–3 mm. long; leaflets (2–) 4–5 (–6) pairs, opposite to alternate, with 8–12 main lateral nerves on each side of midrib:6
- 5 Pedicels of male flowers 5–10 mm. long; inflorescence and calyx puberulous; inflorescence racemose except for a few short lateral branches near the base, up to 15 cm. long; petioles 5.5–7.5 cm. long, rhachides 4.5–6 cm. long; leaflets alternate or opposite, elliptic or oblong-elliptic, cuneate at base, shortly acuminate, 6–22 cm. long, 3–8.5 cm. broad, with 5–9 main lateral nerves on each side of midrib.[2. boya](#)
 Pedicels of flowers up to 2 mm. long (to 5 in fruit); inflorescence and calyx densely tomentellous; inflorescence a very narrow spike-like panicle with very short 1–3-flowered lateral branches, 3–13 cm. long; petioles 1.8–12 cm. long, rhachides 2.8–11 cm. long; leaflets opposite or subopposite, oblong-elliptic to oblanceolate-elliptic, obtuse or cuneate at base, rounded, obtuse, or obtusely and shortly acuminate at apex, 3–20 cm. long, 1.5–7 cm. broad, with 6–12 main lateral nerves on each side of midrib.[3. riparius](#)
- 6 Axes of inflorescence and calyx tomentellous; bracts up to 2 mm. long; racemes up to 40 cm. long; leaflets 2–5 pairs, oblong to oblong-elliptic, cuneate to obtuse at base, more or less long-acuminate, 10–30 cm. long, 3–8–10 cm. broad; petioles 6–17 cm. long, rhachides 11–29 cm. long.[4. leptostachys](#)
 Axes of inflorescence and calyx shortly tomentose; bracts about 5 mm. long; racemes up to 22 cm. long; leaflets 4–5 pairs, oblong-oblanceolate, cuneate, very shortly acuminate, 12–28 cm. long, 6–11 cm. broad; petioles 4.5–14 cm. long, rhachides 14–20 cm. long.[5. sp. A](#)
- 7 Flowers subsessile; calyx 3 mm. long, tomentose; racemes up to 20 cm. long; leaflets 3–4 pairs, subopposite or opposite, oblong-elliptic, obtuse to cuneate at base, acuminate, 5.5–21 cm. long, 3–7.2 cm. broad, with 7–14

main lateral nerves on each side of midrib; petioles 2–11 cm. long, rhachides 5.5–16 cm. long [6. *turbinatus*](#)

Flowers with distinct pedicels 1–2 mm. long; calyx 2 mm. long, puberulous-tomentellous; racemes up to 36 cm. long; leaflets 3–6 pairs, alternate or sub-opposite, oblong-elliptic, cuneate to obtuse at base, acuminate, 10–30 cm. long, 3.5–9 cm. broad, with 10–17 main lateral nerves on each side of midrib; petioles 10–19 cm. long, rhachides 13–25 cm. long. [7. *glandulosus*](#)

- 8 Leaflets 8–12 pairs, elongate-oblong or oblong-lanceolate, cuneate and oblique at base, caudate-acuminate, 5.5–23 cm. long, 1.5–4.8 cm. long, with 11–15 main lateral nerves on each side of midrib; petioles 9.5–18 cm. long, rhachides 25–48 cm. long, petiolules 3–6 mm. long; racemes up to 15 cm. long, tomentose; flowers very shortly pedicellate; calyx obconic-subglobose, 2.75–4 mm. long, 3.5–4.5 mm. diam., lobes never wide open, tomentose outside; fruits 3-lobed, but only 1 or 2 lobes fully developed, 2.5–3.5 cm. long, 3–3.5 cm. broad, pubescent, later glabrescent [8. *splendidus*](#)

Leaflets 18–24 pairs, lanceolate and subfalcate, cuneate at base and subsessile, acute and mucronate at apex, up to 30 cm. long and 7.5 cm. broad, with 8–10 main lateral nerves on each side of midrib; rhachides triangular in cross-section; leaves up to 100 cm. or more long; racemes up to 35 cm. long, tomentose; pedicels up to 1 cm. long. [9. *bancoensis*](#)

1. **Placodiscus pseudostipularis** *Radlk.* in Sitzb. Math.-Phys. Akad. Münch. 20: 242 (1890); Chev. Bot. 152; Radlk. in Engl. Pflanzenr. Sapindac. 812; Aubrév. Fl. For. C. Iv. 2: 200. *APD acc*

A shrub or small tree, 3–48 ft. high; flower buds brown; [in forest](#),

S. L.: Afzelius. Njala (May–Sept.) Deighton 3016! 3230! 5335! Makump (fr. July) Thomas 950! Gola Forest (young fr. Apr.) Small 595! **Lib.:** Dukwia R. (May, Oct.) Cooper 266! 374! **iv. 9. MELANODISCUS

Radlk. in Th. Dur. Ind. Gen. 75 (1888); Engl. Pflanzenr. Sapindac. 816 (1932).

- 1 Branchlets, rhachides and inflorescence softly pubescent; leaflets 2–4 pairs, the lowest pair small ovate-cordate, very close to the stem, the upper pairs larger, oblong-elliptic, obtuse or cuneate at base, gradually acuminate, up to 20 cm. long and 8 cm. broad, densely pubescent beneath and on midrib above; panicles terminal, about as long as the leaves, pedicels up to 4 mm. long; calyx about 2.5 mm. long, stamens glabrous, 7–10 mm. long.

.....[africanus](#)

Melanodiscus africanus Radlk. in Th. Dur. Ind. Gen. 75 (1888); Engl. Pflanzenr. Sapindac. 817.

A tree to 20 ft. high; **in forest regrowth**.

S. Nig.: Lagos Moloney! **Br. Cam.:** Bombe (Jan.) Lobe Babute Cam. 52/36!

Burbidge 497 from “Konnoh Country,” Sierra Leone, possibly belongs to this genus but better material is needed. Imperfectly known species.

10. LECANIODISCUS

Planch. ex Benth. — F.T.A. 1: 428; Radlk. in Engl. Pflanzenr. Sapindac. 879 (1932).

- 1 Branchlets thinly pubescent; leaves paripinnate; leaflets opposite or nearly so, with a short swollen petiolule, oblong or elliptic, cuneate at base, broadly caudate-acuminate, 6–18 cm. long, 4–9 cm. broad, with rather numerous spreading lateral nerves, glabrous; racemes axillary, much shorter than the leaves, puberulous;

flowers more or less clustered, polygamous or dioecious; pedicels about 5 mm. long, slender; petals absent; stamens 10, glabrous; ovary densely setose-tomentose; fruits broadly ovoid, 2 cm. long, often slightly 2-lobed, tomentellous, shortly beaked by the terminal style. [cupanioides](#)

Lecaniodiscus cupanioides *Planch. ex Benth.* — F.T.A. 1: 429; Chev. Bot. 153; Radlk. l.c. 880; Aubrév. Fl. For. C. Iv. 2: 202, t. 205. *APD acc*

A small tree, or shrub, 5–30 ft. high, with spreading crown; flowers greenish-yellow or whitish, fragrant; ripe fruits red or yellowish, indehiscent.

14. BLIGHIA

Konig — F.T.A. 1: 426; Radlk. in Engl. Pflanzenr. Sapindac. 1142 (1933); Wilczek in Bull. Jard. Bot. Brux. 21: 149 (1951).

Phialodiscus Radlk. (1879) — F.W.T.A., ed. 1, 1: 502; Radlk. l.c. 1147.

- 1 Midrib and main lateral nerves impressed, or at any rate not prominent, above; disk thick, fleshy, puberulous or glabrous; fruits large, 3–8 cm. long, pyriform, sub-trigonal or acutely triangular in section, tomentose within:2

Midrib and main lateral nerves prominent or prominulous above; disk thin, glabrous; fruits 1.5–3 cm long, 1.5–2.2 cm. broad, obovoid-triangular with winged lobes, glabrous or pilose and glabrescent within; calyx-lobes about 1 mm. long; petals 1–1.5 mm. long, shorter than the appendages; branchlets, petioles, rhachides and petiolules golden-pubescent and more or less glabrescent; petioles 0–7 cm. long, rhachides 0–5 cm. long; leaflets 1–3 (–4) pairs, upper ones largest, rarely leaves 1-foliolate, oblong-elliptic or oblong-oblancheolate, cuneate to rounded at base, broadly acuminate, 3.5–25 cm. long, 1.5–10 cm. broad, usually pubescent in the axils of the main lateral nerves beneath; racemes axillary, up to 11 cm. long, pubescent3. *unijugata*

- 2 Capsules with rounded valves, 4–6 cm. long, about 3 cm. diam., rugose outside when dry; calyx-lobes 2–2.5 mm. long; petals 3–4 mm. long, exceeding the appendages; leaflets rounded or shortly acuminate at apex; branchlets, petioles, rhachides and petiolules rather densely yellowish pubescent; petioles flattened above, 0.5–3.5 cm. long; rhachides 1.5–16 cm long; leaflets (2–) 3–5 pairs, the upper ones largest, obovate, oblong or subelliptic, acute to rounded at base, 3–18 cm long, 2–8.5 cm. broad, pubescent on the nerves beneath; racemes axillary, 5–20 cm. long, densely pubescent1. *sapida*

Capsules with acutely angled or winged valves, 3–8 cm. long, 3–4.5 cm. diam., smooth outside when dry; calyx lobes 1–1.2 mm long; petals 1.8–3 mm. long, shorter than or equalling the appendages; leaflets usually distinctly and sometimes long-acuminate at apex; branchlets, petioles, rhachides and petiolules tomentellous or puberulous; petioles more or less winged, 1.5–10 cm long; rhachides 0.5–10 cm. long; leaflets (2–) 3–4 pairs, the upper ones largest, elliptic or oblong-elliptic; acute to rounded at base, 5–19 cm. long, 2–8 cm. broad, glabrous or pubescent only on the nerves beneath; racemes axillary, 4–15 cm. long, tomentellous to glabrous 2. *welwitschii*

1. *Blighia sapida* *Konig* in *Konig & Sims*, Ann. Bot. 2: 571, tt. 16 & 17 (1806); F.T.A. 1: 426; Chev. Bot. 153; Radlk. in Engl. Pflanzenr. Sapindac. 1142, fig. 32; Aubrév. Fl. For. C. Iv. 2: 188, t. 199; Wilczek in Bull. Jard. Bot. Brux. 21: 152, fig. 39. *APD acc*

A forest tree 20–80 ft. high, with spreading crown and ribbed branchlets; flowers bisexual and male on separate trees, greenish-white, fragrant; capsules bright red when ripe, opening to expose 3 shining black, oblong seeds, each with a large yellow or whitish aril; native in forest outliers in the savannah regions and in drier parts of the forest regions of the eastern half of our area, but most usually seen planted near dwellings.

15. ERIOCOELUM

Hook. f. —F.T.A. 1: 427; Radlk. in Engl. Pflanzenr. Sapindac. 1150 (1933).

- 1 Fruits large, 2.3–3 cm. long, valves 3.5–4 cm. wide and 4 mm. thick, glabrous outside except occasionally for a few short hairs near the base; branchlets, rhachides and petiolules shortly pubescent; inflorescence paniculate, up to 21 cm. long, the axes rusty puberulous; leaflets (2–) 3 pairs, the uppermost pair much the largest, obovate-elliptic or obovate, shortly acuminate, up to 30 cm. long and 14.5 cm. broad, soon glabrous beneath [L. macrocarpum](#)
Fruits smaller, 1.4–2.3 cm. long, valves 1.7–3.2 cm. wide and 1–3 mm. thick; inflorescence-axes tomentose or pilose; leaflets up to 20 cm. long and 7 cm. broad, more or less pilose or pubescent at least on the midrib beneath: **2**
- 2 Fruits 1.8–2.3 cm. long, valves 2.2–3.2 cm. wide and 2.5–3 mm. thick, pubescent, at least near the base; inflorescence paniculate or racemose, densely rusty-tomentose; branchlets, rhachides and petiolules rusty-tomentose or -pilose: **3**
Fruits 1.4–1.8 cm. long; valves 1.7–2 cm. wide and 1–1.5 mm. thick; leaflets up to 16.5 cm. long and 7 cm. broad, pilose or pubescent on the midrib only beneath: **4**
- 3 Midrib impressed above; main lateral nerves 13–16, leaving the midrib at 60° or more, impressed above; leaflets 3–4 (–5), oblong, broad and rounded at base, shortly acuminate, rather densely curly-pubescent on midrib, nerves and lamina beneath; fruits about 2.3 cm. long, valves 2.8–3.2 cm. wide and 3 mm. thick; inflorescence up to 12 cm. long [2. oblongum](#)
Midrib prominent above; main lateral nerves 6–13, leaving the midrib at about 45°, prominent above; leaflets (2–) 3, elliptic to obovate-elliptic, upper leaflets cuneate at base, subacute, obtuse or rounded at apex, sparingly pilose or pubescent on midrib and nerves beneath; fruits 1.8–2 cm. long, valves 2.2–2.5 cm. wide and 2.5–3 mm. thick; inflorescence up to 20 cm. long [3. kerstingii](#)
- 4 Branchlets and rhachides with long weak pilose hairs, often dense; fruits pilose then partially glabrescent outside; leaflets (3–) 4–5 pairs, elliptic, elliptic-oblongate or obovate-elliptic, distinctly acuminate, midrib sparingly pilose or pubescent beneath; racemes up to 35 cm. long [4. racemosum](#)
Branchlets and rhachides shortly pubescent; leaflets 2–4 pairs, the uppermost pair the largest, more or less elliptic, usually cuneate at base and acuminate at apex, glabrous or sparingly pubescent on midrib beneath; racemes up to 9 cm long: **5**
- 5 Fruits densely covered with pungent bristles, then partially glabrescent, outside; branchlets, leaves and

inflorescence-axes sometimes with scattered pungent bristles *5. pungens* var. *pungens*

Fruits shortly pubescent; pungent bristles absent 5a. *pungens* var. *inermis*

Also in **French Cameroons**, **Belgian Congo**, **A.-E. Sudan** and **Uganda**.

MELIANTHACEAE

Shrubs or small trees. Leaves alternate, pinnate, stipulate; stipules intrapetiolar, often large. Flowers hermaphrodite, rarely unisexual, racemose, zygomorphic. Calyx of 5 unequal segments, imbricate. Petals 5, free, subperigynous, clawed, unequal. Disk unilateral or annular, lining the inside of the calyx. Stamens 4–6, inserted within the disk, free or variously connate, often declinate; anthers 2-celled, opening lengthwise. Ovary 4–5-celled, superior; style central, dentate or truncate; ovules 1–4 in each cell, axile. Fruit a papery or woody capsule, loculicidally 4–5-valved or opening only at the apex. Seeds with copious endosperm and straight embryo.

Confined to Africa

Recognized by the pinnate leaves and intrapetiolar stipules, subperigynous petals, unilateral or annular disk, and seeds with copious endosperm.

BERSAMA

Fres. — F.T.A. 1: 433; Verdcourt in Kew Bull. 1950: 233. *APD acc*

- 1 Leaflets glabrous beneath or pubescent only on the midrib, 0.8–7.5 cm. broad, with 6–13 main lateral nerves on each side of midrib; pedicels 5–7 mm. long; sepals oblong, rounded at apex, 4–5 mm. long; fruits subglobose, 2–3 cm. diam.:2
- Leaflets densely pubescent or pilose beneath, 5.2–10 cm. broad, with 12–20 main lateral nerves on each side of midrib; pedicels 1 cm. long or more; leaflets oblong to oblong-lanceolate or elliptic, margins subentire:4
- 2 Leaflets (3–) 6–9 pairs, ovate to elliptic-lanceolate, thin or coriaceous, glabrous or pubescent, margins usually dentate, 0.8–5 (–7) cm. broad:3
- Leaflets 3–5 (–7) pairs, more or less obovate-oblong, thin and shining, quite glabrous, margins sometimes dentate, 6.5–23.5 cm. long, 3.2–7.5 cm. broad[2. acutidens](#)
- 3 Sepals sparingly appressed-pubescent; inflorescence 12–25 cm. long, axis and pedicels sparingly pubescent; leaflets thin, drying dark green or brownish, (3–) 6–9 pairs, 2.5–13 (–23) cm. long, 0.8–5 (–7) cm. broad[1. abyssinca subsp. paullinioides var. paullinioides](#)

Sepals densely pubescent; inflorescence 30–40 cm. long, axis and pedicels densely shaggy-pubescent; leaflets coriaceous, drying pale green or greyish, (3–) 6–7 pairs, 1.5–9.5 cm. long, 0.8–3 cm. broad [1a. abyssinica subsp. paullinioides var. engleriana](#)

- 4 Leaflets about 8 pairs, densely and softly pubescent beneath, 8–18 cm. long, 5.2–8.3 cm. broad; flowers not known; infructescence erect, about 40 cm. long, axis and pedicels tomentellous; pedicels 2.5 cm. long in fruit; fruits 4–5-gonous [3a. maxima var. a](#)

Leaflets about 5 pairs, densely pilose beneath, 15–27 cm. long, 7.5–10 cm. broad; inflorescence about 70 cm. long, axis and pedicels densely villous; pedicels about 1 cm. long; bracts about 2 cm. long; sepals acute, about 8 mm. long, villous; fruits not known [3b. maxima var. b](#)

1. **Bersama abyssinica subsp. paullinioides (Planch.) Verdcourt var. paullinioides** — in Kew Bull. 1950: 237, partly, excl. syn. *B. maxima* Bak.; Exell & Mendonca in Consp. Fl. Ang. 2: 93. *APD acc*

Natalia paullinioides Planch. (1849).

Bersama paullinioides (Planch.) Bak. in F.T.A. 1: 435 (1868); Chev. Bot. 155; F.W.T.A., ed. 1, 1: 505; Aubrév. Fl. For. C. Iv. 2: 204, t. 207, 1–6.

Widespread in tropical Africa.

1a. **Bersama abyssinica subsp. paullinioides var. engleriana (Gürke) Verdcourt** in Kew Bull. 1955: 600 (1956).

Bersama engleriana Gürke in Engl. Bot. Jahrb. 14: 307 (1891).

A tree with spikes of pink and white flowers and brown capsule containing 4 red seeds with yellow arils; leaf-rhachides slightly winged.

N. Nig.: near Jos (fl. Feb., Mar., fr. Feb.) Batten-Poole 271! Kennedy FHI 1194! Lely P. 156!

Also widespread in eastern Africa.

2. **Bersama acutidens Welw. ex Hiern** Cat. Welw. 1: 173 (1896); Verdcourt l.c. 243; Exell & Mendonça l.c. 94. *APD acc*

A small tree, to 20 ft. high; leaf-rhachides winged or not; fruits pink; [in rain forest](#).

S. Nig.: Aboabam to Arrimakpan, Ikom Div. (fr. Dec.) Keay FHI 28215! **Br. Cam.:** Kembong F.R., Mamfe Div. Onochie FHI 31186!

Also in [Angola](#) and (?) [Rhodesia](#).

3. **Bersama maxima Bak.** in F.T.A. 1: 434 (1868); Exell & Mendonça l.c. 94. *APD acc*

Our specimens do not agree exactly with the type from Gabon and are provisionally left as varieties:

3a. **Bersama maxima var. a**

A tree 12 ft. high, with erect infructescences held above the large whorled leaves; fruits dull brownish red; seeds bright red; leaf-rhachides slightly winged.

Br. Cam.: Sabga Pass, Bamenda (fr. Jan.) Keay FHI 28426!

This plant is placed by Verdcourt between his varieties D and E of *B. abyssinica* subsp. *paullinioides*; see Kew Bull. 1950: 241–2.

3b. *Bersama maxima* var. *β* *APD acc*

A small tree 4 ft. high, with white flowers and large leaves; leaf-rhachides winged.

Br. Cam.: Abonando, Mamfe Rudatis 68! Mbatu stream, Nkambe, Bamenda Prov. (Sept.) Ujor FHI 30230!

Although the five taxa distinguished above seem to be quite distinct from one another, they are parts of a very difficult and variable complex which occurs throughout tropical Africa. Much careful field study is needed before any real progress can be made in elucidating the genus.

ANACARDIACEAE

Trees or shrubs, often with resinous bark. Leaves alternate, very rarely opposite, simple or compound; stipules absent, very rarely present but obscure. Flowers hermaphrodite or unisexual, mostly actinomorphic. Calyx variously divided, sometimes semi-superior in fruit. Petals 3–7 or absent, free or rarely connate and adnate to the torus. Disk present. Stamens often double the number of the petals, rarely equal or numerous or only one fertile; filaments free among themselves; anthers 2-celled, opening lengthwise. Ovary superior, 1-celled, rarely 2–5-celled, or very rarely carpels free; styles 1–5, often widely separated; ovules solitary, pendulous from the apex or adnate to the ovary wall, or pendulous from a basal funicle. Fruit mostly drupaceous. Seeds without or with very thin endosperm; cotyledons fleshy.

Mainly a tropical family, and fairly abundant in tropical and South Africa.

Bark usually resinous.

Schinus molle *Linn.*

A native of tropical America, it has been introduced into our area.

S. terebinthifolius *Raddi*

A native of tropical America, it has been introduced into our area.

1. MANGIFERA

Linn. — F.T.A. 1: 442.

- 1** Branchlets glabrous; leaves oblong-lanceolate, cuneate at base, acutely acuminate, 10–25 cm. long, 3–4.5 cm. broad, glabrous, closely reticulate on both surfaces, with numerous spreading looped lateral nerves; petiole 2–4 cm. long; flowers small, polygamous or dioecious, in terminal pyramidal panicles nearly as long as the leaves; pedicels and sepals pubescent; petals glabrous; fruit obliquely ovoid, up to 15 cm. long, with a leathery rind and fibrous stone [indica](#)

Mangifera indica *Linn.* — F.T.A. 1: 442; Chev. Bot. 155. *APD acc*

The Common Mango, [widely cultivated but here and there well established in secondary bush.](#)

Native of India, now grown throughout the tropics.

2. ANACARDIUM

Linn. Sp. Pl. 1: 383 (1753); F.T.A. 1: 443. *APD acc*

- 1** Branchlets angular, glabrous; leaves simple, obovate or oblong-obovate, cuneate at base, rounded or truncate at apex, 8–15 cm. long, 5–10 cm. broad, papery, glabrous, closely reticulate, with 10–15 pairs of spreading lateral nerves prominent beneath; petiole up to 2 cm. long, flat above; flowers polygamous in lax terminal panicles; bracts large, enfolding the flowers, ovate, acuminate, softly puberulous; petals 5, linear; stamens 10, usually only some bearing anthers; fruit a kidney-shaped nut supported by a large pear-shaped enlarged receptacle and stalk [occidentale](#)

Anacardium occidentale *Linn.* — F.T.A. 1: 443; Chev. Bot. 156. *APD acc*

The Cashew [tree widely cultivated and commonly naturalized in the bush, chiefly in coastal districts.](#)

Native of tropical America, now grown throughout the tropics.

3. FEGIMANRA

Pierre Fl. For. Cochinch. sub t. 263 (1892); Engl. Bot. Jahrb. 36: 213 (1905).

- 1** Leaves obovate-elliptic, rounded at apex, shortly narrowed into the petiole at base, 10–15 cm. long, 5–8 cm. broad, the midrib and 8–10 pairs of lateral nerves nearly equally prominent on both surfaces, shining above, glabrous, rigid; petiole subterete, 1.5–2.5 cm. long; panicle terminal, very lax and wide, 30–70 cm. long, with rather long lateral branches each with puberulous cymules of puberulous flowers at the ends; fruits drupaceous, obliquely reniform, subtended by a cupular growth of the floral axis [1. *afzelii*](#)

Leaves elongate-oblongate, gradually acutely acuminate, very gradually narrowed into the petiole at base, 5–16 cm. long, 1·8–3·5 cm. broad, the midrib and 15–24 pairs of lateral nerves nearly equally prominent on both surfaces, paler beneath, glabrous, rigid; also with a few much smaller leaves; petiole angular, 0·3–3 cm. long; panicle puberulous, terminal, rather dense, up to 8·5 cm. long, with lateral branches up to 5 cm. long[2. acuminatissima](#)

1. **Fegimanra afzelii** *Engl.* Bot. Jahrb. 36: 214 (1905); Chev. Bot. 156; Aubrév Fl. For. Soud.-Guin. 415, t. 89, 5–6. *APD acc*

A glabrous shrub or tree; flowers white or reddish; ripe fruits red; [in rocky places](#).

4. SPONDIAS

Linn. — F.T.A. 1: 447.

- 1 Branchlets glabrous or puberulous; leaves pinnate with an odd terminal leaflet; leaflets 5–8 pairs, opposite, oblong or oblong-lanceolate, very unequal-sided at base, obtusely and broadly acuminate, 5–10 cm. long, 2–5 cm. broad, glabrous or puberulous, with a strong intramarginal nerve; flowers small, polygamous, in lax terminal panicles; pedicels 3 mm. long, glabrous; sepals very small; petals valvate, oblong-elliptic, 2·5 mm. long; stamens 8–10, filaments slender; fruit ovoid, 3–3·5 cm. long, wrinkled when dry[mombin](#)

Spondias mombin *Linn.* Sp. Pl. 1: 371 (1753); Aubrév. Fl. For. C. Iv. 2: 174, t. 193, 1–8; Fl. For. Soud.-Guin. 403. *APD acc*

Spondias lutea *Linn.* (1762) — F.T.A. 1: 448; Chev. Bot. 156.

Spondias dubia *A. Rich.* (1831).

Spondias oghigee *G. Don* (1832).

A deciduous tree, to 60 ft. high, with large panicles of small white flowers and yellow plum-like fruits; bark thick, with longitudinal fissures. [Widespread and common in farmland, regrowth and villages, especially in the forest regions, but also in the savannah regions](#), usually thought to be an ancient introduction from America, but possibly native in W. Africa.

Extends to A.-E. **Sudan** Abyssinia and **Uganda**.

Perrier de la Bâthie in Mém. Mus. Nat. Paris, nouv. sér. 18: 244 (1944) includes *Sclerocarya* in *Poupartia* Comm. ex Juss. (1789), a genus of the Mascarenes, Madagascar and the Comores. He also suggests that the genus *Lannea* A. Rich. (1831) should be included. *Pseudospondias* Engl. (1883) and *Haematostaphis* Hook. f. (1860) are also close. Aubréville sinks *Sclerocarya* but maintains *Lannea*. Pending thorough revision of the whole group, however, I have followed tradition in maintaining all these genera. *Sclerocarya* differs from *Poupartia* as follows: — *Poupartia*, stamens 8 (–10), stigmas 5; *Sclerocarya*, stamens 12–16 (–26), stigmas (2–) 3.

8. PSEUDOSPONDIAS

Engl. in DC. Monogr. 4: 258 (1883).

- 1 Leaflets 4–12; flowers (3–) 4 (–5)-merous; stamens (6–) 8 (–10); leaflets alternate or subopposite, oblong or elliptic, rounded and unequal-sided at base or slightly cuneate, broadly and obtusely acuminate, up to 20 cm. long and 10 cm. broad; petiolules 0·5–1 cm. long; flowers very small, polygamous, in lax panicles; fruits 1 (–2) seeded, broadly ellipsoid, about 2 cm. long, mucronate with the persistent style: **2**

Leaflets 15–17; flowers 3-merous; stamens 6; branchlets and leaves glabrous; otherwise much as above: **1c.**
[microcarpa var. longifolia](#)

9. LANNEA

A. Rich. in Guill. & Perr. Fl. Seneg. 1: 153 (1831); Engl. in E. & P. Pflanzenfam. Nachtr. 1: 213 (1897).

Odina Roxb. (1832) — F.T.A. 1: 445.

- 1 Flowers in lax panicles, below the leaves; young parts, including the panicles, pinkish stellate-tomentose, later more or less glabrescent; tree to 30 m. high in forest; petioles 9–14 cm. long; leaflets (1–) 2–4 pairs, plus the long-petiolulate obovate terminal one; lateral leaflets oblong-elliptic, unequally cuneate or obtuse at base, long-acuminate, 10–20 cm. long, 6–12 cm. broad, with 5–10 main lateral nerves; leaflets drying brown, dark above, paler with impressed venation beneath; male panicles to 20 cm. long; female panicles to 14 cm. long; fruits flattened-ellipsoid, 6–8 mm. long, 5–6 mm. broad, 4–5 mm. thick, glabrous. [1. welwitschii](#)

Flowers in racemes or narrow panicles with short lateral branches, often clustered at the ends of leafless shoots (but see Nos. 2 & 6); trees up to 16 m. high, mostly in savannah (but see Nos. 8 & 8a):..... **2**

- 2 Lateral leaflets (4–) 8–10 (–12) pairs, oblong or ovate-oblong, rounded or subcordate at base, sessile, rounded at apex, 0.5–3.5 (–5) cm. long, 0.3–1.8 (–2) cm. broad, densely white-tomentose beneath, sparingly pubescent and drying blackish above; petioles 1.5–3 cm. long; young parts white-tomentose; racemes up to 3.5 cm. long, white-tomentose, borne with the leaves on short lateral shoots; fruits oblong, ellipsoid, flattened, about 1 cm. long, 7 mm. broad and 4 mm. thick, white-tomentose [2. humilis](#)

Lateral leaflets (0–) 1–7 pairs, more than 3 cm. long and 1 cm. broad; fruits mostly glabrous, rarely (No. 5) velutinous:..... **3**

- 3 Leaflets remaining tomentose or softly pubescent beneath; fruits glabrous or velutinous: **4**

Leaflets soon becoming glabrous or nearly so beneath; fruit glabrous:..... **6**

- 4 Indumentum of leaflets, shoots and inflorescences floccose, pinkish or reddish, composed of long-armed, weak, crispate-stellate hairs only, early caducous on upper surface of leaflets but mainly dense beneath and often concealing the prominent, reticulate venation; fruit irregularly ovoid or suborbicular, rugose when dry, 7–9 mm. diam.; lateral leaflets (1–) 2–4 pairs, ovate to elliptic, rounded to obtuse at base, subacuminate, 4–13 cm. long, 2.5–6.5 cm. broad [3. schimperi](#)

Indumentum of leaflets, shoots and inflorescences velutinous, greenish brown or grey to whitish-yellow or tawny, composed of simple hairs and stiff, non-crispate, short-armed, stellate hairs, persistent on both surfaces of the leaflets; fruit ovoid-oblong, laterally flattened especially toward the apex, 8–13 mm. long, 6–8 mm.

- broad:5
- 5 Fruit glabrous; margin of leaflets ciliate with rather long simple hairs and a very few stellate hairs; lower surface openly and not prominently reticulate, the surface easily visible between the erect and spreading simple hairs; tawny stellate hairs few and inconspicuous on both surfaces and on the margin; lateral leaflets (1–) 2–6 pairs, ovate-oblong, rounded to subcordate at base, acuminate, 7–13 cm. long, 4.5–8 cm. broad.4. [kerstingii](#)
- Fruit more or less densely velutinous with simple hairs, with or without a few scattered stellate hairs; margin of leaflets stellate-tomentose, with fewer simple hairs intermingled but inconspicuous; lower surface closely and prominently areolate, densely velutinous, with long, whitish, simple hairs spreading from the veins filling the areoles and concealing the surface; tawny stellate hairs conspicuous among the short simple hairs on the upper surface, on the veins on the lower surface and especially on the margin; lateral leaflets (1–) 3–5 pairs, oblong-ovate or ovate-oblong, rounded at base, rounded or subacuminate at apex, 3.5–9 cm. long, 2.5–5 cm. broad. [5. velutina](#)
- 6 Indumentum of leaflets, shoots and inflorescences floccose, pinkish or reddish, composed of weak, crispate-stellate hairs only, early caducous:7
- Indumentum of leaflets, shoots and inflorescences not floccose, not or rarely (Nos. 8 & 8a) pinkish, composed mainly of simple hairs, sometimes with small stellate hairs as well:8
- 7 Lateral leaflets sessile or subsessile, falcate-lanceolate, rounded or subcordate at base, obtuse at apex, 3–9.5 cm. long, 1–2.8 cm. broad, 5–7 pairs; inflorescence sometimes branched; fruit oblong-ellipsoid, about 8 mm. long and 6 mm. broad6. [fruticosa](#)
- Lateral leaflets long-petiolulate, lanceolate, cuneate at base, obtusely acuminate, 4–11.5 cm. long, 1.5–4.5 cm. broad, 3–6 pairs; inflorescence simple; fruit ellipsoid, 8–10 mm. long, 7–8 mm. broad7. [acida](#)
- 8 Male flowers with pedicels 2–5 mm. long; fruits 7–9 mm. long, more or less reniform or suborbicular, 5–7 mm. broad, 3–4 mm. thick; fruiting pedicels 2–3 mm. long; young parts not glutinous; bark not spirally twisted; leaflets ovate-lanceolate, unequal at base, long-acuminate, 5–11 cm. long, 2–2.4 cm. broad; inflorescences sparsely puberulous.9
- Male flowers sessile or with pedicels up to 1 mm. long; fruits 10–14 mm. long, oblong-ellipsoid, 6–7 mm. broad, 4–5 mm. thick; fruiting pedicels 4–6 mm. long, young parts glutinous; bark of bole and larger branches spirally twisted:10
- 9 Leaves and young shoots almost glabrous except for the leaflets which when extremely young are closely and minutely tomentellous; leaflets 3–6 pairs, plus the terminal one8. [nigritana](#) var. [nigritana](#)
- Leaves and young shoots densely pubescent, later glabrescent; leaflets 1–3 pairs, plus the terminal one8a. [nigritana](#) var. [pubescens](#)
- 10 Leaves, inflorescences and young shoots with long simple hairs; fruits 12–14 mm. long; leaflets 3–5 pairs, plus the terminal one, oblong or ovate, obtuse to slightly cordate at base, shortly and obtusely acuminate, 8–13 cm. long, 4.5–6.5 cm. broad9. [egregia](#)
- Leaves, inflorescences and young shoots without long simple hairs, almost glabrous; fruits 10–11 mm long, leaflets (0–) 1–3 pairs, plus the terminal one, ovate-lanceolate, obtuse and unequal at base, obtusely acuminate, subacute or obtuse at apex, 5.5–13 cm. long, 2.7–4.5 cm. broad.10. [microcarpa](#)

***Lannea buettneri* Engl.** Bot. Jahrb. 24: 494 (1897); Aubrév. Fl. For. Soud.-Guin. 397, 402, 404.

APD: *Synonym of *Lannea acida* A. Rich.*

Lannea afzelii of F.W.T.A., ed. 1, 1: 511, partly.

Togo: Misahöhe (Jan.) Büttner 376.

The description suggests *L. acida*, but material distributed from the Berlin Herbarium under the name *L. buettneri* appears to be *L. microcarpa*; the type specimen has presumably been destroyed. See notes by Aubréville (l.c.), who suggests this may be a distinct species endemic to Togo and Dahomey. Imperfectly known species.

10. HAEMATOSTAPHIS

Hook. f. — F.T.A. 1: 443.

- 1** Branchlets purplish-glaucous; leaves pinnate; leaflets alternate, about 9–12 on each side, oblong or oblong-elliptic, rounded at base or slightly cuneate, slightly emarginate at apex, thin, 5–8 cm. long, 1.5–3 cm. broad, the end one broader, glabrous; petiolules 4–5 mm. long; flowers dioecious, the males very small, in slender lax panicles clustered at the ends of the shoots; male calyx 3-lobed; petals 3, imbricate, about 2 mm. long; stamens 6; female: ovary glabrous, surrounded by small staminodes; fruit drupaceous, broadly ellipsoid, about 2 cm. long[barteri](#)

***Haematostaphis barteri* Hook. f.** in Trans. Linn. Soc. 23: 169, t. 25 (1860); F.T.A. 1: 443; Chev. Bot. 159; Aubrév. Fl. For. Soud.-Guin. 403, t. 86, 1–3. **APD acc**

A **savannah** tree, to 25 ft. high with rather glaucous foliage; leaves and pendulous panicles of creamy flowers crowded at ends of branchlets; young parts red; fruits plum-like, smooth, deep red; **mostly on rocky hills.**

11. TRICHOSCYPHA

Hook. f. — *F.T.A.* 1: 444.

Emiliomarcelia *Th. & H. Dur.* (1909).

- 1 Inflorescences borne on main stem of tree; disk glabrous or sparingly pubescent:2
 Inflorescences terminal or axillary:3
- 2 Bracts large, ovate-lanceolate, up to 3 cm. long and 1.5 cm. broad, tomentose; inflorescence up to 25 cm. long, pyramidal, rather congested, rusty-tomentose; leaflets nearly glabrous, 7–8 (–14) pairs, oblong-lanceolate, cuneate to rounded at base, acuminate, up to 32 cm. long and 8 cm. broad, with 10–12 (–20) main lateral nerves on each side of midrib, prominent beneath, impressed above; ovary hirsute, stigmas sessile; fruits ovoid, up to 5 cm. long and 3 cm. diam., rusty-puberulous [1. *acuminata*](#)
 Bracts small, up to 3 mm. long; inflorescence up to 30 cm. long, with rather few somewhat densely flowered lateral branches, rusty-hirsute; leaflets pilose on the midrib above and at first on midrib and nerves beneath, 6–8 pairs, narrowly lanceolate, up to 30 cm. long and 6 cm. broad, with 12–20 main lateral nerves on each side of midrib, prominent beneath [2. *smythii*](#)
- 3 Disk glabrous:4
 Disk hirsute:12
- 4 Flowers minute, in much-branched panicles; petals 1–2 mm. long; pedicels slender, 2–5 mm. long:5
 Flowers larger, petals 3 mm. long or more:7
- 5 Leaflets 1–4 pairs, plus the terminal one; midrib pubescent above:6
 Leaflets 6–8 pairs, plus the terminal one, oblong or narrowly oblong, cuneate at base, caudate-acuminate, 6–19 cm. long, 2.8–5 cm. broad, midrib glabrous above, with 7–9 main lateral nerves on each side of midrib; axes of inflorescence pubescent or glabrescent [5. *cavalliensis*](#)
- 6 Axes of inflorescence glabrous or slightly pubescent; leaflets 2–4 pairs, elliptic, ovate or oblong-ovate, broadly cuneate at base, acuminate, 8–25 cm. long, 3–14 cm. broad, with 10–13 main lateral nerves on each side of midrib [3. *talbotii*](#)
 Axes of inflorescence densely covered with short and reflexed longer hairs; leaflets 1–2 pairs, oblong-elliptic, long-acuminate, 8–18 cm. long, 2.5–8 cm. broad, with 6–8 main lateral nerves on each side of midrib [4. *camerunensis*](#)
- 7 Midrib of leaflets pilose above and with scattered hairs beneath; leaflets 3–7 pairs, oblong, cuneate or obtuse at base, acuminate, up to 36 cm. long and 10 cm. broad, with 8–24 main lateral nerves on each side of midrib, prominent beneath; inflorescence up to 25 cm. long, densely flowered, rusty-pilose; flowers sessile or shortly pedicellate, petals nearly glabrous outside [6. *preussii*](#)
 Midrib of leaflets glabrous above:8
- 8 Inflorescence with long, loose, rusty indumentum; flowers congested on the short lateral branches:9
 Inflorescence pubescent with short hairs, or nearly glabrous, lax, with long lateral branches; ovary and fruits glabrous:10
- 9 Leaflets (1–) 2–4 pairs, elliptic, cuneate at base, caudate-acuminate, 9–20 cm. long, 3.5–7.8 cm. broad, nearly glabrous, with 6–10 main lateral nerves on each side of midrib; inflorescence up to 14 cm. long [7. *bijuga*](#)
 Leaflets (4–) 5–7 pairs, oblong or narrowly oblong, obtuse or rounded at base, acuminate, (5.5–) 8–19 cm. long, 2.5–6 cm. broad, pubescent on midrib and nerves beneath, with 8 — 18 main lateral nerves on each side of midrib; inflorescence up to 60 cm. long, with lateral branches up to 4.5 cm. long [8. *beguei*](#)
- 10 Leaflets membranous, appearing “pustulate” when dry, (2–) 5–7 (–9) pairs, narrowly oblong-elliptic or oblong-lanceolate, cuneate at base, caudate-acuminate, up to 14 cm. long and 4.3 (–6) cm. broad, with 5–12 main lateral nerves on each side of the sparsely pubescent midrib; petiolules 2–8 mm. long; inflorescence up to 60 cm. long, densely rusty-pubescent [9. *baldwinii*](#)
 Leaflets coriaceous, not appearing “pustulate”:11
- 11 Flowers creamy; leaflets 3–5 pairs, oblong, long-cuneate at base, acuminate, up to 16.5 cm. long and 7 cm. broad, nearly glabrous, with 6–11 main lateral nerves on each side of midrib; inflorescence nearly glabrous, up to 50 cm. long [10. *patens*](#)
 Flowers red; leaflets 6–8 pairs, oblong-elliptic, oblong-oblong-lanceolate or oblong-lanceolate, cuneate to rounded and sometimes subfalcate at base, acuminate, up to 25 cm. long and 8 cm. broad, quite glabrous, with 10–18 main lateral nerves on each side of midrib; inflorescence reddish-pubescent, up to 80 cm. long, lax; fruits ellipsoid, about 2.5 cm. long, glabrous [11. *arborea*](#)
- 12 Leaves subsessile, with lowest pair of leaflets less than 1.5 cm. from the stem; ovary hirsute; petals and sepals glabrous outside:13

- Leaves distinctly petiolate; lowest pair of leaflets several cm. from the stem: **14**
- 13** Leaflets hirsute beneath, especially on midrib, 6–9 pairs, oblong, rounded at base, acuminate, up to 25 cm. long and 9.5 cm. broad, with 10–18 main lateral nerves on each side of midrib; inflorescence up to 15 cm. long, congested, the axes hirsute; fruits ovoid, beaked, hirsute [12. mannii](#)
- Leaflets glabrous, 5–7 pairs, elongate-oblong or lanceolate, rounded to cuneate at base, gradually acuminate, up to 30 cm. long and 8 cm. broad, with 7–14 main lateral nerves on each side of midrib; inflorescence up to 30 cm. long, densely many-flowered, the axes pubescent; fruits ovoid, pubescent [13. chevalieri](#)
- 14** Leaflets long-pilose beneath, at least on the midrib and nerves; stems and inflorescence-axes hirsute; calyx usually pubescent outside; ovary densely hirsute; inflorescence congested: **15**
- Leaflets beneath glabrous, or pubescent and glabrescent, or appressed-pubescent; calyx glabrous or pubescent outside, ovary glabrous or hairy; inflorescence congested or lax; flowers white or cream (but colour not recorded in Nos. 17 and 20): **17**
- 15** Midrib beneath rather densely covered with short hairs as well as long ones; calyx densely pubescent outside; leaflets oblong, rounded or obtuse at base, very acutely long-acuminate, up to 24 cm. long and 8 cm. broad: **16**
- Midrib long-pilose, without a dense covering of short hairs; calyx pubescent or glabrescent; petals 3–4 mm. long, blood-red; inflorescence 5–15 cm. long, very densely many-flowered; leaflets 5–8, elongate-oblong, obtuse to rounded at base, acutely acuminate, up to 28 cm. long and 7.5 cm. broad, with 12–20 main lateral nerves on each side of midrib [16. atropurpurea](#)
- 16** Petals 4–4.5 mm. long; leaflets 4 pairs, with about 12 main lateral nerves on each side of midrib; inflorescence about 7 cm. long and broad [14. sp. A](#)
- Petals 2–3 mm. long; leaflets 10 pairs, with about 18 main lateral nerves on each side of midrib; inflorescence about 30 cm. long and 10 cm. broad [15. sp. B](#)
- 17** Leaflets 7–9 pairs, very coriaceous, glabrous and often glaucous, narrowly oblong or lanceolate, obtuse at base, shortly and narrowly acuminate, up to 28 cm. long and 8 cm. broad, with 13–25 main lateral nerves on each side of midrib, venation obscure; inflorescence lax, to 33 cm. long, rusty-tomentellous; ovary glabrous; fruits flattened-ellipsoid, oblique, 2.5–3 cm. long, glabrous [17. longifolia](#)
- Leaflets 3–6 pairs; main lateral nerves 5–13 on each side of midrib: **18**
- 18** Midrib of leaflets hirsute above, undersurface appressed-pubescent at least when young; calyx often pubescent outside; ovary and fruit hairy: **19**
- Midrib of leaflets glabrous above, undersurface glabrous or pubescent and soon glabrescent; calyx glabrous outside: **20**
- 19** Petals about 3 mm. long, drying blackish; inflorescence densely blackish-hirsute, to 45 cm. long; leaflets (3–) 5–6 pairs, oblong to oblong-elliptic, rounded or obtuse at base, acuminate, up to 24 cm. long and 8.5 cm. broad, with 7–13 main lateral nerves on each side of the midrib; petiolules up to 5 mm. long; fruits ovoid, about 1.2 cm. long, densely blackish-velutinous [18. oba](#)
- Petals about 1.5 mm. long, drying pale brown; inflorescence shortly pubescent, to 24 cm. long; leaflets 3–4 pairs, oblong-ovate to oblong, cuneate to rounded at base, obtusely and shortly acuminate, up to 14 cm. long and 5.5 (–8) cm. broad, with 5–8 main lateral nerves on each side of midrib; petiolules 5–10 mm. long; fruits ovoid, about 1.2 cm. long, sparingly appressed-setosepubescent [19. yapoensis](#)
- 20** Petals 4–5 mm. long; inflorescence about 12 cm. long, densely-flowered, densely dark red-brown hirsute; ovary sparingly hirsute; leaflets 4 pairs, oblong or oblong-elliptic, obtuse at base, long-acuminate, 14–23 cm. long, 6.5–7 cm. broad, with 9–12 main lateral nerves on each side of midrib [20. longipetala](#)
- Petals 1–2 mm. long: **21**
- 21** Inflorescence puberulous, up to 30 cm. long, many-flowered, wide; petals 1–1.5 cm. long; ovary and fruit glabrous; leaflets 4–8 pairs, elongate-elliptic or lanceolate, cuneate to rounded at base, gradually acuminate, up to 22 cm. long and 6 cm. broad, with 6–16 main lateral nerves on each side of midrib [21. smeathmannii](#)
- Inflorescence densely blackish-hirsute, up to 40 cm. long and 30 cm. wide, many-flowered; petals 2 mm. long; leaflets 5–6 pairs, narrowly oblong, cuneate at base, acuminate, up to 30 cm. long and 10 cm. broad, coriaceous, with 9–12 main lateral nerves on each side of midrib [22. albiflora](#)

1. *Trichoscypha acuminata* Engl. Bot. Jahrb. 1: 425 (1881). *APD acc*

Sorindeia mannii Oliv. F.T.A. 1: 442 (1868); not *Trichoscypha mannii* Hook. f. (1862).

Trichoscypha ferruginea Engl. Bot. Jahrb. 15: 112, fig. B–D, t. 4 (1892); F.W.T.A., ed. 1, 1: 510, partly (Preuss 283, by error 2836, from Barombi, and syn. *T. braunii* Engl. only).

Trichoscypha braunii Engl. l.c. 111, fig. A (1893).

Schubea heterophylla Pax (1899), flowers only; the leaves are *Cola ficifolia* Mast.

Trichoscypha buettneri Engl. (1893), name only.

Trichoscypha congoensis Engl. ex De Wild. (1906), name only.

A forest tree, to 60 ft. high, with straight bole, cauliflorous; sepals white, petals pinkish-red, stamens red; fruits red when ripe.

S. Nig.: Kataban (fr. May) Latilo FH1 31801! Oban Talbot 117! 161! **Br. Cam.:** Abonando, Mamfe (Apr.) Rudatis 41! Barombi Preuss 283! Etam, Kumba Div. (May) Dundas FHI 15218! S. Bakundu F.R. (June) Ejiofor FHI 14036! Victoria to Bimbina (Aug.) Preuss 1330 (partly)!

A **forest** tree, to 40 ft. high; fruits dull red, seeds black.

S. Nig.: Calabar R. (ff. & fr. Feb.) Mann 2238! Ikom Div. (fr. May) Jones & Onochie FHI 17450! Oban Talbot 208! 1278! 1368! **Br. Cam.:** Banga to Mungo R., Kumba Div. (Apr.) Olorunfemi FHI 30528!

Also in **Gabon**.

13. *Trichoscypha chevalieri* Aubrév. & Pellgr. in Bull. Soc. Bot. Fr. 81; 647 (1934); Aubrév. Fl. For. C. Iv. 2: 162, t. 189, 4–6.

APD: *Synonym of Trichoscypha lucens* Oliv.

Trichoscypha arborea of F.W.T.A., ed. 1, 1: 508, partly (Chipp 318).

A tree, to 20 ft. high, with spreading habit; **in forest**.

Iv. C.: Cavally Basin: Taté to Tabou (Aug.) Chev. 19835! Noé (Aug.) Chev. 19837! Prolo to Bliéron (Aug.) Chev. 19892! **G. C.:** Prestea (ff. & fr. Sept.) Vigne FH 3070! Amokokrom, W. Apollonia (Aug.) Chipp 318! Kumasi (Feb.) Vigne FH 1039!

14. *Trichoscypha* sp. **A.** *APD acc*

Possibly new, but more material required. Liane with heavy woody stem; calyx greenish-white with brownish indumentum, petals buff, ovary and disk chestnut brown; **in forest**.

Lib.: Gbanga (Sept.) Linder 721!

15. *Trichoscypha* sp. **B.** *APD acc*

Shrub or tree, to 15 ft. high, with densely brown-hirsute terminal congested inflorescence.

Lib.: Yila, St. John B., Gbanga (Aug.) Baldwin 9133!

Possibly new, but more material required.

16. **Trichoscypha atropurpurea** *Engl.* Bot. Jahrb. 36: 222 (1905); F.W.T.A., ed. 1, 1: 508, partly (excl. Bunting 135).

APD: Synonym of Trichoscypha mannii Hook. f.

An unbranched tree, to 15 ft. high; flowers blood-red, drying black, disk reddish-brown; **in forest**.

Lib.: Grand Bassa (Oct.) Dinklage 2082. Kolubanu (Oct.) Liner 1122! Javajal, Boporo (Nov.) Baldwin 10283a! **G. C.:** Aiyase, Axim Dist. (Nov.) Vigne FH 1439!

17. **Trichoscypha longifolia** (*Hook. f.*) *Engl.* Bot. Jahrb. 1: 425 (1881); In DC. Monogr. 4: 305. *APD acc*

Dupuisia? **longifolia** *Hook. f.* in Fl. Nigrit. 287 (1849).

Sorindeia longifolia (*Hook. f.*) *Oliv.* F.T.A. 1: 442 (1868); F.W.T.A., ed. 1, 1: 507.

S. afzelii *Engl.* Bot. Jahrb. 15: 107 (1892), not of *Engl.* (1917).

A **forest** tree, to 50 ft. high; with clean bole and no buttresses; sap oxidizing to a strong black stain on exposure.

S. L.: Afzelius! T. Vogel 160! Makump (July) Thomas 885! Dodo Hills F.R. (fr. Jan.) Sawyerr FHK 13572! **Lib.:** Dukwia R. (fl. Sept., fr. May) Cooper 366] 435! Zule, Boporo (fr. Nov.) Baldwin 10236;

18. **Trichoscypha oba** *Aubrev. & Pellegr.* in Bull. Soc. Bot. Fr. 81: 648 (1934); *Aubrev. Fl. For. C. Iv.* 2: 166, t. 190.

APD: Synonym of Trichoscypha lucens Oliv.

Pseudospondias luxurians *A. Chev.* Bot. 157, name only. Note In F.T.A. 1: 442, after *Sorindeia mannii* *Oliv.*

Trichoscypha ferruginea of F.W.T.A., ed. 1, 1: 510, partly (Barter 2151, Dalz. 1229, MacGregor 317, Millen 93).

A small tree or shrub; petals white; **in forest**.

Iv. C.: Bingerville region Chev. 15248! Dabou (fr. Nov.) Jolly 154! Banco Martineau 297! 317! **S. Nig.:** Lagos (fl. Apr., May, Oct.). Barter 2151! Dalz. 1229! MacGregor 317! N. of Eba Isl. (Jan.) Thornevill 264! Aguku Thomas 832!

19. **Trichoscypha yapoensis** *Aubrév. & Pellegr.* l.c. 81: 649 (1934); *Aubrev. l.c.* 2: 164, t. 189, 1–3.

APD: Synonym of Trichoscypha lucens Oliv.

A **forest** tree, to 75 ft. high, sometimes with buttresses; flowers white or cream; cotyledons purple.

Lib.: Dukwia R. (fl. Oct., fr. Nov.) Cooper 66! 141! **Iv. C.:** Yapo (fr. Dec.) Aubrév. 593!

20. **Trichoscypha longipetala** *Bak. f.* in Cat. Talb. 22 (1913).

APD: Synonym of Trichoscypha mannii Hook. f.

A small tree.

S. Nig.: Oban Talbot 1681!

21. **Trichoscypha smeathmannii** *Keay* l.c. 205, fig. 63 (1956).

APD: Synonym of Trichoscypha smythei Hutch. & Dalziel

Brucea paniculata *Lam.* Encycl. Méth. Bot. 1: 472 (1785); F.T.A. 1: 310 (excl. syn. guineensis G. Don); not *Trichoscypha paniculata* *Engl.* (1909).

Trichoscypha arborea of F.W.T.A., ed. 1, 1: 508, partly (Lane-Poole 467).

A small tree, or straggling bush, to 20 ft. high; flowers white, fragrant.

Fr. G.: Kouria (Nov.) Chev. 14753! **S. L.:** Don! Smeathmann! Belbu, Bonthe Isl. (Nov.) Deighton 2328! Port Loko (young fr. Dec.) Thomas 6613! 6700! Bo Lane-Poole 467! Njala (Oct.) Deighton 1412! 1779! 2802! Bumbuna (Oct.) Thomas 3420! 3726! **Lib.:** Fisherman's Lake (fr. Dec.) Baldwin 10899!

22. *Trichoscypha albiflora* Engl. Bot. Jahrb. 36: 223 (1905).

APD: *Synonym of Trichoscypha lucens Oliv.*

Trichoscypha ferruginea of F.W.T.A., ed. 1, 1: 510, partly.

A shrub, scarcely branched, to 15 ft. high; in forest near coast.

Lib.: Fishtown (Aug.) Dinklage 2024! [**G. C.:** Gyamera, W.P., just above beach In closed forest (Feb.) Irvine 2280! — sterile specimen, identification very tentative.]

1. *Trichoscypha liberica* Engl. Bot. Jahrb. 15: 108 (1892).

Lib.: Monrovia (Aug.) Naumann.

Possibly the same as *T. yapoensis* Aubréy. & Pellegr. (1934), but type-specimen presumably destroyed. Imperfectly known species.

2. *Trichoscypha* sp. C.

“Small tree, to 15 ft. high, in savannah woodland; fruits red.”

S. Nig.: Akparabon to Adijinkpon, Ikom Div. (fr. June) Latilo FHI 31823!

Possibly the same as *Sorindeia albiflora* Engl. & K. Krause (q.v.). Imperfectly known species.

12. SORINDEIA

Thouars — F.T.A. 1: 439.

Dupuisia A. Rich. (1831).

- 1 Petals valvate:.....2
 Petals imbricate; inflorescences axillary on older branchlets or from main stem, glabrous or nearly so; calyx 2 mm. long, shortly lobed, glabrous:5
- 2 Panicles terminal and in the upper leaf-axils, pubescent, puberulous or nearly glabrous, to 50 cm. long; leaflets coriaceous:3
 Panicles borne on the trunk of a 3–10 m. high tree, glabrous or very nearly so, to 30 cm. long, pedicels about 2 mm. long; calyx 2 mm. long, subtruncate or with very short broad teeth, not ciliate; petals 4 mm. long, 2 mm. broad; leaflets membranous alternate or subopposite, about 9, lanceolate or ovate-oblong, obtuse or cuneate at base, gradually long-acuminate, 7–21 cm. long, 4–7 cm. broad, with 9–14 main lateral nerves on each side of midrib; fruits ellipsoid, about 2 cm. long4. *collina*
- 3 Petals 3.5–4 mm. long, 1.5–1.75 mm. broad; calyx 2 mm. long; ovary glabrous; inflorescences and flowers puberulous or nearly glabrous; leaflets opposite or subopposite:4
 Petals 2.75 mm. long, 1 mm. broad; calyx 1.25 mm. long, broadly toothed; ovary tomentellous; inflorescences and flowers rusty-puberulous, usually rather densely so; pedicels about 3 mm. long; leaflets 3–8, oblong to obovate, obtuse and sometimes unequal at base, rather abruptly acuminate, 6–15 cm. long, 2.5–8 cm. broad, with 6–9 main lateral nerves on each side of midrib; fruits ellipsoid, about 3.5 cm. long; tree, to 14 m. high 3. *nitidula*
- 4 Calyx subtruncate or with very short broad teeth, not ciliate; inflorescence puberulous to nearly glabrous, pedicels to 5 mm. long; leaflets 1–9, oblong or oblong-elliptic, obtuse at base, shortly acuminate, 3.3–22 cm. long, 2–8.4 cm. broad, with 6–10 main lateral nerves on each side of midrib; fruits ellipsoid, about 1 cm. long; shrub or small tree1. *juglandifolia*
 Calyx rather deeply lobed, ciliate; inflorescence densely rusty-puberulous, pedicels to 1.5 mm. long; leaflets about 9, oblong, obtuse at base, often abruptly acuminate, 6–12 (–17) cm. long, 2.5–5.2 (–8) cm. broad, with 10–12 main lateral nerves on each side of midrib; fruits ellipsoid, about 2.5 cm. long; tree, to 15 m. high2. *mildbraedii*
- 5 Inflorescences racemose, rarely subpaniculate, 2–9 (–2) cm. long; fruits ellipsoid, about 1.2 cm. long; main lateral nerves 5–8 on each side of midrib; shrub, to 4 m. high; leaflets 1–6, opposite or subopposite, often oblong-elliptic or elliptic, the terminal one often obovate-oblong, rounded at base, broadly and obtusely

acuminate, 1.5–14 cm. long, 0.8–7.5 (–10) cm. broad[5. warneckeii](#)

Inflorescences paniculate, 16–30 cm. long; fruits ellipsoid, about 2 cm. long; main lateral nerves 9–14 on each side of midrib; shrub or tree, to 15 m. high; leaflets 3–7, alternate or subopposite, ovate-oblong to lanceolate, cuneate, obtuse or more rarely rounded at base, acuminate, 12–30 cm. long, 3.7–13 cm. broad ..[6. grandifolia](#)

1. **Sorindeia juglandifolia** (A. Rich.) Planch. ex Oliv. F.T.A. 1: 440 (1868), incl. var. *divaricata* Oliv.; Chev. Bot. 160, partly; Aubrév. Fl. For. C. Iv. 2: 174; Fl. For. Soud.-Guin. 407–409, t. 86, 4–5.
APD acc

APD: Synonym of Sorindeia rhodesica R. Fern. & A. Fern.

Dupuisia juglandifolia A. Rich. in Fl. Seneg. 1: 148, t. 38 (Sept. 1831).

Sapindus simplicifolius G. Don (Aug. 1831).

Sorindeia simplicifolia (G. Don) Exell in Cat. S. Tomé 145 (1944); Consp. Fl. Ang. 2: 97; not of (H.B. & K.) March. (1869).

Sorindeia heterophylla Hook. f. (1849).

(?) **S. afzelii** Engl. Bot. Jahrb. 54: 313 (1917); not of Engl. (1892).

A shrub or small tree; flowers whitish, tinged pink.

Sen.: Perrottet 151! Ziguinchor, Casamance (Mar., Apr.) Leprieur. Bignona Aubrév. 3061. Floup Fedyan Chev. 3167. **Fr. Sud.:** Diendénia (Feb.) Chev. 436. **Port. G.:** Bor, Bissau (Feb.) Esp. 6. *Sorindeia grandifolia* Engl. Bot. Jahrb. 11, Beibl. 26: 7 (1890). *APD acc*

Sorindeia acutifolia Engl. (1890).

Sorindeia juglandifolia of F.W.T.A., ed. 1, 1: 507, partly.

A shrub or tree, to 50 ft. high; calyx pale green, petals pink.

S. Nig.: Oban Talbot 1307a! 1382! 1429! 1434! **Br. Cam.:** L. Barombi, Kumba (Mar.) Brenan & Onochie 9464! 9465! N.Korup F.R., Kumba Div. (fr. July) Olorunfemi FHI 30668! Bakebe to Eyang, Mamfe Div. (Jan.) Umana FHI 28553! Metschum Falls, Bamenda Prov. (Jan.) Keay & Russell FHI 28527!

Also on **S. Tomé.**

1. *Sorindeia albiflora* Engl. & K. Krause in Engl. Bot. Jahrb. 46: 341 (1911). *APD acc*

A tree, to 40 ft. high; leaflets 13–15, appressed-pilose beneath; ovary densely pilose, stigmas 5; type specimen presumably destroyed.

Br. Cam.: Bamenda to Babongi (Dec.) Ledermann 1938.

[The description suggests a plant very different from other *Sorindeia* species in our area, and it possibly belongs to another genus. A fruiting specimen, Latilo FHI 31823, from **savannah** woodland in Ikom Div., S. Nig., may be the same, but I think it is a *Trichoscypha* (q.v.)] Imperfectly known species.

2. *Sorindeia protioides* Engl. & K. Krause l.c. 337 (1911).

APD: Synonym of Sorindeia grandifolia Engl.

A shrub or tree, to 45 ft. high; leaflets 5–7, glabrous; panicle lax, glabrous; aestivation of petals not described; type specimen presumably destroyed.

Br. Cam.: Babessi (Dec.) Ledermann 1986.

Also in **French Camerouns.**

Imperfectly known species.

1. *Sorindeia deliciosa* A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 507 (1928)

Is *Santiria trimera* (Oliv.) Aubrév. (Burseraceae). Excluded species.

2. *Sorindeia doerngii* Engl. & K. Krause l.c. 338 (1911)

Is *Ekebergia senegalensis* A. Juss. (Mellaceae). Excluded species.

3. *Sorindeia longifolia* (Hook. f.) Oliv. — F.W.T.A., ed. 1, 1: 507

Is transferred to *Trichoscypha*. Excluded species.

Meisn. Pl. Vasc. Gen., diagn. 75, comm. 55 (1837).

- 1 Leaves 5–2 cm. broad, 6–22 cm. long, oblong or obovate, obtuse or emarginate; inflorescence a narrow cylindrical panicle; a suffrutex about 1 m. high [1. pulcherrima](#)
- Leaves 1–4 cm. broad, 4–14 cm. long, acute or acuminate, rarely obtuse or emarginate; shrubs and small trees: **2**
- 2 Leaves oblong, elliptical or broadly lanceolate, distinctly petiolate, scattered or irregularly whorled; inflorescence and infructescence lax, paniculate, overlapping the leaves [2. insignis](#)
- Leaves linear-lanceolate, shortly petiolate or sessile, regularly 3–4-whorled; infructescence condensed, axillary, much shorter than the leaves [3. sp. A](#)

1. *Heeria pulcherrima* (Schweinf.) O. Ktze. Rev. Gen. 152 (1891); Aubrév. Fl. For. Soud.-Guin. 412 (1950).

*APD: Synonym of *Ozoroa pulcherrima* (Schweinf.) R. Fern. & A. Fern.*

Anaphrenium pulcherrimum Schweinf. Beitr. Fl. Aeth. 1: 32 (1867).

Rhus pulcherrima (Schweinf.) Oliv. F.T.A. 1: 438 (1868).

R. djalensis A. Chev. Bot. 161 (1920), name only.

R. herbacea A. Chev. Bot. 161 (1920), name only.

An erect suffrutex with softly pubescent stems and leaves; flowers small, greenish or tinged red; fruits black, glossy; [in savannah](#).

Also in [Ubangi-Shari](#), [Abyssinia](#) and [A.-E. Sudan](#).

3. *Heeria* sp. A.

A slender, virgate shrub with whorled Osier-like leaves, glossy above, and silvery-white beneath; fruits glossy black.

G. C.: Kintampo, N. Ashanti (fr. Nov.) Andoh FH 5422!

Perhaps an aberrant form of *H. insignis*, but material insufficient for certain determination.

14. RHUS

Linn. — F.T.A. 1: 436, partly.

- 1 Leaves deeply dentate-lobed; twigs armed with strong spines [1. tripartita](#)
 Leaves entire or obscurely crenate-dentate; twigs unarmed or very sparsely spinose: [2](#)
- 2 Inflorescence conspicuous, forming a lax panicle usually much longer than the subtending leaves; leaflets obovate or elliptical, 3–6 cm. long, 2–3 cm. broad, usually entire; twigs brown or fuscous, without spines; fruit 3–4 mm. diam., slightly compressed [2. longipes](#)
 Inflorescence inconspicuous, usually equalling or shorter than the subtending leaves; leaflets obovate or elliptical, 1.5–5 cm. long, 1–3 cm. broad, obscurely crenate or serrate towards the apex; twigs pale grey or grey-brown, sometimes a little spinose; fruits 5–6 mm. diam., strongly compressed [3. natalensis](#)

1. **Rhus tripartita** (*Ucria*) *Grande* in Bull. Ort. Bot. Nap. 4: 242, 243 (1918), as *R. tripartita* (*Ucria*) DC.
APD acc

Rhamnus tripartita *Ucria* in Roem. Arch. Bot. 1: 68 (1796).

Rhus dioica *Brouss. ex Willd.* Enum. Pl. Hort. Berol. 325 (1809).

Rhus oxyacantha of Aubrév. Fl. For. Soud.-Guin. 409, not of Schousb. ex Cav. in Anal. Ciénc. Nat. 3: 36 (1801).

A low spiny bush with small, deeply toothed or lobed, glabrous leaves, and strongly compressed, reddish fruits.

Fr.Nig.: Aïr Aubrév.

Also **Hoggar Mts., N. Africa, Egypt, Palestine** and **Sicily**.

2. **Rhus longipes** *Engl.* in DC. Monogr. 4: 431 (1883). *APD acc*

Rhus villosa of F.T.A. 1: 439, partly, not of Linn. f.

Rhus incana of F.W.T.A., ed. 1, 1: 512 (excl. var. *dahomensis* Hutch. & Dalz.); of Aubrév. Fl. For. Soud.-Guin. 410; not of Mill.

Schmidelia affinis of Chev. Bot. 149, at least in part, not of Guill. & Perr.

Rhus glaucescens of F.W.T.A., ed. 1, 1: 512, not of A. Rich.

A bush or small tree with pale green leaves; whitish or greenish flowers and dull red fruits.

Sen.: Cape Verde (Feb.) Döllinger 37! **Fr. G.:** Labé, Fouta Djallon (Mar.) Chev. 12404! **S. L.:** Loma Mts. (Jan.) Jaeger 4183! **N. Nig.:** Bauchi Plateau (Dec., Jan.) Lely P. 7! Kennedy 2859! Bauchi (fr. June) Cons. of For.! Naraguta (Nov., Dec.) Lely 718! W. D. MacGregor 384!

Widespread throughout tropical Africa.

3. **Rhus natalensis** *Bernh. ex Krauss* in Flora 27: 349 (1844); Aubrév. Fl. For. Soud.-Guin. 410. *APD acc*

APD: *Synonym of Searsia glaucescens* (A. Rich.) Moffett

Searsia natalensis (*Bernh. ex Krauss*) *Barkl.* in Lilloa 23: 253 (1950).

Rhus glaucescens A. Rich. Fl. Abyss. 1: 143 (1847); F.T.A. 1: 437.

Rhus incana var. *dahomensis* Hutch. & Dalz. F.W.T.A., ed. 1, 1: 512 (1928); Aubrev. l.c. 410.

A small shrub 4–10 ft. high; flowers greenish; fruits shining brown.

Fr. G.: Dalaba Adam 66. Saraya Maclaud 456. **iv. C.:** Batié Serv. For. 2502. **G. C.:** Wa, N.T. (Dec.) Adam GC 4470! **Dah.:** Kouandé to Konkobiri (June) Chev. 24263! **N. Nig.:** by Zaria Road, Jos (Aug.) Keay FHI 12711! Neill's Valley, Jos (fr. Nov.) Onochie & Adelodun FHI 21742!

Widespread throughout tropical Africa.

CONNARACEAE

Erect trees or shrubs, or scandent. Leaves alternate, compound, imparipinnate or 1–3-foliolate; stipules absent. Flowers hermaphrodite, actinomorphic or slightly zygomorphic. Calyx imbricate or valvate. Petals 5, free or sometimes slightly connate, imbricate or rarely valvate. Stamens hypogynous to perigynous, often declinate, 5 or 10; filaments often united at the base; anthers 2-celled, opening

lengthwise. Disk absent or thin. Carpels 1–5, free, 1–celled. Ovules 2, collateral, erect, attached near the base or the middle of the ventral suture, all or only 1 ripening into fruit. Fruit often splitting down one side exposing the seed. Seeds usually 1, with or without endosperm, often arillate.

A small tropical family.

Easily recognized by the pinnate or unifoliate exstipulate leaves, apocarpous ovary and arillate seeds.

- 1 Carpels 5: **2**
- Carpels solitary: **13**
- 2 Sepals free to base: **3**
- Sepals connate up to nearly half their length, enlarging in fruit; petals much longer than the sepals, linear and twisted; inflorescences axillary [10. *Spiropetalum*](#)
- 3 Androgynophore absent from the flower: **4**
- Androgynophore present; sepals not enlarged in fruit; leaflets striolate between the veins; several carpels fruitful, small and stipitate [9. *Manotes*](#)
- 4 Flowers appearing before or with the very young leaves; only 1 carpel fruitful; seed with a fleshy outer covering [3. *Byrsocarpus*](#)
- Flowers appearing after the leaves: **5**
- 5 Inflorescences terminal or nearly terminal, never on the older wood: **6**
- Inflorescences axillary or clustered on the older wood: **9**
- 6 Petals about half as long as the sepals; sepals not enlarged in fruit; seed with endosperm and a basal aril; several carpels fruitful [5. *Cnestis*](#)
- Petals as long as or longer than the sepals: **7**
- 7 Leaves 3-foliate; stellate hairs present; sepals with glandular hairs on the margins, not enlarged in fruit; seed without endosperm; several carpels fruitful [6. *Agelaea*](#)
- Leaves pinnate; stellate hairs absent; sepals without glandular hairs, enlarged in fruit; only 1 carpel fruitful, glabrous; aril adnate to seed, no endosperm: **8**
- 8 Leaflets 3–4 pairs; sepals fleshy in fruit; fruit oblong [4. *Jaundea*](#)
- Leaflets numerous, oblique, the lowermost stipule-like; sepals thin; fruit with a curved beak [1. *Roureopsis*](#)
- 9 Leaves pitted on the upper surface (sunken mucilage cells), 3-foliate; seed without endosperm; sepals not enlarged in fruit [7. *Castanola*](#)
- Leaves not pitted above; pinnate, rarely 3- or 1-foliate in No. 3: **10**
- 10 Sepals imbricate, glabrous except for ciliate margins, enlarging somewhat in fruit but thin; only 1 carpel fruitful; petals 3–4 times as long as sepals; inflorescences axillary: **11**
- Sepals almost valvate, tomentose: **12**
- 11 Fruiting carpel oblong, rounded at apex; leaflets (1–) 3–5 [3. *Byrsocarpus*](#)
- Fruiting carpel ovoid, acute at apex; leaflets 5–7 [8. *Santaloides*](#)
- 12 Petals equalling, or up to twice as long as, the sepals; inflorescences often clustered on the older branches; several carpels fruitful, pubescent; sepals not enlarging in fruit [5. *Cnestis*](#)
- Petals at least 4 times as long as the sepals, linear; inflorescences axillary; only 1 carpel fruitful, glabrous; sepals enlarging and leathery in fruit [2. *Paxia*](#)
- 13 Flowers borne on young growth: **14**
- Flowers in clusters of short racemes on the older wood; fruits 2-seeded; leaves large, imparipinnate, with 9–11 subopposite to alternate leaflets [13. *Jollydora*](#)
- 14 Leaflets several to each leaf; fertile stamens 10 or 5; seed without endosperm; inflorescences terminal or subterminal, paniculate [11. *Connarus*](#)
- Leaflet solitary; fertile stamens 5; seed with hard bony endosperm; inflorescences terminal or subterminal panicles or short axillary racemes [12. *Hemadradenia*](#)

1. ROUREOPSIS

Planch. in *Linnaea* 23: 423 (1850); *Schellenb.* in *Engl. Pflanzenr. Connarac.* 107 (1938).

- 1 Leaflets numerous, obliquely oblong, mucronate, 2.5–6 cm. long, 1–2 cm. broad, pubescent on the midrib beneath, with 1–2 basal nerves on one side, the basal leaflets smaller and stipule-like; flowers in sessile clusters

on very long inflorescences; fruits 1.5 cm. long, with a curved beak [obliquifoliolata](#)

Roureopsis obliquifoliolata (Gilg) Schellenb. Beitr. Vergl. Anat. Syst. Connarac. 28 (1910); Pflanzenr. 108, fig. 18 (1938); Troupin in Fl. Congo Belge 3: 77.

APD: *Synonym of Rourea obliquifoliolata* Gilg

Rourea obliquifoliolata Gilg (1891).

Roureopsis fasciculata Gilg (1891).

Roureopsis adiantoides Gilg (1896).

A climbing shrub with brown-pubescent branchlets; flowers dull yellow; fruits red, splitting to expose a black seed with a fleshy yellowish aril; [in rain forest](#).

S. Nig.: Oban Talbot 504! 578! Eket Talbot!

Also in [French Camerouns](#), [Spanish Guinea](#), [Belgian Congo](#) and [Angola](#).

2. PAXIA

Gilg in Engl. Bot. Jahrb. 14: 320 (1891); Schellenb. in Engl. Pflanzenr. Connarac. 114 (1938)

- 1** Midrib of leaflets glabrous beneath; leaflets elliptic-obovate, gradually acuminate, 8–12 cm. long, 3–6 cm. broad, with 4–5 pairs of lateral nerves; cymes axillary, very short and fasciculate, puberulous; petals about 1.5 cm. long [1. liberosepala](#)

Midrib of leaflets puberulous beneath; leaflets ovate or ovate-lanceolate, obtusely acuminate, 5–10 cm. long, 2.5–4 cm. broad, leathery, with 6–7 pairs of lateral nerves; cymes few-flowered, fasciculate; fruits 2.5–3 cm. long [2. cinnabarina](#)

- 1. Paxia liberosepala** (Bak. f.) Schellenb. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 514 (1928); Schellenb. in Engl. Pflanzenr. Connarac. 115.

APD: *Synonym of Rourea myriantha* Baill.

Spiropetalum liberosepalum Bak. f. (1913).

A glabrous climbing shrub with dull yellow flowers.

S. Nig.: Oban Talbot 575! 1404a!

- 2. Paxia cinnabarina** Schellenb. in Engl. Bot. Jahrb. 55: 449 (1919); Pflanzenr. 118.

APD: *Synonym of Rourea myriantha* Baill.

Paxia liberosepala of Schellenb. (1938), partly (Talbot 3352).

A climbing shrub; branchlets rusty-yellow when young; flowers white; fruits cinnabar-red.

S. Nig.: Eket Talbot 3352! **Br. Cam.:** Victoria Winkler 526.

Also in [French Camerouns](#).

3. BYRSOCARPUS

APD: *Synonym of Rourea Aubl.*

Schum. & Thonn. Beskr. Guin. Pl. 226 (1827); Schellenb. in Engl. Pflanzenr. Connarac. 146 (1938).

- 1** Leaflets obtuse at apex, not acuminate, sometimes refuse, 7–11 or more, oblong, the lateral ones oblique, very flaccid when young, 5–45 mm. long, 3–20 mm. broad, glabrous or pilose on the midrib beneath; inflorescences 2–3 cm. long, bracts inconspicuous, 1–2 mm. long; fruits oblong, 1.5 cm. long, glabrous [1. coccineus](#)

Leaflets acuminate, 2–17 cm. long: [2](#)

- 2 Leaflets lanceolate to ovate-lanceolate, rounded at base, acute to acuminate at apex, 2.5–7 cm. long, 1–3 cm. broad; inflorescences 1.5–3 cm. long, appearing with the young leaves; bracts ovate, 4 mm. long; fruits oblong, 1.5–2 cm. long, glabrous [2. poggeanus](#)
- Leaflets ovate to obovate or broadly elliptic: **3**
- 3 Inflorescences up to 2 cm. long, appearing amongst the mature leaves; bracts ovate-lanceolate, 2–3 mm. long; leaflets (1–) 3–5, broadly elliptic to obovate, rounded at base, long-caudate-acuminate, 2.5–17 cm. long, 1.5–8 cm. broad; fruits oblong, 2 cm. long, glabrous [3. viridis](#)
- Inflorescences 5–7 cm. long, appearing with the young leaves; bracts subulate, 1 mm. long; leaflets 5–9, rhomboid-elliptic to ovate, cuneate to rounded at base, shortly and gradually acuminate at apex, 2–8 cm. long, 1–4.5 cm. broad; fruits 1.5 cm. long, contracted about the middle, glabrous [4. dinklagei](#)

1. **Byrsocarpus coccineus** *Schum. & Thonn.* — F.T.A. 1: 452, incl. var. *parvifolius* (Planch.) Bak.; Schellenb. in Engl. Pflanzenr. Connarac. 148; Chev. Bot. 163; Troupin in Fl. Congo Belge 3: 91.

APD: *Synonym of Rourea coccinea* (Schumach. & Thonn.) Benth. var. *coccinea*

A shrub or climber about 6 ft. high; flowers white; fruits red, aril yellow and seed black; **in** secondary forest or thickets in savannah.

Fr. G.: Rio Nunez Heudelot 811! Dyeke (fr. Oct.) Baldwin 9659! Kaba Chev. 13131. Kaoulendougou Chev. 18142. **S. L.:** Kambia, R. Scarcies (Dec.) Sc. Elliot 4347! Falaba (Apr.) Aylmer 47! Widespread in tropical Africa.

2. **Byrsocarpus poggeanus** (Gilg) Schellenb. Beitr. Vergl. Anat. Syst. Connarac. 45 (1910); Pflanzenr. 154; Troupin l.c. 93.

APD: *Synonym of Rourea coccinea* var. *viridis* (Gilg) Jongkind

Rourea poggeana Gilg (1891).

A lax climbing shrub, up to 6 ft. high; flowers pale yellow; fruits red; **in** moist thickets.

S. Nig.: Ibadan (Mar.) Meikle 1254!

Also in **French Cameroons**, **Gabon**, **Spanish Guinea**, **Belgian Congo** and **Angola**.

3. **Byrsocarpus viridis** (Gilg) Schellenb. Beitr. Vergl. Anat. Syst. Connarac. 46 (1910); Pflanzenr. 158, fig. 28; Troupin l.c. 96.

APD: *Synonym of Rourea coccinea* var. *viridis* (Gilg) Jongkind

Rourea viridis Gilg (1891).

R. unifoliolata Gilg (1891).

R. mannii Gilg (1891).

R. pallens Hiern (1896).

A shrub or climber; flowers white; fruits pinkish; **in** forest.

S. Nig.: Onitsha Barter 1634! Aguku Thomas 780! Oban Talbot 1622! 1629! Degema Talbot 3794! Old Calabar Thomson 52!

Also in **French Cameroons**, **Gabon**, **French Congo** and **Belgian Congo** and **Angola**.

4. **Byrsocarpus dinklagei** (Gilg) Schellenb. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 514 (1928); Schellenb. l.c. 157; Troupin l.c. 94.

APD: *Synonym of Rourea coccinea* var. *viridis* (Gilg) Jongkind

Rourea dinklagei Gilg (1895).

Climbing shrub about 12 ft. high; calyx pinkish; corolla white; fruits red with a shining black seed; [in forest](#).

S. Nig.: Calabar (fl. Mar., Apr., fr. Aug.) Holland, 25! 67! Brenan 9222! Oban Talbot 1621! **Br. Cam.:** Cameroons R. (Jan.) Mann 756! Victoria Preuss 1375. Johann-Albrechtshöhe Staudt 901. **F. Po:** Mann 279!

Also in [French Cameroons](#), [Ubangi-Shari](#) and [Belgian Congo](#).

4. JAUNDEA

Gilg in Pflanzenfam. 3, 3: 388 (1894); Schellenb. in Engl. Pflanzenr. Connarac. 161 (1938).

- 1 Leaflets more or less pilose on the nerves beneath, about 3 pairs, obovate or obovate-elliptic, acutely acuminate, rounded or obtuse at the base, up to 12 cm. long and 7 cm. broad, strongly veined beneath; panicles shorter than the leaves; calyx puberulous; fruits 2·5 cm. long. [1. pubescens](#)

Leaflets glabrous beneath but sometimes hairy on the midrib; **2**

- 2 Leaflets lanceolate, gradually long-acuminate, rounded at the base, 5–10 cm. long, 2–2·5 cm. broad, laxly reticulate; fruit obliquely oblong, about 2 cm. long [2. baumannii](#)

Leaflets ovate or oblong-obovate, 3–4 pairs, obtusely pointed and mucronate, up to 12 cm. long and 5 cm. broad, laxly veined beneath; panicles clustered and short; calyx pubescent outside; fruits 2–3 cm. long [3. pinnata](#)

1. *Jaundea pubescens* (Bak.) Schellenb. in Engl. Bot. Jahrb. 55: 462 (1919); Engl. Pflanzenr. Connarac. 162; Troupin in Fl. Congo Belge 3: 84.

APD: Synonym of Rourea thomsonii (Baker) Jongkind

Connarus pubescens Bak. in F.T.A. 1: 458 (1868).

C. thomsoni Bak. (1868).

Rourea buchholzii Gilg (1895).

R. nivea Gilg (1900).

A shrub or climber 15 ft. high with white flowers.

S. Nig.: Lagos (Dec.) Hagerup 750! Millen 109! Cross River North F.R., Ikom (fr. June) Latilo FHI 31832! Old Calabar (Feb.) Mann 2254! Thomson 26! Eket Talbot 3144!

Also in [French Cameroons](#), [Spanish Guinea](#), [Belgian Congo](#) and [Cabinda](#).

2. *Jaundea baumannii* (Gilg) Schellenb. in Engl. Bot. Jahrb. 55: 460 (1919); Pflanzenr. 164.

APD: Synonym of Rourea thomsonii (Baker) Jongkind

Rourea baumannii Gilg (1896).

A lofty climbing shrub.

Togo: Misahöhe (fr. Mar.) Baumann 31.

3. *Jaundea pinnata* (P. Beauv.) Schellenb. in Candollea 2: 92 (1925); Pflanzenr. 164, fig. 29; Troupin l.c. 87, t. 6.

APD: Synonym of Rourea thomsonii (Baker) Jongkind

Cnestis pinnata P. Beauv. (1806).

Manotes palisotii Planch. (1850).

Rourea palisotii (Planch.) Baill. (1866).

R. pseudobaccata Gilg (1891).

R. ivorensis A. Chev. Bot. 165, name only.

Jaundea zenkeri Gilg (1895).

A strong woody climber, 15–20 ft. high, or sometimes an erect shrub; flowers white or pink-tinged, fragrant; fruits red; [in forest](#).

Fr. G.: Kouria Dumas in Hb. Chev. 18172; Chev. 14810! Oussoudou to Diédédou, Beyla (fr. Feb.) Chev. 20847! **S. L.:** Kanguma Smythe 118! Kenema (fr. Jan.) Thomas 7510! **Lib.:** Monrovia Whyte! June) Dundas FHI 21483!

Extends southwards to **Angola** and in eastern Africa from A.-E. **Sudan** to N. Rhodesia.

5. CNESTIS

Juss. — F.T.A. 1: 460; Schellenb. in Engl. Pflanzenr. Connarac. 28 (1938).

- 1 Fruit covered with short uniform velvety hairs without long bristles, pear-shaped, not horned at the apex; petals half as long as, or equalling, the sepals; leaves glabrous above, except on the nerves; inflorescences terminal or in the axils of the upper leaves, up to about 20 cm. long:2
 Fruit covered both with short uniform velvety hairs and with long bristles, tapering into a long horn at apex; petals longer than, or about equalling, the sepals; inflorescences cauliflorous or axillary, 1.5–6 (–10) cm. long:6
- 2 Petals half as long as the sepals; leaflets tomentose or pubescent beneath:3
 Petals as long as or slightly longer than the sepals, 2.5 mm. long; leaflets 2–3 pairs, ovate-elliptic, rounded at base, long-acuminate, 6–12 cm. long, 2.5–5 cm. broad, nearly glabrous beneath; racemes much shorter than the leaves; fruits about 2 cm. long, rounded or subacute at apex [5. racemosa](#)
- 3 Leaflets (4–) 6 or more pairs; petals glabrous; flowers in panicles or racemes:4
 Leaflets 2–4 pairs; petals pubescent outside, 2 mm. long; sepals 5–6 mm. long; panicles terminal, laxly branched:5
- 4 Sepals 2–3 mm. long; petals suborbicular; panicles shorter than the leaves, terminal or upper axillary; leaflets oblong-elliptic, rounded at base, obtusely pointed, about 5–7 cm. long and 2 cm. broad, softly tomentose beneath; fruit 3–4 cm. long with an upturned blunt beak [1. ferruginea](#)
 Sepals 5–7 mm. long; petals oblong, emarginate; racemes as long as the leaves, subterminal and axillary; leaflets oblong, rounded at both ends, 2–4.5 cm. long, about 1.5 cm. broad, thinly pilose beneath fruit 5–6 cm. long, tapering into a straight beak [2. macrantha](#)
- 5 Leaflets very shortly pubescent beneath, broadly ovate-elliptic, rounded at base, abruptly acuminate at apex, 11–20 cm. long, 6–12 cm. broad [3. mannii](#)
 Leaflets softly tomentose beneath, oblong-elliptic to oblong-ovate, rounded at base, acute but hardly acuminate, 8–15 cm. long, 3–7 cm. broad [4. tomentosa](#)
- 6 Leaflets with scattered bristles above; leaf-rhachis long-pilose:7
 Leaflets glabrous above:8
- 7 Leaflets 5–6 pairs, broadly oblong, upper ones 10–18 cm. long, 4.5–6 cm. broad, usually abruptly acuminate, bristly beneath; fruits about 3 cm. long, 1 cm. broad in the middle, very sharply curved; young branchlets pilose; petals 7 mm. long; sepals 4 mm. long [6. grisea](#)
 Leaflets 8–12 pairs, oblong, upper ones 4–8 cm. long, 2–3 cm. broad, softly pubescent beneath; fruits 4 cm. long, 2 cm. broad in the middle, shortly beaked; young branchlets very densely and closely pilose [7. sp. A](#)
- 8 Midrib beneath pilose with laterally spreading hairs, other parts of leaflets with scattered bristles; leaflets 10–12 pairs, oblong, very shortly acuminate, 3–6 cm. long, 1–2 cm. broad, the basal pair suborbicular; fruits about 4 cm. long, densely covered with long yellow bristles; petals 4.5 mm. long; sepals 3 mm. long [8. corniculata](#)
 Midrib beneath tomentose or appressed-pubescent:9
- 9 Apex of leaflets distinctly, acutely and abruptly acuminate; sepals and petals equal in length:10
 Apex of leaflets slightly and obtusely acuminate; leaflets ovate to ovate-oblong:12
- 10 Petals and sepals 7–8 mm. long; racemes 10–15 cm. long; fruits 4 cm. long, about 9 mm. broad in the middle; leaf-rhachis glabrous or minutely puberulous; leaflets (2–) 3–6 pairs, broadly oblong, the terminal ovate-oblong, subcordate at base, abruptly, acutely and long-acuminate at apex, 10–21 cm. long, 5–10 cm. broad, glabrous beneath [9. congolana](#)
 Petals and sepals 4–5 mm. long; racemes 3–4 cm. long; leaflets unequal-sided and subcordate at base, shortly acuminate at apex:11
- 11 Leaf-rhachis glabrous; leaflets 4–5 pairs, oblong-elliptic, 5.5–9 cm. long, 2.5–4 cm. broad, glabrous beneath and midrib sparsely pilose; fruits slender, 3 cm. long, 1 cm. broad [10. cinnabarina](#)

Leaf-rhachis tomentose, bristly towards the base; leaflets 7–10 pairs, oblong, 3–10 cm. long, 1.5–3.5 cm. broad, pubescent beneath, midrib puberulous; fruits 3.5 cm. long, about 1.2 cm. broad [11. aurantiaca](#)

- 12** Leaflets glabrous beneath, except for appressed hairs on midrib and margins, 4–5 pairs, 6–15 cm. long, 3–5 cm. broad; racemes 1.5–3 cm. long; petals 4 mm. long, equalling sepals; fruits slender 2.5 cm. long . [12. dinklagei](#)

Leaflets softly tomentose beneath, 5–6 (–7) pairs, 6–18 cm. long, 3–5.5 cm. broad; racemes 5–8 cm. long; petals 6 mm. long; sepals 2 mm. long; fruits 2.5–3 cm. long [13. longiflora](#)

- 1. Cnestis ferruginea DC.** — F.T.A. 1: 461; Schellenb. in Engl. Pflanzenr. Connarac. 30, fig. 3; Troupin in Fl. Congo Belge 3: 118; Chev. Bot. 166. *APD acc*

Cnestis oblongifolia Bak. in F.T.A. 1: 462 (1868).

A shrub or sometimes a climber 6–15 ft. high, densely brown-pubescent; flowers small and white, fragrant; fruits conspicuous, red; [sometimes abundant in forest regrowth](#).

- 2. Cnestis macrantha Baill.** — F.T.A. 1: 462; Schellenb. l.c. 34, *APD acc*

A shrub 8–12 ft. high, densely yellowish-hairy.

S. Nig.: Old Calabar (Feb.) Mann 2235! Duparquet 53. Oban Talbot 1279! 1378! 1706! Degema Talbot! **Br. Cam.:** Mamfe (fl. & fr. Apr.) Maitland 1149!

- 3. Cnestis mannii (Bak.) Schellend.** in Engl. Bot. Jahrb. 55: 436 (1919); Pflanzenr. 34. *APD acc*

Connarus mannii Bak. in F.T.A. 1: 459 (1868).

A climbing shrub 15 ft. high, shortly yellowish-pubescent on branchlets and inflorescence.

S. Nig.: Shasha F.R. (Apr.) Ross 198! Old Calabar (Feb.) Mann 2264! Oban Talbot 1707!

- 4. Cnestis tomentosa Hepper** in Kew Bull. 1956: 112.

APD: Synonym of Cnestis mannii (Baker) G. Schellenb.

Cnestis mannii of Schellenb. in Engl. Pflanzenr. Connarac. 34, partly (Staudt 916).

A climber up to 100 ft. high; flowers greenish-brown; [in high forest](#).

Br. Cam.: S. Bakundu F.R., Kumba (Mar.) Brenan 9328! Johann-Albrechtshöhe Staudt 916!

- 5. Cnestis racemosa G. Don** — F.T.A. 1: 463; Schellenb. l.c. 41. *APD acc*

Manotes racemosa (G. Don) Gilg (1896).

Cnestis liberica Schellenb. (1919).

A climbing shrub, 6–10 ft. high, with shortly brown-pubescent branchlets and inflorescence; flowers white, fruits pale pink; [in forest](#).

S. L.: Freetown (fr. Feb.) Dalz. 974! Hill Station (fr. Jan.) Dalz. 8119! Njala (fr. Jan.) Dalz. 8105! Matru (Nov.) Deighton 2335! Faiama (fr. Jan.) Deighton 3875! **Lib.:** Kakatown Whyte! Gbanga (Sept.) Linder 650! Harbel, Du R. (fr. Dec.) Bequaert 16! Brewersville (fr. Dec.) Baldwin 10969!

- 6. Cnestis grisea Bak.** in F.T.A. 1: 461 (1868); Schellenb. l.c. 48, fig. 5; Chev. Bot. 167.

APD: Synonym of Cnestis corniculata Lam.

A woody climber, bristly on most parts; inflorescences clustered on the main branches; fruits scarlet, pungent-bristly.

Iv. C.: Fort Binger Chev. 19531. **S. Nig.:** Old Calabar Thomson 90! Oban (fr. May) Ujor FHI 31789! Talbot 506! **Br. Cam.:** Victoria (Apr.) Maitland 602! Johann-Albrechtshöhe Staudt 844.

Also in **French Camerouns** and **Gabon**.

[The leaflets of Maitland 602 are subacute and not acuminate at the apex.]

7. *Cnestis* sp. **A. APD acc**

Close to *C. iomalla* Gilg in Notizbl. Bot. Gart. Berl. 1: 69 (1895), but the leaflets are thicker and more reticulate and pubescent; the fruits are broader and do not possess the long curved beak of *C. iomalla*. Further material, in flower, is required.

S. Nig.: Afi F.R., Ikom (fr. May) Latilo FHI 30975!

[Another specimen from S. Nig., Cross R., nr. Issabang (Jones FHI 1541!) is similar but has the sparsely pilose leaflets beneath and narrower fruits of *C. grisea*.]

8. *Cnestis corniculata* Lam. — F.T.A. 1: 461; Schellenb. l.c. 48; Chev. Bot. 166. **APD acc**

A woody climber with roughly pilose branchlets; flowers cream-white in short clustered racemes sometimes on the older branches; fruits red, covered with pungent bristles; **in forest**.

Fr. G.: Fouta Djallon Heudelot 650. Dyeke (Oct.) Baldwin 9668! Ditinn to Timbo Chev. 12632. **S. L.:** Smeathmann! Leicester Peak (fr. Dec.) Sc. Elliot 3831! Taiama (fr. Nov.) Cole 48! Magbile (fr. Dec.) Thomas 5952! Mamaka (Nov.) Thomas 4340! Mamansu (fr. Feb.) Deighton 4065! **Lib.:** Grand Bassa T. Vogel. Peahtah (Oct.) Linder 957! Ganta (Sept.) Baldwin 9235! Jabrocca (fr. Dec.) Baldwin 10857!

9. *Cnestis congolana* De Wild. Étud. Fl. Bas- et Moyen-Congo 3, 1: 96 (1909); Schellenb. l.c. 52, fig. 6; Troupin l.c. 116.

APD: Synonym of Cnestis corniculata Lam.

Woody climber up to 50 ft. high; **in forest**.

Br. Cam.: Banga, S. Bakundu F.R. (Mar.) Brenan 9419! 9474! Dundas FHI 8361!

10. *Cnestis cinnabarina* Schellenb. in Engl. Bot. Jahrb. 55: 438 (1919); Pflanzenr. 46.

APD: Synonym of Cnestis corniculata Lam.

Climbing shrub, young branches puberulous, older ones brown and glabrous; fruits cinnabar coloured.

S. Nig.: Degema Talbot!

Also in **French Camerouns**.

11. *Cnestis aurantiaca* Gilg in Engl. Bot. Jahrb. 23: 216 (1896); Schellenb. l.c. 50.

APD: Synonym of Cnestis corniculata Lam.

Cnestis longiflora Schellenb. l.c. 46, partly (Talbot 507).

A climbing shrub with subglabrous branches; flowers orange.

S. Nig.: Oban Talbot s.n.! 507! **Br. Cam.:** Mamfe (fr. Jan.) Maitland 1153!

Also in **French Camerouns**.

12. *Cnestis dinklagei* Schellenb. in Engl. Bot. Jahrb. 55: 438 (1919); Pflanzenr. 45.

APD: Synonym of Cnestis corniculata Lam.

A climbing shrub with coiled branchlets; flowers greenish, in short racemes on the stems; fruits red; **in forest**.

Lib.: Monrovia Dinklage 2412; 2695! 2712. Baldwin 5851! Brewersville (June) Barker 1325! Mecca (fr. Dec.) Baldwin 10796! Gbanga (fr. Sept.) Linder 652!

13. *Cnestis longiflora* Schellenb. in Engl. Bot. Jahrb. 55: 438 (1919); Pflanzenr. 46.

APD: *Synonym of Cnestis corniculata Lam.*

***Cnestis prehensilis* A. Chev.** Bot. 167, name only.

A woody climber 6–12 ft. high; inflorescences creamy white, on the stems; fruits scarlet with stinging bristles; **in secondary forest and thickets**.

Iv. C.: Bouroukrou (fr. Dec.) Chev. 16887! **Dah.:** Sakété Chev. 22828. **S. Nig.:** Lagos (fl. & fr. Nov.) Dawodu 194! Dalz. 1155! 1401! Abeokuta (fr. Jan.) Burt 23! Ibadan (fl. & fr. Feb.) Brenan 8974! Ujor FHI 24436! Oban Talbot 1404b!

6. AGELAEA

Soland. ex Planch. — F.T.A. 1: 453; Schellenb. in Engl. Pflanzenr. Connarac. 65 (1938). **APD acc**

- 1** Indumentum on petioles and rhachis of inflorescence bristly, hairs 1–3 mm. long: **2**
 Indumentum on petioles and rhachis of inflorescence minutely stellate, not bristly, hairs less than 0.5 mm. long: **3**
- 2** Hairs on inflorescence 3 mm. long, very dense; leaflets ovate or broadly elliptic, rounded at base, abruptly acuminate at apex, 6–14 cm. long, 4–7.5 cm. broad, glabrous on both sides except for tomentose midrib above [1. *hirsuta*](#)
 Hairs on inflorescence 1 mm. long, rather dense on young branches and sparser on petioles; leaflets broadly ovate, broadly cuneate at base, acuminate at apex, 8–12 cm. long, 4–9 cm. broad, glabrous above, the midrib with a few long hairs, sparsely pilose beneath [2. *pilosa*](#)
- 3** Leaflets glabrous beneath (or the younger leaves slightly tomentellous in No. 4); secondary bracts (i.e. those on the branches of the inflorescence) small: **4**
 Leaflets pubescent beneath, often with minute stellate hairs: **6**
- 4** Leaflets prominently 3-nerved at base, the next main lateral nerves appearing halfway up the leaflet, 6–14 cm. long, 4–10 cm. broad, closely and prominently reticulate beneath; sepals 4 mm. long; petals 5–6 mm. long: ... **5**
 Leaflets pinnately nerved, lateral nerves almost equally spaced, broadly elliptic, rounded at base, acuminate at apex, about 17 cm. long and 10 cm. broad, reticulate beneath and tertiary nerves prominent; sepals 2–3 mm. long, petals 2.5–4 mm. long [4. *floccosa*](#)
- 5** Leaflets cuneate to rounded at base [3. *obliqua* var. *obliqua*](#)
 Leaflets distinctly cordate at base [3a. *obliqua* var. *cordata*](#)
- 6** Secondary bracts (i.e. those on the branches of the inflorescence) and primary bracts 8–10 mm. long, subsistent; leaflets ovate to ovate-elliptic, cuneate and 3-nerved at base, shortly acuminate at apex, 6–11 (–14) cm. long, 4–7 cm. broad, midrib and lateral nerves densely tomentose, laxly tomentose beneath, densely so on the nerves [5. *trifolia*](#)
 Secondary bracts 2–3 mm. long; indumentum of leaflets beneath minute (x 20 lens essential): **7**
- 7** Leaflets beneath with stellate hairs, 4–5-armed, the arms spreading: **8**
 Leaflets beneath with scattered stellate hairs with erect branches in a cluster, seen with difficulty with x 20 lens; leaflets 3-nerved from base, ovate, rounded at base, acutely acuminate at apex, terminal one 4–7.5 cm. long, 2.5–4 cm. broad [10. *oligantha*](#)
- 8** Stellate hairs beneath leaflets with usually 5 slender wavy arms spreading and overlapping the next, easily seen with ' 20 lens; leaflets elliptic, cuneate at base, acuminate at apex, 7 cm. long, 4 cm. broad, midrib tomentose above; inflorescence densely tomentose with stiffer hairs [6. *grisea*](#)
 Stellate hairs beneath leaflets with 4 (–5) arms, arms short not overlapping the next hair, minute and just visible with ' 20 lens: **9**
- 9** Midrib above rather densely pubescent with 4-armed hairs which are also scattered over the upper leaflet surface at least near the base; leaflets broadly ovate to suborbicular, cuneate at base, acuminate at apex, 5–9 cm. long, 4–7 cm. broad; sepals 2 mm. long; petals 3 mm. long; indumentum on inflorescence rhachis very short and dense [7. *nitida*](#)
 Midrib above glabrous or with a few stellate hairs towards the base: **10**

- 10** Sepals and petals 2 mm. long; indumentum on rhachis of inflorescence not very dense (i.e. individual stellate hairs distinguishable); leaflets broadly ovate, cuneate to rounded at base, abruptly and long-acuminate at apex, 7–14 cm. long, 5–10 cm. broad, tertiary nerves not parallel [8. *pseudobliqua*](#)

Sepals 4 mm. long; petals 5 mm. long; indumentum on inflorescence rhachis dense (i.e. individual stellate hairs overlapping one another and indistinguishable); leaflets ovate to broadly elliptic, rounded or broadly cuneate at base, abruptly acuminate at apex, 8–19 cm. long, 5–10 cm. broad, tertiary nerves prominent and parallel [9. *dewevrei*](#)

- 1. *Agelaea hirsuta* De Wild.** Étud. Fl. Bas- et Moyen-Congo 3, 1: 100, t. 25 (1909); Schellenb. in Engl. Pflanzenr. Connarac. 67; Troupin in Fl. Congo Belge 3: 100.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Climbing shrub.

S. Nig.: Uria Kitson 109!

Also in **French Camerouns** and **Belgian Congo**.

- 2. *Agelaea pilosa* Schellenb.** l.c. 83 (1938).

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Agelaea elegans of F.W.T.A., ed. 1, 1: 516, partly (Talbot 3670).

Agelaea trifolia of F.W.T.A., ed. 1, 1: 516 partly, and of Schellenb. l.c. 83, partly (Thomas 2168; 2175).

Climbing shrub with white flowers.

S. Nig.: Usonigbe F.R., Benin (Mar.) Jones FHI 7447! Sapoba (fr. May) Kennedy 1133! 1377! Degema Talbot 3670! Idumuje (Jan.) Thomas 2168! 2175! Abontakon, Ikom (Dec.) Keay FHI 28173!

- 3. *Agelaea obliqua* (P. Beauv.) Baill. var. *obliqua*** — F.T.A. 1: 454; Schellenb. l.c. 90; Chev. Bot. 164.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

***Cnestis obliqua* P. Beauv.** (1804).

Scrambling shrub with shining leaves; flowers pure white or tinged yellow, green or pink, fragrant; fruits scarlet; **in forest and secondary growth**.

Port. G.: Biombo, Bissau (Feb.) Esp. Santo 1792! **S. L.:** Regent (Dec.) Sc. Elliot 4045! Port Loko (Dec.) Thomas 6719! Njala (Nov.) Deighton 4961! Makunde (fr. Jan.) Jordan 1002! **Lib.:** Vahun, Kolahun (fr. Nov.) Baldwin 10244! **Iv. C.:** Jolly 84. Grand Bassam Thollon 168. Bingerville Chev. 20155. Bouroukrou Chev. 16828. **G. C.:** Cape Coast Brass! Akwapim Mar.) Irvine 1544! Kpong (fl. & fr. Jan.) Irvine 1921! Larte Hills (Nov.) Johnson 807! **Togo:** North Adakulu (Mar.) Williams 55! Sokode-Basari Kersting A. 278! Atakpame Doering 373. **Dah.:** Cotonou (fr. Mar.) Debeaux 170! Abomey (Feb.) Chev. 23139! **N. Nig.:** Nupe Barter 1340! Lokoja (fl. & fr. Mar.) Shaw 25! Abinsi (Apr.) Dalz. 780! **S. - 3a. *Agelaea obliqua* var. *cordata* (Schellenb.) Exell** in Cat. S. Tomé 148 (1944).

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Agelaea cordata Schellenb. (1923) — Engl. Pflanzenr. Connarac. 92.

G. C.: Kumasi (fl. & fr. Sept.) Vigne FH 3370! **S. Nig.:** Degema Talbot 3690!

Also in **S. Tomé**.

- 4. *Agelaea floccosa* Schellenb.** in Engl. Bot. Jahrb. 58: 210 (1923); Pflanzenr. 79.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Tall **forest** climber.

S. Nig.: Shasha F.R., Ijebu (May) Richards 3485! **Br. Cam.:** Abonando Rudatis 64! Victoria (Apr.) Maitland 634!

5. **Agelaea trifolia** (Lam.) Gilg in Notizbl. Bot. Gart. Berl. 1: 65 (1895); Schellenb. in Engl. Pflanzenr. Connarac. 83.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Cnestis trifolia Lam. (1789).

Agelaea villosa (DC.) Soland. ex Planch. (1850) — F.T.A. 1: 454; Chev. Bot. 164.

A shrub or climber, 6–25 ft. or rarely up to 100 ft. high; flowers creamy white or green in ample panicles; fruits scarlet; in forest.

Port. G.: Fulacunda (May) Esp. Santo 2038! **Fr. G.:** Rio Nunez Heudelot 730! Derenka Heudelot. **S. L.:** Smeathmann! Bagroo R. (Mar.) Mann 794! Njala (fr. Nov.) Deighton 3101! Tawia (Feb.) Deighton 3493! Kambui Hills (fr. Mar.) Small 514! **Lib.:** Monrovia (Oct., Nov.) Cooper 20! Belleyella, Boporo (fr. Dec.) Baldwin 10647! Ganta, Sanokwele (Dec.) Baldwin 9215! Jabroke, Webo (July) Baldwin 6447! **Iv. C.:** Taté to Tabou Chev. 19823. **S. Nig.:** Shasha F.R., Ijebu (Feb.) Ross 38! Richards 3127!

6. **Agelaea grisea** Schellenb. in Engl. Bot. Jahrb. 58: 208(1923); Pflanzenr. 73.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Agelaea trifolia of F.W.T.A., ed. 1, 1: 516, partly; of Schellenb. l.c. 83, partly.

Climbing shrub with yellowish flowers.

S. Nig.: Oban Talbot 1734!

Also in **French Camerouns**.

7. **Agelaea nitida** Soland. ex Planch. in Linnaea 23: 437 (1850); Schellenb. in Pflanzenr. 88.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Agelaea obliqua of F.T.A. 1: 454, partly, (Heudelot 894, Afzelius).

Straggling bush up to 10 ft. high; flowers white, fragrant.

Sen.: Conakry Debeaux 321. **Fr. G.:** Rio Pongo Heudelot 894. **S. L.:** Afzelius! Kambia (fr. Dec.) Sc. Elliot 4224! Kumrabai (Dec.) Thomas 6968! Njala (May) Deighton 1947! **Lib.:** Zigida (Mar.) Bequaert 132!

8. **Agelaea pseudobliqua** Schellenb. in Engl. Bot. Jahrb. 58: 216 (1923); Pflanzenr. 86; Troupin l.c. 108.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Agelaea phaseolifolia Gilg ex Schellenb. (1923) — Schellenb. l.c. 90; F.W.T.A., ed. 1, 1: 516.

A shrub 8 ft. high, with scarlet velvety fruits.

S. Nig.: Itu, Cross R. (Apr.) Holland 28! Old Calabar (Aug.) Holland 68! Robb! Oban Talbot 1762! Eket Talbot! **F. Po:** Mann 433!

Also in **French Camerouns** and **Gabon**.

9. **Agelaea dewevrei** De Wild. & Th. Dur. in Bull. Soc. Bot. Belge 38: 190 (1899); Schellenb. l.c. 73; Troupin l.c. 104, t. 8.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

A scrambling shrub with white flowers.

Br. Cam.: Lakom, Bamenda, 6,000 ft. (May) Maitland 1460! Barombi Preuss 518. Also in Belgian Congo and Principe.

10. **Agelaea oligantha** Gilg ex Schellenb. in Engl. Bot. Jahrb. 58: 214 (1923); Pflanzenr. 85.

APD: Synonym of Agelaea pentagyna (Lam.) Baill.

Shrub or climber; flowers white.

Lib.: Fishtown, Grand Bassa (Sept.) Dinklage 1711; 2039! Kings Farm, Monrovia Dinklage 3280.

1. *Agelaea preussii* Gilg in Engl. Bot. Jahrb. 23: 10 (1896); Schellenb. in Engl. Pflanzenr. Connarac. 86.

Climber with yellow-brown-tomentose inflorescences and branchlets.

Br. Cam.: Victoria to Bimbria (May) Preuss 1116; 1277. Also in (?) Belgian Congo.

As the species of this genus are so critical, and as the above was not seen, it has not been possible to include it in the key. Imperfectly known species.

2. *Agelaea macrocarpa* Schellenb. in Engl. Bot. Jahrb. 58: 214 (1923); Pflanzenr. 85.

Shrub with purplish-velvety obovoid fruits 1 in. long.

Lib.: Fishtown, Grand Bassa (fr. Oct.) Dinklage 1866.

As the species of this genus are so critical, and as the above was not seen, it has not been possible to include it in the key. Imperfectly known species.

7. CASTANOLA

Llanos in Mem. Acad. Cienc. Madrid 3, 2: 302 (1859); Schellenb. in Engl. Pflanzenr. Connarac. 169 (1938).

- 1 Leaflets broadly obovate-elliptic, broadly cuneate at base, long and abruptly acuminate, 8–16 cm. long, 4–10 cm. broad, glabrous and obscurely reticulate; inflorescence a short panicle; fruit narrowly obovoid, beaked, up to 2 cm. long, tomentellous [paradoxa](#)

Castanola paradoxa (Gilg) Schellenb. ex Hutch. & Dalz. F.W.T.A., ed. 1, 1: 516 (1928); Pflanzenr. 174, fig. 31.

APD: *Synonym of Agelaea paradoxa Gilg var. paradoxa*

Agelaea paradoxa Gilg (1891).

A. fragrans Gilg (1896).

A. brevipaniculata Cummins (1898).

A scrambling shrub or small tree of **forest**, with fragrant white flowers.

S. L.: Pujehun (fr. Feb.) Thomas 8182! **Lib.:** Browntown (Aug.) Baldwin 7084! Tappita (Aug.) Baldwin 9115! **G. C.:** Akim (June) Johnson 764! Kumasi (Mar., Nov.) Cummins 30a! Irvine 127! Asamankese (Aug.) Howes 936! Ekosu (July) Darko 916! **S. Nig.:** Olokemeji (Mar.) A. F. Ross 112! Sapoba Kennedy 1592! 1744! Ute Ogbeji, Benin (Aug.) Onochie FHI 33427! Eket Talbot! Oban Talbot 1294! 1300!

Also in **French Cameroons**, **Gabon** and **Belgian Congo**.

8. SANTALOÏDES

Schellenb. Beitr. Verg. Anat. Syst. Connarac. 76 (1910); Engl. Pflanzenr. Connarac. 119 (1938).

- 1 Leaflets ovate or oblong to obovate, rounded at base, long-acuminate at apex, 5–10 cm. long, 2–5 cm. broad, glabrous, reticulate; racemes clustered, slender, axillary, 3–6 cm. long; pedicels 6 mm. long, jointed near base with 2 small linear bracteoles; sepals ovate, imbricate, 2 mm. long, enlarging and becoming woody in fruit, glabrous, margin of apex ciliate or tomentose; petals about 6 mm. long; fruits ovoid, often slightly curved, acute at apex, about 2 cm. long, glabrous, finely longitudinally striate [afzelii](#)

Santaloides afzelii (R.Br. ex Planch.) Schellenb. Beitr. Verg. Anat. Syst. Connarac. 53 (1910); Pflanzenr. 138.

APD: *Synonym of Rourea minor (Gaertn.) Alston*

Rourea afzelii R.Br. ex Planch. (1850).

R. splendida Gilg (1891).

Santaloïdes splendidum (Gilg) Schellenb. ex Engl. Pflanzenw. Afr. 3: 327 (1915); Schellenb. in Engl. Bot. Jahrb. 55: 455 (1919); Pflanzenr. 140; Troupin in Fl. Congo Belge 3: 82, t. 5; Hemsley in F.T.E.A. Connarac. 13.

Rourea gudjuana Gilg (1891).

Santaloïdes gudjuanum (Gilg) Schellenb. ex Engl. l.c. 326 (1915); Pflanzenr. 138, fig. 24; F.W.T.A., ed. 1, 1: 517; Aubrév. Fl. For. Soud.-Guin. 416, t. 24, 1–2.

A straggling shrub about 10 ft. high or a climber up to 60 ft. high; flowers white or pinkish; fruits red; **by streams and in forest.**

Port. G.: Madina do Boé, Bafatá (Jan.) Esp. Santo 2860! Geba, Bafatá (fr. Feb.) Esp. Santo 2674! **Fr. G.:** Kouroussa (Dec.) Pobéguin 820! Timbo Pobéguin 105. Chev. 14637. **S. L.:** Afzelius! Sulimania Sc. Elliot 5352! Musaia (fr. Feb., Mar., July) Deighton 4230! 4802! Sc. Elliot 5128! **Lib.:** Karmadhun Kolahun Dist. (fr. Nov.) Baldwin 10154! **Iv. C.:** Ferkéssédougou Aubrév. 1615. **G. C.:** Atuna, Ashanti (Dec.) Vigne FH 3530! **Togo:** Sokodé Kersting A. 94; A. 116. **N. Nig.:** Katagum Dalz. 409! Naraguta Lely 73! 714! Mada Hills (fr. June) Hepburn 73! Anara F.R., Zaria (Nov.) Keay FHI 21124! Ogbeni & Obiora FHI 21692!

Extends southwards to **Angola** and in eastern Africa from A.-E. **Sudan** to N. Rhodesia.

9. MANOTES

Soland. ex Planch. — F.T.A. 1: 459; Schellenb. in Engl. Pflanzenr. Connarac. 54.

- 1 Inflorescences terminal and subterminal panicles, about 20 cm. long; sepals 2–4 mm. long, 1 mm. broad; fruits recurved; midrib tomentose above; branches without recurved spines:2
 Inflorescences in axillary fascicles about 8 cm. long; sepals about 6 mm. long and 3 mm. broad; petals 10 mm. long; fruits erect, stipitate, rounded, 1–5 cm. long, finely velvety; leaflets 2–4 pairs, elliptic, subcordate at base, acuminate at apex, (6–) 10–21 cm. long, 3–6 cm. broad, prominently reticulate and glabrous on both sides; branches with recurved spines nearly 1 cm. long4. *macrantha*
- 2 Rhachis of inflorescence densely tomentose or pubescent with hairs about 0.5 mm. long, obscuring the minute hairs beneath; leaflets usually laxly pilose beneath:3
 Rhachis of inflorescence minutely puberulous, also with a few hairs about 0.5 mm. long; sepals lanceolate, 3 mm. long, puberulous outside; petals about 9 mm. long; fruits 1.5 cm. long, stipitate, finely velvety; leaflets 2–5 pairs, oblong-elliptic, 3–8 cm. long, pubescent only on midrib and sometimes the lateral nerves beneath ...3. *expansa*
- 3 Sepals (of open flower) ovate, 2 mm. long, pubescent outside; petals 7–9 mm. long, pubescent outside, minutely puberulous inside; fruits 1–1.5 cm. long, stipitate, pubescent; leaflets 4–6 pairs, elliptic, (2–) 4.5–13 cm. long1. *zenkeri*
 Sepals (of open flower) linear-lanceolate, 4 mm. long, puberulous outside; petals about 9 mm. long, minutely puberulous on both sides; fruits 1–1.5 cm. long, stipitate, finely velvety; leaflets 3–5 pairs, lanceolate-elliptic, (2–) 3–6.5 cm. long2. *longiflora*

1. **Manotes zenkeri** Gilg ex Schellenb. in Engl. Bot. Jahrb. 55: 444 (1919); Engl. Pflanzenr. Connarac. 57.

APD: Synonym of Manotes griffoniana Baill.

Scrambling shrub, 10–15 ft. high; flowers with pink petals and sepals, white filaments and yellow anthers; fruits brown; **in forest thickets.**

S. Nig.: Bonny R. (fl. & fr. Oct.) Mann 508! Eket (fl. & fr. May) Onochie FHI 33155! Talbot 3125! Old Calabar Holland! Robb! Afi F.R., Ogoja Smith Cam./30/36! **Br. Cam.:** Rio del Rey Johnston.

Also in **French Cameroons**, **Spanish Guinea** and **Gabon**.

2. **Manotes longiflora** Bak. in F.T.A. 1: 460 (1868); Schellenb. l.c. 56.

APD: Synonym of Manotes expansa Sol. ex Planch.

Manotes expansa of Chev. Bot. 166, partly (Chev. 16698).

A climbing or scrambling shrub, 6–20 ft. high; flowers with pink sepals and white or yellow petals; fruits scarlet; **in old farmland and forest regrowth.**

Iv. C.: San Pedro (fr. Aug.) Thoiré! Abidjan Aubrév. Bouroukrou Chev. 16698. Adiopodoumé (Sept.) Roberty 12161! **G. C.:** Axim (Apr.) Chipp 423! Anaji, Sekondi (fr. Oct.) Howes 973! Kumasi (Dec.) Vigne FH 1777! **S. Nig.:** Lagos Rowland 37! Millen 166! 185! Dalz. 1023! Epe Barter 3283! Warri Prov. (Sept.) Cole 21! Old Calabar (Feb.) Mann 2256! Eket Talbot 3112!

3. **Manotes expansa** Soland. ex Planch. — F.T.A. 1: 459; Schellenb. l.c. 59; Chev. Bot. 166. *APD acc*

Climbing shrub up to 20 ft. high; flowers red or yellowish-pink; fruits reddish-brown; **in forest.**

Fr. G.: Dyeke (Oct.) Baldwin 9655! 9661! **S. L.:** Bagroo R. (Apr.) Mann 859! Freetown (Jan., Dec.) Dalz. 955! 1009! Rokupr (fl. & fr. Feb.) Deighton 4991! Njala (Oct., Nov.) Deighton 1787! 4910! **Lib.:** Grand Bassa (July) T. Vogel 95! Kakatown Whyte! Brewerville (Sept.) Barker 1076! Vonjama (Oct.) Baldwin 9944! Gletown, Tchien Dist. (July) Baldwin 6798! **Iv. C.:** Cavally R. basin Chev. 19549; 19816.

4. **Manotes macrantha** (Gilg) Schellenb. Beitr. Verg. Anat. Syst. Connarac. 21 (1910); Pflanzenr. 62, fig. 8. *APD acc*

Dinklagea macrantha Gilg (1897).

Woody climber with hooks on the branches; flowers yellow; fruits brown.

Lib.: Fishtown Dinklage 1633! Grand Bassa (July) Dinklage 1965! Monrovia (fr. Apr.) Cooper 73! Duo, Sinoe (Mar.) Baldwin 11360!

10. SPIROPETALUM

APD: Synonym of Rourea Aubl.

Gilg in Engl. Bot. Jahrb. 14: 335 (1891); Schellenb. in Engl. Pflanzenr. Connarac. 103.

- 1 Midrib of leaflets markedly pubescent (but not minutely puberulous) beneath; leaflets 3–4 pairs, often subopposite, acuminate:2
Midrib of leaflets glabrous or minutely puberulous beneath; leaflets 1–4 pairs or solitary, broadly elliptic, obtuse at base, acute but hardly acuminate at apex, 7–12 cm. long, 3–5–7 cm. broad, firm, loosely reticulate beneath; calyx tomentellous4. [heterophyllum](#)
- 2 Leaflets not distinctly reticulate on the upper surface, about 3 pairs, oblong to obovate-elliptic, obtusely acuminate, with about 5 pairs of lateral nerves; flowers in dense axillary clusters; calyx campanulate, tomentose1. [solanderi](#)
Leaflets distinctly reticulate on the upper surface:3
- 3 Leaflets subtrinnerved and dull beneath, lateral nerves more or less ascending and stout, about 3 pairs; lamina more or less elliptic, 5–10 cm. long, 2–4 cm. broad, the midrib densely pubescent beneath; calyx-lobes narrow, tomentellous outside; petals very narrow2. [triplinerve](#)
Leaflets with more or less spreading weak lateral nerves, shining beneath (when dry); lamina oblong-elliptic or obovate-elliptic, cuneate or rounded at base, shortly acuminate at apex, 5–7 cm. long, 2–4 cm. broad; petals 1.5–2 cm. long; fruits oblong up to 4 cm. long, beaked3. [reynoldsii](#)

1. **Spiropetalum solanderi** (Bak.) Gilg in Engl. Bot. Jahrb. 23: 214 (1896); Schellenb. in Engl. Pflanzenr. Connarac. 104.

APD: Synonym of Rourea solanderi Baker

Rourea solanderi Bak. in F.T.A. 1: 456 (1868).

Forest climber, sometimes a shrub; flowers white; fruits straight, about 1 in. long, red-velvety, drying brown.

S. L.: Pujehun (Apr.) Aylmer 69! Njala (May) Deighton 3000! 6062! Gbesebu (fr. July) Deighton 6083! Bumbuna (fr. Oct.) Thomas 3470! **Lib.:** White Plains, St. Paul R. Dinklage 2198. Nana Kru (Mar.) Baldwin 11591! Brewersville (fr. Aug.) Baldwin 13083!

2. *Spiropetalum triplinerve* Stapf in J. Linn. Soc. 37: 93 (1906); Schellenb. l.c.

APD: Synonym of Rourea solanderi Baker

Climbing shrub up to 20 ft. high.

Lib.: Monrovia (fr. Sept.) Whyte! Baldwin 9199! Nana Kru (Mar.) Baldwin 11574! Cess R. (Mar.) Baldwin 11249! Mnanulu, Webo (young fr. June) Baldwin 6041!

3. *Spiropetalum reynoldsii* (Stapf) Schellenb. in Engl. Bot. Jahrb. 55: 451 (1919).

APD: Synonym of Rourea solanderi Baker

Connarus reynoldsii Stapf (1906).

Spiropetalum triplinerve of Schellenb. in Pflanzenr. 104, partly (Reynolds; Chev. 19824).

Rourea afzelii of Chev. Bot. 165.

Straggling shrub or climber; flowers white or pale pink, turning yellow.

Lib.: St. Paul R. Reynolds! White Plains (fr. Apr.) Barker 1281! Brewersville (Mar.) Baldwin 1234! Gonatown (Dec.) Baldwin 10784! Lakrata (Apr.) Bequaert 158! **iv. C.:** Taté to Tabou, Cavally R. Chev. 19824.

4. *Spiropetalum heterophyllum* (Bak.) Gilg in Engl. Bot. Jahrb. 23: 214 (1896); Schellenb. in Engl. Pflanzenr. Connarac. 106.

APD: Synonym of Rourea thomsonii (Baker) Jongkind

APD: Synonym of Rourea solanderi Baker

Rourea heterophylla Bak. in F.T.A. 1: 456 (1868); Chev. Bot. 165.

Spiropetalum odoratum Gilg (1891) — Schellenb. l.c. 105, fig. 17; Troupin in Fl. Congo Belge 3: 127.

Spiropetalum polyanthum Gilg (1895) — F.W.T.A., ed. 1, 1: 518.

Shrub or large climber in forest; flowers white, turning yellow, fragrant.

S. L.: Mabum (Aug.) Thomas 1626! Roruks (July) Deighton 2503! Fwendu (Apr.) Deighton 1610! Njala (July, Sept.) Deighton 1738! 1840! **Lib.:** Fishtown (Aug.) Dinklage 1971! Monrovia Dinklage 2701. Cam.:** Victoria Preuss 1321!

Also in **Gabon**, **Belgian Congo** and **Cabinda**.

[Schellenberg, in Engl. Pflanzenr. Connarac. 105–106, considered specimens (from Nigeria southwards) with puberulous midribs as a distinct species, *S. odoratum* Gilg. These plants also tend to have more leaflets and to be unifoliate less frequently than those from Sierra Leone which he regarded as *S. heterophyllum*, but the two species are hardly worth maintaining. — F.N.H.]

11. CONNARUS

Linn. — F.T.A. 1: 456; Schellenb. in Engl. Pflanzenr. Connarac. 216.

- 1 Leaflets more than 3:2
 Leaflets 3, elliptic to obovate, more or less gradually acuminate, up to 18 cm. long and 10 cm. broad, with about 5 pairs of lateral nerves; inflorescence short; sepals and petals much broader than in preceding species; fruits obliquely oblanceolate, about 6 cm. long, glabrous4. [africanus](#)
- 2 Leaflets narrowly oblong to oblong-elliptic or oblanceolate, rather abruptly acuminate:3
 Leaflets ovate, 4–5 pairs, gradually long-acuminate, 8–14 cm. long, 5–6.5 cm. broad, glabrous, with 4–5 pairs of lateral nerves, scarcely reticulate; panicles rather long; sepals and petals slightly pubescent; fruits narrowly ovoid, shortly stipitate, 6 cm. long, glabrous3. [staudtii](#)

- 3 Leaflets subopposite, 3–5 pairs, rather long-acuminate, rounded at base, very variable in size, up to 16 cm. long and 6 cm. broad, at first thinly pubescent beneath, with about 10–12 pairs of slender prominently looped lateral nerves; petiolule transversely wrinkled; flowers in very long and lax rusty-pubescent panicles; sepals imbricate, narrowly oblong, 1.5 mm. long; petals oblanceolate, 6 mm. long, pubescent; fruits stipitate, obliquely obovate, closely striate, about 2–2.5 cm. long, tomentose on the back [1. *griffonianus*](#)

Leaflets 3 pairs, elliptic, slightly pointed, 6–9 cm. long, 3–4 cm. broad, glabrous, with about 6 pairs of lateral nerves; flowers in short panicles; sepals 3 mm. long; petals slightly pubescent; fruits as above but smaller and quite glabrous [2. *thonningii*](#)

1. ***Connarus griffonianus* Baill.** *Adansonia* 7: 235 (1866); Schellenb. in Engl. Pflanzenr. Connarac. 269; Troupin in Fl. Congo Belge 3: 132, t. 9. *APD acc*

Connarus smeathmanni of F.T.A. 1: 458, partly, (excl. ref. & spec. Smeathmann), not of (DC.) Planch. (1850).

A woody climber with rusty-pubescent branches and inflorescence; flowers white; fruits reddish; [in wet forest](#).

S. Nig.: Sapoba Kennedy 1946! Idumuje (Jan.) Thomas 2178! Balinge to Ikwette, Obudu (Dec.) Savory & Keay FHI 25160! Oban Talbot 503! 1295! **Br. Cam.:** Victoria (Oct.) Mildbr. 10584! Anthagathis *monadelpha* *Harms* (1897).

Small tree up to 25 ft. high; flowers yellow in clusters on the stems.

S. Nig.: Old Calabar R. (fl. & fr. Feb.) Mann 2307! **Br. Cam.:** Victoria Winkler 406. S. Bakosi, Kumba (fr. May) Olorunfemi FHI 30576! S. Bakundu F.R., Banga (fl. & fr. Mar.) Brenan 9407! 9411!

Also in **French Cameroons** and **Gabon.**

ALANGIACEAE

Trees or shrubs, sometimes spiny. Leaves alternate, simple; stipules absent. Flowers hermaphrodite, actinomorphic, in axillary cymes; pedicels articulated. Calyx truncate or with 4–10 teeth. Petals 4–10, mostly linear, valvate, at length recurved, sometimes coherent at the base. Stamens the same number as and alternate with the petals or 2–4 times as many, free or slightly connate at the base, more or less villous inside; anthers 2-celled, linear, opening lengthwise. Disk cushion-like. Ovary inferior, 1–2-celled; style simple, clavate or lobed; ovule solitary, pendulous. Fruit a drupe crowned by the sepals and disk, 1-seeded. Seeds with the embryo about equal to the endosperm.

A small family formerly included in the Cornaceae and found only in the tropics and subtropics of the Old World.

Leaves alternate, exstipulate, ovary inferior.

ALANGIUM

Lam. Encycl. Méth. Bot. 1: 174 (1783); Wangerin in *Engl. Pflanzenr. Alangiaceae* 6 (1910). *APD acc*

- 1 Branchlets glabrous; leaves ovate-elliptic, very oblique at the base, acuminate, 15–17 cm. long, 9–10 cm. broad, 5-nerved from the base, with slender parallel tertiary nerves, glabrous; petiole 2.5–3 cm. long, puberulous; cymes axillary; peduncle 2–4 cm. long; flowers about 10 or more; pedicels jointed at the top, about 4 mm. long; calyx a mere toothed rim; petals 1 cm. long, linear from a broader base; ovary puberulous [chinense](#)

Alangium chinense (*Lour.*) *Harms* in *Ber. Deutsch. Bot. Ges.* 15: 24 (1897); Rehder in *Sarg. Pl. Wilson.* 2: 552 (1916), q.v. for synonymy; F.W.T.A., ed. 1, 2: 607. *APD acc*

Stylidium chinense *Lour.* (1790).

Marlea begoniifolia *Roxb.* (1819).

Alangium begoniifolium (*Roxb.*) *Baill.* (1877); Wangerin l.c. 20, fig. 1, A–G, fig. 5; F.W.T.A., ed. 1, 1: 519.

A deciduous tree, to 70 ft. high, fast growing and soft-wooded; flowers creamy white to pale yellow, fragrant; [forest margins, especially in montane areas](#).

Br. Cam.: Cam. Mt., 1,400–4,800 ft. (Mar.) Kalbreyer 148! Maitland 484! 1172! Bamenda (Apr.) Johnstone 1168! Bali-Santa Pass, Bamenda (fl. & fr. May) Ujor FHI 30389a! 30389b! **F. Po:** Mildbr. 7140.

Also in [French Camerouns](#) and extending to the tropics and subtropics of eastern Asia.

ARALIACEAE

Mostly woody. Leaves alternate or rarely opposite, simple or compound; stipules often adnate to the petiole. Flowers hermaphrodite or unisexual, spicate, racemose, umbellate or capitate. Calyx adnate to the ovary, small. Petals valvate or slightly imbricate, usually free. Stamens free, alternate with the petals; anthers 2-celled, opening lengthwise. Disk epigynous. Ovary inferior, 1–or more-celled; styles free or connate; ovules solitary in each cell, pendulous from the inner angle. Fruit a berry or drupe. Seeds with copious endosperm and small embryo.

Mainly in tropical regions but rare in Africa.

Superficially resembling the Umbelliferae, but woody with an indehiscent baccate or drupaceous fruit.

- 1 Leaves pinnate; leaflets softly tomentose with stellate hairs [1. Polyscias](#)
 Leaves digitate or digitately lobed; pedicels not jointed: [2](#)
 2 Flowers spicate or racemose; ovary 2-celled [2. Cussonia](#)
 Flowers umbellate or capitate; ovary 5– or more-celled [3. Schefflera](#)

1. POLYSCIAS

J. R. & G. Forst., *Char. Gen.* 63 (1776); *Harms* in *E. & P. Pflanzenfam.* 3, 8: 43 (1894).

- 1 Leaves imparipinnate, up to 80 cm. or more long, clustered at the ends of the branches; leaflets 4–7 (–10) pairs, opposite, the rachis usually contracted at the nodes when dry; lateral leaflets ovate, ovate-elliptic or ovate-oblong, rounded to cordate at base, usually shortly acuminate at apex, 7–20 cm. long, 3.5–10 cm. broad, puberulous only on midrib above, densely stellate-tomentose beneath, with 10–15 pairs of faint lateral nerves; panicles up to 60 cm. long, lateral branches up to 12 cm. long; flowers shortly pedicellate or subsessile or sessile; ovary glabrous; fruits ellipsoid, ribbed, about 5 mm. long [fulva](#)

A forest tree; leaves and flower-spikes clustered at the ends of the branches; flowers greenish-white, with an unpleasant smell which attracts flies.

Iv. C.: Banco (Nov.) Aubrév. 500. **G. C.:** Apedwa-Suhum Road (young fr. Jan.) Scholes 454! Bobiri F.R., Juaso (Dec.) C. J. Taylor FH 5449! **S. Nig.:** Akure F.R. Keay & Onochie FHI 19658!

[A sterile specimen, Smythe 267, from Sierra Leone, cited in the first edition as *C. longissima*, may in fact be *C. bancoensis*. The collector's note — "fruiting on main stem" — probably refers to a different plant.]

3. SCHEFFLERA

J. R. & G. Forst., Char. Gen. 45 (1776); Harms in E. & P Pflanzenfam. 3, 8: 35 (1894).

- 1 Flowers distinctly pedicellate; petals coming off in a calyptra at anthesis; panicles crowded near the apex of the shoot; leaflets 6–7, glabrous; petioles up to 30 cm. long; petiolules 1.5–7.5 cm. long: **2**
Flowers sessile; petals spreading at anthesis; panicles crowded near the apex of the shoot, up to 42 cm. long, with lateral branches 8–20 mm. long; panicles and flowers glabrous; leaflets (6–) 8–10, oblong-elliptic, rounded to shortly cuneate at base, gradually acute or shortly acuminate at apex, 12–20 cm. long, 4.5–8.5 cm. broad, glabrous, with 12–18 main lateral nerves on each side of midrib; petioles up to 22 cm. long; petiolules 2.5–5.5 cm. long *4. mannii*
- 2 Leaflets crenate all round, cordate, subcordate or rounded at base, ovate, gradually acutely acuminate, 11–25 cm. long, 6–12 cm. broad, with 10–15 main lateral nerves on each side of midrib; panicles up to 25 cm. long, with lateral branches 10–20 mm. long; pedicels 2–5 mm. long; panicles and flowers glabrous except for the densely pubescent or tomentose bracts *1. abyssinica*
Leaflets entire or nearly so, rounded to cuneate at base, shortly acuminate: **3**
- 3 Pedicels (3–) 5–10 mm. long; flowers 8–11 per umbel; lateral branches of panicle (4–) 8–22 mm. long; panicle sparingly pubescent, up to 26 cm. long; leaflets elongate-oblong-elliptic, 11–25 cm. long, 4–8.5 cm. broad, with 4–10 main lateral nerves on each side of midrib *2. barteri*
Pedicels 2–4 (–5) mm. long; flowers 12–15 per umbel; lateral branches of panicle 3–15 mm. long; panicle rather densely but loosely rusty-pubescent, up to 40 cm. long, leaflets obovate-oblong or oblong-elliptic, 8.5–20 cm. long, 3.5–8.5 cm. broad, with 8–11 main lateral nerves on each side of midrib *3. hierniana*

Heptapleurum mannii (Hook. f.) Hiern in F.T.A. 3: 31 (1877).

A tree, 40–50 ft. high; panicles erect, crowded at the ends of the branches; flowers green, with yellow anthers; in montane forest.

S. Nig.: Ikwette Plateau, 5,300 ft., Obudu Div. (Dec.) Keay & Savory FHI 25240! **Br. Cam.:** Cam. Mt., 4,000–7,600 ft. (Dec.–Apr.) Dundas FHI 15337! Maitland 1199! Mann 1182! 2168! Preuss 884! Oku, Bamenda (Nov.) Johnstone 227! **F. Po:** 5,000 ft. Mann 289! Mildbr. 6410.

Also in **Annobon** and **S. Tomé**.

UMBELLIFERAE

Herbs with furrowed stems and broad soft pith, rarely shrubs or small trees. Leaves alternate, usually compound and much divided, sometimes simple, rarely peltate. Flowers usually hermaphrodite, rarely unisexual, in simple or compound umbels, rarely capitate. Calyx adnate to the ovary, normally with 5 minute teeth. Petals 5, free, valvate or slightly imbricate, epigynous. Stamens 5, free, alternate with the petals; filaments inflexed in bud, anthers 2-celled, opening lengthwise. Styles 2, ovary inferior, 2-celled, ovules solitary in each cell, pendulous. Fruit dry, dividing when ripe into 2 mericarps, supported by a central carpophore; carpels usually ribbed and often with resin canals (vittae) in their walls; mericarps sometimes hairy and sometimes provided with hooks or spines. Seeds with copious endosperm and minute embryo.

Very abundant in the warm temperate regions of the northern hemisphere, and fairly well represented in the tropics, especially on the mountains.

A very homogeneous family, readily recognizable by the habit, broad pith, umbellate flowers, free petals and inferior 2-celled ovary.

- 1 Small soft-wooded trees, up to 10 m. high; fruits broadly winged [15. Steganotaenia](#)
Herbs; fruits winged or not: [2](#)
- 2 Flowers umbellate or in loose more or less globose heads: [3](#)
Flowers in a dense cylindrical spike surrounded by leafy spiny-toothed bracts; radical leaves simple [4. Eryngium](#)
- 3 Creeping herbs, rooting at the nodes; usually in damp places: [4](#)
Erect herbs, not rooting at the nodes; in various situations: [5](#)
- 4 Leaves orbicular or reniform; flowers hermaphrodite; mericarps 5-ribbed, without connecting veins between the

-
- ribs [1. *Hydrocotyle*](#)
 - Leaves reniform; flowers usually unisexual; mericarps 7–9-ribbed, with connecting veins between the ribs [2. *Centella*](#)
 - 5 Fruit (and ovary) hairy or with spinose bristles: [6](#)
 - Fruit glabrous: [12](#)
 - 6 Ovary with hooked or barbed bristles; [7](#)
 - Ovary more or less covered with hairs: [9](#)
 - 7 Leaves digitately divided into 3–5 obovate segments [3. *Sanicula*](#)
 - Leaves pinnately to bipinnately divided into numerous small leaflets: [8](#)
 - 8 Plants with appressed strigose hairs only [6. *Torilis*](#)
 - Plants with spreading hairs on the stem, petiole and inflorescence [7. *Caucalis*](#)
 - 9 Ultimate leaf-segments very narrowly linear, about 1 mm. wide: [10](#)
 - Ultimate leaf-segments broad, subrotund [9. *Pimpinella*](#)
 - 10 Fruit densely covered with very long setose hairs [16. *Ammodaucus*](#)
 - Fruit hairy, but hairs not long-setose: [11](#)
 - 11 Bracteoles of the secondary umbels narrowly linear, with a long setose point [5. *Pycnocycla*](#)
 - Bracteoles of the secondary umbels broad, membranaceous, acute, often with a mucronate tip [12. *Diplolophium*](#)
 - 12 Fruit with broad wings, strongly compressed dorsally: [13](#)
 - Fruit not broadly winged, slightly compressed laterally: [14](#)
 - 13 Fruit without a deep notch at the apex [13. *Peucedanum*](#)
 - Fruit with a deep notch (in which the stylopodium is situated) separating the wings at the apex [14. *Lefebvreia*](#)
 - 14 Low lax annual herbs (weeds in cultivation) with linear leaf-segments and very prominently ribbed fruit [8. *Apium*](#)
 - Plants not as above: [15](#)
 - 15 Leaflets 8–12 pairs, with appressed cartilaginous teeth on the margins; flowers yellow [10. *Sium*](#)
 - Leaflets about 3 pairs, with projecting herbaceous teeth on the margins; flowers white: [16](#)
 - 16 Pedicels short and rather thick; fruit broadly ellipsoid, nearly as broad as long [9. *Pimpinella*](#)
 - Pedicels long and very slender; fruit narrowly ovoid, much longer than broad [11. *Cryptotaenia*](#)

***Cuminum cyminum* Linn.**

Is cultivated in our area, and may be found established in areas associated with human occupation.

***Erythroselinum lefeburioides* Engl.**

In Pflanzenw. Afr. 3, 2: 821, Engler mentions as occurring at Buea on Mt. Cameroon. In the absence of both specimens and description, I am unable to account for this name.

***Berula erecta* (Huds.) Coville**

Occurs in the Bambuto Mts., French Cameroons and may well be found in the area of this Flora.

1. HYDROCOTYLE

Linn. — F.T.A. 3: 3.

- 1 Leaves attached at the base (not peltate): [2](#)
- Leaves peltate, orbicular up to 12 cm. diam; doubly crenulate; petiole very variable in length; umbels compound, bracts lanceolate. [3. *bonariensis*](#)
- 2 Plants very small and slender; leaves suborbicular, 5–10 mm. diam., usually shallowly lobed, subglabrous; flowers about 2–4 in each head, peduncle up to 1 cm. long [1. *sibthorpioides*](#)
- Plants more robust; leaves suborbicular-reniform, 5–10 mm. diam., usually rather deeply lobed and distinctly pilose-setulose; flowers about 10–30 in each head, peduncle (0.5–) 1–3 (–4) cm. long [2. *mannii*](#)

1. *Hydrocotyle sibthorpioides* Lam. Encycl. Méth. Bot. 3: 153(1789). APD acc

Also in [French Cameroons](#), [Abyssinia](#), [Uganda](#), [Kenya](#) and [Belgian Congo](#).

8. APIUM

Linn. — F.T.A. 3: 11. *APD acc*

- 1 An erect or subprostrate herb, with finely divided leaf-segments, the ultimate divisions narrow linear, leaf-bases sheathing and membranous; the stem leaves similar but smaller; umbels terminal and lateral; fruit ovoid, slightly compressed laterally and with very prominent ridges when mature[leptophyllum](#)

Apium leptophyllum (*Pers.*) *F. Müll. ex Benth.* Fl. Austr. 3: 372 (1866).

APD: *Synonym of Cyclospermum leptophyllum (Pers.) Sprague ex Britton & P. Wilson*

Pimpinella leptophylla *Pers.* Syn. Pl. 1: 324 (1805).

A low lax herb, up to 1 ft. high, with linear leaf-segments.

Fr. Nig.: Niamey to Gao Ryff!

A weed, widespread throughout the tropics.

9. PIMPINELLA

Linn. — F.T.A. 3: 13; Norman in J. Linn. Soc. 47: 583 (1927).

- 1 Leaflets ovate-orbicular, rounded at apex, the terminal one about 1.5 cm. diam., crenate-dentate, the lateral ones smaller and sessile, slightly pubescent on the radiating principal veins, petiole broadly sheathing at the base; umbels about 6-rayed; rays (i.e. pedicels) very short and rather stout; fruit ovoid-oblong, 2.5 mm. long, glabrous [1. oreophila](#)

Leaflets ovate-lanceolate, acute, the lowest pair the largest, stalked about 3 cm. long and 1.5 cm. broad, sharply serrulate, slightly pubescent on both surfaces; petiole with a very narrow sheathing base; umbels about 6-rayed, rays (i.e. pedicels) very slender, about 2 cm. long; ovary and fruit whitish-pubescent [2. praeventa](#)

1. **Pimpinella oreophila** *Hook. f.* — F.T.A 3: 14; Wolff in Engl. Pflanzenr. Umbellif. 4, 228: 311 (1927); Norman in J. Linn. Soc. 47: 588. *APD acc*

A small herb 2–12 in. high, leaves pinnate; [in upper montane grasslands](#).

Br. Cam.: Cam. Mt., 9,500–12,000 ft. (fl. Apr., fl. & fr. Nov.-Jan.) Mann 1291! 2028! Hutch. & Metcalfe 81! Maitland 1252! Keay FHI 28610! **F. Po:** Clarence Peak Mann!

Also in [Abyssinia](#) and [N.E. tropical Africa](#).

2. **Pimpinella praeventa** *Norman* l.c. 47: 591 (1927).

APD: *Synonym of Pimpinella hirtella* A. Rich.

An erect slender herb, 1–4 ft. high, with pinnate leaves; [in open savannah among rocks](#).

Fr. G.: Mali, Fouta Djallon, 4,800 ft. (Sept.) Schnell 7045! **N. Nig.:** Bauchi Plateau (July) Lely P. 514! P. 861! Vom, 3,000–4,500 ft. Dent Young 107! Naraguta 4,000 ft. (June) Lely 335! Jos (fl. & fr. Nov.) Keay FHI 21439! Riyom, Jos Div. (fr. Dec.) Corby FHI 14665! Bangwele, Bauchi Prov. (fl. & fr. Sept) Summerhayes 37! Fobur, Bauchi Prov. (fl. & fr. July) Summerhayes 13!

Pimpinella anisum *Linn.*

Is occasionally cultivated in our area and may be found established in areas associated with human occupation.

Pimpinella ledermannii *Wolff* *APD acc*

Occurs in the Bambuto Mts. and other localities in the French Cameroons; it may well be found in the area of this Flora.

10. SIUM

Linn. — F.T.A. 3: 13.

- 1 Leaves simply pinnate, with about 12 narrowly lanceolate leaflets; umbels with well-developed bracts and bracteoles; fruit slightly compressed laterally, with prominent ribs [repandum](#)

Sium repandum *Welw. ex Hiern* Cat. Welw. 1: 425 (1898).

APD: *Synonym of Berula repanda* (Welw. ex Hiern) Spalik & S.R. Downie

A robust herb, about 3 ft. high, with yellow flowers; [in marshy places](#).

Br. Cam.: Maisanmari, Gashaka Dist. (fl. & fr. Jan.) Latilo & Daramola FHI 34394!

Spasmodically distributed in tropical and S. Africa.

11. CRYPTOTAENIA

DC. Coll. Mém. 5: 42 (1829).

- 1 Radical leaves ternate or biternate; lower part of stem and petioles rusty-pilose; leaflets broadly ovate, sometimes lobed or cordate, irregularly dentate, setulose; cauline leaflets becoming linear-lanceolate; umbels with 3–6 primary and 3–5 secondary rays; bracts and bracteoles absent, pedicels very slender, flowers very small, narrowly ovoid, 5 mm. long [africana](#)

Cryptotaenia africana (*Hook. f.*) *Drude* in *E. & P. Pflanzenfam.* 3, 8: 189 (1898). *APD acc*

Anthriscus africana *Hook. f.* (1864) — *F.T.A.* 3: 16.

Herb 2–4 ft. high, pedicels very slender and thread like.

Br. Cam.: Cam. Mt., 4,000–7,000 ft. (fl. & fr. Dec., Feb., May) Brenan 9351! Maitland 655! 822! Mann 1234! 2023! Mba-Kokeka, 7,000 ft., Bamenda (fr. Mar.) Richards 5299! **F. Po:** Tessmann 2821

Also on the mountains of French Cameroons, E. Africa and the **Belgian Congo**.

12. DIPLOLOPHIUM

Turcz. — *F.T.A.* 3: 17.

- 1 Cauline leaves few, scattered; petiole flat, dilated into a rigid amplexicaul sheath at the base; lamina 3–5 pinnatisect, segments all very narrow, linear, elongated, fleshy, acute 3–5 cm. long; involucre bracts numerous, narrowly linear with white margins, acute, up to 3 cm. long, 3–4 mm. broad at the base; rays about 20, unequal; umbellules 10–20 flowered; fruit subterete, compressed on the back, densely papillose, densely and shortly villous [africanum](#)

Diplolophium africanum *Turcz.* in *Bull. Soc. Imp. Nat. Mosc.* 201: 173 (1847). *APD acc*

APD: *Synonym of Diplolophium diplolophioides (H. Wolff) Jacq.-Fél.*

Cachrys abyssinica *Hochst. ex. A. Rich.*, *Fl. Abyss.* 1: 333 (1848).

Diplolophium abyssinicum (*Hochst. ex. A. Rich.*) *Benth.* (1867) — *F.T.A.* 3: 17.

Physotrichia diplolophioides *Wolff* in *Engl. Bot. Jahrb.* 57: 230 (1922); *F.W.T.A.*, ed. 1, 1: 522.

A robust herb up to 6 ft. high, with linear leaf segments and hairy fruit.

Fr. G.: Labé, Fouta Djallon Jac.-Fél. 655! Kankan (fr. Aug.) Schnell 6692! **Togo:** Sokode-Basari (fr. Nov.) Kersting 515. **N. Nig.:** Birnin Gwari (ft. & fr. Nov.) Thornehill 151! Koboji to Kontagora (fr. Jan.) Meikle 1030! Naraguta (fl. & fr. Aug.) Lely 499! Ropp (Dec.) W. D. MacGregor 398! Jos. (fl. & fr. Dec.) Corby FHI 14662!

Also in **French Cameroons**, **Ubangi-Shari**, **Abyssinia**, **A.-E. Sudan**, **E. Africa** and **Belgian Congo**

13. PEUCEDANUM

Linn. — *F.T.A.* 3: 18.

- 1 Mericarps without prominent dorsal ridges between the lateral wings:.....2
 Mericarps with prominent dorsal ridges between the lateral wings:.....3
- 2 Leaves bipinnate; leaflets deeply 3-lobed, triangular in total outline, up to 4 cm. long, margins remotely toothed; fruit obovate, 10 mm. long and 7.5 mm. broad, broadly winged; lamina of the upper stem-leaves much reduced [1. madense](#)
- Leaves biternate to bipinnate; leaflets usually linear-lanceolate, rarely narrowly lanceolate, margins remotely serrate; fruit elliptic 7 mm. long and 5 mm. broad, broadly winged; lamina of the stem leaves much reduced. [2. angustisectum](#)
- 3 Leaves bipinnatisect; leaflets ovate or narrowly-ovate, acute, crenate-serrate, up to 3 cm. long and 1 cm. broad; fruit elliptic, 10 mm. long and 7.5 mm. broad; broadly winged; lamina of the upper stem-leaves quite prominent. [3. winkleri](#)

1. **Peucedanum madense** *Norman* in *J. Linn. Soc.* 49: 513 (1934).

APD: Synonym of Lefebvrea grantii (Hiern) S. Droop

A tall herb up to about 5 ft. high.

N. Nig.: Wana, Mada Hills. 2,000 ft. (fl. & fr. Oct.) Hepburn 93!

Also in **French Cameroons**.

[This is a very poorly known species; opportunities for its collection and study in the field should not be missed.]

2. *Peucedanum angustisectum* (Engl.) Norman l.c. 509 (1934).

APD: Synonym of Lefebvrea angustisecta Engl.

Lefeburia angustisecta Engl. Pflanzenw. Afr. 3, 2: 829 (1921); F.W.T.A., ed. 1, 1: 523.

A robust herb, up to 4 ft. high, with linear-lanceolate leaf-segments.

Br. Cam.: Cam. Mt., 6,000–10,000 ft. (fl. July–Sept., fr. Dec., Jan.) Maitland 819! Mildbr. 10925! Preuss 969! Savory 523!
L. Bambili, Bamenda (Aug.) Ujor FHI 29968!

Also in **French Cameroons**.

3. *Peucedanum winkleri* Wolff in Engl. Bot. Jahrb. 48: 278 (1912): Norman l.c. 511.

APD: Synonym of Afroligusticum linderi (C. Norman) P. Winter

Peucedanum petitianum of F.T.A. 3: 20 and of F.W.T.A., ed. 1, 1: 522.

A tall herb with broadly winged fruit, in **montane habitats**.

Br. Cam.: Cam. Mt., 6,000–10,000 ft. (fl. & fr. Feb.) Maitland 1315! Preuss 966! **F. Po:** Clarence Peak, 9,000–9,500 ft. (fl. & fr. Dec.) Mann 608!

Also on the mountains, in French Cameroons and E. Africa.

14. LEFEBVREA

A. Rich. — F.T.A. 3: 23.

Tall robust herb; leaflets lanceolate to narrowly ovate, acute, 5–10 cm. long, 1.5–6 cm. broad, serrulate, sometimes long-toothed; umbels terminal and lateral, the lateral umbels on long straight peduncles; flowers often tinged red-purple; fruit not seen[nigeriae](#)

Lefebvrea nigeriae Wolff in Engl. Bot. Jahrb. 57: 233 (1921). Erect herb up to 6 ft. high.

APD: Synonym of Lefebvrea grantii (Hiern) S. Droop

N. Nig.: Kilba country (July) Dalz. 90! Vom, 3,000–4,500 ft. Dent Young 108! Naraguta (Aug.) Lely 486! Bauchi Plateau (Aug.) Lely P. 620! Batten-Poole 352!

Also in the **French Cameroons**.

It is most desirable that this species be collected in fruit. All the specimens I have seen are flowering; without fruit it is impossible to be certain of the generic affinities of this species.

15. STEGANOTAENIA

Hochst. in Flora 27, Bes. Beil. 4 (1844).

A small tree, up to 12 m. high; leaves simply pinnate; leaflets subentire to toothed, 5–15 cm. long, 2–7 cm. broad, glabrous; primary umbels about 12-rayed, secondary about 6–9-rayed; ultimate peduncles about 3 cm. long; pedicels 5 mm. long; fruit obovate 1 cm. long, 7 mm. broad, 3-ribbed[araliacea](#)

Steganotaenia araliacea Hochst. l.c. (1844); Norman in J. Linn. Soc. 49: 514 (1934). *APD acc*

Peucedanum araliaceum (Hochst.) Benth. (1876) — F.T.A.3: 21; F.W.T.A., ed. 1, 1: 523.

P. fraxinifolium Hiern ex Oliv. (1873) — F.T.A.3: 22; F.W.T.A., ed. 1, 1: 523.

P. atacorensis A. Chev. Bot. 304, name only.

A small, soft-wooded tree, with compound umbels of small, white flowers; **in savannah**.

Fr. Sud.: Kita Chev. 106; Jaeger 4! **Fr. G.:** Labé Chev. 12319; Roberty 16396! Timbo Chev. 14638. Beyla Chev. 20896. **S. L.:** Freetown Welw. 2516! Bathurst Deighton 2764! Koinadugu Dist. Vigne FH 1698! **Dah.:** Somba, Atacora Mts. Chev. 24095! **N. Nig.:** Nupe Barter! Katagum Dalz. 343! Kontagora (fr. Jan.) Meikle 1057! Bauchi Plateau (fl. & fr. Jan.). Lely P. 10! Bornu Prov. Talbot 1218! **Br. Cam.:** Gwoza, Dikwa Div. (Jan.) McClintock 151!

Widespread in tropical Africa.

16. AMMODAUCUS

Coss. & Dur., in Bull. Soc. Bot. Fr. 6: 393 (1859). *APD acc*

A small herb with a slender tap-root; leaves bipinnate, segments linear, rather thick, glabrous; umbels about as long as the leaves; pedicels 0.5–1 cm. long; fruit about 1 cm. long, densely covered with long slender whitish bristles *leucotrichus*

Ammodaucus leucotrichus *Coss. & Dur.* l.c. (1859); Chev. Bot. 305. *APD acc*

Fr. Sud.: Timbuktu region (young fr. Feb., Mar.) Vuillet in Hb. Chev. 25974; 25978; 28834!

Also throughout N. Africa.

ERICACEAE

Shrubs or undershrubs, less frequently trees; leaves alternate or whorled, rarely opposite, simple, usually evergreen; stipules absent. Flowers hermaphrodite, actinomorphic or slightly zygomorphic. Calyx persistent; sepals free or united. Corolla hypogynous, gamopetalous, inserted below a fleshy disk; lobes contorted or imbricate. Stamens usually double the number of the corolla lobes or, if the same number, alternate with them, hypogynous; filaments and anthers usually free; anthers 2-celled, opening by pores or pore-like slits. Ovary superior, several-celled, with numerous ovules on axile or rarely basal placentas, rarely 1-ovulate; style simple. Fruit a capsule, berry, or drupe. Seeds with fleshy endosperm and straight embryo, sometimes winged.

Generally distributed, but less frequent and mostly on the mountains in the tropics; very numerous in the south-western region of South Africa.

Amongst African families recognized by the small flowers, hypogynous stamens within a shortly lobed gamopetalous corolla, and the anthers opening by pores or pore-like slits.

- 1 Leaves lanceolate, acuminate, fairly large; corolla not persistent; flowers in racemes [1. Agauria](#)
 Leaves very small and heath-like; corolla persistent; flowers not in racemes: [2](#)
- 2 Small tree or shrub; no bracteoles on pedicel; calyx zygomorphic; corolla shortly campanulate, less than 2 mm. long; anthers without appendages [2. Philippia](#)
 Small wiry undershrub; 1-3 bracteoles on pedicel; calyx actinomorphic; corolla tubular, expanded above, more than 4 mm. long; anthers with appendages [3. Blaeria](#)

1. AGAURIA

(DC.) Hook. f.-F.T.A. 3: 483.

APD: *Synonym of Agarista D. Don ex G. Don*

Shrub or small tree; branchlets purplish; leaves oblong-lanceolate, acute at both ends, more or less acuminate at the apex, 3-9 cm. long, 1-3 cm. broad, glabrous, glaucous beneath; petiole about 1 cm. long; flowers in short axillary racemes; pedicels 3-4 mm. long; bracts caducous; sepals triangular, 5, pubescent outside; corolla deciduous, greenish-yellow tinged with pink, cylindric, contracted at the mouth, with 5 short rounded lobes; stamens 10, filaments pubescent; fruit a capsule, 5-angled, 4-6 mm. diam.; seeds curved [salicifolia](#)

Agauria salicifolia (Comm.) Hook. f. ex Oliv. F.T.A. 3: 483 (1877); Sleumer in Engl. Bot. Jahrb. 69: 381 (1938). APD acc

Andromeda salicifolia Comm. in Lam. Encycl. Méth., Bot. 1: 159 (1783); Bot. Mag. 60: t. 3286 (1833).

A shrub or small tree, attaining about 40 ft. in height, on the margins of the montane forest and in grassland above it.

[Br.] Cam.: Cam. Mt., 4,000-10,000 ft. (Dec.-May) Mann 1209! 2182! Johnston 12! Deistel 74! Thresh 3! Hamblar 210! Lakom, 8,000 ft., Bamenda (fr. Apr.) Maitland 1631! Lake Oku, 7,700 ft., Bamenda (Jan.) Keay & Lightbody FHI 28510! Bafut-Ngemba F.R., 6,000-7,000 ft., Bamenda (Jan.) Keay & Lightbody FHI 28375! Nkambe, 6,000 ft. (Feb.) Hepper 1903! F. Po: Clarence Peak, 8,500-9,000 ft. (Dec.-Mar.) Mann 621! Guinea 2934!

This species is represented in West Africa by only var. *salicifolia* (var. *pyrifolia* (Pers.) Oliv.; Sleumer, l.c.)

2. PHILIPPIA

APD: *Synonym of Erica L.*

Klotzsch in Linnaea 9: 354 (1835).

Ericinella of F.T.A. 3: 484, not of Klotzsch.

Small tree or shrub; branchlets pubescent with simple and barbellate hairs; leaves ascending to erect, in whorls of three, oblong-lanceolate, acute, 1.5-4 mm. long, with a dorsal groove, minutely scabrid at the margin; flowers few at the apex of each branchlet; pedicels glabrous, 1.5-2 mm. long; calyx-lobes 4, one free, linear, leaf-like, two-thirds of the corolla to almost equalling it in length, three connate to about half their length, triangular, about half the length, of the corolla; corolla campanulate, shallowly cleft, 4-lobed, about 1.5 mm. long; stamens 6, included; anthers without appendages, opening by pore-like slits; stigma broadly peltate; ovary 3-4-celled; capsule densely pubescent with very short hairsmannii

Philippia mannii (Hook. f.) Alm & Fries in Kungl. Svenska Vet. Handl., ser. 3, 4, No. 4: 37, t. 4a, fig. 10m.

APD: *Synonym of Erica mannii* (Hook. f.) Beentje subsp. mannii

Ericinella mannii Hook. f. in J. Linn. Soc. 6: 16 (1861); Bot. Mag. 92: t. 5569 (1866); F.T.A. 3: 484 (1877).

A heath-like shrub up to 12 ft. with purplish flowers.

[Br.] Cam.: Cam. Mt., 4,500-11,000 ft. (fl. May, fr. Nov.-Mar.) Mann 1289! 2181! Johnston 104! Deistel 81! Gray FHI 7454! Brenan 9393! Lake Bambuluwe, Bamenda (Sept.) Ujor FHI 30201! Oku, 6,500 ft. Bamenda (fr. Feb.) Hepper 2059! F. Po: Clarence Peak, 9,000 ft. to summit (fl. Dec., fr. Mar.) Mann 287! Guinea 2796!

3. BLAERIA

Linn.-F.T.A. 3: 484.

Small wiry undershrub, stems covered with short simple and long bristly hairs often branched below, some, usually most or all, glandular at the tip; leaves in whorls of 3, occasionally spiral or in whorls of 4, 2-5 mm. long, with a dorsal groove, sometimes with short simple hairs, always with long hairs at the margins, some glandular, some branched at the tip; flowers axillary in whorls of 3, inflorescence usually a spike-like panicle; pedicels short, bracteolate; calyx-lobes 4, linear, about one third the length of the corolla, with long marginal hairs some or all glandular at the tip; corolla, 4-6 mm. long, shortly 4-lobed, somewhat expanded above, slightly curved, persistent and tearing at capsule dehiscence; stamens 4, scarcely exserted; anthers with appendages, opening by pores; ovary 4-celled; capsule pubescentmannii

Blaeria mannii (Engl.) Engl. Bot. Jahrb. 43: 366 (1909); Alm & Fries in Act. Hort. Berg. 8: 245, t. 5-6 fig. f-g (1924).

APD: *Synonym of Blaeria spicata* var. *nimbana* (A. Chev.) Letouzey

APD: *Synonym of Blaeria spicata* var. *bambuttensis* Alm & T.C.E. Fr.

APD: *Synonym of Erica silvatica* (Engl.) Beentje

Blaeria spicata of F.T.A. 3: 484, partly, not, of Hochst.

Blaeria spicata var. **mannii** Engl. Hochgebirgsflora trop. Afr.: 325 (1892).

Blaeria tenuipilosa Alm & Fries, l.c. 247, partly (Ledermann 1625); Pichi-Sermolli & Heiniger in Webbia 9: 40 (1953).

Blaeria nimbana A. Chev. in Rev. Bot. Appl. 18: 113 (1938).

A heath-like undershrub with purplish flowers

Iv. C.: Nimba Mts., 5,300-5,800 ft. (July-Oct.) Jac.-Fél. 1938! Schnell 1575! 1877! [Br.] Cam.: Cam. Mt., 6,000 ft. to summit (Nov.-Apr.) Mann 1280! 2177! Johnston 7! 91! Preuss 712! 778! EBENACEAE

Trees or shrubs without milky latex, heartwood sometimes black (Ebony of commerce). Leaves nearly always alternate, exstipulate, entire. Flowers actino-morphic, hypogynous, usually unisexual, but frequently with rudiments of other sex, solitary, fasciculate or cymose, rarely in false racemes, sometimes cauliflorous. Calyx gamosepalous, entire to deeply lobed, always persistent in fruit and

usually accrescent. Corolla gamopetalous, shortly to deeply lobed; tube often fleshy and constricted at throat; lobes contorted in bud. Stamens from 2 to more than 100, epipetalous or borne on receptacle, exserted or included, filaments often very short, anthers usually apiculate, often 2 or more arising from a single filament. Ovary syncarpous, each locule either with 2 ovules or divided by a false septum into 2 uni-ovulate compartments; styles distinct or basally connate, very rarely completely united; stigmas usually large and conspicuous; ovules pendulous from apex of locule. Fruit a berry. Seeds large; endosperm abundant, hard, sometimes ruminant; embryo half as long as the endosperm, with foliaceous cotyledons

Mainly in the tropics and subtropics; many of local economic importance, a few of considerable commercial importance.

The number of floral parts is very variable and inconstant both between and within species. The only other genus now recognized in the family is *Euclea* Murr. which is widespread in [Africa](#) but does not occur in our area.

DIOSPYROS

Linn.-F.T.A. 3: 517; White in Bull. Jard. Bot. Brux. 26: 237-246 (1956).

Maba Forst.-F.T.A. 3: 514; F.W.T.A., ed. 1, 2; 6.

KEY TO SPECIMENS WITH MALE FLOWERS.

- 1 Corolla lobed to the middle or beyond; anthers often exserted beyond the throat (to p. 5):2
Corolla lobed only in upper half; anthers usually completely concealed: 15
- 2 Flowers small, corolla less than 8 mm. long; anthers usually exserted far beyond the throat:3
Flowers large, corolla more than 11 mm. long; anthers included or only slightly exserted:9
- 3 Filaments attached to corolla-tube; anthers exserted beyond throat for whole or greater part of length:4
Filaments attached to receptacle; anthers not, or only slightly exserted beyond the throat:8
- 4 Calyx 3·5-4·5 mm. long, lobes 5-6, suborbicular, imbricate; stamens 45-120; leaves more or less oblong-elliptic, acuminate, up to 17 cm. long and 7 cm. broad, lateral nerves in 8-10 pairs, tertiary nervation laxly reticulate- (see fig. 202A 1) [1. polystemon](#)
Calyx up to 2·5 mm. long; lobes with open aestivation, usually deltoid; stamens 10-25:5
- 5 Peduncles more than 4 mm. long; cymes lax, 12-20-flowered; corolla 7·5 mm. long, 4-lobed; leaves more or less elliptic, apex usually cuspidate, up to 17 cm. long and 11 cm. broad, drying reddish, upper surface glossy, with conspicuously reticulate, raised venation [2. viridicans](#)
Peduncles up to 2 mm. long; cymes mostly congested; corolla up to 6 mm. long, 3-5-lobed:6
- 6 Calyx densely fulvous-setulose outside; leaves mostly elliptic, shortly acuminate, up to 18·5 cm. long and 7 cm. broad, usually drying reddish, tertiary nerves subparallel; corolla (4-)5-lobed [3. dendo](#)
Calyx completely glabrous outside except for a few minute marginal cilia; leaves drying black; corolla 3(-4)-lobed:7
- 7 Leaves elliptic-oblong with almost parallel sides, apex caudate-acuminate, up to 13 cm. long and 5 cm. broad, secondary nerves in 12-20 pairs; flowers distinctly pedicellate in lax cymes; anthers minutely setulose on the margin [4. piscatoria](#)
Leaves more or less elliptic, shortly subacuminate, up to 12 cm. long and 4 cm. broad, secondary nerves in 5-12 pairs; flowers subsessile in contracted cymes; anthers glabrous [5. abyssinica](#)
- 8 Flowers in 1-4-flowered fascicles; pedicels slender, 3-4 mm, long; corolla-lobes spreading, glabrous; calyx with open aestivation, regularly lobed; leaves elliptic, acuminate, up to 11 cm. long and 4·5 cm. broad, drying black, with 6-9 pairs of prominent lateral nerves, tertiary nerves and veins scarcely visible [6. cooperi](#)
Flowers subsessile in 1-3(-4)-flowered pedunculate cymes; corolla-lobes ascending, densely strigulose; calyx closed in the bud, irregularly lobed at anthesis; leaves very variable, up to 10 cm. long and 4·5 cm. broad, drying brown, venation closely reticulate on both surfaces [7. ferrea](#)
- 9 Inflorescence a lax, 3-5-flowered axillary pseudo-raceme; pedicels up to 2 cm. long; calyx-lobes 4, free almost to base, papery, with marginal cilia and conspicuous venation; stamens entirely included; branchlets with setose hairs up to 5 mm. long; some leaves modified to form boat-shaped shelters for ants [8. conocarpa](#)
Inflorescence a congested fascicle or cyme, or a lax, many-flowered cyme borne on the older wood; calyx-lobes variously united; hairs on branchlets never more than 2 mm. long; leaves not modified to form shelters for ants: 10
- 10 Corolla hairy: 11

- Corolla glabrous: 12
- 11 Corolla hypocrateriform, fulvous-tomentellous, tube 9 mm. long, slender, contracted at the throat; stamens attached to receptacle, entirely included, strigose at base; leaves elliptic, acuminate, up to 18 cm. long and 8 cm. broad, lower surface fulvous-sericeous and with laxly reticulate, prominent venation [9. kamerunensis](#)
- Corolla infundibuliform, glabrous except for densely strigose mid-petaline lines; tube about 5 mm. long, widely open at the throat; stamens attached to corolla-tube, exerted, densely strigose for entire length; leaves elliptic or lanceolate-elliptic, acuminate, up to 18 cm. long and 8.5 cm. broad, lower surface pinkish-or greyish-white, strigose-pubescent on nerves, tertiary nervation subparallel-(see fig. 202A 2) [10. mannii](#)
- 12 Leaves pubescent beneath; flowers always borne on bole and branches, never in axils of leaves; pedicels more than 3 mm. long; corolla-lobes 5: 13
- Leaves glabrous beneath; some flowers borne in leaf-axils, others on older branchlets, but never (apparently) on bole and main branches; pedicels 1 mm. long; corolla-lobes 4: 14
- 13 Flowers in fascicles; pedicels 3-4 mm. long; calyx sparsely puberulous, lobes as long as tube, narrowly deltoid; corolla-tube as long as lobes, constricted at throat; leaves oblong-elliptic or lanceolate-elliptic, acutely acuminate, up to 11.5 cm. long and 4 cm. broad, drying grey-green, lateral nerves in 4-5 pairs, not impressed above-(see fig. 202A 3) [11. fragrans](#)
- Flowers in lax, many-flowered cymes; pedicels 8-13 mm. long; calyx tomentellous, lobes much shorter than the tube, hemi-orbicular; corolla-tube much shorter than the lobes, not constricted; leaves oblong-elliptic, or lanceolate-elliptic, acuminate, up to 14 cm. long and 4.5 cm. broad, lateral nerves in about 7 pairs, leaving midrib at very acute angle, impressed on upper surface [12. suaveolens](#)
- 14 Calyx 8 mm. long, lobes 4 mm. long, narrowly deltoid; leaves chartaceous, oblong-elliptic or oblanceolate-oblong, caudate-acuminate, up to 26 cm. long and 9 cm. broad, drying olive-brown, venation laxly reticulate [13. bipindensis](#)
- Calyx 2.5 mm. long, cup-shaped, margin entire except for 4 minute teeth; leaves coriaceous, elliptic or oblong-elliptic, caudate-acuminate, up to 19 cm. long and 7 cm. broad, drying grey-green, venation very closely reticulate [14. physocalycina](#)
- 15 Corolla tomentose or tomentellous or with large hairs easily visible to naked eye (to p. 6): 16
- Corolla glabrous or with minute hairs invisible to naked eye: 27
- 16 Branchlets densely clothed with long, rusty, spreading hairs about 1.5 mm. long; leaves cordate at base, usually ovate or lanceolate, up to 16 cm. long and 7 cm. broad, acutely acuminate, glaucous beneath, tertiary nerves subparallel, deeply impressed above; calyx lobed almost to the base, lobes subulate; corolla 1 cm. long, tube 7.5 mm. long, gradually narrowed to throat-(see fig. 202A 4) [15. barteri](#)
- Branchlets without long hairs; leaves cuneate or rounded at base: 17
- 17 Corolla more than 12 mm. long: 18
- Corolla 7-8 mm. long: 21
- 18 Calyx deeply lobed almost to the base, lobes narrowly deltoid; corolla glabrous except for a vertical strip of hairs along central axis of each corolla-lobe which is continued down the tube, and a few marginal cilia; leaves oblanceolate or oblanceolate-elliptic, shortly acuminate, up to 26 cm. long and 11 cm. broad, drying reddish-brown, lower surface sparsely puberulous [16. undabunda](#)
- Calyx only lobed in upper half or not at all; corolla tomentellous: 19
- 19 Calyx 4 mm. long, cup-shaped, unlobed but sometimes developing irregular splits; pedicels 3-5 mm. long; corolla 1.3-1.6 cm. long, tube 1-1.2 cm. long, constricted at the throat; leaves lanceolate or lanceolate-elliptic, shortly acuminate, up to 23 cm. long and 8 cm. broad, glaucous or grey-green beneath, lower surface sparsely and minutely puberulous [17. sanza-minika](#)
- Calyx 7-8 mm. long, distinctly lobed; pedicels less than 2 mm. long: 20
- 20 Calyx sparsely and minutely puberulous, lobes rounded; corolla 2.5-3 cm. long, tube 2.2-2.8 cm. long, flask-shaped, tapering rapidly from the middle to both ends; stamens about 90; leaves oblong-elliptic or lanceolate-elliptic, acuminate, up to 19 cm. long and 7.5 cm. broad, lower surface sparsely and minutely puberulous-(see fig. 202A 5) [18. crassiflora](#)
- Calyx densely covered with chocolate-brown or black tomentum, lobes deltoid; corolla 1.8-2.2 cm. long, hypocrateriform, tube about 1.2 cm. long; stamens about 20; leaves usually oblanceolate-elliptic, very shortly acuminate, up to 38 cm. long and 14 cm. broad, usually drying greenish-brown, lower surface densely setulose-puberulous on nerves and veins, more sparsely so on lamina, venation prominently reticulate .. [19. gabunensis](#)
- 21 Leaves opposite or subopposite, up to 32 cm. long and 10 cm. broad, oblanceolate, apex acute or shortly acuminate, lower surface sparsely and minutely puberulous and glaucous; first-year branchlets rusty-tomentellous; stamens exerted-(see fig. 202A 6) [20. chevalieri](#)
- Leaves alternate, usually smaller; branchlets not rusty-tomentellous; stamens included: 22
- 22 Inflorescence a distinctly pedunculate 3-9-flowered cyme; leaves more or less elliptic or oblanceolate-elliptic, apex subacuminate, up to 15 cm. long and 5.5 cm. broad, usually drying yellowish- or reddish-brown, lower surface almost glabrous, but with a few appressed hairs [21. mespiliformis](#)

- Inflorescence a sessile fascicle or congested cyme: **23**
- 23** Corolla narrowly conical, gradually tapering from near base; leaves rounded or acute at apex, never acuminate, ovate or elliptic, drying reddish above, densely pubescent or tomentose beneath [22. *tricolor*](#)
- Corolla botuliform or urceolate, tapering more or less equally from about the middle; leaves acuminate: **24**
- 24** Leaves small, up to 14 cm. long and 4-6 cm. broad, minutely and sparsely puberulous beneath, tertiary nerves scarcely visible: **25**
- Leaves large, up to 20 cm. long and 10 cm. broad, densely puberulous or pubescent beneath except in extreme old age, tertiary nerves very conspicuous, subparallel: **26**
- 25** Calyx-lobes rounded, broader than long; leaves usually drying greenish-brown above and grey beneath, lower surface with minute, black, strigulose hairs [23. *nigerica*](#)
- Calyx-lobes narrowly deltoid, much longer than broad; leaves usually drying reddish, lower surface with minute hyaline hairs [24. *heudelotii*](#)
- 26** Calyx 2 mm. long, lobes deltoid with flat margins; tertiary nerves not or only slightly impressed . [25. *liberiensis*](#)
- Calyx 4-5 mm. long, lobes ovate-apiculate with reduplicate margins; tertiary nerves impressed above [26. *thomasi*](#)
- 27** Branches with papery peeling bark and sharp-pointed spines; flowers subsessile in 3(-5)-flowered cymules at ends of (3-)6-14 mm. long, distally expanded and flattened peduncles; calyx closed in bud, botuliform, (7-)9-12(-21) mm. long; corolla rotate, tube 12 mm. long, lobes 7-9 mm. long; leaves oblanceolate, subacuminate, up to 20 cm. long and 7.5 cm. broad, drying brown [27. *monbuttensis*](#)
- Branches without papery peeling bark and spines; flowers in fascicles; calyx with open aestivation, not botuliform: **28**
- 28** Calyx truncate or with only slight indications of lobes: **29**
- Calyx distinctly lobed:..... **31**
- 29** Stamens with long strigose hairs (visible to naked eye) clothing filament and proximal half of connective, anthers with apiculus 1 mm. long; leaves broadly ovate-elliptic to lanceolate-elliptic, acuminate, up to 12 cm. long, and 5.5 cm. broad, drying brownish, secondary nerves not impressed, tertiary nerves and veins invisible [28. *melocarpa*](#)
- Stamens glabrous or with minute setulose hairs, apiculus less than 0.25 mm. long; secondary nerves deeply impressed above, prominent beneath, tertiary nerves clearly visible:..... **30**
- 30** Leaves drying reddish, elliptic or lanceolate-elliptic, up to 21 cm. long and 9 cm. broad, lateral nerves in (6-)7-9 pairs, acumen gradually tapering [29. *alboflavescens*](#)
- Leaves drying blackish, elliptic or lanceolate-elliptic, up to 14 cm. long and 6.5 cm. broad, lateral nerves in 4-5 pairs, acumen parallel-sided except for the slightly expanded tip [30. *zenkeri*](#)
- 31** Corolla-lobes 4-5 mm. long; leaves large, venation prominent and very closely reticulate on both surfaces: ... **32**
- Corolla-lobes up to 2.5 mm. long; leaves usually small and without closely reticulate venation: **33**
- 32** Calyx glabrous, 2.5 mm. long, tightly clasping base of corolla-tube, regularly lobed to middle; corolla-tube not constricted; anthers far-exserted; leaves oblanceolate or oblanceolate-elliptic, shortly acuminate, up to 35 cm. long and 13 cm. broad [31. *preussii*](#)
- Calyx sparsely and minutely strigulose, 4 mm. long, separated from base of corolla-tube by an appreciable space, irregularly lobed in upper third; corolla-tube constricted at throat; anthers included; leaves usually elliptic or oblong-elliptic, acuminate, up to 25 cm. long and 10 cm. broad [32. *canaliculata*](#)
- 33** Calyx-lobes rounded, or glabrous inside: **34**
- Calyx-lobes acute, puberulous inside: **36**
- 34** Calyx-lobes acute; leaves elliptic, oblong-elliptic or oblanceolate-oblong, up to 14 cm. long and 6 cm. broad, apex gradually tapering to a narrowly deltoid acumen, lower surface glabrous, drying dark brown or black [33. *soubreana*](#)
- Calyx-lobes rounded; leaves not or scarcely acuminate: **35**
- 35** Leaves lanceolate, up to 12 cm. long and 5 cm. broad, apex not emarginate, lateral nerves conspicuous; calyx 3 mm. long, puberulous, lobed almost to the base; corolla-lobes 2 mm. long, much longer than broad [34. *elliottii*](#)
- Leaves obliquely rhombic, up to 6 cm. long and 2 cm. broad, apex emarginate, lateral nerves invisible; calyx 1.5 mm. long, minutely puberulous, lobed only in upper third; corolla-lobes 1 mm. long, scarcely longer than broad-(see fig. 202A 7) [35. *hoyleana*](#)
- 36** Leaves small, up to 3.5 cm. long, drying greenish or blackish, very asymmetric, apex with a filiform tip [36. *obliquifolia*](#)
- Leaves larger, more than 7 cm. long, drying reddish, more or less symmetric, without a filiform tip: **37**
- 37** Leaves large, up to 19 cm. long and 9 cm. broad, lanceolate or lanceolate-elliptic, acuminate, tertiary nerves and veins clearly visible on lower surface, darker than lamina; corolla glabrous [37. *simulans*](#)

Leaves medium-sized, up to 17 cm. long and 6.5 cm. broad, but usually much smaller, tertiary nerves and veins scarcely visible; corolla with a few strigulose hairs: **38**

- 38** Flowers subsessile; corolla 7 mm. long; leaves tapering gradually to the rather blunt acumen, drying greyish-green beneath [38. *vignei*](#)

Flowers distinctly pedicellate; corolla 11 mm. long; leaves tapering rather suddenly to the acute acumen, drying pinkish beneath [39. *cinnabarina*](#)

KEY TO FRUITING SPECIMENS.

- 1** Calyx-lobes undulate; calyx more than 1 cm. long: **2**
 Calyx-lobes not undulate (or if undulate as in No. 26, then calyx less than 7 mm. long): **6**
- 2** Calyx less than half as long as fruit, 1-1.2 cm. long, fulvous-puberulous outside, lobes (4-)5, ovate-deltoid, 5-6 mm. long, margin undulate with at least one large fold about one third of the way from the base; fruit subglobose, 2.8 cm. long, 2.6 cm. broad, verruculose, almost glabrous at maturity [21. *mespiliformis*](#)
 Calyx almost as long as or longer than the fruit: **3**
- 3** Calyx glabrous, lobed only in upper half, lobes 4: **4**
 Calyx puberulous or pubescent, lobed almost to the base, lobes usually 5: **5**
- 4** Calyx leathery, without distinct venation, about 3.8 cm. long, lobes (at least in young fruit) reduplicate-valvate; tertiary nerves and veins of leaves very closely reticulate and prominent on both surfaces [31. *preussii*](#)
 Calyx papery with distinct longitudinal venation, 3-3.8 cm. long, lobes not reduplicate-valvate; tertiary nerves and veins laxly reticulate and slightly prominent on both surfaces-(see fig. 202B 3) [13. *bipindensis*](#)
- 5** Young branchlets, leaves and calyces pubescent, hairs visible to naked eye; calyx about 4 cm. long, venation not parallel; fruit depressed-globose, about 3.8 cm. long and 4 cm. broad [16. *undabunda*](#)
 Young branchlets, etc., puberulous, hairs visible with a $\times 20$ lens; calyx 2.5-3 cm. long, venation parallel; fruit ovoid-conic, about 1.5 cm. long and 1.2 cm. broad-(see fig. 202B 1) [3. *dendo*](#)
- 6** Indumentum of fruit consisting at least in part of long setose hairs clearly visible to naked eye: **7**
 Indumentum of fruit consisting of minute hairs visible with a $\times 20$ lens, or fruit glabrous: **12**
- 7** Calyx cup-shaped, the tube surrounding the whole of the lower half of the fruit, tomentose with chocolate-brown or black hairs, lobes 5, scarcely developed or well-developed and up to 1.5 cm. long; fruit up to 2.2 cm. long and 2.6 cm. broad, chocolate-brown tomentose-(see fig. 202B 6) [19. *gabunensis*](#)
 Calyx not cup-shaped, the tube not surrounding the lower half of fruit: **8**
- 8** Leaves opposite; fruit subsessile, about 4.2 cm. long and 2.5 cm. broad; calyx 4-5 mm. long [20. *chevalieri*](#)
 Leaves alternate; pedicels up to 3 cm. long; calyx 1.2-1.5 cm. long (but note that the fruiting calyx of No. 11 is unknown): **9**
- 9** Fruit sparsely setose: **10**
 Fruit tomentose: **11**
- 10** Fruit ovoid-conic, up to 4 cm. long and 1.7 cm. broad; calyx papery, sparsely setose, with conspicuous venation; some leaves modified to form boat-shaped shelters for ants [8. *conocarpa*](#)
 Fruit depressed-globose, 3 cm. long and 3.5 cm. broad; leaves not modified to form shelters for ants [11. *fragrans*](#)
- 11** Fruit up to 4 cm. long and 2.8 cm. broad, tomentose with an understorey of short chocolate-brown hairs and with longer setose hairs-(see fig. 202B 2) [12. *suaveolens*](#)
 Fruit about 4.8 cm. long and 4.4 cm. broad, ferrugineous-setose-tomentose [10. *mammii*](#)
- 12** Calyx longer than the fruit, 3-4 cm. long: **13**
 Calyx much shorter than the fruit: **14**
- 13** Calyx cordiform, broadest just above the base and gradually tapering to apex, lobes much shorter than the tube, deltoid [14. *physocalycina*](#)
 Calyx broadest near the middle at the junction of lobes and tube, lobes rounded with reduplicate margins forming 4 acute ridges which are continued in the upper part of the tube-(see fig. 202B 8) [32. *canaliculata*](#)
- 14** Fruit ovoid-conic or conic, tapering to a pointed apex; calyx lobed almost to the base, lobes deltoid: **15**
 Fruit of various shapes, never tapering to a pointed apex (but sometimes with an umbo at base of style): **20**
- 15** Branchlets densely clothed with long rusty spreading hairs about 1.5 mm. long; leaves cordate at base, up to 16 cm. long and 7 cm. broad; calyx 9 mm. long, rusty pilose; fruit up to 4.2 cm. long and 1.8 cm. broad-(see fig. 202B 4) [15. *barteri*](#)
 Branchlets without long hairs; leaves not cordate at base: **16**
- 16** Leaves very small, up to 3.5 cm. long and 1.6 cm. broad, markedly asymmetric, apex with a filiform tip; fruit more or less 1.8 cm. long and 0.7 cm. broad [36. *obliquifolia*](#)

- Leaves larger, more than 6 cm. long, not or scarcely asymmetric, apex not filiform: 17
- 17 Leaves rounded or acute at apex, densely strigose-pubescent beneath; fruit 2·2-2·8 cm. long, 1·3-1·6 cm. broad; shrub of coastal scrub [22. *tricolor*](#)
- Leaves acuminate, sparsely strigulose beneath; shrubs or small trees of rain forest: 18
- 18 Fruit conic, tapering from the base, sometimes asymmetric, up to 4 cm. long and 2·5 cm. broad; seeds 4 or fewer by abortion [38. *vignei*](#)
- Fruit ovoid-conic, tapering from some distance above the base; seeds 6: 19
- 19 Tertiary nerves and veins clearly visible on lower surface, darker than lamina; fruit about 4·2 cm. long and 3·2 cm. broad [37. *simulans*](#)
- Tertiary nerves and veins scarcely visible; fruit about 3·5 cm. long and 3 cm. broad [39. *cinnabarina*](#)
- 20 Fruit tomentellous (except in extreme old age): 21
- Fruit glabrous or almost so: 24
- 21 Fruit subglobose, up to 2·8 cm. long and 2·4 cm. broad [24. *heudelotii*](#)
- Fruit ellipsoid, cylindric, ovoid- or obovoid-cylindric, 3·5-4·5 cm. long, 2·8-3·8 cm. broad: 22
- 22 Seeds 6-8; tertiary nerves and veins forming an indistinct, lax reticulum [9. *kamerunensis*](#)
- Seeds 3-4; tertiary nerves subparallel: 23
- 23 Pedicels 9-18 mm. long; calyx 6-7 mm. long, lobes suborbicular-apiculate, the margins folded back and undulate-(see fig. 202B 7) [26. *thomasi*](#)
- Pedicels 2-3 mm. long; calyx 1 cm. long, lobes narrowly deltoid, the margins flat [25. *liberiensis*](#)
- 24 Fruit very large, about 10 cm. long and 6·5 cm. broad, obovoid, sparsely strigulose-puberulous, especially near apex, otherwise glabrous; calyx 1·5 cm. long, with 5-6 wrinkled and minutely puberulous rounded lobes ... [18. *crassiflora*](#)
- Fruit smaller, never more than 5 cm. long and 4·5 cm. broad: 25
- 25 Fruit cylindric, up to 5 cm. long and 4·5 cm. broad-(see fig. 202B 5) [17. *sanza-minika*](#)
- Fruit globose, ellipsoid or ovoid, smaller than last: 26
- 26 Leaves up to 6 cm. long and 2 cm. broad, obliquely rhombic, apex subacuminate and emarginate, nerves and veins invisible; fruit up to 2·5 cm. long and 2 cm. broad, ovoid or ovoid-cylindric, verruculose .. [35. *hoyleana*](#)
- Leaves nearly always larger, never emarginate, at least the secondary nerves always visible: 27
- 27 Fruit ellipsoid, small, up to 1·4 cm. long and 0·9 cm. broad; seeds 1-2: 28
- Fruit globose, larger, never less than 1·5 cm. long and 1·5 cm. broad; seeds 6-8, or sometimes fewer by abortion: 29
- 28 Calyx glabrous outside except for a few minute marginal cilia, deeply lobed almost to base, lobes suborbicular; fruit drying black, glabrous [5. *abyssinica*](#)
- Calyx tomentellous, shallowly and irregularly lobed, lobes broadly deltoid; fruit drying pale brown, with a few hairs near apex [7. *ferrea*](#)
- 29 Calyx cup-shaped, surrounding the lower half of fruit, margin subtruncate, but usually irregularly broken away; fruit up to 3 cm. long and 3·4 cm. broad [27. *monbuttensis*](#)
- Calyx not cup-shaped: 30
- 30 Endosperm ruminant: 31
- Endosperm uniform: 33
- 31 Calyx-lobes 4, about 4 mm. long and 2·5 mm. broad, reflexed; fruit globose, about 3 cm. long and 3 cm. broad; tertiary nerves and veins conspicuously raised and reticulate on upper surface [2. *viridicans*](#)
- Calyx-lobes 3(-4), 3 mm. long, or calyx irregularly lobed, lobes not reflexed, tertiary nerves and veins inconspicuous or invisible: 32
- 32 Leaves caudate-acuminate; fruit about 3·2 cm. long and 3·5 cm. broad; seeds dark brown, surface transversely wrinkled [28. *melocarpa*](#)
- Leaves subacute to subacuminate; fruit up to 2 cm. long and 2·4 cm. broad; seeds black, surface smooth [34. *elliottii*](#)
- 33 Calyx-lobes 5-8 mm. long, distinctly longer than broad: 34
- Calyx-lobes up to 3 mm. long, not longer than broad, or calyx unlobed: 35
- 34 Leaves abruptly tapering at apex to parallel-sided acumen, lateral nerves in 12-20 pairs; pedicels more than 3 mm. long; fruiting calyx about 8 mm. long [4. *piscatoria*](#)
- Leaves gradually tapering to the deltoid acumen; lateral nerves in 7-10 pairs; fruits subsessile, fruiting calyx 1-1·2 cm. long [33. *soubreana*](#)

- 35 Leaves minutely strigulose beneath:..... **36**
 Leaves glabrous:..... **37**
- 36 Fruiting calyx unlobed, dish-shaped; fruit about 2-6 cm. long and 3 cm. broad; leaves with tertiary nerves and veins scarcely visible [23. nigerica](#)
 Fruiting calyx with 4-5 well-defined hemi-orbicular lobes; fruit about 2 cm. long and 2 cm. broad; leaves with a prominent, lax reticulum [1. polystemon](#)
- 37 Leaves drying reddish; acumen gradually tapering; lateral nerves in (6-)7-9 pairs, tertiary nerves prominent; calyx 4-5 mm. long, irregularly 3(-4) lobed; fruit about 2-8 cm. long and 2-8 cm. broad [29. alboflavescens](#)
 Leaves drying blackish or greenish-black; tertiary nervation scarcely visible: **38**
- 38 Leaves suddenly tapering to the parallel-sided acumen; lateral nerves in 4-5 pairs [30. zenkeri](#)
 Leaves gradually tapering to the deltoid acumen; lateral nerves in 6-9 pairs [6. cooperi](#)

1. **Diospyros polystemon** *Gürke* in Engl. Bot. Jahrb. 43: 210 (1909). *APD acc*

Forest shrub or tree up to 90 ft. high; bole slightly fluted at base; flowers white, fragrant.

[Br.] Cam.: Likomba Plantation Mildbr. 10754.

Also in [Cameroun](#), [the Congos](#) and [Angola](#).

[I have not seen this specimen which is cited in the first edition; it is probably now destroyed.-F.W.]

2. **Diospyros viridicans** *Hiern* in J. Bot. 59: 129 (1921). *APD acc*

Diospyros kekemi *Aubrév. & Pellegr.* in Bull. Soc. Bot. Fr. 83: 621, t. 1, 1 (1937); *Aubrév. Fl. For. C. Iv.*, ed. 2, 3: 164, t. 309, 1-5.

Small or medium-sized forest tree 25-60 ft. high; bole tall, straight; bark black, smooth at first, becoming scaly; fruit yellow at first, turning red, then black.

S. L.: Njala, Moyamba (fr. Nov.) Deighton 6014! **Iv. C.:** Abidjan (fr. Jan.) *Aubrév.* 188! Rasso (fr. Dec.) *Aubrév.* 545! Agboville (fr. June) *Aubrév.* 1385! Guiglo (fr. Jan.) 39 **Diospyros cinnabarina** (Gürke) F. White in Bull. Jard. Bot. Brux. 26: 242 (1956). *APD acc*

APD: Synonym of Diospyros cinnabarina (Gürke) F. White

Maba cinnabarina Gürke in Engl. Bot. Jahrb. 43: 199 (1909).

Diospyros heudelotii of F.W.T.A., ed. 1, 2: 6, partly (Zenker 3466) not of Hiern.

Small forest tree up to 30 ft. high; bark black, smooth with shallow vertical anastomosing fissures; slash jet black outside, red and fibrous inside, sapwood white; leaves dull above, pale glaucous-green beneath.

[Br.] **Cam.:** S. Bakundu F.R. (male fl. Mar.) Brenan 9320! Likomba Plantation Mildbr. 10531!

Also in **Cameroun**.

Besides the above, *D. discolor* Willd., a native of the Philippines, widely planted in the tropics for its edible fruits, is grown in our area. *D. heterotricha* (B. L. Burtt) F. White, a native of Central Africa, is also in cultivation.

1. **Diospyros sp.**

Small forest tree 15 ft. high; differs from *D. obliquifolia* (Hiern ex Gürke) F. White (No. 36 above) in having more acute leaves with more distinctly filiform apices and more densely pubescent lower leaf-surfaces with secondary and tertiary nerves clearly visible.

S. Nig.: Afi River F.R., Ogoja Jones & Onochie FHI 17387! Keay FHI 28186!

2. **Diospyros sp.**

Medium-sized tree about 50 ft. high; possibly *D. cinnabarina*, but flowers and fruits are required for confirmation.

S. Nig.: Ohumbe F.R., Abeokuta Oladoyinbo FHI 15006! Ogun River F.R., Lagos Onochie FHI 18653!

HOPLESTIGMATACEAE

Trees. Leaves alternate, entire; stipules absent. Flowers hermaphrodite, in terminal cymes. Calyx closed in bud, bursting irregularly. Corolla shortly tubular, with about 3 series of overlapping corolla lobes. Stamens numerous (about 21), in several rows inserted at the base of the corolla; anthers 4-celled, opening by longitudinal slits. Ovary superior, 1-celled with 2 intrusive parietal placentas; style bilobed nearly to the base, branches sharply bent; stigmas capitate. Ovules pendulous, one on each side of the bilobed placentas. Fruit with a deep groove up each side, the calyx forming a plate at the base, endocarp hard. Seeds with scanty endosperm and long thick straight embryo.

HOPLESTIGMA

Pierre in Bull. Soc. Linn. Paris, n. sér., 116 (1899); emend. Gilg in Engl. Bot. Jahrb. 40, Beibl. 93: 76; Hallier f. in Meded. Rijks Herb. Leiden 1: 35 (1910).

- 1 Leaves densely pubescent beneath at least on midrib and nerves with rather long, crisped hairs; lamina broadly obovate-elliptic, rounded and slightly apiculate, narrowed to base, 15-30 cm. long, 5-15 cm. broad, venulose-reticulate above; lateral nerves about 10 on each side of midrib; petiole about 2 cm. long; cymes terminal, softly tomentose all over; calyx about 1 cm. long; corolla 1.5 cm. long; fruits broadly ellipsoid, 3 cm. long,

- 2·6-2·9 cm. broad, glabrous [1. *pierreanum*](#)
 Leaves beneath with small, stiff and straight appressed hairs, sometimes sparse, lateral nerves about 8 on each side of midrib; petioles 1-1·5 cm. long; cymes covered with dense stiff hairs; fruits 2 cm. long, 2·2-2·4 cm. broad [2. *kleineanum*](#)

1. *Hoplostigma pierreanum* Gilg l.c., with fig. (1908). *APD acc*

A tree with long slender stem and small crown; inflorescences like *Cordia*.

[Br.] Cam.: Likomba Plantation, Cam. Mt. (Dec.) Mildbr. 10774!

Also in **Cameroun**.

2. *Hoplostigma kleineanum* Pierre l.c. (1899); Aubrév. Fl. For. C. Iv., ed. 2, 3: 155, t. 307. *APD acc*

A tree, 65-80 ft. high.

Iv. C.: Tabou Aubrév. 1683! 2809! San Pedro Aubrév. 1270!

Also in **Gabon**.

SAPOTACEAE

Trees, shrubs, or rarely climbers, often with milky juice. Leaves alternate, entire, leathery; stipules usually absent. Flowers hermaphrodite, actinomorphic, usually small. Calyx 4-8-lobed. Corolla 4-8-lobed, lobes 1-2-seriate, imbricate, sometimes with petaloid external appendages. Stamens inserted on the corolla, the fertile ones equalling the corolla-lobes and opposite to them, or more numerous and 2- or more-seriate; staminodes sometimes present; anthers opening lengthwise. Ovary several-celled, superior; style simple. Ovules solitary in each cell, ascending from the inner axil. Fruit 1- many-celled, often a rather hard berry, rarely a capsule. Seeds with a bony, often shining testa, and a large broad hilum; endosperm mostly scanty; embryo large, with small radicle and broad foliaceous cotyledons.

Distinguished by the woody habit, alternate leaves without or with caducous stipules, and regular flowers, mostly with petaloid staminodes.

Mainly in the tropics and subtropics; some of considerable economic value.

To assist future workers on this complicated family, fuller references and synonymies are given than is usual in this Flora. Since this account was completed, two important additions to the taxonomic literature on the family have been published: Aubréville in *Notulae Syst.* 16: 223-279 (1961), and *Fl. Gabon* No. 1: Sapotac. (1961).

- 1 Stamens several (3-5) opposite each lobe of the corolla (sterile in the female flowers); fruits 6-26 cm. diam., globose to depressed-globose: [2](#)
 Stamens solitary opposite to each lobe of the corolla; fruits globose or ellipsoid, up to 5 cm. diam.: [4](#)
- 2 Strictly cauliflorous trees, i.e. flowers borne in fascicles on the main trunk, pedicellate; styles thickened or slightly inflated beyond the stigma; fruits depressed-globose, up to 26 cm. diam., with a very thick and hard exocarp and about 20 elliptic, flattened seeds up to 4 cm. long and 2·5 cm. broad [1. *Omphalocarpum*](#)
 Flowers borne mainly on the younger branches, sometimes (in No. 2) also on the main trunk; fruits globose, up to 8 cm. diam.: [3](#)
- 3 Flowers in fascicles on slender branches below the leaves on scars of older fallen leaves, few in each cluster, pedicels up to 8 mm. long, pedicels and calyx rusty-tomentose; fruits with about 20 flattened seeds, up to 1·5 cm. long [2. *Ituridendron*](#)
 Flowers single, but sometimes densely together, sessile, borne on the younger branches on scars of older fallen leaves; calyx nearly glabrous, ciliate; fruits with 10 seeds, up to 3·5 cm. long [3. *Tridesmostemon*](#)
- 4 Corolla-lobes with petaloid external appendages (these often appearing to be 3 series of petals); staminodes also petaloid: [5](#)
 Corolla-lobes without external appendages: [11](#)
- 5 Staminodes opposite to the stamens; flowers 5-merous; fruits dehiscent [4. *Gluema*](#)
 Staminodes alternate to the stamens; fruits indehiscent: [6](#)
- 6 Flowers 5-merous; lobes of the corolla-trilobate; leaves and flowers in whorl-like fascicles at the nodes [5. *Neolemonniera*](#)
 Flowers 6-8-merous, lobes of the corolla entire; leaves and flowers never in whorl-like fascicles at the nodes: .. [7](#)

-
- 7 Sepals 3 + 3; corolla with 6 lobes [6. *Manilkara*](#)
 Sepals 4 + 4; corolla with 8 lobes: **8**
- 8 Seeds with a small navel-like scar at the base [7. *Mimusops*](#)
 Seeds with a scar covering more than a third of the base: **9**
- 9 Scars on the seeds basiventral and subrectangular, rather less than half the length of the seed; petals pubescent inside [8. *Autranella*](#)
 Scars on the seeds nearly as long as the length of the seed, broadly elliptic: **10**
- 10 Testa of the seeds woody, very thick; plants without stipules; leaf-nerves not prominent beneath [9. *Tieghemella*](#)
 Testa of the seeds thin; plants with stipules; leaf-nerves very prominent beneath [10. *Baillonella*](#)
- 11 Leaves and flowers relatively densely clustered at the top of the shoots; ovary 8-10-celled; seeds usually 8; staminodes petaloid, apiculate [11. *Butyrospermum*](#)
 Leaves usually not clustered at the top of the shoots; ovary rarely more than 5-celled; petals 4-6: **12**
- 12 Staminodes well-developed, petaloid: **13**
 Staminodes very small and subulate, or absent: **14**
- 13 Sepals united beyond the middle [12. *Synsepalum*](#)
 Sepals not united beyond the middle; stamens with filaments about 2 mm. long [13. *Vincentella*](#)
- 14 Disk present, glabrous: **15**
 Disk absent; ovary mostly 5-celled: **17**
- 15 Ovary 5-celled; leaves oblong-lanceolate, cuneate at base, with 9-15 pairs of nerves, glabrous [14. *Kantou*](#)
 Ovary 8-celled: **16**
- 16 Leaves cordate at the base; corolla long-tubular; style contorted; leaves golden silky-velutinous beneath, nerves very numerous and close [15. *Breviea*](#)
 Leaves oblong, cuneate at the base; corolla short; style not contorted; leaves glabrous beneath, nerves 7-9 pairs [16. *Aubreggrinia*](#)
- 17 Stamens inserted on the corolla between and at the base of the lobes: **18**
 Stamens inserted in the corolla-tube and alternate with the lobes: **22**
- 18 Fruits ellipsoid, olive- or prune-like, mostly with 1-2 seeds: **19**
 Fruits globose, egg-shaped or apple-like, mostly with 3-5 seeds: **21**
- 19 Leaves with pellucid dots, with about 12-20 pairs of very prominent lateral nerves, leaf-colour in drying mostly dark brown or greenish-brown, not very different on both sides: **20**
 Leaves without pellucid dots, with very numerous and dense, not prominent, lateral nerves, leaf-colour in drying cream-greyish, light olive-green or light rusty-brown, with the lower surface mostly much lighter than the upper [19. *Bequaertiodendron*](#)
- 20 Flowers without staminodes [17. *Malacantha*](#)
 Flowers with subulate staminodes [18. *Aningeria*](#)
- 21 Shrub or small tree; flowers single or in pairs in the axils of the leaves, all parts covered with 3 mm. long rusty-brown hairs, nerves of the leaves 15-20 pairs, very conspicuous [20. *Delpyodora*](#)
 Mostly very big and tall forest trees, sometimes lianes; flowers fascicled; plants generally not covered with rusty-brown long hairs (if so, leaves irregular-rotundate at the base) [21. *Chrysophyllum*](#)
- 22 Stipules persistent; flowers without staminodes; leaves with about 16 pairs of conspicuous lateral nerves [22. *Pachystela*](#)
 Stipules caducous; flowers with small staminodes; leaves with rather numerous very obscure lateral nerves .. [23. *Afrosersalisia*](#)
-

1. OMPHALOCARPUM

P. Beauv.-F.T.A. 1: 171. *APD acc*

- 1 Flowers pedicellate, pedicels not bracteate except at the base: **2**
 Flowers subsessile, with several imbricate bracts below the calyx; leaves oblanceolate, much narrowed to the base, not acuminate at apex, 8-13 cm. long, 3-5 cm. broad, glabrous, with 6-7 pairs of lateral nerves; bracts very broadly ovate, tomentose outside, about 8 mm. long; young fruits depressed-globose, glabrous, with a persistent style; mature fruit depressed-globose, about 15 cm. diam.; seeds as in *O. ahia* [3. *procerum*](#)

- 2 Leaves elongate-obovate, long-attenuated to the base, rounded at the apex, about 40 cm. long and up to 18 cm. broad, with numerous (over 20) pairs of prominent lateral nerves, glabrous; flowers several in each cluster; pedicels up to 1 cm. long, tomentose; sepals ovate, 1-1.5 cm. long, tomentose; corolla 3 cm. long, the lobes slightly pubescent on the margin; fruits depressed-globose, about 14 cm. diam., the outer shell about 1.5 cm. thick, openly reticulate in section; seeds nearly flat, 4 cm. long, 2.5 cm. broad, with a narrow scar on one side [1. ahia](#)

Leaves obovate or oblanceolate, attenuated to the base, rounded or obtusely acuminate at the apex, 12-25 cm. long, 4-8 cm. broad, glabrous, with about 10 pairs of lateral nerves; flowers more or less as above but calyx and pedicels soon glabrescent; fruits (according to a sketch) depressed-globose [2. elatum](#)

1. **Omphalocarpum ahia** *A. Chev.* in Vég. ut. Afr. trop. fr. 5: 244 (1909); Chev. Bot. 389; Aubrév. Fl. For. C. Iv. ed. 2, 3: 110, t. 288 fig. 1-3. *APD acc*

A tall tree with clear bole and large leaves; conspicuous by the clustered fruits on the main stem.

extending to Ubangi-Shari.

The Shea butter tree.

The conservation of the generic name *Butyrospermum* has been proposed (Hepper l.c.), but Dr. H. Heine would have preferred to abandon the name for his revision of this family in favour of *Vitellaria* had not this proposal been made. -ed.

12. SYNSEPALUM

(A. DC.) *Daniell* (1852)-Baill. Hist. Pl. 11: 286 (1892); Chev. in Rev. Bot. Appliq. 23: 291 (1943).

Sideroxylon Sect. *Synsepalum* A. DC. (1844).

- 1 Leaves closely silky beneath, elliptic-oblongate, acuminate, up to 15 cm. long and 5 cm. broad, with 10-12 pairs of lateral nerves; petiole 1.5 cm. long; flowers axillary, clustered; buds finely appressed-pubescent; fruits subsessile, broadly ellipsoid, beaked, about 2.5 cm. long, puberulous [1. *glycydorum*](#)

Leaves glabrescent beneath: **2**

- 2 Leaves with 8-12 pairs of lateral nerves, rounded or shortly acuminate at apex, markedly attenuated from the upper third to the base, 5-10 cm. long, 2-4 cm. broad; petiole short, up to 5 mm. long; flowers axillary, subsessile, pedicels up to 2 mm. long; calyx ribbed, 5 mm. long, tomentellous outside, lobes short, triangular; corolla with a narrow tube as long as calyx, lobes exserted, glabrous; style exserted; fruit ellipsoid, 1-seeded, 2 cm. long, nearly glabrous; seeds nearly as large as the fruit [2. *dulcificum*](#)

Leaves with about 18 pairs of lateral nerves, oblong-lanceolate, long-acuminate, and obtusely pointed at apex, cuneate from the middle to the very narrow petiole-like base, 10-19 cm. long, 4.5-6 cm. broad; real petiole only up to 3 mm. long, but with the petiole-like base of the leaf apparently 1-1.5 cm. long and winged; flowers axillary, very numerous; pedicels up to 3 mm. long; calyx pilosulous outside, lobes lanceolate-ovate, acute, 2.5 mm. long; corolla with a narrow tube up to 3 mm. long, lobes exserted, up to 3 mm. long, glabrous; style exserted; fruit ellipsoid, 2 cm. long, smooth, 1-seeded [3. *stipulatum*](#)

1. *Synsepalum glycydorum* Wernham in J. Bot. 55: 82 (1917) (as glycydora). *APD acc*

A shrub or small tree, about 25 ft. high, in leaf characters much resembling a *Chrysophyllum*, especially *C. subnudum*.

[The plants from Guinea, Sierra Leone, and Ghana are slightly different in some vegetative characters (thickish-woolly young shoots, flowers usually, but not always, subsessile, leaves larger), but it is impossible to separate them as a different taxon as was done by Baehni (l.c. 1942)-H.H.]

3. **Vincentella brenanii** *Heine* in Hook Ic. Pl. t. 3630 (1964).

APD: Synonym of Synsepalum brenanii (Heine) T. D. Penn.

A shrub or small tree, up to 15 ft. high, with small and densely fascicled greenish-cream flowers in the axils of fallen leaves.

[Br.] Cam.: Banga, S. Bakundu F.R., Kumba Div. (Mar.) Brenan 9273! Binuyo & Daramola FHI 35589!

14. KANTOU

Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 104: 276 (1957).

- 1 Leaves crowded at the top of the branches, oblong-lanceolate, 15-25 cm. long, 6-7 cm. broad, with about 10-15 lateral nerves, glabrescent; stipules minute; petiole 4-5 cm. long; flowers fasciculate, pedicels about 1 cm. long, pubescent; bracts ovate, 5-6 mm. long; sepals about 6 mm. long, pubescent; corolla glabrous, 7-8 mm. long, 5-lobate, lobes ovate, obtusely tripartite, corolla-tube about 1-5 mm. long; ovary 5-loculate, conic, hirsute, about 4 mm. long; fruit globose, reddish, only one well-developed seed; seed oblong, about 5 cm. long, compressed, with brown and shining testa and a large ovate hilum [guereensis](#)

Kantou guereensis *Aubrév. & Pellegr.* l.c. (1957); Aubrév. Fl. For. C. Iv., ed. 2, 3: 114, t. 291.

APD: Synonym of Inhambanella guereënsis (Aubrév. & Pellegr.) T. D. Penn.

A tall tree up to 160 ft. high, with small fascicled flowers; **in dense evergreen forest**.

Lib.: Wanau (fr. Oct.) Harley 2049! **Iv. C.:** Oumé Aubrév. 4147! Guiglo Aubrév. 4049! Taï Aubrév. 4103!

15. BREVIEA

Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 81: 792 (1935).

- 1** Branches and leaves underneath golden-yellow-brown silky-villous; leaves elongate-oblong, abruptly caudate-acuminate, cordate at base, 11-22 cm. long and 5-8 cm. broad, with 12-18 pairs of prominent lateral nerves; petioles very short, up to 5 mm. long; flowers axillary in small fascicles, 3-5 together; pedicels 3-4 mm. long; calyx with 5 ovate imbricate sepals, silky-tomentose outside; corolla greenish-white, tubular, up to 2 cm. long and 5 mm. diam.; staminodes subulate, up to 2 mm. long, style up to 7 cm. long; fruits depressed-globose, 6-7 cm. diam., 6 cm. high, with 8 flat, elliptic seeds 2 cm. long and 1-4 cm. broad [leptosperma](#)

Breviea leptosperma (Baehni) Heine in Kew Bull. 14: 302 (1960).

APD: Synonym of Breviea sericea Aubrév. & Pellegr.

Pouteria leptosperma Baehni in Candollea 9: 388 (1942).

Breviea sericea (A. Chev.) Aubrév. & Pellegr. l.c. 793, fig. 1 (1935); Aubrév. Fl. For. C. Iv., ed. 1, 3: 108, t. 282; ed. 2, 3: 130, t. 297; Chev. in Rev. Bot. Appliq. 23: 284 (1943).

Chrysophyllum sericeum A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 296 (1917); Chev. Bot. 386; F.W.T.A., ed. 1, 2: 9; Hutch. & Dalz. in Kew Bull. 1937: 55; not of Salisb. (1796) and A. DC. (1844).

Chrysophyllum leptospermum (Baehni) Roberty in Bull. I.F.A.N. 15: 1417 (1953).

A tree up to 100 ft. high; stem up to 5 ft. girth; in transition forest between rain and deciduous forest.

Iv. C.: Zaranou to Bébou Chev. 22627! Acuabo Aubrév. 642! **Ghana:** Mprisu, Ashanti Vigne FH 2059! Ofin Headwaters F.R. (fr. Aug.) Andoh FH 4231! 4290!

16. AUBREGRINIA

Heine in Kew Bull. 14: 301 (1960). *APD acc*

Endotricha Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 81: 794 (1935), not Endotrichia Suringar (1870).

- 1** Leaves oblong, obtuse, 13-25 cm. long, 5-10 cm. broad, membranous, with about 7-9 pairs of lateral nerves; petioles 2-3 cm. long; flowers axillary, pedicels glabrous, about 12 mm. long; flowers 5-merous, unisexual (only female flowers known); calyx with 5 imbricate, ciliate lobes, glabrous outside, densely covered with long, silky hairs inside; corolla 6-7 mm. long, with 5 suborbiculate lobes, lobes 1.5 mm. long and 2 mm. broad; 5 staminodes opposite the lobes, fixed at base of the corolla, about 3.5 mm. long, 5 staminodes more or less abortive, alternate with the corolla-lobes and affixed in the axils of the lobes; disk glabrous at base, stiff-strigose at top; ovary 8-loculate; style about 5 mm. long, glabrous; fruit baccate, subglobose, depressed, 8-seeded, 8 cm. diam., 6.5 cm. long; seeds 5.5 cm. long, 3 cm. broad and 1.8 cm. thick, glabrous, dark-brown, with a long, deep-impressed hilum and woody testa [taiensis](#)

Aubregrinia taiensis (Aubrév. & Pellegr.) Heine l.c. (1960). *APD acc*

Endotricha taiensis Aubrév. & Pellegr. l.c. (1935); Aubrév. Fl. For. C. Iv., ed. 1, 3: 110 (as Entotricha), t. 283, fig. 1-3; ed. 2, 3: 132, t. 298; Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 104: 277 (1957).

A very large tree, up to 150 ft. high and 8-9 ft. girth with greenish flowers; fruits greenish-yellow.

Iv. C.: Taï Aubrév. 1212. Soubre Aubrév. 4776. **Ghana:** Kade Univ. College Farm, Oda Dist. (Jan.) Enti FH 6871!

[The genera 14-16 are closely allied with Chrysophyllum Linn. in a broad sense and further taxonomic studies might perhaps make it necessary to unite them with it.]

17. MALACANTHA

Pierre Not. bot. Sapot. 60 (1891); Engl. Monogr. Afr. 8: 47 (1904).

- 1** Leaves tomentose, becoming more or less glabrescent, slightly cuneate to rounded at base, obovate-elliptic, up to 23 cm. long, 6-12 cm. broad, with 15-20 pairs of very prominent lateral nerves; flowers sessile, clustered; calyx

light brown-rusty tomentose outside, lobes elliptic; corolla-tube 4 mm. long, lobes 3 mm. long, glabrous; ovary tomentose; fruits ellipsoid, apiculate, up to 2.5 cm. long, pubescent [alnifolia](#)

Malacantha alnifolia (Bak.) Pierre l.c. 61 (1891); Engl. l.c. 49; Chev. Bot. 387; F.W.T.A., ed. 1, 2: 12, partly; Aubrév. Fl. For. C. Iv., ed. 1, 3: 110; ed. 2, 3: 133; Fl. For. Soud.-Guin. 427.

APD: Synonym of Pouteria alnifolia (Baker) Roberty var. alnifolia

Chrysophyllum? alnifolium Bak. in F.T.A. 3: 499 (1877).

Pouteria alnifolia (Bak.) Roberty in Bull. I.F.A.N. 15: 1417 (1953).

Malacantha heudelotiana Pierre l.c. 60 (1891); Aubrév. Fl. For. C. Iv., ed. 2, 3: 134, t. 299.

Malacantha warneckeana Engl. l.c. 48 (1904).

Malacantha obtusa C. H. Wright in Kew Bull. 1908: 58.

Malacantha acutifolia A. Chev. Bot. 387, name only.

A shrub or small tree with scaly bark; flower-clusters dense in the axils of fallen leaves; in deciduous and gallery forests.

21. CHRYSOPHYLLUM

Linn.-F.T.A. 3: 498.

- 1 Leaves glabrous beneath, with very numerous, non-prominent, parallel lateral nerves; leaf-colour on drying becoming on both sides dark blackish-green or dark brownish-green (Sect. Donella (Pierre) Engl.): **2**
Leaves always with an indumentum beneath, but sometimes glabrescent; lateral nerves not very dense and numerous, always clearly prominent; leaves on drying seldom becoming dark-greenish colour on both sides (Sect. Gambeya (Pierre) Engl.): **4**
- 2 Trees: **3**
Climbing shrub; leaves like the preceding species, but broadly rounded at the base, shortly acuminate, 5-8 cm. long, 2.5-3.5 cm. broad; petiole up to 3 mm. long; flowers axillary; pedicels 2-3 mm. long; fruit about 4.5 cm. long and 3 cm. in diam., more or less beaked; seeds 2.5 cm. long, 1 cm. broad and 5-6 mm. diam. **3**.
[welwitschii](#)
- 3 Fruits up to 11 cm. long and 8.5 cm. diam.; leaves oblong, shortly cuneate or obtuse at base, abruptly and obtusely acuminate, 10-16 cm. long, 4-7 cm. broad; petioles 8-12 mm. long; flowers axillary, numerous; pedicels up to 4 mm. long, puberulous at first; calyx pubescent; fruits with a fleshy exocarp, well-marked 5-angled; seeds up to 5.5 cm. long, 3 cm. broad and up to 1.6 cm. diam. **1. pentagonocarpum**
Fruits up to 4.5 cm. long and 3 cm. diam.; leaves very similar to the preceding species, very shortly cuneate at base, abruptly and obtusely acuminate, 5-10 cm. long, 3-5 cm. broad; petiole up to 5 mm. long; flowers axillary, numerous; pedicels up to 5 mm. long, pubescent; fruit depressed-globose, 5-angled, with a fleshy exocarp; seeds up to 2.2 cm. long and 1.2 cm. broad **2. pruniiforme**
- 4 Leaves asymmetrical, irregularly rounded at base, rusty-tomentose or pilose beneath with rather long and conspicuous hairs **4. beguei**
Leaves symmetrical regular-cuneate at base: **5**
- 5 Fruits clearly beaked, 5-6 cm. long, 3-4 cm. diam.; leaves very sparsely and shortly rusty-pilose beneath, mainly along the nerves; oblong-elliptic, 14-18 cm. long, 4-6 cm. broad, with about 7-10 pairs of lateral nerves; petioles 6-8 mm. long, tomentose; flowers fascicled, axillary, sessile, 3-4 mm. long; calyx about 3 mm. long; sepals hirsute outside, inside glabrous; petals up to 3 mm. long, oblong-lanceolate; seeds 25-28 mm. long, 10-

- 13 mm. broad, black [5. azagueianum](#)
- Fruits not clearly beaked; leaves silky-tomentose beneath, but sometimes glabrescent: **6**
- 6** Leaves usually silvery-silky beneath, indumentum persistent or becoming glabrescent: **7**
- Leaves fulvous or golden beneath: **9**
- 7** Indumentum persistent, i.e. leaves still silvery beneath in adult state, elongate-obovate-elliptic, shortly acuminate, cuneate at base, 12-30 cm. long, 5-9 cm. broad, with 12-15 pairs of distant lateral nerves, finely appressed beneath; petiole 1-3 cm. long, hoary; flowers shortly pedicellate; calyx 3 mm. long, silky; fruit mostly depressed-globose, about 3 cm. diam [6. albidum](#)
- Indumentum not persistent, i.e. leaves at first silvery-silky beneath, becoming glabrescent in adult state: **8**
- 8** Leaves oblanceolate, apex rather elongated, obtusely acuminate, 8-16 cm. long, 2.5-5.5 cm. broad, shortly pubescent beneath, with 10-15 pairs of prominent lateral nerves; petiole 1-2 cm. long, pubescent; flowers subsessile; calyx-lobes broadly ovate, pubescent, 3-4 mm. long; corolla-lobes densely white-ciliate; fruit about 3 cm. diam., slightly 5-lobed [7. subnudum](#)
- Leaves elliptic-lanceolate, apex not elongated, sharply acuminate, 10-15 cm. long, 3-5.5 cm. broad, shortly silvery-pubescent beneath, with about 15 pairs of lateral nerves, petiole 1-1.5 cm. long, pubescent; flowers unknown; fruit 2-2.5 cm. diam., globose, not lobed [8. taiense](#)
- 9** Flowers in short racemes [9. giganteum](#)
- Flowers in fascicles: **10**
- 10** Leaves small, usually below 10 cm. long, and 4-5 cm. broad, broadly elliptic-obovate, mucronate-acuminate, with 12-14 pairs of lateral nerves, rusty-silky beneath; petiole 1 cm. long; flowers sessile, very small; calyx appressed-tomentose [10. prunifolium](#)
- Leaves large, usually well over 10 cm. long, lateral nerves about 15 pairs or more: **11**
- 11** Lateral nerves 15-20 pairs; leaves oblong-elliptic, obtuse or shortly pointed, 15-22 cm. long, 6-8 cm. broad, dark brown-reddish, rusty-tomentose beneath but hairs not appressed; petiole 2-3 cm. long, tomentellous; flowers clustered, sessile; calyx rusty-tomentose; fruits sessile, globose, 2-5 cm. diam., rusty-tomentose [11. perpulchrum](#)
- Lateral nerves 20-30 pairs; leaves elongate-obovate-elliptic, acuminate, 15-30 cm. long; indumentum always clearly appressed, tawny to rusty-brown: **12**
- 12** Mature crown leaves 7-15 cm. long, averaging about 12 cm., up to 3 cm. broad, primary lateral nerves 10-17 with loose reticulum of veins; fruits up to 3 cm. diam., usually with persistent ferruginous indumentum ... [12. gorungosanum](#)
- Mature crown leaves 13-25 cm. long, averaging about 20 cm., primary lateral nerves 15-30, with rather close reticulum of veins; fruits large, up to 6 cm. diam. [13. delevoyi](#)

1. *Chrysophyllum pentagonocarpum* Engl. & K. Krause in Engl. Bot. Jahrb. 49: 387, fig. 2 (1913).

APD: Synonym of Chrysophyllum ubangiense (De Wild.) D. J. Harris

Chrysophyllum letestuanum A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 269 (1917); Aubrév. Fl. For. C. Iv., ed. 1, 3: 122, t. 288, fig. 6-9; ed. 2, 3: 146, t. 303, fig. 6-11; Chev. in Rev. Bot. Appliq. 23: 137 (1943).

Donella letestuana (A. Chev.) A. Chev. ex Pellegr. in Mém. Soc. Linn. Normandie, n. sér. 1: 15 (1928).

Chrysophyllum belemba De Wild. Pl. Bequaert. 4: 122 (1926).

Chrysophyllum claessensii De Wild. l.c. 125 (1926).

A large tree, with small fascicled flowers and globose lemon- or orange-like, yellow fruits with 5 seeds; **in dense rain forest.**

Iv. C.: Man Aubrév. 1165. Oumé Aubrév. 4170. **Ghana:** Kwahu Prasu (Feb.) Vigne FH 1595! **S. Nig.:** Ukon F.R., Ogoja (fr. May) Jones & Onochie FHI 18886!

Also in **Cameroun**, **Gabon** and **Congo**.

2. *Chrysophyllum pruniforme* Pierre ex Engl. Monogr. Afr. 8: 42 (1904); Aubrév. Fl. For. C. Iv., ed. 1, 3: 122; ed. 2, 3: 146, t. 303, fig. 2-4; Chev. in Rev. Bot. Appliq. 23: 138 (1943). *APD acc*

Chrysophyllum dubardii Pierre in Agr. prat. pays chauds, Bull. Jard. col. 5e année, n. 28: 88 (1905).

Chrysophyllum gracile A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 268 (1917); Chev. Bot. 386.

Chrysophyllum mortehanii De Wild. Pl. Bequaert. 4: 137 (1926).

A tree up to about 100 ft. high, with small flowers in axillary clusters, like the preceding species, but with much smaller fruits.

S. L.: Deighton 3919! Unwin & Smythe 30! Mt. Aureol, Freetown (June, Dec.) Deighton 2718! Dalz. 958! Moselelo (fr. Nov.) Deighton 2388! Falaba Aylmer 34! Gola Forest (May, fr. June) Small 654! 734! Also in **Cameroun**, **Gabon**, **Rio Muni** and **Congo**.

8. **Chrysophyllum taiense** *Aubrév. & Pellegr.* in Bull. Soc. Bot. Fr. 104: 279 (1957); Aubrév. Fl. For. C. Iv., ed. 2, 3: 144, t. 303, fig. 10, 11. *APD acc*

A medium sized tree, very similar to No. 7 and perhaps only a local race of it.

Iv. C.: Taï Aubrév. 4090bis.

(According to Aubréville widespread in the forests of Taï, Upper Niouniourou, Soubré, etc.)

9. **Chrysophyllum giganteum** *A. Chev.* in Mém. Soc. Bot. Fr. 2, 8: 267 (1917); Bot. 386; Aubrév. Fl. For. C. Iv., ed. 1, 3: 120, t. 287, fig. 103; ed. 2, 3: 142, t. 302, fig. 1-3; Hutch. & Dalz. in Kew Bull. 1937: 57. *APD acc*

Tree up to 70 ft. high, sharply buttressed, bark with long narrow fissures, slash pink; fruit dull orange.

S. L.: Crichton 128! **Iv. C.:** Akabélé, Krou (fr. Dec.) Chev. 22512! **Ghana:** Nfaense (Feb.) Chipp 115! Benchema (Apr.) Foggie FH 4457! Juaso to Ogbogu Road (Feb.) Akpabla 277! Antubia, W.P. (Apr.) Cansdale 3977! **S. Nig.:** Shasha F.R., Ife Dist. (Mar.) Cooper FHI 43823!

10. **Chrysophyllum prunifolium** *Bak.* in F.T.A. 3: 499 (1877). *APD acc*

A tree 30-60 ft. high, rusty-silky on the branchlets and under the surface of the leaves.

S. Nig.: Kennedy (fide Dalz. Appendix, no specimen seen). **F. Po:** (Mar.) Mann 2344!

11. **Chrysophyllum perpulchrum** *Mildbr. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 10 (1931), and in Kew Bull. 1937: 57; Aubrév. Fl. For. C. Iv., ed. 1, 3: 118, t. 286, fig. 6-8; ed. 2, 3: 140, t. 301, fig. 6-8. *APD acc*

Chrysophyllum africanum var. **orientale** *Engl.* Bot. Jahrb. 48: 390 (1913).

Chrysophyllum africanum var. **multinervatum** *De Wild.* Pl. Bequaert. 4: 121 (1926).

A tree up to 100 ft. high, with subcoriaceous leaves red-brown velvety beneath.

Lib.: Ganta (fr. Feb., Mar.) Baldwin 10996! Harley 326! 807! 1391! **Iv. C.:** Oroumba-Boca de Wilde 612! Sassandra (fl. & fr. Mar.) Leeuwenberg 3115! **Ghana:** S. Scarp F.R. Beveridge FH 3280! Widespread in tropical Africa.

Chrysophyllum cainito Linn.

Star Apple

A native of C. America, is often cultivated in our area as an ornamental tree.

Chrysophyllum akuase A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 267 (1917), and Chev. Bot. 385 as "akuasi," excl. Chev. 22669; Aubrév. Fl. For. C. Iv., ed. 1, 3: 124; ed. 2, 3: 146 (as "C.sp."); Chev. in Rev. Bot. Appliq. 23: 139, fig. 1 (1943) (as "akuasi"). Perhaps conspecific with No. 1.

Iv. C.: Yakassé to Adzopé Chev. 22663. Aubrév. 647. No material seen.

[Note: F.W.T.A., ed. 1, 2: 10 states that this is *Uvaria anonoides* Bak. f.; but this is only true in respect of Chev. 22669, vide Chev. l.c. 141 (1943).]

22. PACHYSTELA

Baill. ex Engl. Monogr. Afr. 8: 35 (1904); Baill. in Bull. Soc. Linn. Paris 2: 946 (1891), provisional name.

- 1 Leaves 15-35 cm. long, 6-16 cm. broad, very thick-coriaceous, on drying upperside mostly light olive-green, rusty-brown beneath, narrowed to a broadish slightly cordate base, abruptly acuminate, elongate-obovate, covered at first with a thin felt of hairs beneath, becoming glabrous, with about 16 pairs of prominent lateral nerves; stipules subulate-filiform, up to 2 cm. long; flowers pedicellate [1. msolo](#)
Leaves up to 22 cm. long and 7 cm. broad, thick-coriaceous, on drying becoming greyish, glabrous beneath, narrowly cuneate below the middle and acute or slightly cordate at base, with about 10 pairs of lateral nerves; stipules subulate, up to 1.5 cm. long; flowers subsessile: **2**
- 2 Leaves acute at base, narrowly acuminate at apex, lanceolate; petiole 5-7 mm. long [2. brevipes](#)
Leaves slightly cordate or rounded at base, shortly acuminate at apex, obovate; petiole 3-4 mm. long [3. pobeguiniiana](#)

1. *Pachystela msolo* (Engl.) Engl. Monogr. Afr. 8: 38 (1904); Baehni in Candollea 9: 428 (1942).

APD: Synonym of Synsepalum msolo (Engl.) T. D. Penn.

Chrysophyllum msolo Engl. Pflanzenw. Ost-Afr. C: 306, t. 37 (1895).

Pachystela robusta Engl. Bot. Jahrb. 49: 386 (1913); Baehni l.c. 428.

Pachystela argentea A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 264 (1917); Bot. 391; Rev. Bot. Appliq. 23: 289 (1943); F.W.T.A., ed. 1, 2: 10; Hutch. & Dalz. in Kew Bull. 1937: 58; Baehni l.c. 427.

Pachystela bequaertii De Wild. Pl. Bequaert. 4: 106 (1926); Baehni l.c. 427.

Pouteria msolo (Engl.) Meeuse in Bothalia 7: 341 (1960).

Pachystela zenkeri Meeuse l.c. (1960).

A tall tree, up to 150 ft. high; flowers in the axils of fallen leaves, but sometimes also occurring on the stem.

Ghana: Kibi (Feb.) Vigne FH 4323! Jumpapu (Sept.) Vigne FH 4251! **Dah.:** Bokoutou F.R. Chev. 22865! **[Br.] Cam.:** Bamuko F.R., Kumba Dist. Keay FHI 37452! Mamfe Lobe Babute Cam. 7/37! Bali-Ngemba F.R. (fr. May) Ujor FHI 30348!

Also in **Cameroun**, **Congo** and in **tropical E. Africa**.

2. *Pachystela brevipes* (Bak.) Baill. ex Engl. Monogr. Afr. 8: 37 (1904); Baill. l.c. 947 (1891), provvis. name; F.W.T.A., ed. 1, 2: 10, partly; Aubrév. Fl. For. C. Iv. 3: 124; Fl. For. Soud.-Guin. 425, 427; Chev. in Rev. Bot. Appliq. 23: 286 (1943).

APD: Synonym of Synsepalum brevipes (Baker) T. D. Penn.

Sideroxylon brevipes Bak. in F.T.A. 3: 502 (1877).

Sersalisia brevipes (Bak.) Baill. l.c. (1891).

Also in **Ubangi-Shari** and in **Angola**.

MYRSINACEAE

Trees, shrubs or rarely subherbaceous. Leaves alternate, rarely subopposite, simple, punctate or with schizogenous lines. Flowers small, usually hermaphrodite, in clusters, racemes or panicles. Sepals free or connate, often gland-dotted, valvate, imbricate or contorted, persistent. Corolla gamopetalous or rarely petals free; lobes contorted, imbricate or valvate. Stamens the same number as and opposite the petals, the filaments more or less adnate to the corolla; anthers introrse, opening by slits or apical pores. Ovary superior to half-inferior, 1-celled; style simple; ovules numerous, on a free central placenta. Fruit a berry or drupe, rarely irregularly dehiscent. Seeds with smooth or rarely ruminate endosperm, with the embryo sometimes placed transversely.

Mainly in the tropics.

The woody habit and the stamens the same number as and opposite to the petals are characteristic; leaves usually gland-dotted.

- | | | |
|---|---|----------------------|
| 1 | Calyx free from the ovary: | 2 |
| | Calyx-tube adnate to the ovary; petals united into a short tube | 4. <i>Maesa</i> |
| 2 | Flowers in axillary fascicles or below the leaves; petals united at the base into a short tube: | 3 |
| | Flowers racemose; petals free | 3. <i>Embelia</i> |
| 3 | Trees | 1. <i>Rapanea</i> |
| | Herbs or small shrubs | 2. <i>Afrardisia</i> |

Ardisia humilis Vahl

Afrosersalisia solanacea Roxb.

A native species of India, is reported from Victoria, [Br.] Cameroons.

1. RAPANEA

Aubl. Hist. Pl. Guian. Fr. 1: 121, t. 46 (1775); Mez in Engl. Pflanzenr. 4, 236, Myrsinac.: 342 (1902).

Myrsine of F.T.A. 3: 493, not of Linn.

- 1 Leaves obovate-oblongate, obtuse at apex, gradually cuneate at the base, 8-12 cm. long, 3-4.5 cm. broad, glabrous, with numerous conspicuous lateral nerves; flowers in axillary clusters or below the leaves; calyx 2 mm. long, lobes small and rounded, minutely ciliate; corolla-tube very short, lobes oblong, 3 mm. long, with black longitudinal markings; fruits globose, up to 5 mm. diam., tipped by the short persistent style, longitudinally striate; veins conspicuous when dry *neurophylla*

Rapanea neurophylla (Gilg) Mez l.c. 374 (1902)

APD: Synonym of Rapanea melanophloeos (L.) Mez

Myrsine neurophylla Gilg in Engl. Bot. Jahrb. 19, Beibl. 47: 45 (1894).

M. melanophlaeos of F.T.A. 3: 494 (excl. distrib.), not of R. Br.

A tree or tall shrub 15-50 ft. high with pinkish petioles and leaf-veins inconspicuous when fresh; flowers white; fruits bright bluish-purple; **in moist upland forest.**

[Br.] Cam.: Cam. Mt., 4,000-7,600 ft. (fl. Dec., fr. Jan.-Mar.) Mann 1200! 2175! Maitland 995! 1352! Brenan 9368! Bafut-Ngemba F.R., 7,000 ft. (fl. Apr., fr. Feb.) Ejiofor FHI 29384! Hepper 2854! Also in **Uganda**.

2. AFRARDISIA

Mez in Engl. Pflanzenr. 4, 236, Myrsinac.: 183 (1902); de Wit in Blumea, Suppl. 4: 243 (1958).

APD: Synonym of Ardisia Sw.

- 1 Leaf-margin distinctly and irregularly serrate, entire towards base, 10-15(-18) cm. long, 4-5(-8) cm. broad; petioles up to 1 cm. long; pedicels 6-14 mm. long [3. cymosa](#)
 Leaf-margin entire or shallowly denticulate or crenulate; **2**
- 2 Lamina at least 3 times as long as broad: **3**
 Lamina 11/2-21/2 times as long as broad: **5**
- 3 Leaves elliptic or oblong-elliptic, 15-20(-26) cm. long, 5-8(-12) cm. broad; petioles 10-17 mm. long: **4**
 Leaves lanceolate, long-cuneate at each end, (8-)10-14(-23) cm. long, 2-3(-5) cm. broad; petioles slender, 8-13 mm. long; inflorescences axillary; pedicels 2-3 mm. long [7. zenkeri](#)
- 4 Leaves with 12-16 lateral nerves, reticulations (when dry) lax and delicate; margins more or less entire; petioles 10-17 mm. long; pedicels 6-9 mm. long; style punctate [1. buesgenii](#)
 Leaves with at least 20 lateral nerves, densely and conspicuously reticulate (when dry), margin usually shallowly wavy; pedicels 11-12 mm. long; style not punctate [2. conraui](#)
- 5 Petals and sepals mucronate; leaves elliptic, 8-14 cm. long, 3-5-5-5 cm. broad; petioles 1-1-5 cm. long; inflorescences nodding, with 10-12 flowers, equalling petioles [4. oligantha](#)
 Petals and sepals not mucronate, acute or obtuse: **6**
- 6 Peduncle absent or nearly so; pedicels 3-5 mm. long; leaves oblong, obovate-elliptic or broadly elliptic, 8-12 cm. long, 4-5-5 cm. broad; petioles 10-13 mm. long; undershrub [5. schlechteri](#)
 Peduncle up to 1 cm. long; pedicels 5-8 mm. long; leaves ovate-elliptic or oblong, 13-18 cm. long, 4-5-7(-8) cm. broad; petioles 4-6(-15) mm. long; shrub or tree [6. staudtii](#)

1. *Afrardisia buesgenii* Gilg & Schellenb. in Engl. Bot. Jahrb. 48: 516 (1912); de Wit in Blumea, Suppl. 4: 247, fig. 3 (1958).

APD: Synonym of Ardisia buesgenii (Gilg & G. Schellenb.) Taton

A shrub or small tree, 6 ft. or more high, with horizontal more or less whorled branches; flowers pale pinkish brown.

S. Nig.: R. Ata, below Mt. Koloishe, 4,000 ft., Obudu Div. (Dec.) Keay & Savory FHI 25057! Sonkwala, 4,000 ft., Obudu Div. (Jan.) Carpenter 731!

Also in **Cameroun**.

2. *Afrardisia conraui* (Gilg) Mez in Engl. Pflanzenr. 4, 236, Myrsinac.: 184 (1902); de Wit l.c. 249, fig. 5.

APD: Synonym of Ardisia staudtii Gilg

APD: Synonym of Ardisia conraui Gilg

Ardisia conraui Gilg in Engl. Bot. Jahrb. 30: 98 (1901).
Afrardisia ledermannii Gilg & Schellenb. (1912).
Afrardisia rosacea Gilg & Schellenb. (1912).

A shrub or small tree; flowers and fruits red.

[Br.] Cam.: Mayo Ndaga, Bello, Gashaka Dist. (fr. Jan.) Latilo & Daramola FHI 28988!

Also in Cameroun.

3. *Afrardisia cymosa* Mez l.c. 186 (1902); Exell Cat. S. Tomé 233; de Wit l.c. 252, fig. 6-7.

APD: *Synonym of Ardisia kivuensis Taton*

APD: *Synonym of Ardisia staudtii Gilg*

Ardisia cymosa Bak. in F.T.A. 3: 495 (1877), not of Blume (1826).
Tinus cymosa (Bak.) O. Ktze. (1891).
Afrardisia dentata Gilg & Schellenb. (1912).

Erect shrub or small tree, flowers and fruits red; in upland forest.

[Br.] Cam.: Bamenda Dist.: Bamenda (Apr.) Ujor FHI 30029! Bafut-Ngemba F.R. (Mar.) Onochie FHI 34869! Hepper 2118! Bali (fr. May) Ujor FHI 30372! Kishong (Jan.) Keay & Russell FHI 28442! Lakom (Apr.) Maitland 1408!

Also in S. Tomé, Congo and Uganda.

4. *Afrardisia oligantha* Gilg & Schellenb. in Engl. Bot. Jahrb. 48: 517 (1912); de Wit l.c. 256.

APD: *Synonym of Ardisia oligantha* (Gilg & G. Schellenb.) Taton

Probably a shrub.

[Br.] Cam.: Cam. Mt. Weberbauer 48.

Type specimen destroyed.

5. *Afrardisia schlechteri* (Gilg) Mez l.c. 185 (1902); de Wit l.c. 259.

APD: *Synonym of Ardisia schlechteri Gilg*

Ardisia schlechteri Gilg in Engl. Bot. Jahrb. 30: 97 (1901).

A subherbaceous shrublet about 1 ft. high, with fibrous rhizomatous stems; inflorescences very short, 3-6-flowered.

[Br.] Cam.: Bibundi (Apr.) Schlechter 12417. Type specimen destroyed.

[Olorunfemi FHI 30692 (N. Korup F.R., Kumba) may also belong to this species.]

6. *Afrardisia staudtii* (Gilg) Mez l.c. 187 (1902); de Wit l.c. fig. 13.

APD: *Synonym of Ardisia staudtii Gilg*

Ardisia staudtii Gilg l.c. 98 (1901).
Afrardisia brunneo-purpurea Gilg l.c. (1901).
Afrardisia haemantha Gilg l.c. 99 (1901).
Afrardisia brunneo-purpurea (Gilg) Mez l.c. 186 (1902).
Afrardisia haemantha (Gilg) Mez l.c. (1902).

A shrub 1-6 ft. tall, with pink petioles; flowers in small clusters along the branches, purple or reddish; fruits bright red; in forest.

N. Nig.: Dogon Kurmi, Sanga F.R., Jemaa Div. (Aug.) Killick 6! S. Nig.: Okomu F.R., Benin (fl. & fr. Jan.) Brenan 8894! Boshi-Okwangwo F.R., Obudu Dist. (May) Latilo FHI 30954!

Also in Cameroun and Congo.

7. *Afrardisia zenkeri* (Gilg) Mez l.c. 186 (1902); de Wit l.c. 262, fig. 14.

APD: Synonym of Ardisia zenkeri Gilg

APD: Synonym of Ardisia staudtii Gilg

APD: Synonym of Ardisia pierreana Taton

Ardisia zenkeri Gilg in Engl. Bot. Jahrb. 30: 100 (1901).

Afrardisia hylophila Gilg & Schellenb. (1912).

A simple shrub 1-3 ft. high; fruits reddish.

S. Nig.: Sapoba F.R., Benin (fr. Feb., Aug.) Olorunfemi FHI 34174! Ujor FHI 32990!

Also in **Cameroun** and **Gabon**.

3. EMBELIA

Burm.-F.T.A. 3: 496; Mez in Engl. Pflanzenr. 4, 236, Myrsinac.: 295 (1902). Nom. cons.

- 1 Inflorescences on leafless part of previous year's branchlets; leaves glabrous:2
 Inflorescences arising from leaf-axils of current year's growth:4
- 2 Leaves (when dry) with numerous prominent very slender lateral nerves; coriaceous when fresh:3
 Leaves (when dry) with few impressed lateral nerves, veins very obscure, lamina obovate, broadly rounded at apex, cuneate at base, 5-8 cm. long, 2.5-4 cm. broad, with numerous black gland-dots; racemes 2-3 cm. long, few, flowers about 4 mm. diam. [3. guineensis](#)
- 3 Upland shrub; veins not markedly reticulate; leaves elliptic to obovate-elliptic, obtuse at each end, 5-9 cm. long, 2-4 cm. broad, black gland-dots often obscure except towards apex; racemes 2.5-5 cm. long, sometimes numerous, flowers about 5 mm. diam. [1. schimperi](#)
 Lowland shrub; veins prominently reticulate; leaves obovate, rounded at apex, cuneate at base, about 5 cm. long and 3 cm. broad, with gland-dots beneath; racemes 2-3 cm. long, few [2. sp. A.](#)
- 4 Racemes 1-1.5 cm. long, subumbellate with flowers about 3 mm. diam. clustered towards apex, slender; leaves elliptic 5-6 cm. long, 2.5-3 cm. broad, margin distinctly dentate, glabrous [4. sp. nr. welwitschii](#)
 Racemes 2-3 cm. long, not subumbellate; leaves entire, more or less pubescent beneath:5
- 5 Leaves without visible black dots, obovate-oblong to obovate-elliptic, obtuse or very shortly apiculate at apex, cuneate at base, 6-13 cm. long, 3.5-7 cm. broad, midrib irregularly pubescent or minutely so; flowers 4 mm. diam. in loose axillary racemes; pedicels 4-6 mm. long in fruit [5. rowlandii](#)
 Leaves with conspicuous black gland-dots:6
- 6 Midrib rather densely puberulous beneath, lateral nerves about 15 pairs, glabrous and raised on both surfaces, lamina obovate-elliptic, 8-9 cm. long, 4-5 cm. broad [6. djalonensis](#)
 Midrib, the 6-8 pairs of lateral nerves and young branchlets densely ferruginous-puberulous; leaves obovate to obovate-elliptic, 6-9 cm. long, 3.5-6 cm. broad [7. nilotica](#)

1. **Embelia schimperi** *Vatke* in Linnaea 40: 206 (1876); Mez in Engl. Pflanzenr. 4, 236: 329; Brenan in Mem. N.Y. Bot. Gard. 8: 498 (1954). *APD acc*

Embelia abyssinica *Bak.* in F.T.A. 3: 497 (1877).

Straggling shrub or climber with smooth leathery leaves tufted towards ends of the branches; flowers whitish; fruits red; **in upland thickets**.

[Br.] Cam.: Bafut-Ngemba F.R., 6,200-7,200 ft., Bamenda (fl. Feb., Apr., fr. Jan.) Ujor FHI 30049! Keay & Lightbody FHI 28368! Hepper 2133! Bum, 4,000 ft., Bamenda Dist. (fr. June) Maitland 1609!

Widespread in the mountains of tropical Africa.

2. *Embelia* sp. A. *APD acc*

Embelia guineensis of F.W.T.A., ed. 1, 2: 16, partly (Thomas 9111), not of Bak.

Climbing shrub; " white berries with black flecks " (Harley 1201).

S. L.: Gbanbama (fr. Mar.) Thomas 9111! **Lib.:** Ganta (fr. May) Harley s.n.! 1201! **S. Nig.:** Onitsha (Feb.) Jones FHI 4506!

[E. tessmannii of Aké Assi, Contrib. 1: 115 (Ivory Coast; Yapo Aké Assi IA 4911, Mt. Tonkouï Aké Assi IA 5474) may also belong here.]

3. *Embelia guineensis* *Bak.* in F.T.A. 3: 496 (1877); Chev. Bot. 385.

APD: *Synonym of Embelia schimperi Vatke*

Embelia gilgii *Mez* l.c. 330 (1902).

A climbing shrub with short rather crowded racemes on the older parts of the branchlets; flowers white.

Guin.: R. Mafin, Dalaba (Apr.) Caille in Hb. Chev. 18132. **S. L.:** Bagroo R. (Apr.) Mann 861! Dodo (Apr.) Deighton 3922! near Berria, Palaba (Mar.) Sc. Elliot 5229! **iv. [It is possible that the specimens I have not seen may belong to sp. A. above-F. N. H.].

4. *Embelia* sp. nr. *welwitschii* (*Hiern*) *K. Schum.* in Just Bot. Jahresb. 26: 390 (1900); Gilg in Engl. Bot. Jahrb. 30: 96 (1901); Mez l.c. 317. *APD acc*

Pattara welwitschii *Hiern* (1898).

A climbing shrub, in upland forest undergrowth.

[**Br.**] **Cam.:** Cam. Mt., Buea to Musaka Camp (May) Maitland 692!

5. *Embelia rowlandii* *Gilg* in Engl. Bot. Jahrb. 30: 96 (1901); Mez l.c. 317. *APD acc*

Embelia dahomensis *A. Chev.* Bot. 385, name only.

Climbing shrub, the older branches with grey bark, the younger ones with fine brown indumentum and pale lenticels; flowers creamy-yellow; besides streams in savanna.

Port. G.: Catio (fl. July, fr. Aug.) Esp. Santo 2143! 2170! **Dah.:** Bassila to Péssésoulou (May) Chev. 23825. **N. Nig.:** Anara F.R., Zaria Prov. (May) Keay FHI 22868! FHI 25954! **S. Nig.:** Lagos interior Rowland! Enyinawsa, Epe Dist. (fr. Jan.) Onochie FHI 35259!

6. *Embelia djalonensis* *A. Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 16 (1931); Kew Bull. 1937: 60; Chev. Bot. 384, name only. *APD acc*

Embelia guineensis of Mez l.c. 331, not of Bak.

A climber in woods, the leaves with pubescent midrib and numerous lateral nerves.

Guin.: Kollangui (Mar.) Chev. 13637! Dantilia (fr. Mar.) Sc. Elliot 5266! **iv. C.:** Boundiali Aké Assi IA 5510.

7. *Embelia nilotica* *Oliv.* in Trans. Linn. Soc. 29: 105, t. 71 (1875); F.T.A. 3: 496 (1877); Mez l.c. 318. *APD acc*

Climbing shrub about 20 ft. high; flowers cream, fragrant; beside streams in savanna.

N. Nig.: Anara F.R., Zaria Prov. (May) Keay FHI 22894!

Also in **Uganda**.

4. MAESA

Forsk.-F.T.A. 3: 491; Mez in Engl. Pflanzenr. 4, 236, Myrsinac.: 15 (1902).

- 1 Leaves more or less entire, subcordate to rounded at base, acuminate at apex, broadly ovate, 11-17 cm. long, 7-12 cm. broad (much smaller near the inflorescences), glabrous; inflorescences lax and spreading panicles up to 25 cm. long [1. kamerunensis](#)
- Leaves serrate to crenate, cuneate to rounded at base, ovate-elliptic to lanceolate, 8-14 cm. long, 3-7 cm. broad, glabrous or softly pubescent beneath: **2**
- 2 Calyx glabrous, 2 mm. long; corolla little longer than calyx; inflorescences about 11 cm. long, with few branches about 2 cm. long, glabrous; flowers laxly arranged on pedicels 2 mm. long [2. nuda](#)

Calyx ciliate, 1 mm. long; corolla longer than calyx; inflorescences profusely branched, 5-19 cm. long; flowers usually very numerous and subsessile [3. lanceolata](#)

1. **Maesa kamerunensis** Mez in Engl. Pflanzenr. 4, 236: 27 (1902).

APD: Synonym of Maesa lanceolata var. rufescens (A. DC.) Taton

Maesa cordifolia Bak. in F.T.A. 3: 492 (1877), not of Miq. (1859).

Maesa lanceolata of Exell Suppl. Cat. S. Tomé, 31 (1956), not of Forsk.

A shrub 15-20 ft. high, with large leathery leaves; flowers white; [in upland forest](#).

[Br.] Cam.: Cam. Mt., 2,500-3,100 ft. (fl. & fr. Dec., Mar., Apr.) Mann 1198! Maitland 1077! Hutch. & Metcalfe 91! Brenan 9502! above L. Oku, 7,800 ft. (Jan.) Keay & Lightbody FHI 28474! **F. Po:** Musola (Jan.) Guinea 1236! 1250! Moka, 4,000-5,000 ft. Exell 791!

Also in [Cameroun](#) and **S. Tomé**.

2. **Maesa nuda** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 16 (1931); Kew Bull. 1937: 60. *APD acc*

Apparently a shrub, quite glabrous and with slender inflorescences.

Guin.: Farmar 327!

3. **Maesa lanceolata** Forsk. Fl. Aegypt.-Arab. CVI & 66 (1775); F.T.A. 3: 492; Mez l.c. 26; Chev. Bot. 384. *APD acc*

APD: Synonym of Maesa vestita Jacq.-Fél.

APD: Synonym of Maesa lanceolata var. rufescens (A. DC.) Taton

Maesa djalonis A. Chev. Bot. 384, name only.

A shrub or small tree up to 20 ft. high; flowers greenish white; [beside upland streams and in grassland](#).

Guin.: Longuey Caille in Hb. Chev. 14831! Diaguissa to Boulivel Chev. 18611; 18678. Labé Chev. 12238. Ditinn Chev. 13439. **iv. C.:** Mt. Do, Upper Cavally (May) Chev. 21432! Mt. Gbon Chev. 21410. Mt. Tonkoui (fr. Aug.) Schnell 6370! Boughey GC 18333! **N. Nig.:** Rafin Bauna North F.R., 4,300 ft., Jos (fl. & fr. Oct.) Hepper 1178! **S. Nig.:** Mt. Koloishe, 5,000 ft., Obudu Div. (Dec.) Widespread in tropical Africa, [Arabia](#) and Madagascar, and in S. Africa.

[Although Mann 578 and Guinea 1954 have serrated leaves, cuneate at the base, the inflorescences are more like those of *M. kamerunensis*].

STYRACACEAE

Trees and shrubs, often with stellate or lepidote indumentum. Leaves alternate, stipules absent. Flowers actinomorphic, hermaphrodite, racemose, axillary or terminal. Calyx tubular, more or less adnate to the ovary; lobes or teeth valvate or open. Corolla gamopetalous or rarely of free petals, lobes 4-7, valvate or imbricate. Stamens equal and alternate with or double the number of the corolla-lobes, adnate to the corolla-tube or rarely free; anthers 2-celled, opening lengthwise. Ovary superior to inferior, 1-5-celled; style slender, 3-5-lobed; ovules 1 to many in each cell, axile, anatropous. Fruit drupaceous or capsular, calyx persistent. Seed with copious endosperm and straight or slightly curved embryo.

A. Chevalier (in Rev. Bot. Appliq. 27: 26-29, 402 (1947)) transferred Afrostyrax to the family Huaceae, but the genus differs widely from Hua and it should be retained in Styracaceae as originally placed by its authors-(Hutchinson, Fam. Fl. Pl., ed. 2, 1: 263 (1959)).

Perkins & Gilg in Engl. Bot. Jahrb. 43: 216 (1909). *APD acc*

Small trees; leaves alternate, usually long-acuminate. Flowers axillary, small; calyx closed in bud; petals 5, free; stamens 10; anthers 4-celled; ovary 1-celled, superior. Fruit dry, indehiscent.

- 1 Leaves beneath glabrous or at most sparsely hairy on the midrib, lamina elliptic to ovate, rounded at base, long-caudate-acuminate at apex, 10-16 cm. long, 4.5-7 cm. broad; petiole 6-10 mm. long, densely brown-tomentellous; flowers axillary usually paired, pedicels 5-8 mm. long [1. *kamerunensis*](#)
- Leaves beneath densely pale-brown-lepidote, lamina oblong-elliptic to ovate-elliptic, rounded at base, acuminate and often long-acuminate at apex, 9-18 cm. long, 3-6 cm. broad; petiole 6-10 mm. long, brown-lepidote; flowers in axillary clusters, pedicels 8-12 mm. long [2. *lepidophyllus*](#)

1. *Afrostryrax kamerunensis* *Perkins & Gilg* in Engl. Bot. Jahrb. 43: 217, with fig. (1909). *APD acc*

Medium-sized tree; flowers pale yellow; in forest.

[Br.] Cam.: Likomba, Cam. Mt. Mildbr. 10888!

Also in [Cameroun](#).

2. *Afrostryrax lepidophyllus* *Mildbr.* in Engl. Bot. Jahrb. 49: 556 (1913). *APD acc*

Tree 50-70 ft. high, straight bole, slash cream coloured, smelling of onions.

[Ghana](#): Benso, Tarkwa Dist. (fl. Sept., fr. Nov.) Quao FH. 5611! 5673! Andoh FH 5818!

Also in [Cameroun](#).

LOGANIACEAE

Mostly trees and shrubs; stem usually woody. Leaves opposite, simple; stipules present or absent. Flowers hermaphrodite, usually actinomorphic, paniculate, corymbose or in globose heads. Calyx-lobes valvate or imbricate. Corolla tubular, lobes 4-16, contorted, imbricate or valvate. Stamens epipetalous, as many as the corolla-lobes and alternate with them, or rarely reduced to 1; anthers 2-celled, opening lengthwise. Ovary superior, 2-4-celled; style single; ovules several to numerous, rarely solitary, axile or ascending from the base of each cell. Fruit a capsule, berry or drupe. Seeds sometimes winged; embryo straight, in the middle of fleshy or cartilaginous endosperm.

Tropics and subtropics generally.

Resembling Rubiaceae, but usually exstipulate and ovary always superior.

- 1 Sepals almost completely connate; calyx-tube about as long as the corolla-tube or longer; capsule small, about as long as the calyx [6. *Nuxia*](#)
- Sepals free or connate up to two-thirds of their length; calyx-tube if present shorter than the corolla-tube; fruit conspicuously larger than the calyx: [2](#)
- 2 Annual herbs with one-sided (cincinnous) apical spikes [4. *Spigelia*](#)
- Trees, shrubs or climbers: [3](#)
- 3 Inflorescence with 2 large approximately orbicular bracts covering the sepals (*M. hirsuta*) [3. *Mostuea*](#)
- Inflorescence with small bracts never covering the sepals: [4](#)
- 4 One sepal much larger than the others; fruit an oblong capsule, about 3-4 times as long as wide [5. *Usteria*](#)
- Sepals equal or unequal, the largest up to twice as long as the others; fruit up to twice as long as wide: [5](#)
- 5 Sepals 4, decussate, orbicular, rounded; corolla-lobes 8-16, contorted; fruit a berry [1. *Anthocleista*](#)
- Sepals 5 or 4, mostly imbricate; corolla-lobes 5 or 4, valvate or imbricate: [6](#)
- 6 Fruit a berry, globose or nearly so; corolla-lobes valvate; shrubs, trees, or lianes with tendrils; leaves mostly coriaceous and distinctly 3- or 5-nerved [2. *Strychnos*](#)
- Fruit an obcordate or bilobed capsule; corolla-lobes imbricate; shrubs; leaves mostly thin and never 3- or 5-nerved [3. *Mostuea*](#)

Cynoctonum mitreola (*Linn.*) *Britt.*

This weed has been recorded from [Ghana](#) (Gambaga Scarp (fr. Nov. 1957) Morton A2728).

It is native in America and has been widely introduced into Asia (see Heine in Kew Bull. 17: 171 (1963)).

1. ANTHOCLEISTA

Afzel. ex R. Br. -F.T.A. 4, 1: 537; E. A. Bruce in Kew Bull. 10: 45 (1955); Leeuwenberg in Acta Bot. Neerl. 10: 1-53 (1961). *APD acc*

- 1 Secondary veins conspicuous; leaves crowded at the apices of the branchlets; candelabrum-shaped trees or few-stemmed shrubs:2
 Secondary veins inconspicuous; leaves not crowded at the apices of the branchlets; climbers, shrubs, or sometimes (?) trees (see also No. 4):8
- 2 Branches armed with short usually paired spines; flower buds uniformly rounded or subtruncate at the apex;3
 Branches unarmed or if with incipient or occasional spines, then flower buds not rounded but tapering at the apex:5
- 3 Branches conspicuously spiny; spines divergent, confluent at the base, paired or sometimes 3-4 together; leaves conspicuously discolorous, dark green above, more or less glaucous beneath, usually sessile, (6-)15-45(-150) cm. long, (4-)6-20(-45) cm. broad, margin usually revolute and undulate; mature corolla in bud usually less than 5 times as long as the calyx:4
 Branches not conspicuously spiny; spines parallel or slightly divergent, confluent for at least half their length, paired; leaves not conspicuously discolorous, petiolate, margin not revolute nor undulate; mature corolla in bud 5.5-6 times as long as the calyx (see also below)[3. djalensis](#)
- 4 Corolla-tube 2-3 times as long as the lobes and 2.5-3.5 times as long as the calyx; fruit when dry with 4 more or less irregular dents or irregularly shrivelled; leaves often drying black[1. nobilis](#)
 Corolla-tube 0.9-1.5 times as long as the lobes and 1.25-2 times as long as the calyx; fruits drying smooth, neither shrivelled nor dented; leaves never drying black, mostly obovate and often comparatively wider than in No. 1[2. vogelii](#)
- 5 Leaves petiolate and buds usually uniformly rounded at the apex:6
 Leaves sessile or subsessile, if petiolate then buds not rounded, but tapering to apex, oblong-obovate to oblanceolate:7
- 6 Leaves obovate, usually rounded at base, 9-35(-115) cm. long, 4.5-17(-50) cm. broad; calyx narrowed, not definitely constricted at the mouth; branches with incipient or occasional spines; berry drying smooth, 35-50 mm. long, 25-35 mm. broad when mature, with a thick wall (about 3 mm.)[3. djalensis](#)
 Leaves elongate-oblanceolate, always cuneate at base, 11-75 cm. long, 3-15 cm. broad; calyx definitely constricted at the mouth; branches never spiny; berry irregularly shrivelled when dry, 15-27 mm. long, 10-18 mm. broad when mature, with a thin wall (about 1 mm.)[4. liebrechtsiana](#)
- 7 Sepals drying smooth, clasping the corolla-tube at anthesis, only spreading under the mature fruit; leaves, at least the upper ones, usually petiolate, lower ones often sessile or subsessile, 7-45(-100) cm. long, 3.5-18(-30) cm. broad, usually sub-coriaceous, and with inconspicuous tertiary veins; corolla-tube about 1-1.5 times as long as the lobes which are large and reflexed[5. schweinfurthii](#)
 Sepals drying rugulose, outer pair at least more or less spreading, not closely clasping the corolla-tube at anthesis, widely spreading under the fruit; leaves sessile, 40-45(-145) cm. long, 20(-45) cm. broad, usually membranaceous, and with conspicuous tertiary veins; corolla-tube 1.5-2.5 times as long as the lobes, which are smaller and spreading[6. procera](#)
- 8 Outer sepals about as long as broad or broader; leaves oblong-elliptic to oblong-obovate, 6-20 cm. long, 2.5-11 cm. broad;9
 Outer sepals 1.5-2 times as long as broad, 12-17 mm. long, 8-11 mm. broad, often apically torn; leaves oblong-obovate to oblong-lanceolate, 4-5-19 cm. long, 1-7 cm. broad[9. obanensis](#)
- 9 Sepals 4-8 mm. long[7. microphylla](#)
 Sepals 20-30 mm. long[8. scandens](#)

2. STRYCHNOS

Linn.-F.T.A. 4, 1: 517; Duvigneaud in Bull. Soc. Bot. Belg. 85: 9 (1952); E. A. Bruce in Kew Bull. 10: 35, 127 (1955), 627 (1956); 11: 153, 267 (1956)

Scyphostrychnos *S. Moore* (1913)-F.W.T.A., ed. 1, 2: 24.

- 1 Inflorescence terminal, large, lax, paniculate, and many-flowered, or if not so then sepals lanceolate, acuminate, and not distinctly imbricate, axillary spines and/or linear stipules present, and large and thick-walled fruits: **2**
 Inflorescence axillary or both axillary and terminal, mostly on the same branchlet; sepals up to twice as long as wide, rounded to acute, usually distinctly imbricate; plants without spines, occasionally with internodal prickles (No. 15): **6**
- 2 Savanna trees with axillary spines, without tendrils; leaves rounded and slightly mucronate or emarginate to acuminate at apex, very variable in shape and size, sub-orbicular to elliptic, (1.5-)3-8 cm. long, (0.8-)1.3-7 cm. broad, glabrous or pubescent beneath; branches usually with curved, reflexed spines; inflorescence seemingly

- umbellate; sepals lanceolate; fruits large, thick-walled [1. spinosa](#)
- Climbers or shrubs, never trees, in the forest, with tendrils, sometimes with spines and then usually with linear stipules (No. 3): **3**
- 3** Plant brown-hirsute; leaves oblong-obovate, oblong-oblancoate, oblong-elliptic, or sometimes oblong-ovate, 2.5-16.5 cm. long, 1.4-8 cm. broad; inflorescence lax, paniculate; corolla-tube very short; filaments curved and provided with a bilobed pubescent gland; large colleters (glands) near the base of the petioles; fruit about 2-3 cm. diam., thin-walled, about 3-7-seeded [2. phaeotricha](#)
- Plant glabrous or pubescent; leaves ovate, or elliptic, or nearly so: **4**
- 4** Inflorescence seemingly umbellate, rather congested; sepals lanceolate, acuminate; plant often with 4 or 8 linear stipules on each node; fruit large, about 7 cm. diam., thick-walled, many-seeded; leaves rounded and abruptly acuminate at apex [3. congolana](#)
- Inflorescence lax, paniculate; sepals orbicular, ovate, or triangular, rounded to acute; plant without stipules; fruits small, about 1-1.5 cm. diam., thin-walled, one-seeded: **5**
- 5** Branchlets densely pubescent; leaves dull beneath; sepals connate for about half their length, acute, pubescent outside; pistil glabrous [4. dolichothyrsa](#)
- Branchlets glabrous or sparsely pubescent; leaves shining on both sides; sepals free, obtuse or rounded, minutely pubescent outside; pistil sparsely pubescent [5. dinklagei](#)
- 6** Leaf-apex rounded or obtuse; lamina elliptic to obovate-elliptic, 2-15 cm. long, 1-7 cm. broad; flowers subfasciculate; corolla in mature bud 6-9 mm. long; sepals ciliate; fruit globose, 5-12.5 cm. diam., thick-walled, many-seeded; small trees in savanna woodland: **7**
- Leaf-apex acuminate or acute; if obtuse or rounded, a shrub or climber in forest: **8**
- 7** Branchlets glabrous; leaves glabrous on both sides [6. innocua subsp. innocua var. innocua](#)
- Branchlets pubescent; leaves pubescent, at least at the base of the midrib beneath [6a. innocua subsp. innocua var. pubescens](#)
- 8** Branchlets, petioles, and usually also leaves beneath (at least at the base of the midrib) hairy; fruits small, 1-3 cm. diam., thin-walled, usually 1-seeded: **9**
- Branchlets, petioles and leaves glabrous; some hairs may occur on the stipular line: **17**
- 9** Pistil pilose or sparsely pubescent (in No. 5): **10**
- Pistil glabrous, sometimes some minute hairs on the style (in No. 13): **14**
- 10** Pistil sparsely pubescent; inflorescence distinctly longer than the leaves, lax, many-flowered, 4-7 times branched; corolla in mature bud 2-3 mm. long; leaves shining and coriaceous (other characters as above) [5. dinklagei](#)
- Pistil distinctly pilose; inflorescence up to half as long as the leaves, few-flowered, if lax up to 3 times branched: **11**
- 11** Branchlets and inflorescence-axis puberulous with very short appressed hairs; lamina entirely glabrous, coriaceous; inflorescence lax; corolla in mature bud 3-4 mm. long, lobes 6-7 times as long as the tube; anthers glabrous [7. splendens](#)
- Branchlets and inflorescence-axis sparsely pubescent as is the midrib beneath; hairs erect or nearly so: **12**
- 12** Leaves coriaceous, large, oblong-elliptic (7.5-)12-19.5 cm. long, 3.5-7 cm. broad, sparsely pubescent on the distinctly prominent midrib and main secondary veins beneath; inflorescence rather congested, much shorter than the leaves; corolla in mature bud 4 mm. long, the lobes 1.7 times as long as the tube; anthers bearded at the base; fruit 2-3 cm. diam., 1-3-seeded [8. memecyloides](#)
- Leaves papery to thinly coriaceous, smaller, 3-11 cm. long, 1-5 cm. broad: **13**
- 13** Inflorescence congested or rather so; corolla in mature bud 7.5-8.5 mm. long, outside more or less distinctly pubescent, lobes about as long as the tube; anthers bearded; leaves obtuse to acuminate at apex [9. ngouniensis](#)
- Inflorescence lax; corolla in mature bud 4.5-5 mm. long, outside glabrous or nearly so, the lobes 1.4-2 times as long as the tube; anthers glabrous; leaves acuminate at apex, acumen often long [10. boonei](#)
- 14** Tall tree without tendrils; leaves variously shaped, oblong-ovate, oblong-lanceolate, or oblong-elliptic, mostly acuminate, never rounded at apex; petioles smooth; inflorescence not really congested, often rather lax; corolla in mature bud 3.5-4 mm. long, glabrous outside, inside with a broad brush on each lobe; tube 0.6-1.2 times as long as the lobes; anthers bearded at the base; fruit 1-1.5 cm. diam., 1(-2)-seeded [11. mitis](#)
- Climber or scandent shrub with tendrils; inflorescence-axis appressed-pubescent (see also No. 26; if inflorescence-axis glabrous or with ranked hairs see No. 24): **15**
- 15** Sepals sparsely pubescent outside; leaves usually distinctly discolorous and above with conspicuous tertiary venation when dry: **16**
- Sepals glabrous outside; leaves usually not discolorous and with inconspicuous tertiary venation above, mostly obtuse and apiculate; petioles mostly transversely rugose when dry; corolla in mature bud 2-2.5 mm. long, subrotate, glabrous outside, inside densely pilose on the base of the lobes, lobes 3-4 times as long as the tube; anthers glabrous; fruit about 1-2 cm. diam. [14. angolensis](#)

- 16 Leaves extremely variable in shape and size, usually broadest above the middle, rounded, apiculate, or acuminate at apex; pubescence not regularly appressed, hairs rather long; corolla in mature bud 1·8-2 mm. long, sparsely pubescent outside, inside with a flat brush of white hairs on each lobe; tube 0·5-1 times as long as the lobes; anthers bearded; fruit about 1-1·3 cm. diam., 1-seeded [12. afzelii](#)
- Leaves very variable but less than in the preceding species, usually broadest below the middle, acuminate, sometimes obtuse or acute at apex, pubescence regularly appressed, with very short hairs; petioles often transversely rugose when dry; corolla in mature bud 2-2·5 mm. long, often very sparingly pubescent outside, inside pilose on the lobes; lobes 1·5-2 times as long as the tube; anthers glabrous [13. malacoclados](#)
- 17 Branches and branchlets with internodal prickles; large climber; tendrils in 2 or 3 pairs above each other at the apex of short lateral branchlets; inflorescence much shorter than the leaves, congested; corolla in mature bud 4-4·7 mm. long, tube 1-1·7 times as long as the lobes, lobes thick; fruit large, subglobose, about 8-12·5 cm. diam. [15. aculeata](#)
- Branches and branchlets unarmed: 18
- 18 Pistil hairy, immature fruit often topped by the hairy base of the style: 19
- Pistil glabrous: 24
- 19 Flowers small; corolla in mature bud 2-4 mm. long; fruit small, up to 3 cm. diam., thin-walled, usually 1(-6)-seeded: 20
- Flowers larger; corolla in mature bud 5-11 mm. long; fruit large, 5 cm. diam. or more, thick-walled, many-seeded (if not, see No. 17): 22
- 20 Inflorescence distinctly longer than the leaves, large, many-flowered, 4-7 times branched (other characters as above, in two places) [5. dinklagei](#)
- Inflorescence up to half as long as the leaves, 1-3 times branched: 21
- 21 Inflorescence lax, few-flowered; corolla glabrous outside or with some minute hairs; style 2·5-3·5 mm. long (other characters as above) [7. splendens](#)
- Inflorescence congested, many-flowered; corolla pubescent outside; style 1 mm. long [16. talbotiae](#)
- 22 Corolla in mature bud 5-6 mm. long and rounded at apex, lobes 1·2-2 times as long as the tube; anthers bearded; style 1·5 mm. long; sepals 1·5 mm. long; fruit 4-5 cm. diam., thin-walled, 3-6-seeded; leaves about 8-20 cm. long, 4-10 cm. broad, mostly pale greenish-brown when dry [17. chrysophylla](#)
- Corolla in mature bud 7·5-11 mm. long and tapering at apex; anthers glabrous; style 4-6 mm. long; sepals 2-5 mm. long; fruit 5 cm. diam. or more, thick-walled, many-seeded; leaves mostly smaller, drying medium or dark brown, sometimes slightly glaucous: 23
- 23 Branchlets usually distinctly lenticellate; old leaves often thinly coriaceous, usually drying with a flat margin and with rather conspicuously reticulate tertiary venation above; inflorescence mostly congested; inflorescence-axis and pedicels often sparsely pubescent; corolla in mature bud 7·5-8 mm. long, tube 1·5 times as long as the lobes, lobes about twice as long as wide, 3-3·2 mm. long [18. densiflora](#)
- Branchlets lenticellate or not; old leaves often thickly coriaceous, usually drying with a recurved margin and smooth above; inflorescence lax; inflorescence-axis and pedicels glabrous; corolla in mature bud 7·5-11 mm. long, tube 1-1·2 times as long as the lobes, lobes 2·5-3 times as long as wide, 4-5 mm. long [19. nigritana](#)
- 24 Inflorescence, sepals and corolla outside, or some of these organs often partially hairy, if not then inflorescence large, lax, and provided with tendrils, and leaves dull beneath (in No. 21): 25
- Inflorescence, sepals and corolla outside entirely glabrous: 32
- 25 Corolla minutely pubescent outside, inside with 2 rings of white brush-like hairs; anthers bearded; inflorescence-axis, pedicels, and sepals outside shortly pubescent all over; fruits small, up to 4 cm. diam.; forest tree, 7-20 m. high [20. staudtii](#)
- Corolla glabrous or sometimes hairy outside, inside with only one ring of hairs, sometimes composed of brushes of which one is on or below each lobe; fruits small, up to 3 cm. diam.; climbers or shrubs with tendrils: 26
- 26 Inflorescence lax, about 0·5-1·5 times as long as the leaves, many-flowered, provided with tendrils; leaves dull beneath; sepals obtuse, glabrous outside; corolla in mature bud 6·5-8 mm. long, lobes 1·2-1·3 times as long as the tube; anthers glabrous [21. melastomatoides](#)
- Inflorescence lax or congested, without tendrils, if more than half as long as the leaves corolla in mature bud up to 5 mm. long or leaves shining or matt beneath: 27
- 27 Tall tree without tendrils; inflorescence-axis pubescent (other characters as above) [11. mitis](#)
- Climbers, shrubs, or trees (?), with tendrils or not (?) (habit of No. 22 unknown; No. 26 may be a tree as far as known from E. African material): 28
- 28 Leaves dull beneath; midrib and secondary veins hardly or not prominent, tertiary venation inconspicuous; inflorescence congested; peduncle conspicuous, with 2 stripes of pubescence and a pair of bracteoles; sepals glabrous outside, rounded, distinctly ciliate; corolla in mature bud 3·5-4·5 mm. long, densely pilose inside; lobes 3·5 times as long as the tube [22. gnetifolia](#)
- Leaves shining or matt, never dull beneath; at least the midrib distinctly prominent beneath, peduncle without

- bracteoles; sepals acute or obtuse, if ciliate less distinctly so:..... **29**
- 29** Branches and branchlets green or pale greenish-brown when living, drying usually paler than in the next species, more or less distinctly quadrangular, not lenticellate; leaves mostly conspicuously 3-nerved, drying pale greenish-brown; inflorescence-axis shortly pubescent all over or with 2 stripes of pubescence; corolla in mature bud 3.5-5 mm. long, lobes 1-1.5 times as long as the tube; style 2-2.2 mm. long [23. *johnsonii*](#)
- Branches and branchlets often dark brown, terete, very often lenticellate, if not then corolla in mature bud 4-7.5 mm. long (in No. 25) or stamens included and leaves distinctly acuminate (in No. 24); leaves less conspicuously 3-nerved, drying pale or dark greenish-brown or brown: **30**
- 30** Stamens included; apex of anther reaching the hairy ring in throat; corolla in mature bud 4-5 mm. long, with a narrow brush-like ring of stiff hairs in the throat; anthers bearded; leaves papyraceous to subcoriaceous, distinctly acuminate; branches and branchlets not lenticellate; branchlets often with some ranked hairs as on the inflorescence-axis [24. *longicaudata*](#)
- Stamens exerted; anthers glabrous:..... **31**
- 31** Branches lenticellate or not; branchlets glabrous, not lenticellate; corolla in mature bud 4-7.5(-8.5) mm. long; tube 0.7-1.5(-3) times as long as the lobes, 2-4(-5) mm. long; style 2-6 mm. long; fruit 1-2 cm. diam., sometimes lenticellate; leaves usually more shining, thicker, and less distinctly acuminate than in No. 26 ..[25. *floribunda*](#)
- Branches usually dark brown, lenticellate; branchlets glabrous or shortly pubescent, lenticellate near the base, often covered by a pale skin which later splits and peels off; corolla in mature bud 2.5-3.5 mm. long, tube 1-1.4 mm. long, lobes 1.5 times as long as the tube; style 1-1.5(-2) mm. long; fruit 1-1.8 cm. diam., sometimes shortly stipitate [26. *usambarensis*](#)
- 32** Corolla with an entire or 5-lobed corona; whole plant drying dark brown or black; corolla in mature bud 8-11.5 mm. long; leaves large, 6-22 cm. long, 3-10 cm. broad; basal secondary veins mostly not more conspicuous than the others; fruits large, thick-walled [27. *camptoneura*](#)
- Corolla without corona; if plant drying dark brown or black then flowers smaller than in No. 27; corolla in mature bud up to 6 mm. long, and fruits small and thin-walled: **33**
- 33** Fruits large, thick-walled; inflorescence distinctly pedunculate, congested; corolla-lobes thick, inside with a flat brush of white hairs; anthers bearded; leaves large, 5-24 cm. long, 3-9 cm. broad, usually drying pale greenish-brown; stigma sessile (other characters as above) [15. *aculeata*](#)
- Fruits small, thin-walled, 1-3 cm. diam.; corolla-lobes not very thick; leaves if large drying darker (in No. 28):**34**
- 34** Leaves usually large, 5.5-21 cm. long, 2-10 cm. broad, mostly distinctly acuminate, strongly 3-nerved from above the base to the apex, papery to parchment-like, rarely coriaceous; inflorescence lax; flowers small, 4-merous; corolla in mature bud 2.5 mm. long, lobes 2-6 times as long as the tube; style 0.4-0.8 mm. long; sepals small, 0.4-1 mm. long, nearly halfway connate; branches often umbellately branched and shortly below the branching point provided with a tendril [28. *icaja*](#)
- Leaves smaller, main secondary veins not very distinct near the apex if reaching it; inflorescence mostly congested; sepals connate at the base; tendrils arranged otherwise: **35**
- 35** Leaves parchment-like, distinctly acuminate, acumen 7-12 mm. long, mostly dark brown or black when dry; branches hardly or not lenticellate; inflorescence congested; flowers small: **36**
- Leaves coriaceous or thinly coriaceous, if distinctly acuminate branches mostly distinctly lenticellate (in Nos. 25 and 26, below) or drying paler, mostly greenish-brown (in No. 31): **37**
- 36** Stamens included; anthers bearded; branchlets and inflorescence sometimes sparsely pubescent; tendrils pubescent (other characters as above) [24. *longicaudata*](#)
- Stamens exerted; anthers glabrous; branchlets, inflorescence and tendrils glabrous; leaves mostly dull and shrivelled when dry; corolla in mature bud about 3-4 mm. long, pilose on the base of the lobes inside and at the tube apex, lobes nearly twice as long as the tube; style about 1.7 mm. long [29. *odorata*](#)
- 37** Leaves rounded, apiculate, or shortly acuminate at apex, often oblong-obovate, coriaceous, shining on both sides, especially above; corolla in mature bud about 6 mm. long, pilose on the base of the lobes inside and at the tube apex, lobes about as long as the tube, narrow, strap-shaped, recurved; style 3-5 mm. long [30. *barteri*](#)
- Leaves acuminate, never rounded at the apex: **38**
- 38** Flowers small; corolla in mature bud 2.5-3.5 mm. long (other characters as above) [26. *usambarensis*](#)
- Flowers larger; corolla in mature bud 4-7.5(-8.5) mm. long:..... **39**
- 39** Flowers 4-merous; corolla very densely pilose inside, usually also on the apices of the lobes, in mature bud 6-5 mm. long and tapering at the apex; branches and branchlets not lenticellate, pale brownish-green when dry; fruit about 2.5-3 cm. diam.; leaves often distinctly acuminate [31. *ndengensis*](#)
- Flowers usually 5-, rarely 4-merous; sepals approximately triangular; corolla densely pilose inside, but glabrous on apices of the lobes, in mature bud mostly rounded at the apex (other characters as above) [25. *floribunda*](#)

3. MOSTUEA

Didr.-F.T.A. 4, 1: 504; Leeuwenberg in Meded. Landb. Wageningen 61, 4: 1-31 (1961).

Coinochlamys *T. Anders. ex Benth.* (1876)-F.W.T.A., ed. 1, 2: 20.

- 1 Inflorescence with two large orbicular bracts covering the sepals; leaves more or less pilose, ovate, acuminate to subacute at apex, more or less rounded and unequal-sided at base, 1-4.5 cm. long, 6-20 mm. broad; fruits 2-lobed, pubescent to pilose [3. *hirsuta*](#)
- Inflorescence with small bracts never covering the sepals: **2**
- 2 Plant pubescent, pilose, or glabrous; hairs never erect: **3**
- Plant hirsute with stiff erect hairs, especially on the branchlets; leaves variable, elliptic to oblong-obovate, 6-65 mm. long, 4-27 mm. broad; sepals ovate-lanceolate to linear; inflorescences very short, 1-3-flowered [5. *batesii*](#)
- 3 Leaves shining when dry, entirely glabrous, equal-sided at base, elliptic to oblong-ovate, 2.5-7.5 cm. long, 1-3.5 cm. broad; sepals obtuse or acute, usually shorter than the ovary, connate for about half their length; capsule obcordate, pale brown, conspicuously veined; fruits reflex and apiculate at apex [1. *adamii*](#)
- Leaves dull when dry, usually with some hairs, variable in shape and size; sepals acute to subulate, usually longer than the ovary; capsule not conspicuously veined, mostly dark brown: **4**
- 4 Capsule dull, usually dark brown, mostly bilobed; branchlets densely appressed-pubescent to glabrous, if with hairs in two lines then lamina lanceolate; leaves extremely variable, orbicular to lanceolate [2. *brunonis*](#)
- Capsule shining, medium-brown, obcordate; branchlets apically with two lines of pubescence below the stipules; leaf often abruptly narrowed into the cuneate base, acuminate at apex, 1.5-5 cm. long, 8-24 mm. broad [4. *hymenocardioides*](#)

1. **Mostuea adamii** *Sillans* in Rev. Bot. Appliq. 33: 546, t. 5 (1953); Leeuwenberg in Meded. Landb. Wageningen 61, 4: 30, fig. 6, 1-5 (1961). *APD acc*

Shrub, 1-3 ft. high; leaves subcoriaceous; corolla white; fruit with longitudinal anastomosing veins; **in rain forest**.

Also in [Congo](#), [Sudan](#), [Ethiopia](#), [E. Africa](#), [Nyasaland](#), [Angola](#), [S. Rhodesia](#), [Mozambique](#) and [S. Africa](#).

[The range of variation is extreme in this genus.]

OLEACEAE

Trees, shrubs or climbers. Leaves opposite or very rarely alternate, simple or pinnate; stipules absent. Flowers hermaphrodite or rarely unisexual, actinomorphic. Calyx lobed or dentate. Petals present, free or connate, often 4, imbricate or induplicate-valvate. Stamens hypogynous or epipetalous, usually 2;

anthers apiculate, 2-celled, cells back to back, opening lengthwise. Disk absent. Ovary superior, 2-celled, style simple with a capitate or bifid stigma; ovules usually 2 in each cell, axile, pendulous or ascending. Fruit baccate or drupaceous; seeds usually with endosperm; embryo straight, the radicle sometimes hidden within the base of the cotyledons.

A small family easily recognised by the woody habit, opposite leaves without stipules and the two stamens.

- 1 Corolla not exceeding 7 mm. long, with a short tube or petals nearly free; fruit a drupe; shrubs or small trees: ...[2](#)
Corolla not less than 10 mm. long, hypocrateriform with a well developed tube; fruit a berry or hard and woody; trees, shrubs or climbers:[3](#)
- 2 Petals very narrow, paired and free almost to the base; inflorescences axillary; leaves with or without pits or tufts of hairs in the axils of the main lateral nerves beneath, lamina up to 25 cm. long [1. Linociera](#)
Petals more or less ovate, united, with a distinct tube; inflorescences terminal; leaves without pits or tufts of hairs in the axils of the main lateral nerves beneath, lamina up to 13 cm. long [2. Olea](#)
- 3 Fruit hard and woody, 2-valved, seeds winged; trees; leaves simple (in our species); petioles simple; calyx-lobes blunt-triangular or very small[3. Schrebera](#)
Fruit a berry, seeds not winged; climbers or shrubs; leaves simple or trifoliolate (in our species); petioles trifoliolate or articulate; calyx-lobes filiform, or often blunt-triangular[4. Jasminum](#)

1. LINOCIERA

APD: Synonym of Chionanthus L.

Sw.-F.T.A. 4, 1: 19; Gilg & Schellenberg in Engl. Bot. Jahrb. 51: 67 (1913). Nom cons.

- 1 Rhachis of inflorescence (1.3-)2.5-4(-7) cm. long; leaves with glabrous pits or tufts of hair beneath in the axils of the majority of the (6-)9-12(-13) main lateral nerves on each side of the midrib; lamina oblong, oblong-ob lanceolate or oblong-lanceolate, (6-)9-15(-25) cm. long, (2.5-)3-6(-9.5) cm. broad; petioles 6-20 mm. long:[2](#)
Rhachis of inflorescence 0.2-2 cm. long; leaves with or without pits in the axils of the (5-)6-7(-8) main lateral nerves on each side of the midrib; lamina oblanceolate, oblong or oblong-lanceolate (often narrowly so in *L. mannii*); petioles 5-10 mm. long, rugulose, sometimes flaky with age in dried specimens:[3](#)
- 2 Main lateral nerves with tufts of hair in their axils; inflorescence rhachis densely appressed-tomentose; calyx appressed-tomentose often densely so; petioles thickened, flaky rugulose in dried specimens, even when young [1. africana](#)
Main lateral nerves with glabrous pits in their axils; inflorescence rhachis glabrous or sparsely appressed-tomentose; calyx glabrous, ciliate or rarely with a few hairs outside; petioles slightly thickened, not flaky rugulose[2. nilotica](#)
- 3 Inflorescence rhachis 10-20 mm. long, appressed-tomentose; corolla 3-5 mm. long; leaves gradually acuminate, tip acute or blunt, lamina (6-)7-17(-19) cm. long, (1.5-)2-5(-7) cm. broad, without or with small pits glabrous (or hairy) beneath in a few of the axils of the 6-7 main lateral nerves on each side of midrib; main lateral nerves slightly raised, venation more or less obscure beneath[3. mannii](#)
Inflorescence rhachis 2-7 mm. long, glabrous or appressed-tomentose; corolla 4-5-7 mm. long; leaves abruptly caudate-acuminate, tip rounded; lamina 9.5-24 cm. long, 3.7-8.5 cm. broad, without pits beneath in the axils of the (5-)6-7(-8) main lateral nerves on each side of midrib; main lateral nerves and venation not prominent beneath[4. congesta](#)

Also in **Congo, Ethiopia, Sudan, Uganda, Kenya, Tanganyika** and **N. Rhodesia**.

[*O. welwitschii* (Knobl.) Gilg & Schellenb. known from S. Tomé, Annobon, Angola and tropical E. Africa is very close and, as pointed out by Verdoorn (*Bothalia* 6: 581 (1956)) the two species may possibly be regarded as subspecies of the S. African *O. capensis* Linn. Maitland 498 and Lightbody FHI 26283 approach *O. welwitschii* in their longer slender petioles and slightly acuminate leaf-apices.]

***Olea europaea* Linn.**

Native of the Mediterranean region, is cultivated in Senegal. (Berhaut Fl. Sén. 113).

3. SCHREBERA

Roxb.-F.T.A. 4, 1: 13. Nom. cons.

- 1 Leaves broadly oblong, elliptic or ovate-elliptic, (6-)8-14(-18) cm. long, (3.5-)4.5-9(-11) cm. broad, more or less chartaceous, glabrous except at the base of the midrib, and occasionally of the main lateral nerves, beneath, which range from soft-tomentellous to glabrate or rarely glabrous, base obtuse to rounded slightly decurrent into the petiole, apex abruptly and shortly acuminate to acuminate, with (5-)6-8(-9) main lateral nerves on each side of the midrib; petiole 1-3 cm. long, glabrate to soft-tomentellous; inflorescence terminal, glabrate to soft and shortly tomentellous; calyx campanulate, 4-5 mm. long, glabrate to minutely tomentellous, with 4 shallow ciliate teeth up to 1 mm. long; corolla hypocrateriform, 12-20 mm. long, tube 2-3 mm. diam., lobes 5-6 mm. long, each with a patch of reddish-brown hairs at the base; fruit woody, club-shaped, blunt, lenticular, 5-6 cm. long when mature; seeds 4 cm. long, including the wing [arborea](#)

***Schrebera arborea* A. Chev.** in Mém. Soc. Bot. Fr. 2, 8: 180 (1912); Chev. Bot. 399; Aubrév. Fl. For. C. Iv., ed. 2, 3: 177, t. 316; Turrill F.T.E.A. Oleac. 2; Berhaut Fl. Sén. 117, 119. *APD acc*

***Schrebera chevalieri* Hutch. & Dalz.** F.W.T.A., ed. 1, 2: 26 (1931); Kew Bull. 1937: 336.

Schrebera golungensis of Thompson Rep. For. Gold Coast 72, 190 (1910); Kennedy For. Fl. S. Nig. 202.

Forest tree to 100 ft. high, with clear bole; flowers white or greenish white with crimson or purplish-brown markings at the base of the petals; sweetly fragrant; **often planted**.

Sen.: Casamance Chev. 3532! Berhaut 1316. **Port. G.:** Fulacunda Esp. Santo 2027. Ilhas das Cobras Esp. Santo 1927.

Guin.: Mamou Aubrév. 31; 59. **Iv. C.:** Anoumaba (fr. nov.) chev. B22352! Aubrév. 72; 1340; 1812! 2008. **Ghana:** Odumase, Krobo (Apr.) Odonkor! Ajena, Volta Gap (fr. Nov.) Keay FHI 25704! Okeho, Oyo (Mar.) Keay FHI 37742!

Also from the **Congo, Sudan** and **Uganda**.

[The Sudan and Uganda specimens are completely glabrous in all parts.]

4. JASMINUM

Linn.-F.T.A. 4, 1: 1; Gilg & Schellenberg in Engl. Bot. Jahrb. 51: 77 (1913).

- 1 Leaves trifoliolate, glabrous (often including the nerves), ovate to ovate-lanceolate; inflorescence many-flowered, more or less densely corymbose-paniculate; pedicels 1-3(-4) mm. long:2
- Leaves simple, glabrous or hairy, nerves usually hairy, lamina ovate to narrowly lanceolate:3
- 2 Indumentum of stem and inflorescence contrasting, the stem and petioles glabrous, the inflorescence densely tomentose; corolla tube 1 cm. long, with 5 lobes 0.5 cm. long, more or less ovate; shallow pits with tufts of hairs in most of the axils of the main lateral nerves on the leaf beneath, lamina (5-)8-11 cm. long, (3.5-)4-7 cm. broad, apex acute to acuminate, base acute to almost rounded; petioles 20-35 mm. long; calyx tomentose, lobes acute, 1-2 mm. long, slightly accrescent in fruit [1. bakeri](#)
- Indumentum of stem and inflorescence similar, and, with the petioles, crisped pubescent, sometimes minutely so; corolla tube 2-2.5 cm. long, with 5-7 lobes 1 cm. long, rounded elliptic; tufts of hairs confined to the axils of the main lateral nerves at the base of the leaf beneath, lamina 3-5 cm. long, 2-3-7 cm. broad, apex acute, base rounded to subcordate; petioles 5-20 mm. long; calyx puberulous, lobes blunt, less than 1 mm. long [2. fluminense](#)
- 3 Stem and petioles more or less glabrous or if puberulous, minutely so; leaves without tufts of hairs in the axils of the main lateral nerves beneath:4
- Stem pubescent or puberulous with crisped or spreading hairs, often densely so; leaves with or without tufts of hairs in the axils of the main lateral nerves beneath; inflorescence 1-12-flowered from the axils of the uppermost leaves:5
- 4 Inflorescence with numerous flowers more or less densely corymbose, pedicels 1-3 mm. long, accrescent and thickened in fruit, especially towards the top, 7-15 mm. long; lamina ovate or occasionally broadly lanceolate, (4-)5-11 cm. long, (2.5-)3-6.5 cm. broad, apex acute, acuminate or rounded, the tip often mucronate occasionally slightly reflex, base acute or rounded; petioles 7-20 mm. long; leaves on some shoots often ternate; calyx glabrous or sparsely puberulous, lobes 0.5-2(-4) mm. long, ciliolate; corolla tube 1.8-2.5 cm. long, with 5-9 oblanceolate lobes 0.7-1.6 cm. long [3. dichotomum](#)
- Inflorescence 1-3(-4) flowered, pedicels 2-8(-17) mm. long; lamina narrow-lanceolate or rarely lanceolate, 3-5-7 cm. long, 1-2.5 cm. broad, apex acute, tip rounded, mucronate, occasionally retuse, base cuneate; petiole 2-7 mm. long; calyx puberulous or sparsely puberulous, sometimes minutely so, lobes 1-4 mm. long; corolla tube 2-2.5 cm. long with 7-8 oblong to narrowly oblong lobes 1.4-2 cm. long [4. kerstingii](#)
- 5 Tufts of hairs in the axils of the main lateral nerves of the leaf beneath and occasionally at the nerve-junctions, sometimes almost masked by hairs on the midrib; pedicels 10-20 mm. long, accrescent and thickened in fruit especially towards the top and up to 25 mm. long, petioles 3-18 mm. long; stem and petioles pubescent, often densely so; leaves glabrous or scattered pubescent, ovate, ovate-elliptic or rarely oblong, (2-)2.5-6(-11) cm. long, (1-)2-3(-6) cm. broad, base rounded or subcordate, rarely subacute, apex acute or subacuminate, tip mucronate; calyx pubescent or glabrate, lobes 3-8 mm. long, slightly accrescent in fruit; corolla tube 1.6-2 cm. long, with 7-9 linear lobes 1-2 cm. long [5. pauciflorum](#)
- Tufts of hairs in the axils of the main lateral nerves of the leaf absent beneath; pedicels 2-20 mm. long, petioles 2-7 cm. long:6
- 6 Apex of leaf rounded, usually more or less retuse; stem, pedicels and calyx pubescent, sometimes densely so; pedicels 2-6(-10) mm. long, slightly accrescent in fruit and thickened especially toward the top; calyx lobes 1.5-4 mm. long, slightly accrescent in fruit; leaf surface glabrous or puberulous along the nerves on both surfaces, lamina ovate to lanceolate or rarely elliptic, (1.5-)2-5 cm. long, (0.8-) 1.5-3(-4) cm. broad; petioles 2-4 mm. long; corolla tube 2-3 cm. long with 7-9 oblong-lanceolate lobes, 1-1.7 cm. long [6. obtusifolium](#)
- Apex of leaf subacuminate to cuspidate; stem and especially the calyx and pedicel with long spreading hairs, often densely so; pedicels 15-20 mm. long, slightly accrescent in fruit and thickened towards the top; calyx lobes (4-)6-7 mm. long, linear; leaf surface with scattered hairs on both surfaces especially on the nerves, densely so beneath, lamina obovate or oblanceolate, rarely ovate, (3-)4-8 cm. long, (1.7-)2-5 cm. broad; corolla tube and lobes 2-2.3 cm. long, lobes 6-8, linear [7. preussii](#)

1. *Jasminum bakeri* *Sc. Elliot* in *J. Linn. Soc.* 30: 86 (1894); *F.T.A. 4, 1: 12*; *Chev. Bot.* 398. *APD acc*

A climber; flowers white, fragrant.

Guin.: Bonhour (Feb.) Pobéguin 899! Bangadou to Dioromandou (Feb.) Chev. 20730! Labé (Apr.) Chev. 12318. **S. L.:** near Berria (Mar.) *Sc. Elliot* 5409! **Iv. C.:** Sogui to Koualé (May) Chev. 21697.

Also in **Congo** and **N. Rhodesia**.

2. *Jasminum fluminense* *Vell.* *Fl. Flumin.* 10 (1825); *op. cit. Atlas 1, t. 23* (1827); *Dandy in Kew Bull.*

1950: 368; Turrill F.T.E.A. Oleac. 19; Exell Cat. S. Tomé Suppl. 33. *APD acc*

Jasminum mauritianum Bojer ex DC. Prod. 8: 310 (1844); F.T.A. 4, 1: 10; F.W.T.A., ed. 1, 2: 27.

A scandent shrub; flowers cream-coloured or white tinged with pink, fragrant; fruits black.

S. L.: Njala (cult. fl. Jan.) Deighton 3962! **N. Nig.:** near Jos (Aug., Dec.) Batten-Poole 133! Keay FHI 20070! Lely 61! W. D. MacGregor 422! Gindiri, Plateau Prov. (Oct.) Hepper 1089!

Distributed throughout Africa and in Mauritius and the Seychelles; introduced to S. America and the W. Indies.

Several infraspecific groups have been recognised (see Turrill F.T.E.A. Oleac. 19); all the tropical West African specimens examined fall within var. *fluminense*.

3. *Jasminum dichotomum* Vahl Enum. Pl. 1: 26 (1804); F.T.A. 4, 1: 9; Gilg & Schellenb. in Engl. Bot. Jahrb. 51: 89; Chev. Bot. 398; Esta de Sousa in Anais Junta Invest. Col. 4: 27; Turrill F.T.E.A. Oleac. 23; Berhaut Fl. Sén. 100, 117. *APD acc*

Jasminum noctiflorum Afzel. Rem. Guin. 25 (1815).

Jasminum guineense G. Don Gen. Syst. 4: 61 (1838).

Jasminum gardenioidorum Gilg ex Bak. F.T.A. 4, 1: 8 (1902).

Jasminum nigericum A. Chev. Bot. 398, name only.

Jasminum dinklagei of Hoyle Gold Coast Check-list 87.

A scrambling shrub or woody climber reaching to 25 ft. or more in trees; corolla with red tube and pure white lobes, very fragrant.

7. *Jasminum preussii* Engl. & Knobl. in Engl. Bot. Jahrb. 17: 536 (1893); F.T.A. 4, 1: 9. *APD acc*

Jasminum monticola Gilg & Schellenb. in Engl. Bot. Jahrb. 51: 99 (1913).

Jasminum zenkeri Gilg & Schellenb. l.c (1913), incl. var. *glabrata*.

A rambling climber or erect shrub, to 3 ft. high; flowers white.

Ghana: Abra, W. Prov. (Jan.) Akpabla 801! **S. Nig.:** Omo F.R., Ijebu Ode (June) Keay FHI 37054! Sapoba (May) Okafor FHI 36583! Oban Talbot 335! **[Br.] Cam.:** Cam. Mt., 5,000-6,000 ft. (Mar.-June, Aug.) Brenan 9354! Deistel 203; Maitland 39! 653! Barombi (Apr.) Preuss 122!

Also in **Cameroun**.

A small-flowered form, with corolla tube 4 mm., and lobes 6 mm. long, has been described from Kohoumbo, W. of Toumodi, Ivory Coast, by Roberty (in Bull. I.F.A.N. 15: 1423 (1953)) as *forma minutiflorum*.

***Jasminum dinklagei* Gilg & Schellenb.** in Engl. Bot. Jahrb. 51: 97 (1913); F.W.T.A., ed. 1, 2: 28.

Lib.: White Plains, Monrovia (May) Dinklage 2193.

No authentic material of this species has been seen, but it is suspected that it is closely allied to *J. dichotomum*.

***Jasminum multiflorum* (Burm.f.) Andr.**

Jasminum pubescens (Retz.) Willd.

Native of tropical Asia

***Jasminum sambac* (Linn.) Ait.**

Native of tropical Asia

***Jasminum volubile* Jacq.**

Jasminum simplicifolium Auct.

Native of Australia.

APOCYNACEAE

Trees, shrubs or climbers, rarely perennial herbs, with latex. Leaves opposite or verticillate, rarely alternate, simple, entire; stipules usually absent. Flowers hermaphrodite, actinomorphic. Calyx often glandular inside; lobes 5 or rarely 4, imbricate. Corolla tubular, variously shaped; lobes contorted-imbricate, very rarely valvate. Stamens 5 or rarely 4, inserted in the tube; filaments free or rarely united; anthers often sagittate, free or connivent around the stigma, rarely adherent to the latter, 2-celled, opening lengthwise, connective often produced at the apex; pollen granular; disk usually present, annular, cupular or of separate glands. Ovary superior, 1-celled with 2 parietal placentas or 2-celled with the placentas adnate to the septa, or carpels 2 and free or connate only at the base with ventral placentas in each carpel. Style 1, split at the base or entire, thickened and stigmatose below the apex; ovules 2 or more in each carpel. Fruit entire and indehiscent or of 2 separate carpels, baccate, drupaceous or follicular. Seeds mostly with endosperm and large straight embryo, often winged or appendaged with long silky hairs.

A well-marked family with usually opposite exstipulate entire leaves, latex, contorted gamopetalous corolla without a corona, and superior often apocarpous ovary.

- 1 Leaves or leaf-scales spirally arranged; stem succulent, erect; fruits dry follicles, the seeds with an apical tuft [34. *Adenium*](#)
 Leaves opposite or verticillate (very exceptionally also alternate, but then stems climbing and never fleshy); stems not succulent: [2](#)
- 2 Corolla-lobes overlapping to the left: [3](#)
 Corolla-lobes overlapping to the right: [25](#)
- 3 Carpels completely fused; fruits fleshy: [4](#)
 Carpels free, or connate only at the very base; fruits fleshy or dry: [14](#)
- 4 Calyx with numerous, or at least with 3, glandular scales on each sepal: [5](#)
 Calyx without glandular scales (or with 5 solitary scales alternating with the sepals in *Landolphia utilis*): [6](#)
- 5 Leaves with 4-6 pairs of distant lateral nerves; flowers conspicuous, the corolla-lobes 14-22 mm. long [8. *Vahadenia*](#)
 Leaves with more than 20 pairs of dense lateral nerves; flowers small, corolla-lobes 2-3 mm. long [12. *Cyclocotyla*](#)
- 6 Inflorescences of elongate, branched, terminal panicles: [7](#)
 Inflorescences contracted, short and often clustered, terminal or axillary: [8](#)
- 7 Anthers not keeled; ovary and fruit glabrous; stipules interpetiolar, early caducous [7. *Dictyophleba*](#)
 Anthers keeled along the back; ovary and fruit pubescent; stipules absent [9. *Ancylobotrys*](#)
- 8 Length of the anthers up to 1/3 of the length of the corolla-tube, frequently less: [9](#)
 Length of the anthers almost 1/2 or more of the length of the corolla-tube; clavuncula ring-shaped [6. *Aphanostylis*](#)
- 9 Walls of the corolla-tube thickened above the anthers; anthers not keeled, 0.5 mm. or more long: [10](#)
 Walls of the corolla-tube not thickened above the anthers: [11](#)
- 10 Seeds with albumen [2. *Landolphia*](#)
 Seeds without albumen (use key to *Landolphia* spp.) [11. *Cylindropsis*](#)
- 11 Only terminal inflorescences developed [10. *Saba*](#)
 Inflorescences axillary or axillary and terminal: [12](#)
- 12 Clavuncula (swelling beneath stigma) cylindric, ovate or globose: [13](#)
 Clavuncula (swelling beneath stigma) ring-shaped; anthers not keeled, 0.8-1 mm. long [5. *Anthoclitandra*](#)
- 13 Anthers not keeled, less than 0.5 mm. long inserted above the middle of the corolla-tube [3. *Clitandra*](#)
 Anthers keeled along the back, more than 0.5 mm. long, inserted beneath the middle of the corolla-tube [4. *Orthopichonia*](#)
- 14 Anthers not tailed, fertile to the base: [15](#)
 Anthers tailed or auriculate, sterile towards the base: [19](#)
- 15 Fruits fleshy, indehiscent; trees or shrubs: [16](#)
 Fruits a pair of dry follicles up to 4 cm. long, opening lengthwise; seeds glabrous; corolla-lobes when fully expanded 1-2 cm. broad; introduced herbs or under-shrubs [23. *Catharanthus*](#)
- 16 Disk absent; leaves opposite, rarely in whorls of 3; branches and leaves glabrous; inflorescences contracted, short and often clustered, terminal or axillary; corolla-lobes 2-25 mm. long: [17](#)
 Disk present; leaves in whorls of 3, 4 or more; branches and leaves glabrous or puberulous; flowers in ample, verticillately-branched cymes; corolla-lobes 1-2 mm. long [25. *Rauvolfia*](#)
- 17 Calyx with glandular scales within; stigma usually with well-developed apiculus: [18](#)
 Calyx without glandular scales; apiculus of stigma hardly developed [15. *Pleiocarpa*](#)
- 18 Corolla 2-4 cm. long; ovary with 70-130 ovules [13. *Picralima*](#)
 Corolla 5-16 mm. long; ovary with 1-30 ovules [14. *Hunteria*](#)
- 19 Corolla with 5-toothed corona-lobes in the throat of the tube; anthers entirely exerted; fruit a dry follicle; seeds with a basal tuft [32. *Pleioceras*](#)
 Corona absent; anthers not or only slightly exerted; seeds glabrous: [20](#)
- 20 Corolla-tube very short, up to 2 mm. long; disk absent; fruit a dry follicle; seeds exarillate [22. *Pycnobotrya*](#)
 Corolla-tube long; disk frequently present; fruit fleshy, usually dehiscent; seeds arillate: [21](#)

- 21 Sepals persistent, free or very shortly connate at base:..... 22
 Sepals caducous, more or less connate into a tube, circumscissile at the base [20. Voacanga](#)
- 22 Clavuncula (swelling beneath stigma) circular in cross-section; flowers rather small, corolla-tube 6-9 mm. long; fruit winged with 3 longitudinal ridges [16. Pterotaberna](#)
 Clavuncula (swelling beneath stigma) ribbed; fruit not ridged lengthwise: 23
- 23 Anthers basifixed, topped with a minute mucro [17. Callichilia](#)
 Anthers dorsifixed, with a well-developed acumen:..... 24
- 24 Disk free; anthers fixed with a big dorsal callus [18. Hedranthera](#)
 Disk indistinct, completely connate with the ovary; anthers without a dorsal callus [19. Tabernaemontana](#)
- 25 Anthers not tailed, fertile to the base: 26
 Anthers sterile towards the base, caudate or auriculate: 29
- 26 Ovary syncarpous; fruit fleshy; branches usually armed with axillary spines [1. Carissa](#)
 Ovary apocarpous; fruit dry follicles; branches never armed: 27
- 27 Leaves whorled, with more than 25 pairs of lateral nerves; seeds with a tuft of hairs at each end [21. Alstonia](#)
 Leaves opposite; seeds with one apical tuft of hairs:..... 28
- 28 Corolla-tube up to 9 mm. long; anthers up to 2 mm. long; branches and inflorescences mostly puberulous to tomentellous [24. Holarrhena](#)
 Corolla-tube more than 10 mm. long; anthers 5-6 mm. long; branches and inflorescences glabrous [30. Farquharia](#)
- 29 Corolla with paired corona-appendages between the (frequently long-tailed) corolla-lobes; fruits dry follicles; seeds produced into a long, plumose apical beak [27. Strophanthus](#)
 Corolla without corona-appendages; seeds with or without a basal beak: 30
- 30 Corolla-tube more than 2 cm. long; fruits fleshy; seeds arillate [17. Callichilia](#)
 Corolla-tube up to 1.5 cm. long, usually less; fruits dry-follicles; seeds not arillate:..... 31
- 31 Anther-cone exserted from the corolla-tube: 32
 Anther-cone included in the corolla-tube: 33
- 32 Flowers in narrow-terminal panicles; seeds with an apical tuft of hairs [26. Isonema](#)
 Flowers in axillary clusters; seeds without a tuft of hairs [33. Malouetia](#)
- 33 Corolla-lobes folded lengthwise (conduplicated) in bud; corolla-tube constricted markedly in the lower half or 1/3; seeds with an apical tuft; small tree, possibly introduced [28. Mascarenhasia](#)
 Corolla-lobes not induplicated in bud: 34
- 34 Trees; flowers in dense, axillary clusters; seeds produced into a plumose basal beak [31. Funtumia](#)
 Climbing shrubs; inflorescences terminal or axillary, but then elongated or branched; seeds with an apical tuft of hairs:..... 35
- 35 Disk absent; corolla-tube narrowed towards the mouth: 36
 Disk present; corolla-tube wide at the mouth: 37
- 36 Interpetiolar stipules present; no supra-axillary glands on the petiole; anther-tails free [29. Alafia](#)
 Interpetiolar stipules absent; supra-axillary glands on the petiole developed; corolla-tube quite glabrous on the inside; anther-tails connate with the connective [30. Farquharia](#)
- 37 Anther-tails straight, acute; stigma up to 0.5 mm. long; corolla-lobes 2.5-20 mm. long; follicles narrowly cylindric, 30-50 cm. long, up to 1 cm. diam. [35. Baissea](#)
 Anther-tails curved, obtuse; stigma 0.5-1 mm. long; corolla-lobes 2-5 mm. long: 38
- 38 Corolla-tube with 5 corona-scales alternating with the petals in the mouth; anther-tips glabrous; follicles 10-25 cm. long, from less than 1 cm. to 2 cm. in diam. narrowly cylindrical to spindle-shaped [37. Oncinotis](#)
 Corolla-tube without scales in the mouth; anthers tipped with a minute plumose mucro; follicles narrowly spindle-shaped, about 12 cm. long and 1.5-2 cm. in diam. [36. Motandra](#)

Allamanda cathartica Linn.

Has been recorded as cultivated plants in our area.

A. neriifolia Hook.

Has been recorded as cultivated plants in our area.

Chonemorpha macrophylla G. Don

Has been recorded as cultivated plants in our area.

Ervatamia coronaria (Jacq.) Stapf

Has been recorded as cultivated plants in our area.

Nerium oleander Linn.

Common oleander, has been recorded as cultivated plants in our area.

Plumeria rubra Linn.

The frangipani has been recorded as cultivated plants in our area.

Thevetia neriifolia Juss.

Has been recorded as cultivated plants in our area.

1. CARISSA

Linn.-F.T.A. 4, 1: 88. Nom. cons.

- 1 Spiny shrub up to 5 m. high; branches glabrous or pubescent with axillary spines 1-3 cm. long; leaves ovate, usually acute at apex, shortly cuneate or rounded at base, 2-6 cm. long, 2-5 cm. broad, with 3-5 pairs of lateral nerves, glabrous or pubescent; petiole short; inflorescences dense, shortly pedunculate, terminal or axillary cymes; calyx 3-5 mm. long, with subulate teeth; corolla tube 7-20 mm. long, lobes 3-10 mm. long, always shorter than the tube [edulis](#)

Carissa edulis Vahl Symb. Bot. 1: 22 (1790); F.T.A. 4, 1: 89; Aubrév. Fl. For Soud.-Guin. 445, t. 97, 5-6.

APD: *Synonym of Carissa spinarum* L.

Carissa pubescens A. DC. (1844).

Carissa edulis forma pubescens (A. DC.) Pichon (1949).

Carissa edulis subsp. continentalis Pichon in Mém. Inst. Sci. Madag., sér. B, 2: 129 (1949)

An erect shrub up to 16 ft. high; flowers fragrant, white or purplish; fruits syncarpous berries about 1/2 in. diam.

Mali: Ouassana Chev. 616. Kita Dubois 152. **Guin.:** Labé (Mar.) Chev. 12405! Fouta Djallon (Mar.) Schnell 4815! **Iv. C.:** Ouangolo Aubrév. 1404! **Ghana:** Accra T. Vogel 31! Nsawam (Feb.) Dalz. 8289! Wahaku to Fausi (Apr.) Kitson 824! Krobo Plains (Dec.) Johnson 510! **Togo Rep.:** Lomé Warnecke 266! **Dah.:** Cotonou Chev. 4497. **N. Nig.:** Kaduna to Zaria (Feb.) Meikle 1225! Kogin Kano F.R. (Mar.) Onwudinjo FHI 22354! Vom (Feb.) McClintock 215! Maiduguri (July) Ujor FHI 21947! **S. Nig.:** A. F. Ross R121! **[Br.] Cam.:** Mayo Wombo, Gashaka Dist. (fr. Dec.) Latilo & Daramola 28971!

Throughout the drier parts of tropical Africa and Madagascar, to **Arabia**, India and Indochina.

2. LANDOLPHIA

P. Beauv. (1804)-F.T.A. 4, 1: 30; Pichon in Mém. I.F.A.N. 35: 40 (1953). Nom. cons.

Carpodinus R. Br. ex G. Don (1837)-F.T.A. 4, 1: 72; F.W.T.A., ed. 1, 2: 35, mostly.

- 1 Ovary glabrous; cymes axillary and terminal:2
 Ovary pilose at least towards the apex:4
 2 Corolla-tube 2-3 mm. long:3
 Corolla-tube 13-16 mm. long, lobes 11-13 mm. long; branches glabrous; leaves elliptic to elliptic-oblong, broadly acuminate, 4-12 cm. long, 2-5-5 cm. broad, with 9-14 pairs of lateral nerves[3. macrantha](#)
 3 Young branches glabrous; leaves acuminate, elliptic to oblong, 5-17 cm. long, 2-6 cm. broad, with 5-11 pairs of lateral nerves; corolla-lobes 2-3 mm. long[1. micrantha](#)
 Young branches mostly pubescent; leaves not or hardly acuminate, elliptic to ovate, 4-13 cm. long, 2-6 cm. broad, with 7-12 pairs of lateral nerves; corolla-lobes 1-5-2 mm. long[2. togolana](#)
 4 Inflorescences only terminal; corolla-lobes pilose outside towards the apex:5
 Inflorescences axillary or axillary and terminal (but then corolla-lobes glabrous outside):9

- 5 Corolla-tube glabrous in the throat, 3-17 mm. long:6
Corolla-tube pilose in the throat, not exceeding 10 mm. in length:7
- 6 Corolla-tube 3-5 mm. long, lobes 2-8 mm. long, markedly pubescent on their auricles; young branches glabrous or laxly pubescent; leaves oblong to elliptic, 6-12 cm. long, 2.5-4 cm. broad, with 8-28 pairs of lateral nerves[4a. parvifolia var. johnstonii](#)
Corolla-tube 11-17 mm. long, lobes 7-22 mm. long; young branches pubescent; leaves elliptic or oblong, mostly subcordate at the base, 5-14 cm. long, 2.5-5 cm. broad, with 5-11 pairs of lateral nerves[5. calabarica](#)
- 7 Anthers 0.9-1.5 mm. long, inserted distinctly above the middle of the corolla-tube; young branches pubescent or rarely glabrous; leaves oblong, elliptic or lanceolate, 5-25 cm. long, 2.5-12 cm. broad, with 6-20 pairs of lateral nerves; corolla-tube 4-8 mm. long, lobes 1.7-9 mm. long:.....8
Anthers 1.5-1.9 mm. long, inserted at about the middle of the corolla-tube; young branches densely pubescent; leaves similar to the above, but often smaller; 3-11 cm. long, 1.5-5 cm. broad, with 5-12 pairs of lateral nerves; corolla-tube 5-9 mm. long, lobes 3.7-7 mm. long[7. heudelotii](#)
- 8 Pedicels and sepals mostly pubescent; sepals ciliate[6. owariensis var. owariensis](#)
Pedicels and sepals glabrous; sepals not ciliate[6a. owariensis var. leiocalyx](#)
- 9 Inflorescences terminal and axillary; corolla-lobes glabrous outside; leaves not gland-dotted beneath: 10
Inflorescences only axillary; leaves gland-dotted beneath (except in No. 17):..... 12
- 10 Calyx with 5 glandular scales within alternating with the sepals; young branches pubescent; leaves 3-17 cm. long, 1-9 cm. broad, with 7-11 pairs of lateral nerves; mature flowers unknown[8. utilis](#)
Calyx without glandular scales:..... 11
- 11 Corolla-tube 8-13 mm. long, equalling the lobes; branches glabrous or pubescent; leaves oblong to elliptic, 8-26 cm. long, 3-10 cm. broad, with 10-16 pairs of lateral nerves [9. landolphioides](#)
Corolla-tube 3-5 mm. long, lobes 1.8-2.5 mm. long; branches glabrous[9a. Cyindropsis parvifolia](#)
- 12 Leaves gland-dotted beneath; young branches glabrous or with short hairs (not more than 1.3 mm. long): 13
Leaves not gland-dotted beneath; young branches clothed with long hairs (1-3 mm.); leaves elliptic to oblong, 5-20 cm. long, 3.5-10 cm. broad, with 6-10 pairs of lateral nerves, usually hirsute beneath; corolla-tube 3-4 mm. long, lobes 2.8-4.5 mm. long[17. hirsuta](#)
- 13 Corolla-tube glabrous in the throat; anthers glabrous, less than 1/4 of the length of corolla-tube:..... 14
Corolla-tube pilose in the throat; anthers pilose on their back about 1/4 or 1/3 of the length of corolla-tube; branches pubescent; leaves oblong-elliptic, 4-32 cm. long, 1.5-12 cm. broad, with 8-17 pairs of lateral nerves; corolla-tube 5-8 mm. long, lobes 3-7 mm. long [16. subrepanda](#)
- 14 Inflated part of the corolla-tube either glabrous or laxly pubescent outside: 15
Inflated part of the corolla-tube densely pubescent outside:..... 19
- 15 Young branches staying smooth during lignification: 16
Young branches becoming rough with small scales during lignification: 18
- 16 Young branches and leaves quite glabrous; leaves oblong-elliptic to obovate, 7-25 cm. long, 2.5-9 cm. broad, with 10-20 pairs of lateral nerves; corolla-tube 12-22 mm. long, lobes 7-23 mm. [10. violacea](#)
Young branches more or less pubescent or pilose; leaves elliptic, oblong or ovate, 4-20 cm. long, 1.5-10 cm. broad, with 4-10 pairs of lateral nerves; corolla-tube 7-20 mm. long, lobes 5-22 mm. long:..... 17
- 17 Young branches densely pilose[11. dulcis var. dulcis](#)
Young branches laxly to moderately pilose [11a. dulcis var. barteri](#)
- 18 Branches and leaves glabrous; leaves usually cuneate at base, elliptic-oblong, 5-23 cm. long, 1.5-9 cm. broad, with 6-11 pairs of lateral nerves; net of veins prominent; sepals frequently only 4; corolla-tube 12-28 mm. long, lobes 8-21 mm. long [12. congolensis](#)
Branches glabrous or pubescent; leaves cordate at base, elliptic-oblong to broadly lanceolate, 5-24 cm. long, 2-12 cm. broad, with 5-11 pairs of lateral nerves; net of veins not prominent; corolla-tube 14-16 mm. long, lobes 16-20 mm. long [13. membranacea](#)
- 19 Branches laxly or irregularly densely pubescent; leaves opposite, oblong, 9-24 cm. long, 2.5-7.5 cm. broad, with 8-14 pairs of lateral nerves; cymes 1-2-flowered; sepals 2-6-5 mm. long; corolla-tube 13-16 mm. long, lobes 13-18 mm. long, attenuate towards the apex [14. uniflora](#)
Branches equally densely pubescent; leaves opposite or partly alternate or in whorls of 3, elliptic to obovate, 7.5-32 cm. long, 2.5-18 cm. broad, with 6-19 pairs of lateral nerves; cymes 3-30-flowered; sepals 1.2-2.2 mm. long; corolla-tube 6-12 mm. long, lobes 2.8-9 mm. long, rounded towards the apex [15. foretiana](#)

1. *Landolphia micrantha* (A. Chev.) Pichon in Mém. I.F.A.N. 35: 84, t. 2, 3-4 (1953). *APD acc*

Clitandra micrantha A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 44 (1908); Chev. Bot. 401.

C. elastica var. **micrantha** (A. Chev.) A. Chev. ex Dalz., Appendix 369 (1937).

C. leptantha of F.W.T.A., ed. 1, 2: 34, partly (Chev. 17691), not of Pierre.

Climber up to 60 ft. high; flowers small, yellow or yellowish-white, in very lax inflorescences.

Lib.: Sinoe Basin (Mar.) Whyte 8! 15! Dukwia R. (Feb.) Cooper 235! **Iv. C.:** Soubiré to Namouéflo (Mar.) Chev. 17091! Noé Chev. 19841. Guidéko Chev. 16391. Abidjan Chev. 15619.

2. *Landolphia togolana* (Hallier f.) Pichon l.c 87 (1953). *APD acc*

Cylindropsis togolana Hallier f. (1900).

Clitandra togolana (Hallier f.) Stapf in F.T.A. 4, 1: (1902); F.W.T.A., ed. 1, 2: 34 (1931).

C. alba, Stapf in F.T.A. 4, 1: 64 (1902).

C. "togoensis" of Chev. Bot. 402.

Climber 15 ft. or more high with tendrils and cream-coloured or yellow flowers in axillary and terminal inflorescences.

Iv. C.: Sassandra Chev. 17938. Abidjan Chev. Grand Bassam Thollon 167. Chev. 17909. 3. *Landolphia macrantha* (K. Schum.) Pichon l.c 146, t. 4, 3-6 (1953). *APD acc*

Carpodinus macrantha K. Schum. (1896)-F.T.A. 4, 1: 85; F.W.T.A., ed. 1, 2: 36.

Glabrous climber with tendrils and white flowers in 1-5 flowered inflorescences.

Guin.: Kouria Pobéguin 1530. **S. L.:** Afzelius! Heddle's Farm, Freetown (May) Lane-Poole 250! Ninia, Talla Hills (fr. Feb.) Sc. Elliot 4924! Makali (fr. Feb.) Deighton 4087!

4. *Landolphia parvifolia* K. Schum. in Engl. Bot. Jahrb. 15: 409 (1893). *APD acc*

4a. *Landolphia parvifolia* var. *johnstonii* (A. Chev.) Pichon l.c 96 (1953).

APD: *Synonym of Landolphia dewevrei* Stapf

Landolphia subterranea var. **johnstonii** A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 46 (1908).

Landolphia talbotii Wernham in Cat. Talb. 60 (1913)

Lofty climber with tendrils; flowers white or yellow, in many-flowered terminal inflorescences.

S. Nig.: Oban Talbot 1038! **[Br.] Cam.:** Rio del Rey Johnston 1.

Also in **Cameroun**, **Gabon**, **Ubangi-Shari**, **the Congos**, **Cabinda**.

5. *Landolphia calabarica* (Stapf) E. A. Bruce in Kew Bull. 2: 28 (1947); Pichon l.c. 138, t. 4, 1-2. *APD acc*

Carpodinus calabaricus Stapf (1894).

Landolphia bracteata Dewèvre (1895)-F.T.A. 4, 1: 41; F.W.T.A., ed. 1, 2: 32; Chev. Bot. 403.

Climber with tendrils, up to 22 ft. high; flowers white in dense or lax terminal cymes.

S. L.: Matotoka (July) Thomas 1236! Bonjema (fr. Dec.) Deighton 6153! Wiima (Apr.) Deighton 3947! **Lib.:** Vahon, Kolahun (fr. Nov.) Baldwin 10252. **Iv. C.:** Abidjan Chev. 15615. Also on the **Cape Verde Islands**.

8. ***Landolphia utilis* (A. Chev.) Pichon** l.c 200, t. 9, 5-6 (1953). *APD acc*

Carpodinus utilis A. Chev. in J. Agric. Trop. 6: 159 (1906)-Chev. Bot. 411.

Clitandra laurifolia A. Chev. (1908) and Chev. Bot. 401, name only-F.W.T.A., ed. 1, 2: 35.

Climber 6-10 ft, high with 1-4-flowered cymes.

Iv. C.: Prolo Chev. 19856. Grabo Chev. 19739; 19767. Davo Chev. 17966. Bingerville to Abidjan Chev. 15549; 15552. Dabou Chev. 15617.

[Note: I have not seen any material of this imperfectly known and aberrant species which is the only species with glandular scales in the calyx-Huber.]

9. ***Landolphia landolphioides* (Hallier f.) A. Chev.** in Rev. Bot. Appliq. 28: 401 (1948); Pichon l.c 53, t. 1, 10. *APD acc*

Clitandra landolphioides Hallier f. (1900).

Carpodinus landolphioides (Hallier f.) Stapf in F.T.A. 4, 1: 80 (1902); F.W.T.A., ed. 1, 2: 36.

Climber up to 80 ft. long with tendrils and dense or lax axillary and terminal inflorescences; corolla white, with the tube sometimes red at the base.

S. Nig.: Cross R. area Meyer. **[Br.] Cam.:** Buea, 1,900-4,000 ft. Dalz. 8242! Hutch. & Metcalfe 108! Deistel 144! 556! Barombi Preuss 217.

Extends to Cameroun, Gabon, Ubangi-Shari and **Uganda**.

10. *Landolphia violacea* (K. Schum. ex Hallier f.) Pichon l.c 157, t. 5, 7 (1953). *APD acc*

Carpodinus violacea K. Schum. ex Hallier f. (1900)-F.T.A. 4, 2: 80; F.W.T.A., ed. 1, 2: 36.

Glabrous climber with tendrils and white, pink or violet flowers in few-flowered, dense axillary cymes.

S. Nig.: Oban Talbot 1445!

Also in **Cameroun**, **Gabon**, and **the Congos**.

Landolphia dulcis* (R. Br. ex Sabine) Pichon** *APD acc11. *Landolphia dulcis* var. *dulcis*** -l.c. 169, t. 6, 6 (1953). *APD acc*

Carpodinus dulcis Sabine ex G. Don Gen. Syst. 4: 101 (1837); F.T.A. 4, 1: 76; F.W.T.A., ed. 1, 2: 36; Chev. Bot. 410.

Carpodinus acida Sabine ex G. Don (1837)-F.T.A. 4, 1: 86.

Climber up to 30 ft. with tendrils and white, yellowish or violet flowers in few-flowered axillary cymes.

Sen.: fide Pichon l.c **Mali:** Kangola Chev. 860! Sitakoto Paroisse 31. **Port. G.:** Prabis, Bissau (ft. Feb.) Esp. Santo 1827! Mansoa Esp. Santo 742. Cacim Esp. 4. ORTHOPICHONIA

H. Huber in Kew Bull. 15: 437 (1962). *APD acc*

Orthandra Pichon in Mém. I.F.A.N. 35: 211 (1953), not of Burret (1940).

Clitandra of F.T.A., 4, 1: 60, and of F.W.T.A., ed. 1, 2: 33, partly.

- 1 Corolla-lobes attenuate towards the apex:2
Corolla-lobes rounded towards the apex:4
- 2 Branches and petioles quite glabrous; corolla-tube 11-16 mm. long, the anthers inserted in the lower 1/3 of the tube; sepals glabrous outside:3
Branches and petioles puberulous when young; corolla-tube 4-7 mm., lobes 4-5-8 mm. long; anthers inserted in the middle of the tube; leaves elliptic to oblong, 8-16 cm. long and 3-8 cm. broad, with 16-35 pairs of lateral nerves; sepals pubescent at least towards the base[4. staudtii](#)
- 3 Corolla-lobes 4-5 mm. long, always less than 1/2 length of the tube and frequently 1/3 length, pubescent outside towards base, tube 11-15 mm. long; leaves elliptic to oblong, 8-16 cm. long, 3-8 cm. broad, with 16-35 pairs of lateral nerves[1. indeniensis](#)
Corolla-lobes 6-9 mm. long, about half as long as the tube; leaves oblong to broadly lanceolate, cuneate or almost rounded at base, 5-13 cm. long, 2-6 cm. broad, with 14-35 pairs of lateral nerves[2. longituba](#)
Corolla-lobes 4-6 mm. long, at least 2/3 length and up to about twice as long as the tube; leaves broadly obovate, elliptic, oblong or almost orbicular, rounded or indistinctly cuneate at base, 4-16 cm. long, 2-7 cm. broad, with 16-32 pairs of lateral nerves[3. schweinfurthii](#)
- 4 Corolla-tube 3-5 mm. long, anthers inserted about 1 mm. above the base of the tube; corolla-lobes 1.5-2.7 mm. long; branches glabrous also when young; leaves elliptic, 6-16 cm. long, 3-7 cm. broad, with 28-44 pairs of lateral nerves[5. barteri](#)
Corolla-tube 7-15 mm. long, anthers inserted 2-3 mm. above the base of the tube; corolla-lobes 3-9 mm. long; ovary about 1 mm. high, attenuate at the apex; leaves elliptic, long-acuminate, 4-10 cm. long, 2-5 cm. broad, with 25-45 pairs of lateral nerves, glabrous[6. nigeriana](#)

1. *Orthopichonia indeniensis* (A. Chev.) *H. Huber* in Kew Bull. 15: 437 (1962). *APD acc*

Clitandra indeniensis A. Chev. in Mem. Soc. Bot. Fr. 2, 8: 43 (1908).

Clitandra ivorensis A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 34 (1931); Kew Bull. 1937: 336.

Orthandra indeniensis (A. Chev.) *Pichon* in Mém. I.F.A.N. 35: 218 (1953).

Climber with tendrils 15-50 ft. high; corolla white with tube yellow.

Lib.: Greenville, Sinoe Sim 14! Sinoe (fr. Mar.) Whyte 4! **Iv. C.:** Mid. Cavally to Mid. Sassandra Chev. 19276. Abidjan Chev. 15183! 15616. Yapo Manganot. Aboisso Chev. 17751.

2. *Orthopichonia longituba* (Wernham) *H. Huber* l.c.(1962).

APD: *Synonym of Orthopichonia indeniensis* (A. Chev.) *H. Huber*

Clitandra longituba Wernham in Cat. Talb. 60 (1913); F.W.T.A., ed. 1, 2: 34.

Orthandra longituba (Wernham) *Pichon* l.c. 216, t. 10, 1-4 (1953).

Glabrous climber with tendrils; flowers in axillary fascicles.

S. Nig.: Sapoba Kennedy 2156! Eket Talbot! Oban Talbot 1577! **[Br.] Cam.:** Victoria (Feb.) Maitland 405! S. Bakundu F.R., Kumba (Mar.) Brenan 9498!

3. *Orthopichonia schweinfurthii* (Stapf) *H. Huber* l.c. (1962). *APD acc*

Clitandra schweinfurthii Stapf in Kew Bull. 1894: 20; F.T.A. 4, 1: 68.

Clitandra visciflua K. Schum. ex Hallier f. (1900)-F.T.A. 4, 1: 66; F.W.T.A., ed. 1, 2: 34.

Orthandra schweinfurthii (Stapf) *Pichon* l.c. 213 (1953).

Climber with the flowers in axillary clusters; corolla white or with a yellowish tube.

S. Nig.: Benin Unwin 51! Sapoba F.R. (fr. June) Onochie FHI 36652!

Also in **Cameroun**, **Ubangi-Shari**, **Gabon**, **Congo** and **Sudan**.

4. *Orthopichonia staudtii* (Stapf) H. Huber l.c. (1962).

*APD: Synonym of *Orthopichonia visciflua* (K. Schum. ex Hallier f.) Vonk*

Clitandra staudtii Stapf in F.T.A. 4, 1: 67 (1902); F.W.T.A., ed. 1, 2: 34.

Orthandra staudtii (Stapf) Pichon l.c. 223, t. 10, 5-8 (1953).

Climber with tendrils and white flowers in axillary fascicles.

[Br.] Cam.: Johann-Albrechtshöhe (=Kumba) (Feb.) Staudt 860!

Also in **Cameroun**, **Gabon** and **Congo**.

5. *Orthopichonia barteri* (Stapf) H. Huber l.c. (1962). *APD acc*

Clitandra barteri Stapf in Kew Bull. 1894: 20; F.T.A. 4, 1: 66; F.W.T.A., ed. 1, 2: 34.

Orthandra barteri (Stapf) Pichon l.c. 223, t. 10, 12, t. 11, 1-3 (1963).

Climber, 12 ft. high, similar to the above.

Ghana: Dome (fr. May) Thompson 76! **S. Nig.:** Epe Barter 3310! Sapoba Kennedy 2322! Thompson 21! Asaba Unwin! Anwai R. Unwin 15!

6. *Orthopichonia nigeriana* (Pichon) H. Huber l.c. (1962).

*APD: Synonym of *Orthopichonia cirrhosa* (Radlk.) H. Huber*

Orthandra nigeriana Pichon l.c. 226, t. 11, 7-9 (1953).

Climber with tendrils and glabrous branches; flowers densely clustered, white.

S. Nig.: Oban Talbot 1351! 1353! 1537! **[Br.] Cam.:** Balange, Kumba (Jan.) Binuyo & Daramola FHI 35089!

5. ANTHOCLITANDRA

(Pierre) Pichon in Mém. I.F.A.N. 35: 230 (1953). *APD acc*

Clitandra of F.T.A. 4, 1: 60, and of F.W.T.A., ed. 1, 2: 33, partly.

- 1** Lateral nerves 11-15 pairs; leaves broadly elliptic to obovate, 5-10 cm. long, 2.5-6 cm. broad; pedicels up to 3 or 4 mm. long; corolla-tube about 3 mm. long, pubescent in the throat, lobes 4-6 mm. long; ovary glabrous [*l. nitida*](#)

Lateral nerves 4-10 pairs; leaves oblong, 7-21 cm. long, 2.5-8 cm. broad; pedicels very short, not exceeding 1.5 mm.; corolla-tube 4-6 mm. long, glabrous in the throat, lobes 3-10 mm. long; ovary pubescent on the apex .[*2. robustior*](#)

1. *Anthoclitandra nitida* (Stapf) Pichon in Mém. I.F.A.N. 35: 230, t. 12, 2 (1953).

*APD: Synonym of *Landolphia nitidula* J.G.M. Pers.*

Clitandra nitida Stapf in F.T.A. 4, 1: 595 (1904); F.W.T.A., ed. 1, 2: 34.

Glabrous climber with tendrils and very lax axillary cymes.

Lib.: Kakatown Whyte! Monrovia (fr. Oct., Nov.) Cooper 43! Sinoe Whyte 1! Greenville, Sinoe Sim 24! Mecca, Boporo Dist. (ft. Nov.) Baldwin 10411! **Iv. C.:** Kééta Chev. 19338.

2. *Anthoclitandra robustior* (K. Schum.) Pichon l.c. 231, t. 12, 3-5 (1953).

*APD: Synonym of *Landolphia robustior* (K. Schum.) J.G.M. Pers.*

Clitandra robustior K. Schum. in E. & P. Pflanzenfam. 4, 2: 130 (1895); F.T.A. 4, 1: 71; F.W.T.A., ed. 1, 2: 34.

Climber up to 60 ft. high with very dense, axillary inflorescences; corolla very variable in colour: white, yellow, ochre, purple or violet.

S. Nig.: Afi River F.R., Ikom (Dec.) Keay FHI 28218! 28266! [**Br.**] **Cam.:** Kumba to Ikiliwindi Preuss 390. S. Bakundu F.R., Kumba (Jan.) Binuyo & Daramola FHI 35095!

Also in **Cameroun**, **Gabon**, **the Congos** and **Cabinda**.

6. APHANOSTYLIS

Pierre in Bull. Soc. Linn. Paris, n. sér., 89 (1898); Pichon in Mém. I.F.A.N. 35: 235 (1953). *APD acc*

Clitandra of F.T.A. 4, 1: 60, and of F.W.T.A., ed. 1, 2: 33, partly.

- 1 Lateral nerves 7-10 pairs; only axillary inflorescences developed:2
Lateral nerves in 11-20 pairs; axillary and terminal inflorescences developed; corolla-tube 0.8-2 mm. long, the anthers inserted above the middle; corolla-lobes 3-10mm. long; branches glabrous; leaves elliptic-oblong, 4-11 cm. long, 2-5 cm. broad3. *mannii*
- 2 Cymes very dense; pedicels 1-3 mm. long; corolla-tube 1.3-1.8 mm. long, the anthers inserted in the lower 1/3; corolla-lobes about 5 mm. long; branches glabrous or pubescent, leaves oblong, 5-18 cm. long, 2.5-6 cm. broad1. *leptantha*
Cymes lax; pedicels 4-7 mm. long; corolla-tube 2.5-2.7 mm. long, the anthers inserted at about the middle; corolla-lobes about 10 mm. long; leaves elliptic to oblong, 8-14 cm. long, 3-7 cm. broad2. *flavidiflora*

1. **Aphanostylis leptantha** (*K. Schum.*) *Pierre* in Bull. Soc. Linn. Paris, n. sér., 89 (1898); Pichon in Mém. I.F.A.N. 35: 237, t. 12, 6-7.

APD: *Synonym of Landolphia leptantha* (*K. Schum.*) *J.G.M. Pers.*

Carpodinus leptantha *K. Schum.* (1895).

Clitandra leptantha (*K. Schum.*) *Hallier f.* (1900)-F.T.A. 4, 1: 70; F.W.T.A., ed. 1, 2: 34 (excl. syn. *C. micrantha* A. Chev. and Chev. 17691).

Climbing shrub 12-25 ft. high with tendrils and small white flowers in dense axillary cymes.

S. Nig.: Oban Talbot 1526! 2047! Eket Talbot 3190!

Also in **Cameroun** and **Gabon**.

2. **Aphanostylis flavidiflora** (*K. Schum.*) *Pierre* l.c. 90 (1898); Pichon l.c. 239, t. 13, 1-2.

APD: *Synonym of Landolphia flavidiflora* (*K. Schum.*) *J.G.M. Pers.*

Carpodinus flavidiflora *K. Schum.* (1896).

Clitandra flavidiflora (*K. Schum.*) *Hallier f.* (1900)-F.T.A. 4, 1: 70; Brenan in Kew Bull. 7: 450 (1952).

A large climber very similar to *A. leptantha* but with laxer cymes.

[**Br.**] **Cam.:** near Banga, Kumba Dist. (Mar.) Brenan 9322!

Also in **Cameroun**.

3. **Aphanostylis mannii** (*Stapf*) *Pierre* l.c. 89 (1898); Pichon l.c. 241, t. 13, 3-5.

APD: *Synonym of Landolphia incerta* (*K. Schum.*) *J.G.M. Pers.*

Clitandra mannii *Stapf* (1894)-F.T.A. 4, 1: 69; F.W.T.A. ed. 1, 2: 34; Chev. Bot. 401.

Climbing shrub, up to 100 ft. long, with tendrils; flowers white or yellowish in lax inflorescences.

Port. G.: Guébu, Catio (fl. July, fr. June) Esp. Santo 2080! 2136! Cacine Esp. Santo 692. **Guin.:** Bayan-Bayan Sc. Elliot 4547. **S. L.:** Afzelius. Dudgeon. 1b! Bagroo R. Mann 848! Mano (Mar.) 7. DICTYOPHLEBA

Pierre in Bull. Soc. Linn. Paris, n. sér.: 92 (1898); Pichon in Mém. I.F.A.N. 35: 250 (1953).

Landolphia of F.T.A. 4, 1: 30, and of F.W.T.A., ed 1, 2: 31, partly.

- 1 Anthers inserted about or below the middle of the corolla-tube; ovary abruptly distinct from the style; axis of the panicle robust, usually 2-7 mm. diam. near the base:[2](#)
Anthers inserted above the middle; corolla-tube 8-16 mm. long, lobes 5-15 mm. long, usually shorter than the tube; ovary long-attenuate, gradually passing into the style; branches glabrous or pilose; stipules small, deltoid, entire; leaves elliptic to oblong, 7-18 cm. long, 3-10 cm. broad, with 6-13 pairs of lateral nerves; axis of the panicle slender, usually less than 2 mm. diam. near the base[5. lucida](#)
- 2 Stipules small, markedly caducous, entire, deltoid; corolla-lobes shorter or longer than the tube:[3](#)
Stipules persistent, lacerate in setiform lobes 2-5 cm. long; corolla-tube 7-10 mm. long, anthers inserted in the lower 1/4 or 1/3 of the tube; corolla-lobes 14-22 mm. long, always distinctly longer than the tube; branches laxly pilose when young; leaves oblong-elliptic, long-acuminate 14-25 cm. long, 6-12 cm. broad, with 8-12 pairs of lateral nerves[4. stipulosa](#)
- 3 Corolla-tube 5-13 mm. long, anthers inserted at about the middle of the tube; corolla-lobes 4-18 mm. long, longer than 1/2 of the tube and sometimes longer than the tube; branches when young more or less puberulous; leaves broadly elliptic, cordate at base, 8-44 cm. long, 3-21 cm. broad with 7-24 pairs of lateral nerves ... [1. ochracea](#)
Corolla-tube 11-28 mm. long, anthers inserted in the lower 1/3 of the tube:[4](#)
- 4 Corolla-lobes 5-10 mm. long, less than 1/2 length of the tube; branches pilose when young; leaves broadly elliptic to obovate, 7-22 cm. long, 5-12 cm. broad, with 5-11 pairs of lateral nerves[2. leonensis](#)
Corolla-lobes 30-41 mm. long, longer than the tube; branches glabrous; leaves ovate, shortly and abruptly acuminate, 10-17 cm. long, 5-5-8-5 cm. broad, with 8-10 pairs of lateral nerves[3. rudens](#)

1. *Dictyophleba ochracea* (*K. Schum. ex Hallier f.*) *Pichon* in Mém. I.F.A.N. 35: 251 (1953). *APD acc*

Landolphia ochracea *K. Schum. ex Hallier f.* in Jahrb. Hamb. Wiss. Anst. 17, 3, Beih. 86 (1900); F.T.A. 4, 1: 40; F.W.T.A., ed. 1, 2: 33.

Climbing shrub up to 130 ft. high, with tendrils; cymes dense or lax, arranged in terminal panicles; corolla white, calyx violet.

S. Nig.: Oban Talbot 292!

Also in [Cameroun](#), [Gabon](#), [Ubangi-Shari](#), [Congo](#) and [Cabinda](#).

2. *Dictyophleba leonensis* (*Stapf*) *Pichon* l.c. 256, t. 14, 1-4 (1953). *APD acc*

Landolphia leonensis *Stapf* in F.T.A. 4, 1: 36 (1902); F.W.T.A., ed. 1, 2: 33.

Carpodinus macraphyllus *A. Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 35 (1931); Kew Bull. 1937: 337.

Very similar to the last.

Guin.: Tembikounda Chev. 20588. **S. L.:** Smythe 42! Barter! Heddle's Farm, Freetown (May) Lane-Poole 268! **Lib.:** Dukwia R. (May) Cooper 423! Sinoe Whyte s.n.! 2! Greenville Sim 31; 35. **iv. C.:** Jolly. Guidéko Chev. 16369; 16405. **Ghana:** Dudgeon 108a

3. *Dictyophleba rudens* *Hepper* in Kew Bull. 16: 451 with fig. (1963). *APD acc*

A lofty climber [on trees in streamside forest in savanna](#); flowers white, fragrant.

[Br.] Cam.: foot of Vogel Peak, Adamawa (Nov.) Hepper 1470!

[This species has been inserted since Dr. Huber completed his MS.-Ed.]

4. *Dictyophleba stipulosa* (*S. Moore ex Wernham*) *Pichon* l.c. 259, t. 15, 1-3 (1953). *APD acc*

Landolphia stipulosa *S. Moore ex Wernham* in Cat. Talb. 69 (1913); F.W.T.A. ed. 1, 2: 33.

A hairy climber with long setiform stipules.

S. Nig.: Oban Talbot 346! 1296!

Also in **Cameroun** and **Gabon**.

5. *Dictyophleba lucida* (K. Schum.) Pierre in Bull. Soc. Linn. Paris, n. sér.: 93 (1898); Pichon l.c. 262, t. 15, 4-5. *APD acc*

***Landolphia lucida* K. Schum.** in Notizbl. Bot. Gart. Bert. 1: 24 (1895); F.T.A. 4, 1: 59.

Climber up to 100 ft. with tendrils; flowers white, yellow, greenish or orange-yellow, in terminal panicles.

S. Nig.: Benin Unwin 8.

Also in **Gabon**, **Ubangi-Shari**, **Congo**, **Cabinda**, **Tanganyika**, **Mozambique** and **S. Rhodesia**.

[This species is included here on the record of Unwin 8, a sterile specimen at Paris (vide Pichon l.c.); it was not seen for this revision. Unwin 8 at Kew is *Ancylobotrys amoena* Hua].

8. VAHADENIA

Stapf in F.T.A. 4, 1: 29 (1902); Pichon in Mém. I.F.A.N. 35: 266 (1953).

- 1** Anthers inserted about the middle of the corolla-tube (i.e. 6-11 mm. above the base of the tube); leaves elliptic to lanceolate, 6-20 cm. long, 4-10 cm. broad; orange-brown beneath when dry, with 5-12 pairs of lateral nerves; sepals large, 7-10 mm. long; corolla-tube 1.5-2.5 cm. long, lobes 1-3 cm. long ***L. laurentii***

Anthers inserted at the lower 1/3 of the corolla-tube (i.e. about 6 mm. above the base of the tube); leaves obovate, elliptic or oblong, 6-15 cm. long, 3-7.5 cm. broad, pale greyish-green or greyish-brown beneath when dry, with 5-9 pairs of lateral nerves; sepals 4-7 mm. long; corolla as above, although frequently slightly smaller ***L. caillei***

1. *Vahadenia laurentii* (De Wild.) Stapf in F.T.A. 4, 1: 29 (1902); Pichon in Mém. I.F.A.N. 35: 266, t. 16, 1-2. *APD acc*

***Landolphia laurentii* De Wild.** in Rev. Cult. Col. Paris 8: 229 (1901); F.T.A. 4, 1: 30.

***Vahadenia talbotii* Wernham** in Cat. Talb. 58 (1913).

Vahadenia caillei of F.W.T.A., ed. 1, 2: 31, partly (syn. *V. talbotii* Wernham and Talbot 1634).

Climber with tendrils, quite glabrous on branches and leaves also when young, up to 150 ft. long; flowers white or sometimes tinged with purple, in cymes arranged in mostly lax, terminal, elongated panicles.

S. Nig.: Sapoba F.R., Benin (ft. June) Onochie FHI 31242! Oban Talbot 1634! [**Br.**] **Cam.:** Banga F.R., S. Bakundu, Kumba (Mar.) Binuyo & Daramola FHI 35618!

16. PTEROTABERNA

APD: *Synonym of Tabernaemontana L.**Stapf* in F.T.A. 4, 1: 125 (1902).

- 1 Shrub; leaves elliptic-lanceolate or elliptic-acuminate, 7-18 cm. long, 2.5-7 cm. broad, with 5-10 pairs of lateral nerves; inflorescence a small, terminal, laxly branched cyme; corolla-tube 6-9 mm. long, lobes 3-5 mm. long, overlapping to the left; anthers 3 mm. long; mericarps paired, with 3 longitudinal wings [inconspicua](#)

Pterotaberna inconspicua (*Stapf*) *Stapf* in F.T.A. 4, 1: 126 (1902); Pichon in Bull. Soc. Bot. Fr. 100: 172 (1953).

APD: *Synonym of Tabernaemontana inconspicua Stapf**Tabernaemontana inconspicua* *Stapf* in Kew Bull. 1894: 120.

A glabrous shrub, 3-10 ft. high, with small yellowish-green flowers in lax cymes.

S. L.: Bumbuna (fr. Oct.) Thomas 3868!Also in **Cameroun**, **Gabon**, **rio Muni** and **Congo**.

[Note: our W. African specimen may be distinct, however the material (a single sheet with fruit only) is insufficient to be sure-Huber, fide Pichon l.c.]

17. CALLICHILIA

Stapf in F.T.A. 4, 1: 130 (1902).

- 1 Calyx 2.5-3.5 mm. long; leaves petiolate, oblong-obovate, 14-30 cm. long and up to 20 cm. broad, with 7-12 pairs of lateral nerves; corolla-tube 6-9 cm. long, the anthers inserted in about the lower 1/4 of the tube, corolla-lobes 4-6 cm. long, overlapping to the left [1. macrocalyx](#)
- Calyx 5-12 mm. long; corolla-tube 2-6 cm. long: [2](#)
- 2 Corolla-lobes overlapping to the left; anthers inserted above the middle of the tube: [3](#)
- Corolla-lobea overlapping to the right: [4](#)
- 3 Petiole 5-15 mm. long; leaves elongate-oblong or oblanceolate, blade 15-26 cm. long, 3.5-10 cm. broad, long-cuneate at base, with 6-12 pairs of lateral nerves; sepals narrowly lanceolate, acute; corolla-tube 2-6 cm. long, lobes about 2.5 cm. long [2. monopodialis](#)
- Leaves subsessile or with a very short petiole up to 5 mm, long, oblong-elliptic to lanceolate, 6-17 cm. long, 3-7 cm. broad, with 5-9 pairs of lateral nerves, rounded or cuneate at base; sepals oblong, subobtus; corolla-tube about 3 cm. long, lobes mostly 2.5-3 cm. long [3. mannii](#)
- 4 Sepals broadly lanceolate or elliptic, obtuse or mucronate at apex; corolla-tube 2-3 cm. long, the anthers inserted below the middle; corolla-lobes 2-3 cm. long; leaves elliptic to lanceolate, 7-20 cm. long, 2-8 cm. broad, with 7-12 pairs of lateral nerves [4. subsessilis](#)
- Sepals narrowly lanceolate, very acute; corolla-tube 2.5-3.5 cm. long, with the anthers inserted above the middle; corolla-lobes about 1.5 cm. long; leaves elliptic to lanceolate, 9-16 cm. long, 3-8 cm. broad with 7-12 pairs of lateral nerves [5. stenosepala](#)

1. **Callichilia macrocalyx** *Schellenb. ex Markg.* in Notizbl. Bot. Gart. Berl. 8: 310 (1923).

APD: Synonym of Callichilia bequaertii De Wild.

Callichilia magnifica *R. Good* in J. Bot. 67, Suppl. 2: 86 (1929).

A glabrous shrub about 10 ft. high with large white flowers in terminal pendulous inflorescences.

S. Nig.: Oban Talbot!

Also in **Cameroun** and **Rio Muni**.

2. **Callichilia monopodialis** (*K. Schum.*) *Stapf* in F.T.A. 4, 1: 131 (1902). *APD acc*

Tabernaemontana monopodialis *K. Schum.* in Engl. Bot. Jahrb. 23: 225 (1896).

A glabrous, erect or decumbent shrub up to 7 ft. high, with white flowers.

S. Nig.: Usonigbe F.R., Benin (May) Keay FHI 37016! [**Br.**] **Cam.:** Johann-Albrechtshöhe Staudt 832.

Also in **Cameroun**.

3. **Callichilia mannii** *Stapf* in F.T.A. 4, 1: 131 (1902).

APD: Synonym of Callichilia inaequalis Stapf

Glabrous climbing shrub with white flowers in few-flowered, terminal inflorescences.

S. Nig.: Oban (May) Ujor FHI 30819! [**Br.**] **Cam.:** Ambas Bay (Dec.) Mann 2152!

Also in **Cameroun**.

4. **Callichilia subsessilis** (*Benth.*) *Stapf* in F.T.A. 4, 1: 132 (1902). *APD acc*

Tabernaemontana subsessilis *Benth.* in Fl. Nigrit. 448 (1849).

Glabrous shrub 2-8 ft. high with white flowers in terminal inflorescences.

Guin.: Macenta (fl. May, fr. Oct.) Collenette 13! Baldwin 9805! Dyeke (fr. Oct.) Baldwin 9651! 9673! **S. L.:** Karheni, Limba (fr. Apr.) Sc. Elliot 5590! Falaba (May) Aylmer 81! Also in **Congo**.

19. TABERNAEMONTANA

Linn. (1753)-Pichon in Notulae Syst. 13: 230 (1948).

Conopharyngia G. Don (1837)-F.T.A. 4, 1: 139; F.W.T.A., ed. 1, 2: 40.

Gabunia K. Schum. ex Stapf in F.T.A. 4, 1: 136 (1902); F.W.T.A., ed. 1, 2: 39.

- 1 Erect trees or shrubs; leaves with 6-16 pairs of distinct lateral nerves (only in No. 6 smaller leaves frequently with 5 pairs); calyx with glandular scales within (Subgen. Sarcopharyngia): **2**
Climbing shrubs; leaves with 4-9 pairs of lateral nerves or lateral nerves quite indistinct; calyx without glandular scales (except in No. 10) (Subgen. Gabunia): **10**
- 2 Corolla-tube 8-12 mm. long in the mature flowers: **3**
Corolla-tube 15-100 mm. long in the mature flower; cymes pedunculate: **5**
- 3 Cymes sessile, axillary, or rarely with a peduncle up to 1.5 cm. long; corolla-tube pilose within above the anthers; leaves elliptic to broadly lanceolate, 6-24 cm. long, 4-9 cm. broad, with 6-14 pairs of lateral nerves [1. penduliflora](#)
Cymes all long-pedunculate; leaves with 9-15 pairs of lateral nerves: **4**
- 4 Corolla-tube densely pilose within above the anthers; leaves broadly elliptic to elliptic-oblong, 18-50 cm. long, about 10-25 cm. broad [2. brachyantha](#)
Corolla-tube glabrous within above the anthers or with 5 faintly puberulous lines; leaves oblong, linear-oblong or lanceolate, 8-24 cm. long, 3-10 cm. broad [3. ventricosa](#)
- 5 Calyx (12-)14-20 mm. long; corolla-tube 6-9 cm. long, very stout; anthers 1.6-2.4 cm. long, inserted about 2.5-4 cm. above the base of the tube; leaves elliptic to oblong, 12-40 cm. long, 5-15 cm. broad, with 9-14 pairs of lateral nerves [4. chippii](#)
Calyx 2-10 mm. long: **6**
- 6 Corolla-tube markedly pilose within above the anthers: **7**
Corolla-tube glabrous or almost glabrous within above the anthers: **9**
- 7 Corolla-tube 1.5-3 cm. long when fully developed, very stout, the anthers inserted about 1 cm. above the base of the tube; leaves broadly elliptic to ovate or obovate, 12 to about 50 cm. long, 7-25 cm. broad, with 7-16 pairs of lateral nerves: **8**
Corolla-tube 6-12 cm. long, slender in the upper half, the anthers inserted 2-3.5 cm. above the base of the tube; leaves elliptic, oblong or broadly lanceolate, 7-20(-24) cm. long, 3-9 cm. broad, with 5-10 pairs of lateral nerves [6. longiflora](#)
- 8 Corolla-tube 2.5-3 cm. long in the mature flower [5. pachysiphon var. pachysiphon](#)
Corolla-tube 1.5-2 cm. long in the mature flower [5a. pachysiphon var. cumminsii](#)
- 9 Anthers 14-16 mm. long, inserted 1-2 cm. above the base of the long corolla-tube; calyx usually 8-10 mm. long; leaves elliptic, 15-35 cm. long, 10-20 cm. broad, with 9-16 pairs of lateral nerves [7. contorta](#)
Anthers 6-10 mm. long, inserted 5-12 mm. above the base of the corolla-tube; calyx 2-8(-10) mm. long; leaves elliptic, obovate or oblong, 13-40 cm. long, 6-20 cm. broad, with 6-12 pairs of lateral nerves [8. crassa](#)
- 10 Corolla-tube 8-18 mm. long, corolla-lobes about 1.5 cm. long; leaves elliptic to lanceolate, 7-12 cm. long, 1.5-4 cm. broad, the lateral nerves quite indistinct; peduncle usually 1-4 cm. long [9. psorocarpa](#)
Corolla-tube 3.5-10 cm. long, lobes 2-4 cm. long; leaves with the lateral nerves distinct: **11**
- 11 Calyx 2-4 mm. long, with glandular scales within; peduncle very short, 0.1-5(-2) cm. long; leaves oblong, lanceolate or elliptic, 5-16 cm. long, 2-6 cm. broad, with 6-9 pairs of lateral nerves [10. glandulosa](#)
Calyx 3-10 mm. long, without glandular scales; peduncle about 2-5 cm. long; leaves elliptic to lanceolate, 8-20

cm. long, 3-8 cm. broad, with 4-6 pairs of lateral nerves [11. eglandulosa](#)

1. **Tabernaemontana penduliflora** *K. Schum.* in Engl. Bot. Jahrb. 23: 225 (1896); Pichon in Notulae Syst. 13: 252 (1948). *APD acc*

Conopharyngia (?) *penduliflora* (*K. Schum.*) *Stapf* in F.T.A. 4, 1: 149 (1902); F.W.T.A., ed. 1, 2: 41.

Glabrous shrub or small tree 3-10 ft. high with white, greenish or pink flowers in sessile, subumbellate inflorescences; [in high forest](#).

Also in [Cameroun](#), [Congo](#) and [Sudan](#).

2. **Tabernaemontana brachyantha** *Stapf* in Kew Bull. 1894: 22. *APD acc*

Conopharyngia brachyantha (*Stapf*) *Stapf* in F.T.A. 4, 1: 148 (1902); F.W.T.A., ed. 1, 2: 41.

Glabrous tree up to 50 ft. high with numerous small white flowers in long-peduncled cymes.

S. Nig.: Oban Talbot! **[Br.] Cam.:** Victoria (Feb.) Maitland 429! Cam. Mt., 4,800 ft. Keay FHI 37507! **F. Po:** (Jan.) Mann 221!

Also in [Cameroun](#).

3. **Tabernaemontana ventricosa** *Hochst. ex A. DC.* in DC. Prod. 8: 366 (1844). *APD acc*

Tabernaemontana usambarensis *Engl.* (1895).

Conopharyngia usambarensis (*Engl.*) *Stapf* in F.T.A. 4, 1: 148 (1902).

Small tree with a compact crown; flowers white with yellow centre, fragrant; [in montane forests](#).

Ghana: Aburi Gardens (? cult., Jan.) Irvine 1902! **S. Nig.:** Rosevear 9/30! Ikweite to Balegette, Obudu (Dec.) Savory FHI 25214! **[Br.] Cam.:** Cam. Mt. (Jan.-May) Dundas FHI 15335! Dalz. 8346! Maitland 273! 506! 676! Nkambe (Feb.) Hepper 1898!

Also in [Congo](#), [Uganda](#), [Kenya](#), [Tanganyika](#), [Nyasaland](#), [S. Rhodesia](#), [Mozambique](#) to [Natal](#).

4. **Tabernaemontana chippii** (*Stapf*) *Pichon* l.c. 251 (1948).

APD: *Synonym of Tabernaemontana africana* *Hook.*

Conopharyngia chippii *Stapf* in Kew Bull. 1913: 77; F.W.T.A. ed. 1, 2: 41; Aubrév. Fl. For. C. Iv., ed. 2, 3: 212, t. 328.

Glabrous tree 15-20 ft. high with large, white or cream, fragrant, fleshy flowers.

Lib.: Sim 18! 26! **Ghana:** Kumasi (Mar.) Andoh 3743! Anwhiaso F.R. (Oct.) Vigne FH 233! Fwirem, Ashanti (May) Chipp 454! Bunso (Aug.) Darko 952! Jemma (Sept.) Chipp 353!

Tabernaemontana pachysiphon *Stapf* *APD acc*

5. **Tabernaemontana pachysiphon var. pachysiphon** -in Kew Bull. 1894: 22. *APD acc*

Conopharyngia pachysiphon (*Stapf*) *Stapf* in F.T.A. 4, 1: 145 (1902); F.W.T.A., ed. 1, 2: 41.

Glabrous shrub or medium-sized tree, 9-32 ft. high with large smooth leaves and fleshy white flowers.

Togo Rep.: Klingfall Kersting A634! Okposso Doering 296! **Dah.:** Poisson! **S. Nig.:** Okomu F.R., Benin (Jan.) Brenan 8918! Onitsha Barter 1328! Sapoba Kennedy 2341! Ogwashi-liku, Asaba (Sept.) Sept. of Agric.! Oban Talbot 1397! **[Br.] Cam.:** Bamenda (Feb.) Lightbody FHI 26302!

5a. **Tabernaemontana pachysiphon var. cumminsii** (*Stapf*) *H. Huber* in Kew Bull. 15: 438 (1962). *APD acc*

Conopharyngia cumminsii *Stapf* in F.T.A. 4, 1: 145(1902); F.W.T.A., ed. 1, 2: 41.

Ghana: Begoro (Dec.) Plumptre 89! Aburi Akpabla 951! Assin-Yan-Kumasi (Apr.) Scholes 236! Cummins 114! Tafo (Sept.) Darko 997! **Togo Rep.:** Kutio (Apr.) Scholes 36! **S. Nig.:** Onitsha Chesters 194!

6. *Tabernaemontana longiflora* Benth. in Fl. Nigrit. 447 (1849), and in Bot. Mag. 75: t. 4484 (1849).

APD: *Synonym of Tabernaemontana africana* Hook.

Conopharyngia longiflora (Benth.) Stapf in F.T.A. 4, 1: 142 (1902); F.W.T.A., ed. 1, 2: 41; Aubrév. Fl. For. C. Iv., ed. 2, 3: 212, t. 328.

Glabrous shrub or small tree 5-25 ft. high with very long, white, fragrant flowers.

Port. G.: Empandja, Bissau (Mar.) Esp. Santo 1510! L. Cufada (Jan.) d' Orey 224! **Guin.:** Heudelot 726! Farmar 151! Conakry (Mar., June) Debeaux 140! 324! Kouria Chev. 15033! **S. L.:** T. Vogel 151! Sugar Loaf Mt. (fr. May) Barter! Waterloo (fl. & fr. Mar.) Kirk 23! Rokupr (May) Jordan 257! Loma Mts. (Jan.) Jaeger 4054! **Lib.:** Ganta (Sept.) Harley! Baldwin 9332! Totokwelli, Medina (Oct.) Linder 1301! Moala, Suen (Nov.) Linder 1383!

[Note: in Ed. 1 *Tabernaemontana grandiflora* Hook. (in Gray & Doehard Trav. West. Afr. App. 389, t. B (1825), not *T. grandiflora* Linn.) which was described from a drawing, was cited as a synonym of *T. chippii*; I cannot agree with this and prefer to follow Stapf who expected this to belong to *T. longiflora*.-Huber.]

7. *Tabernaemontana contorta* Stapf in Kew Bull. 1894: 23. APD acc

Conopharyngia contorta (Stapf) Stapf in F.T.A. 4, 1: 142 (1902) F.W.T.A., ed. 1, 2: 41.

Tree 30-40 ft. high with large leaves and fleshy, white, fragrant flowers.

S. Nig.: Oban Talbot! **[Br.] Cam.:** Amba Bay (Jan.) Mann 703! Victoria (Jan.) Maitland 283! Kalbreyer. Mayuko (Feb.) Dalz. 8223! Johann-Albrechtshöhe Staudt 796.

Extends to Cameroun.

8. *Tabernaemontana crassa* Benth. in Fl. Nigrit. 447 (1849). APD acc

Tabernaemontana durissima Stapf (1894).

Conopharyngia durissima (Stapf) Stapf in F.T.A. 4, 1: 143 (1902); F.W.T.A., ed. 1, 2: 41; Aubrév. Fl. For. C. Iv., ed. 2, 212, t. 329.

C. jollyana Stapf in F.T.A. 4, 1: 144 (1902); Chev. Bot. 415.

C. crassa (Benth.) Stapf in F.T.A. 4, 1: 144 (1902); F.W.T.A., ed. 1, 2: 41.

Gabunia dorotheae Wernham in J. Bot. 52: 25 (1914); F.W.T.A., ed. 1, 2: 40.

A small to medium-sized tree; flowers white, fragrant, opening in the evening; in wet forest.

S. L.: Sefalu, Bandajuma (fl. & fr. Nov.) Deighton 5271! Pujehun (Apr.) Aylmer 62! Thomas 8050! Zimi (May) Deighton 3727! Gola F.R. (May) Small 657! **Lib.:** T. Vogel 21! Dukwai R. (Nov.) Kwahu (Apr.) Johnson 669! Kumasi (Apr.) Irvine 2821! near Kwabeng (Apr.) Adams 2696! **Dah.:** Lower Ouémé? Coll. **S. Nig.:** Oban Talbot 1481. Oban F.R. (Feb.) Latilo FHI 36415x!

Also in **Congo**.

11. *Tabernaemontana eglandulosa* Stapf in Kew Bull. 1894: 24. *APD acc*

Gabunia eglandulosa (Stapf) Stapf in F.T.A. 4, 1: 138(1902) incl. var. macrocalyx Stapf l.c. 139 (1902); F.W.T.A., ed. 1, 2: 39.
Gabunia longiflora Stapf in F.T.A. 4, 1: 138 (1902).

Woody climber in forest tangles; flowers white, fruits yellowish.

S. Nig.: Ikirum (Feb.) Millson 12! Osun F.R., Ijebu-Igbo (fr. May) Ejiofor FHI 26130! Omo (formerly part Shasha) F.R. (Apr.) Onochie FHI 17280! Calabar (Feb.) Mann 2253! Oban Talbot 1525! [**Br.**] **Cam.:** Kumba (Jan.) Binuyo & Daramola FHI 35160! **F. Po:** (Jan.) Mann 239!

Also in **Cameroun**, **Gabon** and **Congo**.

Tabernaemontana donnell-smithii Roxb.

An **American** species

Is cultivated at Victoria.

20. VOACANGA

Thouars -F.T.A. 4, 1: 151; Pichon in Bull. Mus. Hist. Nat. sér. 2, 19: 409 (1947).

- 1 Leaves rounded at apex, with 12-16 pairs of lateral nerves, obovate to oblong, 12-25 cm. long, 4-10 cm. broad; calyx 14-18 mm. long, early circumscissile; corolla-tube 1.5-2.5 cm. long, lobes 2-3 cm. long [1. thouarsii](#)
 Leaves acute and acuminate at apex; calyx not or tardily circumscissile: **2**
- 2 Bracts caducous; calyx-lobes mostly (but not necessarily) spreading or reflexed at anthesis; leaves with 8-16 pairs of lateral nerves: **3**
 Bracts persistent; calyx-lobes mostly erect; leaves usually long-acuminate, with 5-10 pairs of lateral nerves: **4**
- 3 Corolla-lobes 12-24 mm. long when fully expanded, oblong to obovate, forming in bud an elongate-conical structure 1.5-2.5 times as long as broad; corolla-tube 6-9 mm. long; calyx 5-10 mm. long; leaves broadly elliptic to broadly lanceolate or obovate, triangular at apex, not or shortly acuminate, 6-30 cm. long, 3-16 cm. broad; petiole glabrous or puberulous [2. africana](#)
 Corolla-lobes 4-7 mm. long, broadly oblong to obovate, in bud forming a shortly conical structure about as long as broad; corolla-tube about 1 cm. long; calyx 8-12 mm. long, leaves elliptic-lanceolate, 10-20 cm. long, 3-9 cm. broad; petiole puberulous [3. diplochlamys](#)
- 4 Petiole minutely puberulous [3. diplochlamys](#)
 Petiole glabrous: **5**
- 5 Calyx 6-12 mm. long; corolla-lobes broadly oblong to obovate, forming in bud a shortly conical head 1-1.5 times as long as broad; leaves elliptic-acuminate to lanceolate, 9-24 cm. long, 3-8 cm. broad: **6**
 Calyx 12-18 mm. long; corolla-lobes 10-20 mm. long: **7**
- 6 Corolla-lobes 3-6 mm. long, about half as long as the tube [4. bracteata var. bracteata](#)
 Corolla-lobes 8-12 mm. long, almost or about as long as the tube [4a. bracteata var. zenkeri](#)
- 7 Corolla-lobes oblong to ovate-oblong, 3-5 mm. broad, forming in bud an elongate-conical head 2-3 times longer than broad; leaves elliptic-lanceolate, 9-24 cm. long, 3-8 cm. broad [5. psilocalyx](#)
 Corolla-lobes narrowly linear, about 2 mm. long, forming in bud a cylindric structure 4-6 times longer than broad, which is not dilated towards the base; leaves lanceolate or oblanceolate, 12-30 cm. long, 2.5-7 cm. broad [6. caudiflora](#)

1. *Voacanga thouarsii* Roem. & Schult. Syst. Veg. 4: 439 (1819); F.T.A. 4, 1: 154 (1902). *APD acc*
